The Brookings Institution characterized our social-security setup as a plan whereby "the present generation do the promising; future generations do the paying."

Mr. Speaker, the following analysis of the social-security setup by Melchior Palyi, a noted Midwest economist, based upon the book Fact and Fancy, by Dillard Stokes, is so true and so pertinent that I include it as a part of my remarks.

SOCIAL SECURITY: FACT AND FANCY

(By Dillard Stokes, reviewed by Melchior Palyi)

How many people are aware of the fact that our social security is neither insurance nor charity, though Federal agencies call it both, as it suits their purpose? That you and I are forced to pay taxes but are entitled to nothing? Yet, the law is quite clear on this point.

Whether or not social security is to be considered a fraud, it certainly is neither "social" nor does it offer "security." The millionaire president of a large corporation can get the full benefits of some $160-odd dollars a month for his wife and himself if he retires at 65—on a $50,000 income from dividends. A pauper who paid for many years may get nothing. By 1953, not less than 6,400,000 people died without receiving a cent for themselves or their estates, though they had paid their dues. A married couple of oldsters may draw less than the same couple would if they lived together unmarried. Your widow gets nothing until she is 65, unless you leave children under 18 behind; she must not receive benefits in her own right. Adopted children must be close blood-relatives. Your penniless sister or aunt cannot inherit a single penny. The book is replete with details of this sort, handsomely documented. It makes exciting reading, thanks to the "personal touch". It deals with individual types of victims as well as with the victimization of most of us.

What kind of a system is this? What are its guiding principles? Arbitrariness is its No. 1 rule, the total absence of a rational relationship between benefits and contributions, between "need" and benefits, or between fiscal spending and revenue raising. A second, well-camouflaged principle is the evident urge to create extra revenues for the Federal Treasury. A third one is: To provide maximum benefits—to the politicians, by built-in share-the-wealth features, ostensibly favorable to some lowest-paid categories and to those entering the system in their 50's. A so-called reserve fund, a financial legerdemain as Senator BYRD has stamped it, completes the picture.

This book is a masterpiece of condensation. A fantastic maze of facts, figures, and legal technicalities is so cleverly organized that they almost seem to act out their roles, this without detriment to logic and comprehensiveness. The author makes one mistake: He proposes a clean and brushed-up compulsory system of his own construction. A fraud is a fraud is a fraud, as Gertrude Stein might have said; it is hopeless to try and reform it. Besides, maybe people do not mind being fooled when appearances make them feel that they may get something for nothing. Why, a tax is a tax, and it is fun to hope that some day one may get something back, which is most unusual. That the thing is leading the Nation into the gravest of troubles—at a remote date—worries very few among us.

Japan

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. POWELL. Mr. Speaker, April 28, 1956, marks the fourth anniversary of the signing of the peace treaties between the United States and Japan. In observance of the event I wish to extend my sincere felicitations to the people of Japan, Emperor Hirohito, and His Excellency Masayuki Tani, Ambassador of Japan.

There is a new atmosphere in Japan today and it is an atmosphere in keeping with liberal democracy elsewhere in the free world. In the years since the termination of the Second World War, Japan has adopted a new approach in the realm of government, and accordingly has enacted a new democratic constitution based upon the principle of human rights. It seems quite clear that the new constitution has functioned well and that the new postwar democracy has been an educative and enlightening force. Japan is in no danger of reverting to the "good old days." Although the ancient trappings of feudalism are not entirely eliminated, they are mostly on the way out. Political democracy has brought about many valuable changes.

Over 10 years have passed since the end of World War II, and we may now take stock of Japan's amazing recovery from the havoc wrought by that unhappy conflict. Few scars are left today to tell the story of that great catastrophe. Cities and towns have been rebuilt, new factories have sprung up, and the wheels of industry and commerce set in motion. Japanese ships again plough the seas. Japan's recent accession to second place

among the shipbuilding nations of the world again puts the country's shipyards in the position of leadership they enjoyed before the war.

Prime Minister Hatoyama outlined the social goals of his government in a speech on January 30, 1956, to the Diet in which he said: "stabilization of national life is indispensable to the attainment of real independence." In addition to the modernization of industry, bringing labor and management closer together, and promotion of international trade, the Prime Minister pledged social-security improvements, tax reduction, housing, and election revision.

Economically, Japan has set her feet soundly in the paths of progress and it is reasonable to expect that her economic advance will be accelerated. It is true that there are still some towering difficulties to be surmounted but when we recall the utter ruin of a decade ago we have good reason to believe that the next 10 years will witness equally great rewards for Japan's efforts.

In the international field, Japan has been received back into the comity of nations. Although Japan has not yet become a member of the United Nations, she is a contributing member of many of the special agencies sponsored by the international organization. There are more than 100 UNESCO associations working in Japan. The Japanese National Commission has cooperated with UNESCO Headquarters in translating representative literary works, carrying out oceanographic research, and conducting studies in social tensions and other matters.

Foreign Minister Shigemitsu in his address to the Diet on January 30, 1956, expressed his conviction that the world's quest for peace will ultimately succeed. In outlining the foreign policy aims of Japan he placed cooperation with this quest at the head of the list:

> We cannot accomplish the task of building up a new Japan as a free and democratic country without cooperating closely with the free and democratic nations of the world. This is why our Government, in conducting the independent diplomacy of its own, considers cooperation with the United States as the basis of national policy.
>
> With the United States we are maintaining cooperation along all lines, including national defense. This cooperative relationship is essential to the consummation of our independence and to the advantage of our international position, and the necessary measures must be carried out under thorough mutual understanding and intimate contact.

His Excellency Masayuki Tani, Ambassador to the United States in discussing what he had learned at the Bandung Conference has laid particular stress on help to the underdeveloped nations to block Communist opportunity for propaganda and intrigue. Further, Ambassador Tani declares:

> In order to stem the fast-rising tide of communism in these regions military preparedness on the part of free nations is, of course, necessary. But the Communist peace offensive has to be countered with a peaceful campaign of education and with programs for economic development. It is here that Japan can play an important role * * * Japan has joined the Colombo plan. She has plans of her own for contributing to the economic development of southeast Asia, but she cannot carry them out without cooperation from the United States.

Looking ahead, one feels satisfied that the prospects for an increasingly better life for the Japanese people are good insofar as they are within Japan's own control. The conduct of her neighbors, of course, must needs influence any picture one attempts to draw. Japan's role must be one of peace and we must hope that the signs of lessening of international tension now perceivable on world horizons are not false but will grow greater until they usher in a new era of assured prosperity.

The Democratic Party's Dilemma

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. CRETELLA. Mr. Speaker, I submit under unanimous-consent order, a very illuminating editorial from the New York Herald Tribune of April 27, 1956. I think it serves to very accurately and fairly explode the myth that the Presidential aspirant is casting about through the country. I think this editorial definitely indicates the position of the Democratic Party on a very important issue which President Eisenhower has squarely faced and undertaken to resolve.

The editorial follows:

THE DEMOCRATIC PARTY'S DILEMMA

Mr. Adlai Stevenson's address in New York on Wednesday did more to emphasize than to resolve the fundamental dilemma of the Democratic Party. No one doubts Mr. Stevenson's deep personal concern for "the old principle that the American heritage of liberty and opportunity is not to be confined to men, women, and children of a single race, a single religion or a single color." No one can question, either, the truth of his assertion that the Supreme Court decisions against segregation involve "social change in some areas of our country, and all social change creates massive problems of adjustment." What the Nation may rightly challenge is Mr. Stevenson's twin contentions that moral leadership is lacking in Washington today and that it can emerge, especially on this issue, from the Democratic Party.

Representative ADAM CLAYTON POWELL, who has recently been urging a more active fight against segregation by the administration and his own Democratic Party, said that Mr. Eisenhower in his first 2 years in office, "did as much as any other President of the United States had done in a comparable period to bring about equality and dignity for all American citizens." The progress made in the District of Columbia, in the Armed Forces and their bases, in the persuasion exerted by the President's Committee on Government Contracts upon the firms doing business with the Government, was in line with the finest traditions of the Republican Party, as well as with an enlightened concept of Presidential authority.

Meanwhile, the House Judiciary Committee has just approved an administration civil-rights program, which would set up a Federal commission on the subject, as well as a division in the Justice Department, provide authority for the Attorney General to bring suit in the courts for those deprived of civil rights, offer a more direct course than the present requirement that State remedies be exhausted before the Federal Government can act, and give statutory protection against infringements on the right to vote.

All of this constitutes progressive action, recognizing at once the clear need to move forward on civil rights, and the necessity for moderation in a situation which has inflamed opinion, North and South. It is a policy that has overwhelming Republican support.

On the Democratic side is the plain fact that the party contains the extremes of segregationist and desegregationist sentiment, running the gamut from Senator EASTLAND to Representative POWELL. As a party, it cannot be said to have a policy on the issue and it is certain that any President who tried to pacify both Democratic wings would wind up in complete futility, even though, in Mr. Stevenson's words, he might "work ceaselessly and with a sense of great urgency." His hardest task would be to reconcile the divergent Democrats.

While the Democrats are poised on the horns of this dilemma, for Mr. Stevenson to raise the civil-rights issue against the Republicans is, to put it mildly, imprudent. It was, after all, 19 Democratic Senators and 77 Democratic Representatives who signed the manifesto accusing the Supreme Court of "creating chaos and confusion, charging that the Justices "undertook to exercise their naked judicial power," and pledged themselves to use all lawful means to bring about a reversal of the school desegregation decision. There are far too many such skeletons rattling in the Democratic background for Mr. Stevenson's charge to be taken seriously.

A New Twist to NATO—What Next?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very interesting article by that outstanding newswriter, Mr. Constantine Brown, which appeared in the Evening Star for last evening.

Mr. Brown points out that Mr. Dulles now proposed to change the character of the NATO organization. Are we headed for another Marshall plan in Europe? In view of the debacle in France, better more slowly, Mr. Dulles.

The article follows:

SHIFTING TO AN ECONOMIC NATO

(By Constantine Brown)

DULLES' DECISION BELIEVED PROMPTED BY MILITARY COALITION'S WEAK POINTS

NATO is by way of changing its military character to become another branch of foreign economic assistance.

This column reported from Paris some 2 weeks ago that Prime Minister Guy Mollet, in an effort to bolster up his shaky political position due to difficulties in Algeria, had suggested a revamping of the Western defense coalition. He urged America in particular to shift to accent on NATO from a defensive military organization into a kind of welfare group with the primary purpose of helping out the peoples in the undeveloped countries. He mentioned specifically Algeria, where France is fighting against the Arab

nationalists such a severe campaign that it had to remove nearly all the troops it maintained in Germany.

The proposition of M. Mollet was not taken seriously in responsible American quarters in Paris. And for good reasons. A few weeks earlier, while on an official visit to Washington, Italy's President Giovanni Gronchi had suggested in a speech in Washington that the economic rather than the military side of the alliance should henceforth be stressed.

This suggestion was quickly brushed aside by no less than Secretary of State Dulles, who stated at a press conference: "The membership of the NATO was picked primarily, I would say, for strategic and military considerations. I think that the economic problems can be dealt with through other organizations."

And indeed we have the ICA (International Cooperation Administration), the successor of the Marshall and other economic assistance plans, as the agency which distributes tax dollars to our allies.

It was therefore somewhat surprising when our Secretary of State announced on Tuesday, without being specific as to details, that he would take to the next week's meeting of the foreign ministers of the NATO countries in Paris a plan for transforming that coalition into a broader association, shifting its objectives to a permanent instrument of western cooperation, rather than a military deterrent to Communist aggression.

By a strange coincidence, Mr. Dulles mentioned at his Tuesday press conference economic assistance to Algeria (which is one of the most prosperous parts of France and where the present troubles arise from political and not economic difficulties).

He also mentioned economic assistance to Middle Eastern countries, upon which Europe depends for oil. It happens that Saudi Arabia, one of the principal oil countries, is extremely well heeled. So is Iraq, another of the chief oil purveyors of the world. In both those countries the problems are again political and not economic. Iran is less prosperous because it still feels the ill effects of the attempted nationalization of its oilfields and refineries under the Communist-inspired former Prime Minister Mossadegh.

There is little or no economic trouble in Syria and Jordan. Turkey's present acute troubles are due to that country's inability to meet its short-term obligations to Britain, France, Germany, Belgium, and Switzerland. The Turks have asked us for a $300 million, interest-bearing loan. But this has been denied to them.

The proposed shift on the part of the Secretary of State, insofar as the concept of NATO is concerned, was caused apparently by his realization that the military organization established in 1949 for the sole purpose of presenting a solid defensive wall to the Soviet's aggressive plans is now working only on three cylinders.

Its Western European members, particularly France and Germany, which were intended to be the backbone of the organizations, are extremely prosperous. The high degree of prosperity has rendered the German people reluctant to support the organization of a treaty force of 500,000 men which, together with the 6 American and 4 British divisions supplemented by an adequate air and naval force, would have enhanced the strength of the defense wall. The German Government and Parliament have been going through the motions of creating the treaty force, but so far it still is only a blueprint.

The French were compelled to remove their NATO ground forces to trouble-ridden Algeria. The struggle there may last for some time, and the French Government is in no mood to draft new forces to replace those sent across the Mediterranean. On top of all these considerations is the overriding reason why the military NATO has been faltering recently: The conviction of most Western European governments that Russia no longer intends to use military weapons to achieve her purposes in Western Europe. This has produced in some countries a wave of neutralism, in others a lackadaisical attitude toward military preparedness, despite the assistance afforded them by the United States.

Our friends in continental Europe have now devised a plan to transform NATO into a benevolent association (with the United States as the chief purveyor of benevolence). In order to avoid a flop with serious political repercussions at home Secretary Dulles, who only a few weeks ago rejected the idea of the coalitions's becoming merely an economic alliance, has reversed himself and decided to accept the suggestions of Italy's President Gronchi and France's Prime Minister Mollet.

Lynwood, Calif., School Demonstrates Practical Achievements in Realistic Disaster Drill Including Bomb Casualties and All

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 25, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to herewith present a letter to me dated April 23, 1956, from Mr. "Trig" Svendsen, director area E, civil defense, city of Lynwood, Calif., in the great 23d Congressional District which I represent this my 10th year in this great legislative body. The letter and the text of the newspaper writeup about it are self-explanatory.

I know you, Mr. Speaker, and all of my colleagues in this great legislative body, will join with me in congratulating this civil-defense program there as revealed in this letter to me and in the newspaper writeup:

CITY OF LYNWOOD, CALIF.,
April 23, 1956.

The Honorable CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR MR. DOYLE: Enclosed you will find a clipping from the local newspaper, with pictures, of the bombing staged at Hosler Junior, April 19, by the students who have completed training in civil defense under the supervision of the teachers of the school.

Mr. Caples, principal, and Mr. Landis, teacher, with the help of 116 pupils who make up the medical unit, first aid, transportation, wardens, fire crew, canteen, engineers, radio, rescue, with chiefs for each division, proved that the foundation work by the Lynwood Civil Defense Office with the aid of films and talks by representatives of civil defense from our region office in Los Angeles, has been very gratifying.

Thought you might like to have this clipping in the CONGRESSIONAL RECORD.

Yours very truly,
"TRIG" SVENDSEN,
Director, Area E.

HOSLER SCHOOL STAGES REALISTIC DISASTER DRILL, BOMB, CASUALTIES, AND ALL

The shrill continuing ringing of the alarm bell at Hosler School at 2:31 Monday afternoon followed by an aerial bomb explosion set into motion the first fully realistic disaster drill to be conducted under the civil-defense organization in this area.

A minute before the alarm was sounded, the passing bell had rung, and the entire student body was in the halls and about the grounds preparing to go to the next class. As the alarm sounded, there was a rapid but orderly scurrying to the assigned rooms, and within seconds not a student was to be seen. Put into execution was the disaster plan which has been part of the study course for all students at the junior high.

Under the desks and tables a hank of hair or a patch of clothing was all that could be seen. Windows were rapidly opened to prevent shattering glass from being blown inward in case of explosion. That was the job of the teachers and one student previously assigned in each room. Teachers were the last to disappear from sight.

Soon an aerial bomb was exploded over the school. Not a sign of movement or a person could be seen except the observers at the drill. The youngsters remained in their cramped positions until after the all clear was sounded; then life began to unfold as the youngsters crawled from under their shelters and took their places at their desks.

The room wardens emerged, wearing arm bands designating their official capacity. A check was made at each room for casualties. Cots were broken out and emergency hospitalization was set up in the protected halls.

Stretcher bearers brought in the casualties. Those able to walk were escorted by those who had taken the junior Red Cross first-aid training program. Each casualty was tagged with the simulated conditions found.

Order prevailed throughout the entire drill. Although a drill, the staging came as a surprise to all except the few teachers and to those serving in the capacity of junior civilian defense officials.

Finally, after all casualties were checked in, rolls taken at each room to ascertain all were accounted for, the release bell sounded and school resumed normal activity.

As a climax to the drill, the 126 members of the junior civilian defense group were sworn in with mass ceremonies and each of the wardens was issued his official civilian defense identification card by Trig Svendsen, civil-defense director. All junior wardens are from the upper class, the seventh grade.

At Hosler Junior High, all students get first-aid training and physiology study as well as civil-defense study and as part of the student-activity program there is a large chapter of junior Red Cross.

High tribute to Hosler School for their response in the drill was paid by Svendsen and other civilian defense officials witnessing the drill. Special commendation was given to William Landis, science-math teacher who has charge of the junior civil defense at Hosler.

Observers were Harvey Mydland, assistant regional civil defense coordinator of Los Angeles County; Leland Weaver, area E coordinator; Fire Chief Earl Gallaher, assistant local director of civil defense; Ralph Darton, chief of police and member of civil defense council; Fire Captain Robert Rutter; David MacArthur, assistant city engineer; Lewis M. Letson, assistant chief of the medical division of Lynwood's civil defense; Bob Compton, newly elected city councilman, and Allen T. Witter, of the Lynwood Press.

In the pictures in the newspaper article headed "Realism Was Injected Into the Bomb Raid Drill," it showed the students lying on the tennis court and "bombed" students being carried off the tennis courts and schoolyard on realistic stretchers. It showed the first-aid group at work. Under these pictures appeared the following text:

Realism was injected into the bomb-raid drill at Hosler School staged Monday as a

surprise move by civilian defense officials. After the bomb exploded, three casualties are sprawled out in the open awaiting first-aid treatment. Center shows the emergency hospital set up in the protected school halls, lower left the junior wardens are bringing out first-aid equipment and preparing to set up cots. Lower right a casualty is being brought from one of the rooms to the emergency station.

Herblock

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. MULTER. Mr. Speaker, I am certain our colleagues will agree that no member of the fourth estate contributes more to lightening our moments than Herblock. I am pleased to direct to the attention of our colleagues the following remarks by Mr. Robert C. Osborn and Mr. Elmer Davis, which appear in the March 12, 1956, issue of the New Republic. Mr. Osborn comments on Herblock's 10th anniversary as cartoonist for the Washington Post and Times Herald.

HOMAGE TO HERBLOCK

(Since there is only one Herblock, and he is unmatched, his 10th anniversary as cartoonist for the Washington Post and Times Herald is an event requiring some note. Since 1946, his drawings on the editorial page of the only morning daily in Washington, D. C., have been as important to the residents of the Nation's Capital (there are only residents, no citizens, since Washingtonians don't have the right to vote) as their morning cup of coffee, and considerably more stimulating. Syndicated in 150 newspapers, Herblock has, over the past decade, been honored by 2 Pulitzer Prizes and top awards of the American Newspaper Guild, the National Headliner Club, and the American Veterans Committee.)

(By Robert C. Osborn)

I think what distinguishes Herblock is that in a culture which is sugar-coating everything and which is scared to even mutter the unvarnished truth—Herblock comes out every day with the unvarnished truth. This is a great relief to a lot of people. We are so hag-ridden by the singing hucksters, so surfeited with counterfeit presentations—from car design to the fake eroticism of whispered weather reports—that Herblock affects all of us about the way a sound buoy affects the fog-bound sailor. We shout for joy.

And how does he lend us this encouragement and this point of reference? Primarily by his ideas. His force is the idea. Each day he distills an exceedingly intelligent and trenchant idea. One is filled with admiration for the way in which Herblock's intelligence and feeling are transposed and then welded into that day's idea. It is always perspective and immaculate, in fact they are so well conceived that they can become classics overnight. Witness the White Feather "Have a care, sir" cartoon. And because he is a man of enormous personal integrity, all of his ideas hold together and reinforce one another. Perhaps this accounts for the cumulative effect they have had on American political thinking.

It is interesting that in presenting the idea Herblock rarely uses the enormous resources of history, literature, religion, mythology, etc., at his disposal. Instead he prefers the immediate characters and types of the immediate scene. He has evolved a group of standardized caricatures of contemporary figures (for instance, a sort of Happy-Hooligan-faced person labeled "Eisenhower"), a collection of generalized types such as the congressman, the public, the politician, the big-business man, plus such things as the donkey and the elephant and his masterly creation of the bomb.

This cast of characters which he employs day after day sets him free at once to hew out the idea and get it set down in clear, highly legible terms. And he never hesitates to use printed, literary labels in his drawings if it will speed up the comprehension of the cartoon—or if he feels that someone might miss the fact that a particular person is NIXON rather than MCCARTHY. Everything can be labeled if necessary for quick, staccato appraisal.

The actual printed drawing is rarely, if ever, beautiful in the way a Daumier or the Kukriniksi or Goya or Rowlandson political cartoons can be beautiful. Those men, employing the most sensitive lines synthesize and simplify the subject until the picture becomes plastically and rhythmically related—integrated and alive the way an Egyptian bronze cat is integrated and alive. Not many cartoonists achieve this quality. Low, the English Herblock, produces clear, highly intelligent but monotonous drawings. Fitzpatrick, on the other hand, does pursue the esthetic possibilities of each cartoon. When he is dealing with a communications problem, he evolves a single, large sinister wiry-legged black spider astride an enormous black landscape. The visual impression is of a single whole. Herblock, on the other hand, never hesitates to use, almost like an expert juggler, a very complex set of images and situations in order to present the overriding idea.

Finally it occurs to me as I look at Herblock's face that he is closely related to the great clowns. He looks like a great clown—and is more related to the light touch of a Grock, a Fratellini, a Will Rogers, a Keaton, than he is to the more ponderous Daumiers and Goyas. For, like the great clowns, he pursues the main ideas with infinite variations of wit, humor, irony, and pity—using the pen as a saber or as a needle, stabbing with deadly precision at sham, cheating bombast, greed, complacency and any organized folly.

No wonder we like him. No wonder we are grateful for his presence.

WORDS AS WEAPONS

(By Elmer Davis)

Herblock, who writes as well as he draws, is not a middle-of-the-roader. That position, he says in his book, Here and Now, has the same attraction for a lot of people that a coffee cup has for cigarette ashes—the ideal place to dump any kind of decision. When an administration, he says, seems motivated by a willingness to sacrifice principles to avoid trouble, it is the job of editorial people to show that they can get into more trouble by doing what is wrong than by doing what is right.

But it is useless to introduce a book merely by quoting it. This is the work of a man who is tired of hearing people talk down to the public; he thinks there ought to be more talking up, and even talking back. He wishes that the President of the United States—a former, even if somewhat accidental, president of Columbia University—might have done something to turn the tide of know-nothingism by speaking up for intellectualism instead of against it.

But Herblock doesn't seem to think much of this administration. We have a President who is not a father-image but an uncle-image—"a favorite uncle who has won fame and fortune abroad." But Herblock wishes he would do a little more at home; "from the way people talk about 'the men around the President' you'd think he was being hustled off by a riot squad. After all, there's nobody around him that he doesn't want there." Nobody ever excused Roosevelt (or Truman) on the ground that he didn't know what was going on in his administration; whereas almost every news conference turns up something that has been on every front page, but the President hasn't heard of it.

For the people who have heard of those things, in the administration, Herblock has not much use—though he is seldom as candid as he is about Mr. Brownell ("Guilt by association is not good enough, guilt by numerology is not good enough, and an Attorney General who uses those methods is not good enough either"). But his thorough and incisive discussion of the numbers game does not divert him from other characters; including conspicuously Mr. Dulles.

So you have a picture of an administration in which "whatever the state of our defenses against possible foreign aggressors, the American Government has probably never been so firmly on guard against Americans." This is the result of the Great Crusade, which, like some other crusades, turns out to have done most damage to people who had not been mentioned when it began.

To those who reverence the uncle-image all this will be blasphemy, but it is worth thinking over what has happened in the past 4 years before we decide that we want 4 years more of the same.

Salute to Capital Airlines and Its Loyal Employees on the Capital Team

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. FULTON. Mr. Speaker, on April 26, 1956, one of America's foremost airlines celebrated its 29th anniversary. Hearty congratulations on this happy occasion, and best wishes for the continued success of this fine organization.

Capital Airlines began its first scheduled operation April 26, 1927, over a 127-mile route from Pittsburgh to Cleveland. Its home base was at Bettis Field, Pittsburgh, an airport that then was little more than cleared pasture land. The fleet of airplanes that this airline operated consisted of three single-engined open-cockpit Waco biplanes.

In those early days passenger business was not solicited. Airmail was the chief source of revenue to all the fledgling airlines. But as aircraft became larger and faster, with comfortable cabin accommodations, travelers began to take advantage of this new type of travel.

Capital Airlines' routes expanded slowly at first. During the 1930's, when air travel began to increase in popularity, Capital spread its system map east and west and south until today close to 6,000 miles of airlanes make up this great company.

Although Capital is noted for many innovations throughout its long history, two events are outstanding contributions

to the development of commercial aviation. The first was the introduction of the low-fare aircoach to domestic scheduled travel in 1948.

The second major event was the lead Capital took in bringing the jet age of commercial air travel to United States air transportation. Today Capital Airlines is the only United States airline to fly jet-prop transport airplanes.

The fleet of jet-prop Viscounts serving Capital's routes has brought a new concept in flight to America. This is one of the chief reasons why Capital's 29th anniversary carries such significance. The Viscounts have launched a new era of air transportation promising air travelers more comfort, more speed, and greater dependability than ever before.

Capital Airlines is particularly fortunate in its top-flight management team: Mr. George Hann, chairman of the board, a prominent forward-looking attorney of Pittsburgh, Pa.; President James H. "Slim" Carmichael, under whose administration Capital Airlines has made such excellent progress; and General Counsel Jennings Randolph, former Congressman from West Virginia. Congratulations to these men on their fine leadership of the Capital team, and congratulations to the employees on their courteous, efficient, and safe air service.

Progress in Formosa

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. JUDD. Mr. Speaker, three members of the Legislative Yuan of the Government of the Republic of China, temporarily in Taiwan, Formosa, are studying our political institutions in the United States for 3 months on "leader grants" arranged by the State Department.

They are Hon. Tsun-Ying Wong, Hon. Shu-chin Tsui, and Hon. Yi-ping Kiang. Miss Wong studied at the University of Michigan 20 years ago and in private life is Mrs. Ting. Dr. Tsui is a distinguished educator and student of international law. Mr. Kiang was for many years an eminent lawyer in Shanghai.

All are members of the committee on foreign affairs of the Legislative Yuan, which is a unicameral legislature of 770 members, elected on the mainland in 1948, 532 of them left their homes in mainland China to keep the Government of the Republic intact on Taiwan.

At a luncheon here in the Capitol today for these distinguished visitors and members of the House Committee on Foreign Affairs, Miss Wong, who has served as chairman of their committee on foreign affairs, gave a report on progress in Taiwan, which under leave to extend my remarks I am happy to include herewith:

ADDRESS BY HON. WANG TSUN-YING

It is both a pleasure and a privilege for me to speak to this gathering of distinguished American Congressmen. It is also an honor for us to have been invited by your Department of State to visit your country. I wish to take advantage of this opportunity to convey to you our appreciation for the sympathetic understanding and support which you have been giving to our cause. As great and true friends to China, you may be interested in knowing the progress of Taiwan through your aid.

Political democracy has been organized and practiced. People can, through their representatives, participate in legislative work in various levels of lawmaking bodies. They also elect their own magistrates or city mayors.

All the elections in Taiwan have been carried out in accordance with President Chiang Kai-shek's counsel which stressed that "observance of law, limitation of expenses, and selection of the best and ablest" should be the guiding principles of these elections. The voters of the province have enthusiastically gone to the polls in all the elections. The number of voters who actually cast their votes sometimes exceeded 90 percent of the total eligible voters.

At present, all administrative programs, budgets, statutes, and regulations affecting the people's rights and obligations have to be discussed and passed by the Taiwan Provincial Assembly of the county and municipal councils, as the case may be, before they can be enforced. In the meantime, if the post of a county magistrate or municipal mayor should become vacant, the governmental authorities of a higher level have no right to appoint a successor. The vacancy must be filled by one duly elected by the people.

Economically, agricultural and industrial production on the island has registered considerable increase each year. Reconstructions are in rapid progress. There are more than 4,000 Government and privately owned industrial and mining establishments with over 300,000 employees. This number of working population does not include the fishermen, salt workers, and aborigines. In the past, the working people had a hard life. After the retrocession of Taiwan from Japan to China in 1945, the Government introduced various measures for the protection of the people's livelihood. The land reforms have greatly benefited the farmers. The living standard of the people has been raised. They all enjoy a peaceful and stable life. We have no beggars on the streets.

Educationally, during the Japanese occupation, opportunity for the Taiwanese to receive education was limited. Besides primary education, the local people were allowed to be trained only in farming, and in the engineering and medical professions. Admission to institutions of higher learning was restricted. The local people were not allowed to take law or political science courses. Before the retrocession of Taiwan to the Republic of China, there were in the Imperial Taiwan University only 85 Taiwanese students, of whom 80 were studying for medicine, 2 for literature, 1 for science and 2 for engineering.

Since the retrocession of Taiwan, the local people have been free to enter any kind of school and to choose any subject for study. Great progress has been made in the field of education, both in the quality of it and in the number of students.

During the Japanese occupation there were only 1,097 primary schools, 72 middle and vocational schools, 5 institutions of higher learning and a few public libraries and museums. Since the retrocession of Taiwan, there are 1,350 primary schools, 137 middle schools, 77 vocational schools and 14 institutions of higher learning.

Social education, during the Japanese occupation, was limited to a few public libraries and museums. There were few facilities to give education to illiterate adults. There are now 22 public libraries, 2 museums, 17 public playgrounds, 30 public reading rooms, and 4 social-education institutes. They stress the popularization of national language, audio-visual education, and the like.

In the 10 years following retrocession, the Government efforts at rehabilitation and at undertaking new construction, have resulted in marked improvement in communications and water conservation.

Thanks to the military and economic aid from the United States, Taiwan is now the strongest fortress as well as the loveliest place in southeast Asia. We are in the front line doing our utmost to guard against Communist invasion but we still need your sympathy and encouragement, so that when the time arrives we, free people, may stand together to deliver those who are suffering Communist tyranny.

How the West Helps Collectivization Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BYRD. Mr. Speaker, much is being said these days regarding trade with Communist countries. Under leave to extend my remarks, I wish to include an excerpt from the March issue of the International Peasant Union Bulletin, and I commend it to the attention of my colleagues. It emphasizes the importance of food to the Communists, and it should serve to stiffen us in our determination to stand firm against any form of trade with the Soviets and their satellites. Some people say that we should only withhold strategic materials. I maintain, as I have before, that everything is strategic to the Russians and to the Chinese Reds, and I would give them nothing, not even bubble gum. Who can deny the fact that food is strategic in the war for men's minds and hearts. Let us give no succor or comfort to the Reds. The article follows:

HOW THE WEST HELPS COLLECTIVIZATION BEHIND THE IRON CURTAIN

The admirable resistance of peasants in East-Central European Soviet colonies made it impossible for the Communist puppet governments to proceed with their plans for collectivization of agriculture. Forced collectivization has made the food situation in East-Central European countries so alarming that the Communists were obliged to abandon it, as they faced a major political upheaval among the population.

The latest Soviet 5-year plan includes a new drive against the Russian peasant, and the Communist stooges in the captive countries are coordinating their local attack on the peasants with Soviet plans. Before they start to wage their battle against the peasantry, the Communists need to stock enough grain to be independent of food production in their respective countries.

In the New York Times of March 11, Mr. J. H. Carmical in his article Reds Liven Trade in Farm Product reports that last week, Czechoslovakia, Hungary, and Poland contracted large orders of grain from Canada. One order alone, placed last week, included: 11,200,000 bushels of wheat bought by Czechoslovakia and 7,500,000 bushels each by

Hungary and Poland. In addition, Czechoslovakia purchased 1,600,000 bushels of barley.

In selling grain to the captive countries, Canada is not helping to feed hungry people. The east-central European nations were, before the war, the breadbasket of Europe.

Grain from Canada, on the contrary, helps the Communist governments to put down peasant resistance in captive countries. Where is the logic of such actions? The free-world press applauds the peasant resistance to Communist planning, while at the same time the West supplies the Communist governments with grain to help them crush the independence of the peasantry.

Such Western tactics are one of the main reasons why communism is marching victoriously forward.

It is not very expensive to distribute food in the free world. The West helps the undernourished peoples economically in action which are, in substance, giveaway schemes. There are so many millions of undernourished people in the free world. Only to adequately feed India, for instance, would take all the free world's available surpluses. B. S.

America Salutes Israel Celebration

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KEATING. Mr. Speaker, on Sunday, April 29, a mammoth America salutes Israel celebration is being staged at Yankee Stadium. With Judge Samuel S. Leibowitz as general chairman, the following national organizations are sponsoring this event: Farband Labor Zionist Order, B'nai Zion Order, American Trade Union Council for Labor Israel, and United States Committee for Sports in Israel.

A program of speeches, plus musical and sports events is planned. A highlight of the afternoon will be a soccer match between the Israeli Oympic team and the American League All-Stars.

Mr. Speaker, this commendable occasion will serve as an eloquent testimonial to the determination of the United States to maintain Israel's place in the free world as a sovereign and democratic state.

Under leave to extend my remarks, I am including a message I have prepared for the occasion:

It is with a great deal of deep personal satisfaction that I join in the America Salutes Israel celebration. An anniversary is always a great occasion, but the eighth anniversary of Israel's independence is an especially significant milestone.

It is a milestone which attests to the determination, the will to survive, the courage of the people of this bastion of democracy. It is a milestone which has particular significance to all Americans. For democracy in Israel is, like democracy in the United States, a divine incentive—the inescapable logic of her whole destiny.

This stake—the survival of a fellow democracy—forms the indissoluble bond, the moral bridge which is far more durable than that which might unite us with any other people.

America's ties with Israel are also spiritual, personal, human, and humanitarian. And as long as our western civilization endures, the priceless heritage of the religion which was cradled in Jerusalem will bind us to her destiny.

The new nation of Israel numbers among its citizens immigrants from every modern community of the free world. Its roots are as nearly universal as those of any existing community of freemen. A little of America and all the rest of the countries of the world are there and each segment merged into the whole there endures a mutual bond of understanding and affection.

Most Americans are pioneers at heart. Compared with the rest of the world, our national history is comparatively short, and most of our heritage glorifies the bold contest with nature and adversity we have been witnessing in Israel these last 8 years. Living Americans have in their memories the satisfaction of seeing wilderness change to benevolent living space, of watching homes and buildings and cities grow where nothing stood before, and of seeing deserts flower and hardy new generations rise up to populate an empty land.

These things are close to us and dear to us. We understand the problems and disappointments of Israel as other nations, much further removed from the atmosphere of the frontier, will never understand.

We applaud on this day Israel's miraculous achievements during 8 years of troubled existence. Everywhere there is progress. Everywhere the functions of government are performed with efficiency and skill. Law and order rule supreme within the borders. The humanitarian impulse and a willingness to build together a state based on justice, equality, and peace are the order of the day. This is Israel, 1956. That these conditions exist bodes well for a successful future.

We pray to God on this significant occasion for the continued progress of Israel's spiritual adventure to secure the permanent freedom of her ancient home. We pray to God that she will be able to continue to live a life consecrated to the universal vision of fraternity and peace. If Israel will continue to serve this ideal, the new era of her freedom will be worthy of the inheritance of those who have gone before.

Our hearts go out today to those many miles away who strive so sturdily and courageously for the survival of the Holy Land. We thank God for successes so far and pray for continued prosperity.

We Believe

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the American Farm Bureau Federation has decided upon the fundamental principles in which its members believe and which were set forth in the Illinois Farm Bureau magazine of May 1956. This interesting statement follows:

WE BELIEVE

To know what one believes gives quality to his thinking and purpose to his acts. Farm Bureau delegates, therefore, have decided on the fundamental principles in which they believed before writing the detailed resolutions which govern the Farm Bureau position.

I particularly like the foreword of the American Farm Bureau Federation resolutions. Believing these fundamentals will serve as a source of strength for all of us in the future, as they have for me in the past, I set them forth as this month's message to you:

"We believe—

"In the American competitive enterprise system.

"That man's search for progress should be encouraged by maintenance of opportunity, not hindered by illusions of security.

"That a person should be rewarded in accordance with his productive contribution to society.

"That every man is entitled to own property, earn money honestly, save, invest, and spend as he chooses.

"That property rights cannot be taken away without infringing on rights guaranteed by the Constitution.

"That the Constitution is the basic law of the land, and that its interpretation should be in accordance with the intent of its authors.

"That Government regulatory functions should be based on law.

"That Government should provide only minimum controls and aids.

"That Government should stimulate, not discourage, individual initiative.

"That propagandizing by Government is dangerous to the maintenance of self-government.

"That monopoly—whether by Government, industry, labor, or agriculture—is dangerous.

"That voluntary cooperation is part of the American system.

"That candidates for public office should state their beliefs with respect to communism, socialism, and capitalism."

OTTO STEFFEY,
President, Illinois Agricultural Association.

General Twining on Air Power

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, in the city of Shreveport during the springtime each year local people join together for a festive occasion called the Holiday in Dixie. On the first day of this occasion—April 25, 1956—came Gen. Nathan F. Twining, Chief of Staff of the United States Air Force, and addressed a joint meeting of Shreveport civic clubs. The subject was, of course, air power, but on this particular occasion General Twining, America's No. 1 airman, so carefully and ably mixed his remarks concerning the Air Force with local history and local conditions as to strike his audience with surprise and admiration.

This address is a most learned analysis of the importance of air power and it is entitled to especial attention from all of us who want our land to remain strong and invincible. I am pleased to present herewith this address:

ADDRESS BY GEN. NATHAN F. TWINING, CHIEF OF STAFF, UNITED STATES AIR FORCE, AT THE SHREVEPORT JOINT CIVIC CLUBS HOLIDAY IN DIXIE, SHREVEPORT, LA., APRIL 25, 1956

First, I want to thank you for asking me down here to be present during your Holiday in Dixie celebration. I am always glad

to get away from the frenzied pace and pressure of Washington, and this is an especially nice time of year down here. To be able to attend your great show makes this trip a triple bonus for me. I wish I could stay with you through the entire celebration, but unfortunately, I cannot.

You are all aware that Shreveport is closely allied to the Armed Forces today by reason of its close relationship with Barksdale Air Force Base. I have been struck by this fact of your town's background: Shreveport owes its very existence to Armed Forces.

To repeat some of your interesting local history, this locality, in 1815, was known as Bennett and Cain's Bluff. Aside from a trading post on the Red River, its only other attraction was the Catfish Hotel. I understand that this hotel was named in honor of its main dish, taken fresh from the river and served to fur traders, rivermen, and cattlemen.

Bennett and Cain's Bluff could not grow, for it was locked in by the Great Raft, a hundred-year-old jam of driftwood in the Red River. This jam blocked off the bluff 80 miles in each direction.

A little later, the United States Army began to haul freight through this territory along a route known as Military Road. This long, expensive trip could be shortened by using the river, so in 1833, the Army commissioned a man named Henry Shreve to clear the jam. He built two floating battering rams, and within a year had cleared the jam. Immediately, this locality began to prosper from steamboat trade.

In gratitude, the townspeople here, named their newly incorporated city, Shreveport.

This story is interesting to me because it illustrates the direct result of a military requirement which harnessed money and brains for the common good. Many people associate the military only with wars, but some of the greatest advances of civilization have been spurred by military necessity.

For example, the need for quick transportation of Roman soldiers resulted in the Appian Way, part of which still exists.

Or, take the airplane. The extensive experimentation and developments by the Military Establishment over the last 50 years have resulted in many blessings. Not only is our Nation protected by the greatest air force in the world, it also enjoys the finest and safest commercial air-transportation system in the world.

Or medicine, Maj. Walter Reed discovered that the mosquito transmits yellow fever. His discovery has led to almost complete elimination of this disease.

And Maj. Carl Darnell, 45 years ago, perfected a way to purify water with chlorine. His ideas are still in use throughout the world.

I could go on and on.

Perhaps the greatest result of military effort will be atomic energy. While learning to make the most effective weapons of defense the world has ever seen, we have opened the door to undreamed sources of power, health, and wealth.

Of course we would eventually have atomic energy, with or without military effort. However, there is no telling how many decades it would have taken to pass through the various stages of experimentation and testing, had it not been for the Manhattan project and successive military projects.

All through our history, military projects have contributed to our growing standard of living.

Here in Shreveport you understand this very well. Barksdale Air Force Base is a real part of your community. Indeed, the 20,000 acres of Barksdale was donated by this city in 1930. The base now furnishes employment for many local townspeople. The officers and airmen stationed here take part in local activities. Barksdale's monthly $3½ million payroll contributes to community prosperity in a real way. Certainly our peacetime military activities have a beneficial effect here.

And the benefits are mutual. I am very happy to see your fine new bridge over the Red River which connects Barksdale to Shreveport by a direct route. I realize that the decision to build this bridge was made out of loyalty and your friendly desire to provide for mutual improvement. I think this is a wonderful thing—an exceptional example of the common benefits of a peacetime, military-civic relationship.

We are allowed to enjoy these benefits fully only during peacetime. It is here that our military forces make their greatest contribution. Instead of getting us into war, we have found that strong military forces can get us into peace—and keep us there.

This year we are observing what we call a decade of security through airpower.

This decade began when we actually had a very small amount of military forces of any kind. After World War II, we reacted just as we did after the First World War. We were so sick of war, and so relieved when war was ended that we were blind to the future. In haste we disbanded—actually ripped apart—the finest and largest defense organization in history. Our Army, Navy, and Air Force were all stripped. The residue were shoestring forces in every sense of the word.

At the same time we were destroying our weapons, the Communists were rebuilding their forces. Their traditional goal of world domination had not been changed by World War II. Instead of dulling their competitive instincts, World War II had whetted their appetite for new conquests.

In short order, the Communists launched their aggression in Greece; they took Hungary and Czechoslovakia; they solidified their hold over Poland, East Germany, and China.

On all fronts the Communists demonstrated complete willingness to use armed aggression whenever and wherever they thought it would pay.

We were slow to react. Many Americans were stunned by this apparent reversal in behavior by people who, earlier, had been trusted allies. Russian soldiers had fought valiantly on our side, and we had given the Soviet Union millions of dollars worth of weapons and equipment. How could we be anything but friends?

Too slowly we realized that our wartime friendship had been one-sided in every way. It is clear that the Soviets were using one adversary to help conquer another. We know now that their objective was not to be on the right side, but to be on the winning side.

During the late 1940's when we were largely unprepared to meet armed aggression, either here or against our allies, the Communists held back from an all-out effort. In retrospect it is easy to see what stopped them.

During this period, the Communists were not held back by morals, ethics, or fear of public opinion. They have repeatedly demonstrated that these criteria have absolutely no effect on their policies or actions.

Neither were they held back by our conventional armed strength. They were well on their way toward a powerful Red Army of almost 200 divisions. The land armies of all free nations were insignificant by comparison.

Certainly no naval force presented a threat to the Reds, rulers of the world's greatest land mass. In fact, faced by the hostile Communist nation of great land area, most of the other naval powers channeled their military strengths into more effective areas. Indeed, almost purely by default, the Soviet Navy rose to its present No. 2 position. They needed no intensive shipbuilding program to achieve this standing.

No, it was neither morals nor men, ethics nor battleships, that held the Communists back. It was our ability to send airplanes over their homeland; airplanes, which could deliver a knockout punch.

Yes, even the small Air Force we had at that time, could mount a retaliatory attack with nuclear weapons. And during that time, the Soviets could not. For the moment, at least, they were forced to postpone major aggression as a course of action.

They they decided to test our mettle in another way. The Berlin Blockade is a familiar story to us all. Here again, American airpower effectively blocked a Communist move, made the Reds look ridiculous, and did more than any other one act to give our allies faith in us.

Shortly after this came an event which emphasized the importance of airpower. The first nuclear explosion in Russia was a punctuation mark—signalling the end of an era of American safety by isolation. In World War II, we played the game of blackouts and air-raid drills, but there was never danger of a significant attack.

Now, the Soviets had in their hands the growing power to attack us here at home. Still, we were safe. We retained the abiltiy to hit back harder than we were hit.

The Communist planners were intelligent, cool men, with much patience. They were not strong enough yet, so they held back and turned their attention to lesser goals.

Like Korea. Here they believed they would find little resistance, and so the Communists moved south into the free part of Korea, which they coveted.

Again, American airpower helped to save the day. It is generally admitted that our bombers and fighters played a big role in preventing allied troops from being pushed into the sea.

Instead of being pushed into the sea, our forces were able to achieve the United Nations objective, which was denial of South Korea to the aggressor. That this could be accomplished in the face of overwhelming numbers of Communist ground forces is a tribute to our air units in Korea.

Even more important: that the Korean war was kept localized is a tribute to long-range American airpower, like the airpower now based at Barksdale. The B–47's here, and the B–36's at Fort Worth were part of the force that kept Communist aggression localized.

Perhaps one might say that the Communists may have done us a big favor when they attacked South Korea. They jogged us into reversing the trend of weak defenses. We finally realized that weakness invites attack and strength deters aggression.

I want to emphasize that throughout this entire 10-year period, our security has been guaranteed by one fact. The Reds have realized that we could hit back harder than we could be hit.

They have been working hard to swing this balance the other way by building a powerful modern air force, armed with both fission and fusion weapons. They have achieved a formidable success in building up their airpower. Yet they have not succeeded in swinging the balance to their favor. They are ahead of us in many categories of airplanes, the most serious of which is in the heavy jet bomber category. Nevertheless, we feel that we have maintained a lead in comparative overall effectiveness.

This lead is what it will take to guarantee continuing security. If in 1966 we are to be able to observe a second decade of security through airpower, we must work harder than ever to insure our airpower lead.

Here are some of the things we are doing in this line.

We are extending the range of our airplanes. For example, the B–47 is a medium-range bomber. To give it intercontinental

range we use overseas bases and aerial refueling. As you know, Barksdale participated in a major milestone in military aviation. In February 1954, the entire 301st Medium Bomb Wing of 45 B–47's refueled in the air and flew almost 5,000 miles from here to North Africa.

But the performance of the B–47 is penalized by having to descend from efficient altitudes to hook up with the old, low, and slow-flying KC–97's. During the next 10 years we will convert our refueling force to jet tankers whose altitude and speed approach that of the B–47.

Then too, during the next few years, our heavy bomber force will be modernized.

The B–36 is now beginning its retirement, to be replaced by the B–52 heavy jet bomber. In view of the increased threat posed by the Communist air force, we have accelerated our B–52 program. Even now, we are weighing the advisability of increasing the planned B–52 force.

Missiles, of course, will become increasingly important during the next 10 years. The Air Force has recently released the information that we are giving top priority to three missile projects. These are ballistic missiles. Two of them are long-range or intercontinental missiles, and one is our intermediate range ballistic missile. As an alternate to the Air Force IRBM project, the Army and Navy have been assigned responsibility to develop the Redstone missile for possible use as another IRBM.

I wish to emphasize that both in our Air Force and in the Red Air Force, missiles are merely another potential weapon. Powerful to be sure, but not magic. No missile can do a job that cannot now be done with combat airplanes. The missiles only advantage is a potentially greater efficiency—cost wise—than aircraft. By that I mean that missiles are built to destroy targets. We now have airplanes that can destroy targets. It may cost us several airplanes to destroy a target. It may take more than one try. Ultimately, one missile will be able to destroy a target in one try. Thus their only advantage is efficiency.

It is perfectly true to state that there is no known defense against a ballistic missile. Standing alone, this statement has alarmed many people. What we must remember is that it is equally true that there is no known ballistic missile in the inventory of any armed force.

Offense and defense capabilities always leapfrog each other. I am confident that when the time comes that one or both sides have effective, dependable, accurate ballistic missiles, the period in which there will be no defense will be either very short or nonexistent. In fact, the processes we go through in learning to build a ballistic missile will guide us in building a defense.

I am certain that an anti-ICBM will be built.

Furthermore, if, conceivably, a hostile power were to perfect a reliable ICBM before we do, the deterrent effect of our atomic airpower would still be effective.

Adding to our present effectiveness during the ICBM time period, could be the atomic-powered bomber. Theoretically, it would be possible for us to maintain a fleet of nuclear-powered bombers airborne and invulnerable to ballistic missile attack. The unlimited endurance and range of such bombers would make it possible for us to keep them positioned all around a potential aggressor—ready to retaliate the instant a missile were launched in our direction.

There is one other point on missiles we should understand. Potentially hostile aircraft can spoof us; that is, they can head our way and turn back just short of our borders. Since we wish to prevent war, we would be unlikely to send a retaliatory attack until we were sure that the approaching aircraft really were going to attack. In other words, there is always an element of doubt as to the intention of approaching aircraft.

However, once a missile is launched on a certain trajectory there is no doubt. There is no period of indecision. Thus in this way the airplane is, and will be, a much more effective instrument of influence, control, and perhaps psychological warfare than any missile.

I mention these points mainly to reduce the ICBM to its proper perspective in the spectrum of future weapons. It will be a tremendously important weapon, but it will be a long time until it is reliable enough to replace other weapons systems, and much longer until it can match all the capabilities of the airplane.

Looking to the years ahead in a general way, all of the weapons, planes, tools, bases, and highly trained men that we will need to keep on top will cost increasing amounts of money. Yet I think if the 10 percent proportion of the gross national product now devoted to defense is continued at about that level, we will be able to provide continuing security.

There is a danger that we fall into the trap of complacency. Just as a city cannot afford to disband its fire department after a month of no fires, our Nation cannot reduce its defense because we have no wars. We must never forget that it is our powerful defense structure which can do the most to prevent wars.

Thus our military forces can free our Nation to use other means of dealing with world problems.

I will close, emphasizing this point by borrowing another story from your local history.

At one time during the Civil War, it was thought that Shreveport might be in danger of attack by boats advancing up the Red River. To defend the city, forts were built along the river. Cannon were scarce, so fake artillery were carved from the tree trunks and placed in menacing positions along the river banks.

Shreveport never was invaded. Possibly the humbug guns helped, but more likely, the Union Army was turned back at Mansfield and Pleasant Hill by some very real artillery.

The moral is—psychological warfare can only be successful provided it is backed up by military strength. Humbug weapons won't deter the Reds from aggression but a ready-to-go- retaliatory force will.

There is nothing fake about the military strength at Shreveport now.

If all the communities of the Nation were as interested in supporting and helping the Air Force as you are here in Shreveport, we could all feel much safer.

Again I want to thank you for asking me down for your Holiday in Dixie. I have really enjoyed my visit.

Against Stalin or Khrushchev?

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include an article from the March issue of International Peasant Union. The article, by S. Mikolajczeyk, is entitled "Against Stalin or Khrushchev?" I commend it to the attention of my colleagues. The article follows:

AGAINST STALIN OR KHRUSHCHEV?
(By S. Mikolajczyk)

Intense feeling and speculation have been engendered following reports of the press concerning the secret session of the Communist Party leaders in Moscow. This session, as well as the new party line condemning Stalin for preparation of murders and blunders, surprised the world. The question is, then: What is the meaning of the new line; why is Stalin condemned, and what purpose could this condemnation serve?

The new tactics used by the Communist leaders are intended not so much to villify Stalin, as to prevent Khrushchev's becoming another one-man dictator over Soviet Russia. What these tactics import, is less denunciation of Stalin than an attempt to prevent Khrushchev from stepping, finally, into Stalin's boots.

There was never any doubt that Khrushchev is a man who had sufficient shrewdness and ability, not to mention opportunity, to become Stalin's successor. But swiftly as he moved, with the killing of Beria, Malenkov's removal, and purges in the various Soviet Republics, his leap to power was still somewhat short of the mark before the party congress. He became, with the confirmation of the party congress, the first among others, but did not attain the one-man power possessed by Stalin. It is not so important to know what was actually said during the secret session. Much more important is the fact that the internal struggle over one-man dictatorship in Soviet Russia is in full swing again.

Opponents of Khrushchev used every opportunity to point to the example of Stalin. There was certainly unity among them on at least one point: how to use Stalin's example to prevent Khrushchev from taking over Stalin's power. At the same time, they all tried to find the best way to approach the people while preventing splits or other damage to the party.

It can safely be predicted that in the long run collective leadership for a Communist system is impossible. If decisions will be made by vote, then the very fundamentals of Communist dictatorship will be undermined. Once decision by vote is applied, it will inevitably lead to the growth of democratic procedures in government. Collective leadership cannot be forever restricted to the top echelons. The very existence of collective leadership at the top invites the democratization of the entire system down to the lower echelons, and must, finally, lead to democratic procedures in consulting the people at large. The Communist leaders are very well aware of the fact that once they have begun to move in this direction, they are undermining their dictatorial system, and that this may be the beginning of the end. What must prevail in the end is their old system of dictatorship by one man.

But the tactic of vilifying Stalin in order to keep Khrushchev from becoming sole dictator will backfire on the Communist system.

Stalin, like all dictators, made use of the well-known method of spreading rumors among the people that the responsibility for terror, economic hardships, etc., lies with the lesser functionaries of the Communist apparatus. From time to time, he purged these officials to demonstrate that every time news of wrongdoing by the local bureaucrats reached the good father, "Batiushka Stalin," he came to the support of the people and punished the guilty.

As a result, the Soviet people's growing hatred for the Communist system was directed more against others, and was not exclusively centered upon Stalin. Hated as he was, he was not the most hated among Soviet leaders.

Stalin also made clever use of strong national feelings, and even long-dormant imperialistic tendencies among the Russian

people. Nor did the people's great love for their fatherland and their deep-rooted faith escape being utilized by Stalin during the worst moments of Hitler's invasion into Soviet Russia during World War II.

The victory over Hitler, interpreted solely as a Soviet victory organized by Stalin, as well as the expansion of the Soviet orbit in Europe and Asia, were presented to the Russian people not only as Communist successes, but as great national achievements, surpassing anything ever attained by czarist imperialism. At the secret meeting in Moscow, therefore, the Communist leaders, while quarreling among themselves and planning the new party line, had to consider very carefully how to proceed in removing Stalin's name from the roster of party saints without making inevitable certain consequences of the new tactic, which they knew must backfire on them sooner or later.

The shocking facts revealed by the Soviet leaders about Stalin's past, most recently published in the western press, were certainly very useful, even when they have been generally well-known before to western public opinion. Their publication came in time for Malenkov's visit to England, prior to the Khrushchev-Bulganin arrival there. These reports began their work, and when they reached the Soviet orbit, backfired in the Communists' faces and disrupted the procedure so carefully planned at the secret session. In the whole orbit of Communist domination, the Communist leaders will not be able to prevent the inevitable consequences, no matter what they do now.

In the West, guessing and speculation is widespread concerning possible future developments. Western predictions and guesses, however, are very often based on a knowledge of what happens in similar situations in South America when military juntas take over power.

Unfortunately, such reasoning does not apply to Soviet Russia. Molotov has already disposed of any grounds for such wishful thinking by emphasizing that Communist Party membership among Red army personnel has reached 70 percent, while amongst the Soviet people it has not exceeded 4 percent. The Red army is controlled by the most devoted and skilled members of the party among the army's lower echelons and younger officers, while from the top it is controlled by such party figures as Bulganin and others. Konev, Zhukov and other outstanding military leaders will not sacrifice their lives for friendship with the military leaders of the West. Controlled as they are both from top and bottom, they are happy over their survival after the Second World War, and having returned to their former military posts, why should they now risk being liquidated?

Inside Soviet Russia, the security of the Communist system is based on military units of the security police. They have garrisons, weapons of all sorts as well as ammunition, and are the stronghold and guardian of the Communist Party. This is the reason for Khrushchev's elimination of Beria, and the change in the security system. The military units of the Soviet security police came under Khrushchev's control, as the secretary-general of the party, and he has now subordinated them to the Ministry of the Interior. Under the former system, the Soviet security police were engaged in many widespread activities involving Soviet security, spying and diversive action against the West, counter-intelligence activity, and control over atomic power. All these were now subordinated to the newly created security committee, again under the control of the secretary-general of the party, Khrushchev. The same changes in the organization of the security system were soon after instituted in all the satellite countries.

Perhaps now, in this period of internal struggle for power, Khrushchev will have to rely more and more on some of the Soviet generals, not only because they were also among those who denounced Stalin (in order to keep Khrushchev from seizing Stalin's power), but also because it may turn out that in this internecine war Khrushchev will need even the army to help control the country, should the military units of the security police prove to be inadequate. Inadequate, that is, to squash the consequences of the new line, wherever supposedly pro- or anti-Stalin followers will begin to fight each other all over the country.

While the fight for power amongst party leaders in Moscow continues in full strength, the U. S. S. R. continues to suffer from another weak point whose significance, far from diminishing, keeps steadily expanding—the Soviet failure in agriculture. Recent orders to deprive the Soviet peasants of privately worked small plots of land, and to leave them much smaller plots to be used only for flowers and a handful of vegetables, will not endear the Communist system to the peasants. The output of the small private plots had helped the Soviet peasant produce meat and fats to fill out his meager diet, and even more—it had helped to save the country from starvation during World War II.

The Soviet peasants know that the new orders aim to deprive them of the only possessions they have left—the tiny, privately owned plot of land, and the 1 or 2 cows, pigs, and poultry which were their only means to survive. They are certain that when they have to surrender these plots, which symbolize their last and only hope, the end will have come for them. The peasants will oppose these orders with any means left to them under the Communist system.

The latest developments in the U. S. S. R., stemming from the fight for power among the leaders and from the newest restrictive decrees against the peasants, already have backfired in Soviet Russia as well as in Asia, where the consequences of these developments are clearly visible. They have resulted in renewed hope, and in the growth of anti-Communist feelings among the oppressed people behind the Iron and the Bamboo Curtains.

This situation is very promising for all: those who are free, and those who long for freedom and independence from the oppression of communism. But this promise is a condition which can produce either a speed-up or a delay of further developments in the struggle between the free world and communism.

If the West relaxes immediately, misled by the false conviction that the Communist system will deteriorate by itself, and if the Western World begins to treat Khrushchev and others as poor children who were so badly treated by Batiushka Stalin, and therefore need sympathy and a helping hand, the process of deterioration in the Communist system will be delayed.

The present Soviet leaders not only share responsibility for all of Stalin's practices, but for all the Communist terror and subjugation imposed by them not only upon individual Communists, but upon entire nations, and upon all opponents of communism in the Soviet orbit, whom they constantly humiliate, imprison, or murder. The time has now come for the West to sharpen both its sense of alertness and its measures of self-defense, and to unite for increased pressure against the Moscow dictators, who now protest screamingly against the maltreatment suffered under Batiushka Stalin. For the Communist leaders, in their desperate efforts to save their own skins, may jump to any number of conclusions.

Khrushchev, as Secretary-General of the Ukrainian Communist Party, was the man personally responsible for the murder of many thousands and the deportation to Siberia of millions of Ukrainians, and after the Molotov-Ribbentrop Agreement in 1939, it was he who ruthlessly introduced the Communist system to the prewar territories of Poland annexed by Soviet Russia. He deported more than one and a half million Poles to various forced labor camps in Soviet Russia—working hand in hand with Mr. Ponomarenko, present Ambassador to Moscow, at that time acting as Secretary-General in the territories which Soviet Russia annexed to the White Russian Republic after the secret agreement with Hitler.

Mr. Bulganin, as Stalin's Ambassador to the Bierut Lubin Committee, helped subjugate Poland with the assistance of the Soviet Army and swarms of Soviet Security Police units, which he brought with him to Poland.

If the so-called maltreated children of Batiushka Stalin continue Stalin's practices (which they always utilized) in the captive countries, we may ask them: Are they ready to stop the persecution of all these nations as well as of all anti-Communists in the Soviet-occupied countries? Are they ready to restore freedom to nations occupied after World War II, and to those inside Russia? Are they ready to recognize freedom, democracy, and religious freedom for all the people; to withdraw the Soviet Army and Soviet functionaries from occupied countries? And will they agree that all these people should have freedom to decide their own fate, and to choose their own governmental and political system freely, in truly democratic elections under the supervision of the United Nations?

Col. Edward J. Connelly

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. MACDONALD. Mr. Speaker, it is highly gratifying when deserved recognition is given to an individual whose whole life has been directed toward giving service to his Government and to his fellowman. Such an event has just taken place in my congressional district where a testimonial dinner was given in honor of Col. Edward J. Connelly, a native son of Wakefield, Mass. I was very pleased that I could be present at the testimonial dinner to pay tribute to this able and outstanding American citizen. Colonel Connelly is more than deserving of this great honor that has been bestowed upon him. He earned this tribute not only because of his distinguished military service, but also for the outstanding and meritorious service he has rendered his Government both on a Federal and local level. He is an example of our citizens who put the welfare of their country above all other considerations. Colonel Connelly is a man of honor and integrity, a Christian gentleman, and a true American.

We, in Massachusetts and particularly our citizens of Wakefield, are very proud of Colonel Connelly and we extend to him our very best wishes for many happy and fruitful years.

The editorial follows:

IN THE RECORD

A testimonial to a man who has written a record of service like that of Col. Edward J.

Connelly can do little. It can only express in very insufficient terms the feeling of respect and gratitude and warmth a community feels toward one of its key citizens.

Saturday night's testimonial did that in Colonel Connelly's case, but, as one of the speakers said, the true measure of service by the town's first soldier can best be taken by a look at the record.

That record has been printed in the Daily Item and it is as impressive as it is long. It includes service in the military field, the field of government, and the field of aid to veterans and townspeople. In all these fields Colonel Connelly's service has been notable and the record is one to which few men indeed can lay claim.

Referring to his service in World War I, Colonel Connelly told the group Saturday night that he was grateful to be remembered after 40 years. He is remembered, and his gallantry as a leader of men under fire will continue to be a vital part of Wakefield's history.

His service hardly ended there, however. It has continued to the present when Colonel Connelly still is a very important moving spirit behind many activities of veterans' organizations.

As the speaker said, it is all in the record, a record still being lived and written, one which in a small way Wakefield's citizens honored Saturday by their recognition of a gallant soldier and an outstanding native son.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dill, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

Appendix

Address by Hon. J. Glenn Beall, of Maryland, at Dedication of Northeast Hebrew Congregation Synagogue

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 30, 1956

Mr. BEALL. Mr. President, I recently had the great privilege of participating in the dedication of the new synagogue of the Northeast Hebrew Congregation, in Mount Rainier, Md. Although the event was a happy one, and our prayers were for peace, our thoughts were inevitably drawn to the sorrow and tension of the Middle East. Perhaps some day we shall be able to dedicate our synagogues and churches in an atmosphere untainted by trouble and hatred. At present, however, we must face the existence of such things, and must determine that all of our places of worship shall stand as symbols of our continuing hope for friendship and peace. I ask unanimous consent to have my remarks included in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR BEALL AT DEDICATION CEREMONIES FOR THE SYNAGOGUE OF THE NORTHEAST HEBREW CONGREGATION, 4601 EASTERN AVENUE, MOUNT RAINIER, MD., ON APRIL 29, 1956

I am very happy to be here at the dedication ceremonies of your new synagogue and religious school.

I understand that although you were organized about 7 years ago, you will now for the first time be occupying a building of your own—in which, however, some bank or mortgage company may have a slight interest.

The addition of a house of worship to any locality is a cause for celebration, not only by the members of that congregation, but also by the whole community which it serves.

No principle is more fundamental in our system of government than the one expressed in the phrase: "separation of church from state."

Its meaning, however, must not be misunderstood or misinterpreted.

What our Constitution guarantees is that no church shall become the state; that no form of religious worship is to be hindered or prejudiced; and that no church or denomination is to be extended benefits and privileges not offered on an equal basis to others.

It was never intended, however, that the state should or would separate itself from the moral principles which religion teaches, nor from the ethical ideals which the church or synagogue or temple—each in its own way—seeks to impress on its members.

Such a view would be contrary to the entire historical development of our country.

Our Founding Fathers received a great deal of inspiration and guidance from the Bible, and our American tradition is rooted in its teachings.

To the extent that the church or synagogue performs its functions of introducing into the lives of its people the divine purpose in life, the state—which means in essence your neighbors of whatever faith—is a direct beneficiary.

As you create in the minds and hearts of your worshipers an appreciation of spiritual values and higher ethical conduct, the moral tone of the community as a whole rises, and it becomes a better place to live in.

By its own means, the State can only exercise a negative influence in raising standards of conduct.

It can threaten punishment for violations, and it can then punish those violators which are caught.

Therefore, to some degree it might reach the conduct of the individual, but very rarely, if at all, does it affect the standards.

The synagogue and the church, on the other hand, have the capacity to exert a nositive influence.

Their task is to develop the proper moral and ethical beliefs which will reject a course of conduct which is contrary to them.

Put into practical terms, that means less crime, less juvenile delinquency, less unethical business conduct, and less conflict between economic classes, or between any groups which divide along lines of race, religion or color.

It means less meanness and less oppression, and greater tolerance and understanding of your fellow man.

In a world now dominated in large part by a Godless faith, communism, where true freedom of worship and religious teachings are denied, and where only recently we saw countries in which every synagogue was gutted and destroyed, the dedication of a Jewish house of worship represents a triumph of our Bill of Rights and our democratic principles.

The struggle for liberty is a never ending one.

Undoubtedly you are all acquainted with the great fight which was made in the Maryland Legislature by Thomas Kennedy, of Washington County, to remove the bar against Jews holding office.

The struggle, initiated by Solomon Etting and Barnard Gratz, in 1797, was taken up by Christian legislators in 1816, and for 10 long years Tom Kennedy, with his valiant band of devoted and dedicated men with a passionate love of liberty, kept up the battle.

In 1826, the bill was finally passed, thereby advancing the cause of religious freedom everywhere.

While we are accustomed to measuring achievement and progress in terms of industrial growth, increased productivity, economic expansion, or scientific development, such conquests gained in the realm of the spirit are the lasting ones.

Today the battle for liberty is on another front.

As men and women in a free country with individual opinions, we are bound to have differences.

Uniformity and unanimity exist only in a totalitarian state.

It is of the essence of a democracy that a diversity of views may exist.

However, under our system of government, our Constitution, as interpreted by the Supreme Court, is the law of the land.

When that Court has ruled, we obey, regardless of how violently we may disagree with the opinion.

I know, and I can well understand, the great revolution which the recent decision of the Supreme Court represents in the customs, habits, and beliefs of many of our fellow Americans.

Consequently, we should not ignore the great progress which the enlightened citizens of our great Nation have already made in advancing the civil rights of their colored population.

I believe, too, that the Supreme Court recognized the problems involved and, therefore, directed that we must aim toward the change; but that it need not be made—in fact, should not be made—with such haste as to destroy the very objective we seek to achieve.

I believe that the position taken by the Honorable Simon E. Sobeloff, Solicitor General, in recommending this procedure to the Supreme Court, was a very sound and sensible one.

It followed neither the course of those who would nullify the decision of the Supreme Court nor of those who would seek to put it into effect at once, without giving the communities involved the opportunity to adjust and condition themselves to the change over a period of time.

I have, therefore, fought for the confirmation of Solicitor General Sobeloff as a judge of the court of appeals for the fourth circuit, and I shall continue to fight for that confirmation.

I believe that the opposition has been unfair to a man who is not only a great jurist, but who also possesses an enormous amount of commonsense and an abundance of the human quality.

A few days ago marked the eighth anniversary of the independence of the State of Israel.

Speaking on an occasion such as this, it could hardly be proper not to allude to that event.

According to recent newspaper reports, a cease-fire has apparently been agreed upon between Egypt and Israel.

However, let us not delude ourselves.

Unless there is some radical change, this will be only one more temporary armistice which will falter because the basic conditions for its permanence have never been satisfied.

For 7 years since the armistice, Israel has been trying to sit down at a peace table with its antagonists to arrange for a just settlement of grievances, but to no avail.

We all know too well of the various economic and military pressures against which the fledgling nation had to contend in its early days.

Now the situation is infinitely more menacing.

Each week we hear new reports that the Communists are sending arms to the Arab nations, and each day we feel the tension mounting.

There is no need to ask ourselves why Russia is interested in the Middle East.

The motives of the Reds are frightfully obvious.

Behind the friendly overtures which are flowing from the Kremlin to Cairo and its sister cities is one central purpose—Communist expansion.

The roadblock is Israel, conceived in a spirit of freedom and dedicated to its preservation.

From the very beginning I have made my position clear.

I am, and have been, an advocate of mutual security pacts between our country and any nations in the Middle East that are willing to refrain from aggression.

I am not speaking in generalities.

Although the words I use might have lost some of their original impact through constant repetition, they nevertheless express the hard fact that this Nation must supply help—and I mean that word to include the very latest arms—to offset whatever aid is poured into the area for purposes of aggression.

This is not merely the only just thing we can do; it is also the only practical thing we can do.

Such a combination of incentives should leave us without the slightest doubt concerning our path.

Our thoughts during the past few minutes have been turned to turmoil, but behind them have been our hopes and prayers for peace.

This beautiful edifice that you are dedicating today is a symbol of the peace which we are seeking, and I therefore congratulate you and wish you Sholom.

Arab Economic Warfare Against Israel

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. ROOSEVELT. Mr. Speaker, one of my constituents has sent to me the text of a talk delivered by Mr. Edward Robbins, assistant vice president of the Hollywood State Bank and cochairman of the board of the California-Israel Chamber of Commerce, at the luncheon meeting of the California-Israel Chamber of Commerce held on Monday, March 26, 1956, at the Biltmore Hotel in Los Angeles.

This talk is so informative and presents such a challenge to the weak and ineffective present policy of our State Department that I not only endorse the sentiments of Mr. Robbins but I hope that it will be possible for many of my colleagues to emphasize the facts and the conclusions which he so well sets forth:

ARAB ECONOMIC WARFARE AGAINST ISRAEL.

The Arab boycott began December 1945, 2½ years before the establishment of the State of Israel. At that time, the Council of the Arab League adopted a resolution banning the import of "Zionist" goods. This boycott directed at the Jewish community in Palestine, had limited effect, since it was difficult to distinguish between "Zionist" and "Palestine Arab products."

Since the establishment of the State of Israel, Arab boycott activities have reached the height of a full-fledged economic war.

First, there is the boycott against companies dealing with Israel. According to regulations issued in September 1952 by the Council of the Arab League and enforced in Arab countries, foreign firms will be boycotted "if they own an assembly plant in Israel, if they maintain a general agency in Israel, if they concede to an Israeli firm the right to use their name, or if they invest in an Israel concern."

Further, these regulations provide that "should any of these firms show itself ready to terminate its activities in Israel, the Arab governments will place at its disposal all possible facilities in order to enable it to transfer its plant to one of the Arab countries."

Although only a few of the foreign firms actually connected with Israel have yielded to this form of Arab pressure, these measures have had adverse effects on potential foreign investments in Israel.

Another form of boycott is in the field of sea communications.

The Suez Canal, despite the ruling of the Security Council of the United Nations, is not only barred to Israeli ships but also to foreign ships which might be bringing so-called strategic goods to Israel. The same restrictions hold true for the Gulf of Aqaba and the Strait of Tiran.

Thus, all tankers, of whatever origin, carrying oil to Israel are black-listed. When this takes place, they cannot call at Arab ports and do business with Arab countries.

This blockade affects in particular Israel's sea communications with Asia, east Africa, and south Africa. It also has resulted in discouraging to a great extent any foreign shipping company from taking cargo to or from Israel through the Suez Canal, even in transshipment through a third port.

A third form of Arab boycott is the blockade of air communications.

Under the "General Principles of Boycott" established by the Arab League, no aircraft may fly over Arab countries if, in the same course of its journey, it has made a landing in Israel. The Governments of Egypt and Saudi Arabia even have threatened to shoot down any aircraft flying over its territory on the way to or from Israel.

As a result of this blockade, the air links that had existed between Israel and the Far East were severed.

Finally, there is a fourth form of boycott, this one directed at companies whose owners are Jewish, or even whose labor is Jewish.

In the summer of 1952, an American firm received the following letter from a Saudi Arabian customer:

"We very much regret to inform you that our government has duly published a notice announcing that any importers of Saudi Arabia must not be permitted to import goods, any kind of goods, from any Jewish firm in the world.

"Further, they have listed you as being Jewish, and your firm as a Jewish firm. As these steps are taken suddenly against you, we are obliged to cable you to stop the shipment of our orders until we write you.

"However, we are obliged to ask you to let us have full particulars as to what faith your firm belongs, Jewish or Christian? And until we have full particulars from you we are obliged to stop our business with you."

On November 27, 1955, Mohammed Ali Suleiman, head of the Manufacturers and Merchants Association in Saudi Arabia, addressed a letter to a New York firm advising them that, under instructions from his government, business relations with any undertakings in the United States or any other country which are under the management of Jews must be avoided.

Questionnaires were also sent to business firms in Europe and America stating that the boycott has been extended not only to firms that have Jewish proprietors and employees, but also to firms in which Jews are substantial stockholders.

It is very obvious to the world that the purpose of this Arab economic warfare against Israel is to undermine and weaken the economy of Israel to a point where the tiny nation, as the Arabs express it, "will wither away or will become ripe for a military attack and destruction.

Therefore, this boycott must be recognized for what it is—aggressive warfare in the economic field, which, like military warfare, creates tensions, unrest, and damage.

And what has it succeeded in doing? First, it has encroached on American freedoms. An American airline may not fly from Lydda Airfield over the skies of Arabia. An American ship touching upon an Israeli port may not unload in an Arab port. An American business firm which may have some investments in Israel is not permitted to do any business in Arab States.

Second, the boycott discriminates against one class of American citizens, those of the Jewish religion. The letter which I had previously read, written to an American firm in 1952 from a Saudi Arabian customer, illustrates one effect of this discrimination. This particular letter was received by an exporter of wheat, flour, rice, and textiles whose business with Saudi Arabia ran close to $2 million a year. Under the terms of the International Wheat Agreement, the United States pays about 75 cents for each bushel of wheat shipped as a subsidy to American exporters. The effect of this boycott, therefore, was that the United States Government made grants to non-Jewish firms but Jewish firms were unable to benefit from such grants.

A third result of the boycott is the retarded economic development of the entire region, in general, and the Arab States in particular. This condition has resulted in increased dependence on and requests for American financial assistance. Jordan, for instance, is the granary of the region. If the Arab country were to sell its wheat to Israel, it would not need economic aid from the United States.

What should be done about this Arab boycott?

In Italy and Holland, business firms and Government authorities have denounced the Arab policy of discrimination and have refused to cooperate with it. The Bonn Government of Western Germany was threatened twice by the Arab nations, but their efforts to prevent the paying of reparations to Israel failed.

Take the case of the airlines which were told to stop flying to Israel. They ignored the Arabs who have not dared to do anything about it. In all of these cases the Arabs yielded quietly.

But what of the United States?

The Jewish taxpayer in this country contributes to the foreign-aid program ostensibly in defense of the free world and its ideals. Yet this same taxpayer is the subject of gross discrimination in countries which he helps to support both economically and militarily. The United States Government, one of the two most powerful in the world, subscribes meekly to a system under which some of its citizens are accorded second-class status, and are perhaps even regarded as outside the protection of the law.

Gentlemen, if the Government of the United States is not prepared or able to defend the equal rights of its citizens wherever they may be, this policy must be regarded as a challenge to the principle of full citizenship and equal rights for American Jews in this country as well as abroad. No foreign government has the right to discriminate between one American passport and another.

In 1911, in the days of President Taft, we had a Government which had the courage of its convictions. When Russia refused to honor American passports held by American citizens of the Jewish faith, the commercial treaty between the two countries was abrogated by Congress.

Why can't we have a similar show of forceful action today?

Somewhere, somehow, we have heard a faint protest of disapproval by our Government of Arab actions. But why aren't these protests pushed with vigor and persistence? Are there no political or economic measures available to our Government to make its protests felt?

Gentlemen, American citizens have the right to expect their Government to protect their dignity, their good name, and their right to travel and to engage in commerce on an equal footing with citizens of other faiths.

It is time now—now—before it is too late—for the Government of the United States to do something about this Arab boycott in order to protect the fundamental rights of American citizens.

The Weakening Two-Party System

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. AVERY. Mr. Speaker, under leave to revise and extend my remarks, I am inserting an address delivered by the Honorable Alfred M. Landon, former Governor of Kansas. The address was delivered before the Midwest Federation of College Young Republicans Convention, Topeka, Kans., on Tuesday, April 3, 1956. Mr. Landon's speech is worthy of merit. He certainly delivered a most compelling address to the young Republican leaders of the Midwest.

The address follows:

THE WEAKENING TWO-PARTY SYSTEM

(Address by Alf M. Landon before Midwest Federation of College Young Republicans Convention, Topeka, Kans., April 14, 1956)

I am happy to have the privilege of talking with you young Republican leaders from 13 great States.

Your presence here evidences your willingness to exert yourselves in the great adventure of governing men.

The art of government must be preceded by the art of being elected.

The mere ambition to hold a public office—without pride of achievement and a desire for public usefulness is a dead end in life.

Therefore, I want to talk with you tonight about political parties as the agencies for formulating sound principles of government, and responsible to the American voters for achieving their decisions on those policies.

Tonight as we look the world over, we find the most stable governments are those based on the two-party system.

However, 2 of our last 3 Presidents have been stronger than their parties.

It can be argued with some validity that Mr. Truman was stronger in 1948 than the Democratic Party.

That either means the worldwide trend toward personal government is present in America or that the American people are not getting from either political party a competent and adequate expression of principles reflecting their thinking today on vital problems.

Tonight as we look America over we see evidences that both the major political parties are torn with internal strife on great and fundamental national domestic issues.

The difference between the two parties on foreign policies and national defense is more one of management. And for the Democratic Party to attack the Republican administration on that score is like the pot attempting to call the kettle black.

What are some of the accomplishments of President Eisenhower?

The chief one, of course, is gaining the confidence and the trust of the peoples of the world.

It is difficult for any American to understand the fear the peoples of the world had in our peaceful intentions.

As President, Mr. Eisenhower has commanded their respect and faith in his leadership for peace.

Another fundamental accomplishment of great importance to every American has been checking the steady slide in the value of the dollar which occurred in Mr. Roosevelt's and Mr. Truman's administrations.

It is not necessary for me to outline to this intelligent audience the vital necessity of that to our national life—present and future.

The question of the hour is the so-called farm bill.

As you know, it ignores in part the policy and the legislation recommended to the Congress by the President to get farmers and the Nation out of the trap we are caught in by reason of Democrat policies.

Personally, I do not believe this monstrosity of diverse and conflicting provisions solves a permanent long-range national land use program that is impressed with public interest.

Republican Members of the Congress and Democrat Members alike are divided as to its merits.

Neither party seems to be able to develop sufficient unity to meet and solve domestic issues.

The record of the Democrat administration from 1949 to 1953—a Democrat president and a Democrat congress, mind you—when set over against the party platform promises of 1948 is one of the skimpiest, do-nothing records in the political annals of this country. It was, in fact, a new record of futility and failure on virtually every platform pledge dealing with major domestic issues. Therefore, this attack on Mr. Eisenhower as a "do-nothing President" is with poor grace.

From January 1953 to January 1955, Mr. Eisenhower was unable to enact into law—without the aid of Democrat Members of the Congress—such pledges of the Republican platform that required legislation to redeem.

Of course, when a Democrat Congress gained control of the legislative branch of our great Republic in January 1953, it became less possible to enact legislation to put the Republican platform into effect.

But also as significant as this confusion over broad-base political principles of government within both major political parties, is the weakening of party lines.

It started with the Republican Party in 1912 and 1914, and with the Democrat Party in 1928 followed by 1936, 1948 and 1952.

It is highly significant that most of the Bull Moose bolters were not eliminated from public life.

In 1928, all the bolters in the South were punished in succeeding elections.

But that has not been the case of the bolters in either 1948 or 1952.

Therefore, I think there is evidence that the Democraty Party does not have a broad enough and a complete enough agreement on principles and philosophy of government to sustain a permanent political party.

It is apparent that with all its political success, the Democrat party cannot and will not hold together because it is not able to agree on a consistent set of principles.

No longer is it possible to conceal the deep and bitter differences which divide that party.

From the conflict over both domestic and foreign policies between President Eisenhower and Republican Members of the Congress, there is evidence of divergent and contradictory views on vital issues in the Republican Party.

It is apparent that the legislative branch of our glorious Republic has been, and is now, controlled by a Republican and Democrat coalition that finds more agreement in a broad consistency of policies than in the stated objectives of their party platforms as interpreted—in the Republican case—by the head of the party.

A President is head of his party in the Nation as well as Chief Executive of all the people.

A governor is head of his party in his State as well as chief executive of the Commonwealth.

As far as the Republican Party is concerned, it is up to President Eisenhower—going on to 5 years more of his leadership—to hold it together and make it strong by a stand for a set of clearly thought out, vital principles, adequate to the problems confronting us both in foreign affairs and at home.

Political parties arise and are kept alive by great movements of political thought.

When the left wing of both Democrat and Republican Parties have more in common than they do with the right wing of their own party, there is confusion that threatens the stability of America.

I believe the basic domestic issue is coming to a head.

Throughout the last quarter of a century, there has been a constant drive to weaken not only State laws and State responsibility, but city responsibility also.

When that vacuum is once created, not only by congressional legislation—and more particularly by appropriations—presidential policies and court decisions—the Federal Government moves in.

That is the policy the Democrat Party stands for today—that the Federal Government must control farms, industrial plants, and eventually labor, too—not by regulation, but by management. There is a world of difference between the two.

That is the policy the Republican Party must oppose.

The Republican Party, equally with the Democrat Party, derives from Thomas Jefferson—the decentralist—the opponent of oppression and the enemy of omnipotent planning.

Today the Republican Party must resume its fight for these basic principles of freedom and a Republic.

That offers opportunity for a definite lineup based on fundamental principles—the principles of historic liberals who were equally opposed to government oppression by ordering the farmers, labor, and business what they must do to be wise and competent in the management of their affairs, and also were opposed to economic oppression by gigantic monopolies and concentration of the power of money.

Upon one condition is this position possible.

The Republican Party today must remember that Jefferson opposed not only excessive power by government but also excessive power by wealth.

None of us wants to see our country ruled by Fascist or bureaucratic government on the one hand or by the power of money on the other. The average man can lose his political and economic security either way.

That does not mean an attempt to swing the pendulum of government back to the dominant rampant individualism of old, but the attempt to prevent the complete elimination of individualism with the destruction of all the precious freedom of democracy.

As I have said many times, if people must choose between concentration of economic power in the hands of government or the concentration of economic power in the hands of a few individuals, they will choose the government.

We do have a distinct problem to solve the distribution of prosperity. Every wise statesman—in every period of time—has been concerned with the equitable distribution of production.

If that problem is not met with intelligence, it has in the end always been met with violence.

The Republican Party must remember that Jefferson believed that the American citizen should have no despotic master, either governmental or economic.

The Republican Party must resolve accordingly to free this country from all oppressive dictation whether by bureaucracy, official, or financier; whether by industrialist or by labor leader; whether by public money or by private money; whether by the force of the militia or by the force of the mob.

If the Republican Party can take so broad and honest a view of its mission, it will last through a multitude of years. It will stand as a bulwark against a hitherto unknown oppression in America. It will be of immeasurable service in preserving our great and glorious Republic.

Tenth District, California: A Story of Growth and Growing Pains

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. GUBSER. Mr. Speaker, this is a story of progress, growth, and growing pains. Some time ago, I requested various communities in my congressional district to furnish me with statistical information to help me keep my records up to date. I much intrigued by a brochure issued by the Chamber of Commerce of the City of Sunnyvale which, at the bottom of a list of figures, carried this notation: "Warning: Sunnyvale statistics become obsolete hourly."

This, Mr. Speaker, is literally true, and it applies not only to that one locality, but to all of the county of Santa Clara in which it is located, and to the wonderful, amazing tricounty district I have the honor to represent. So rapid is the progress in almost every phase of human endeavor, so staggering the changes that are taking place before our wondering eyes from day to day, that I know my colleagues are interested in hearing about it. To illustrate the miraculous progress of the 10th Congressional District of California, I will have to quote figures. I assure you that they are as recent as I have been able to obtain. In all fairness, however, I, too, wish to add this paraphrased warning: Statistics pertaining to the 10th District of California become obsolete hourly.

Growth and progress are expressed in many ways. The use of land, the modernization of communications, greater soil productivity, and increased output of our manufacturing plants are some of them. So are the quality of housing, the availability of schools, and the whole list of items that come under the general heading of "Standard of Living." Progress can be quantitative and qualitative. In the 10th District of California you will find all of these.

Above all, growth is measured in people. Let me tell you about the fantastic migration of population to our area. In 1940, a year before Pearl Harbor, there were 175,000 people living in Santa Clara County which reaches from the south shore of San Francisco Bay up the green and fertile Santa Clara Valley. It is separated from California's great Central Valley by the Mount Hamilton Range of mountains on the east, and protected from the Pacific by the Santa Cruz Mountains on the west. During the war and immediate postwar years, our poputon climbed from 175,000 to 290,000, but this proved merely a beginning. By 1953, there were 355,000, in 1954 there were 370,000. Santa Clara County had 407,000 residents on January 1, 1955, just a little over a year ago. On January 1, 1956, our population exceeded 456,000, a growth of 12 percent in a single year and 57.2 percent since April 1950. The estimate on the 1st of April of this year was 461,900.

People, needless to say, are not merely statistics. They are human beings who work and earn and produce and create assets. Taxes provide a good yardstick for the latter. In 1940, the assessed valuation of property in Santa Clara County, Calif., was a little over $159 million. In 1950, it was nearly $350 million. The net assessed valuation for the current 1955–56 fiscal year is $623,921,820. And as industry keeps coming into the county the valuation keeps growing steadily, too.

Industry—that more than probably anything else is the word that changed the face of Santa Clara County and is still changing it. In a way, all the other changes are byproducts of industrialization. Yet, Santa Clara County is historically an agricultural region, and even today it ranks 20th in the entire Nation, with an agricultural production of $88 million in 1954. More than 80,000 acres alone are still covered with orchards which have made this area one of the greatest fruit and nut growing centers in the world. Of all the fruit crops, prunes account for almost one-fifth of the dollar value, followed by strawberries, pears, cherries, and apricots. More than 18,000 acres are planted in vegetables. Other important crops are hay, barley, sugar beets, and, to a lesser degree, wheat, oats, and alfalfa.

The orchards still fill the valley with bloom in spring, but nearer the bay of San Francisco, along the rail lines of the Southern Pacific and Western Pacific railroads, an industrial community is growing with giant strides. For years, the city of San Jose, hub of this empire, has been a cannery center unequaled anywhere. In addition, such industries as Food Machinery & Chemical Corp. and Permanente Cement Corp. have provided industrial payrolls and are contributing immensely to the economy of the area. To these we can now add a continuously growing list of corporations whose names read like the Who's Who in American Industry: Ford Motor Co., General Motors, Westinghouse Electric, Lockheed Aircraft, IBM, Eastman Kodak. With them come supplier industries and service organizations. With them, too, come work forces, men and women and their children, people who build homes and buy food and clothing and attend churches and who belong to service clubs, lodges, and the PTA.

Stanford University is fast becoming the medical center of the West, with a $21 million VA hospital scheduled for construction, and the Stanford Medical School expanding its activities. Stanford Research Institute is called upon for work by all of the American industry. The electronics industry is gravitating more and more to the Palo Alto area.

Mr. Speaker, this growth, astounding as it is, is only beginning. Contrary to many other areas, we have a long way to go before we reach the saturation point. Just to cite one example, of nearly 600 acres zoned for light industry in the city of Mountain View, about 65 percent is still vacant and available.

Growth cannot take place without also creating problems. One of our most pressing problems is that of water. The fertile soil of our valley needs water to produce its crops. Water, too, is needed by the industries moving in. And water—in ever-increasing quantities—is needed by the rapidly increasing population for domestic use. With characteristic vigor, the people of my district have taken measures to conserve every drop of water that can be stored during the short months of winter rainfall. Two great water-conservation districts, formed many years ago, have with their own resources constructed reservoirs and dams. The northern district alone has invested some $10 million to date in water-conservation works. At the present time their total storage capacity is 143,700 acre-feet, but only 91,000 acre-feet per year can be percolated, and current pumping amounts to some 125,000 acre-feet per year. This rate is rising. Back in 1945, 85 percent of the water used in the district was for agricultural use. This is now down to 70 percent, since industry and domestic use takes an even larger share of the water resources.

Yet, the water table continues to sink. Where in World War I days, the water table was less than 40 feet below the ground, it has fallen more than 150 feet at the end of recent irrigation seasons. With local efforts at a maximum, importation of water has become a necessity. Even now, the Army engineers are constructing a model of San Francisco Bay and its tributaries as part of a comprehensive survey to study barrier plans. The Bureau of Reclamation of the United States Department of the Interior has requested funds for an engineering survey to determine the feasibility of integrating Santa Clara County and neighboring San Benito County to the south in the Central Valley project. I have also introduced legislation which would modify the 1914 Baker Act to permit sale of Hetch Hetchy water, now in surplus supply, to utilities in my district.

Mr. Speaker, water may be the gravest single problem. There are, of course, many others. The new population centers pose growing demands on transportation and communications, too. State and counties are doing what they can to construct highways which are adequate to carry the enormous traffic flow of our motorized society. The city of San Jose, with aid from the Federal Government, has developed a first-class airport which is rapidly becoming the third major landing field in the San Francisco Bay area. And even here, there are problems since every parcel of land needed to lengthen the runways and to construct maintenance and passenger facilities is also coveted by indus-

try ready to move into every available parcel of vacant land. Recent floods created another serious problem that will be solved by cooperative efforts of local, State, and Federal agencies.

And again, the human problem gains overriding importance. The tanned, healthy children growing up in our sunny climate require schools, and in spite of almost constant school construction, our school districts are hard put to provide sufficient classroom space. More than 13,500 elementary pupils attended double sessions in Santa Clara County this last term. Total elementary school enrollment was 72,800 last fall, as compared to just 39,400 in 1950. Similar problems confront our high schools, junior colleges, and the four major institutions of higher learning, Leland Stanford, Jr. University, the University of Santa Clara, San Jose State College, and Lick Observatory of the University of California.

One would think that the huge influx of industrial workers would also find reflection in organizational ferment. I am very happy to state that the contrary is true. Labor-management relations in the 10th district of California set an excellent example of sensible moderation and mutual respect. Organized labor is as much a part of our community and industrial life as is any other form of organization. Employment is high. So are wages. Practicing wise moderation, both labor and management have achieved a harmony which has greatly aided the continued prosperity of our area.

The face of the valley changes from day to day. Thousands of new homes now cover many areas which were meadows or woods or orchards only a scant few years ago. Shopping centers flank brand-new roads. New plants, new churches, new hospitals, new recreation areas and parks, indeed, entirely new cities have grown and incorporated and continue to grow. In the eastern foothills and along the west valley slopes, new residential districts offer the livability which is not the least of the attractions our area offers to individuals and corporations alike.

All these things, Mr. Speaker, are indications of the explosive growth of Santa Clara County, Calif. It stands to reason, that the shockwaves travel well across county lines. In this age of high-speed transportation and communications, events cannot take place in one city or sector without causing repercussions in others which are within easy driving distance. It certainly is true in the 10th District of California. Beyond the range of the Santa Cruz Mountains, washed by the waters of the Pacific Ocean and Monterey Bay, lies Santa Cruz County. To the south, between the Diablo and Gabilan Ranges, stretch the rich pastures and agricultural lands of San Benito County. Here, too, progress is felt wherever you go.

This is a brief sketch of the 10th Congressional District of California, the area in which I was born and reared and which I have now the honor to represent in this House. Those of us in and out of public life who take an active part and interest in the development and growth of these counties are, of course, attempting to project the events of the past and the trend of the present into the future. We know that only far-sighted planning and long-range preparation will eventually help us to meet all the challenges confronting us as a result of the changes now taking place. Yet, while we are able to project ourselves into 1960 or even 1975, there is no ceiling, no limit in sight.

We can easily visualize our district as part of a solid urban and suburban metropolitan area extending in the shape of a "V" along both sides of San Francisco Bay, with San Jose as the southern hub, and San Francisco and Oakland, respectively, forming the northern points. We can foresee the need for rapid transit, for additional 6-lane or 8-lane freeways, for jet-age airports, and for the water, the utilities, the housing and schools for 600,000–700,000 or even 800,000 people.

A few years ago, I expressed the conviction that some day, San Francisco could be referred to by the people of my district as the little city to the north of San Jose. Facetious as this may sound, the phrase is well on the way of becoming true. No other area in northern California has had the rate of growth we have experienced, and few other areas have the potential we possess for the future. Santa Clara County, Santa Cruz County, and San Benito County, Calif., are not resting on the laurels of the past. With confidence, they are looking toward a future which we all feel can be described in two words: "Opportunities unlimited."

Constitution for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. BARTLETT. Mr. Speaker, on April 24 last, the people of Alaska had before them in the primary election the proposition of adopting or rejecting the constitution for the proposed State of Alaska written during 75 days last winter at the constitutional convention held at the University of Alaska. That proposition was overwhelmingly adopted and in that connection, under leave to extend my remarks, I would like to have reproduced here an editorial appearing in the April 26 issue of the Washington Daily News:

ALASKA COMES OF AGE

Those who have had their doubts that the Territory of Alaska has achieved political maturity and is ready to take its place as a State of the Union need only look at the returns from Tuesday's election.

Turning out in larger numbers than ever, even at a general election, Alaskans ratified a proposed State constitution by margins running as high as 4 to 1 in some precincts, and apparently well over 2 to 1 in the Territory as a whole.

Americans do not lightly vote for higher taxes in these times, and Alaskans already pay every Federal tax residents of the 48 States pay. Yet the Alaskans, like our own ancestors, have signified their willingness to pay the price of self-government.

Statehood, of course, is their only choice. There is not the slightest sentiment in Alaska for political separation from the United States, and virtually none for the bogus commonwealth status advocated by some statehood opponents in Congress.

Alaska is thoroughly American. Indeed, its rapid population growth has been due to a migration wave like that which built the West—vigorous, adventurous young people who are pioneers in the best sense of the word. Their industriousness is building a sound economy to back up our vitally important military outposts in face of Russian threats. Their loyalty has stood every test.

Presidents, Congresses, and Government agencies have been shamefully apathetic toward Alaska. The Territory long has been asking for statehood. But now it is armed with evidence fairminded men will find hard to disregard.

The Administration at Last Seems Ready To Support SUNFED

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, this morning the Associated Press reports an interview with United States Ambassador to the United Nations, Henry Cabot Lodge, which is most heartening to those of us who have urged United States support for the Special United Nations Fund for Economic Development—SUNFED. Long urged by the Scheyven Committee in reports to the U. N., it was asked for repeatedly but in vain by the representatives of the "have not" nations who comprise the majority of the world's population, now determined to achieve economic development in the shortest possible time.

Ambassador Lodge's statement, spelling out as it does a similar statement made April 10 by Assistant Secretary of State Francis O. Wilcox, seems to mean that the United States is now prepared to support the financing through the United Nations, by grants and loans, of basic development projects, such as harbors, highways, water and sewage systems, irrigation, schools, and hospitals, and so on, which are essential to carry agricultural and industrial development programs beyond the preparatory education and training stages.

As I stated December 15, 1955, in a letter addressed to President Eisenhower:

Without SUNFED, point 4 and other technical assistance programs may turn out to have educated, trained, and improved the health of millions and dressed them up with no place to go to work, either on the land or in industry.

I include in the CONGRESSIONAL RECORD the text of my letter to President Eisenhower under date of December 15, 1955,

and a report from the Washington Post and Times Herald of April 30, 1956. Also, because of their long and steadfast advocacy of SUNFED, I am including here excerpts from the 1955 resolutions adopted by the United Auto Workers as well as the AFL–CIO. These great labor organizations, along with many other national organizations devoted to the support of international economic cooperation, have seen the vital importance of SUNFED as part of the necessary kit of tools for building a durable peace of, by, and for free men.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 14, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am taking the liberty of writing to you to call to your attention the need for strong support on the part of the United States of the Special United Nations Fund for Economic Development (SUNFED), a proposal which has lacked the endorsement of our country and in which the United States has not participated. Members of the U. N. are again being asked to state their position in regard to the proposed special U. N. body and members of the New Jersey Delegation are interested in having the United States give wholehearted support to the early establishment of this very worthwhile organization.

With billions of dollars being appropriated for military security and military aid to other nations, the United States should immediately make known to the world its support of SUNFED as a prime essential for providing more production, more jobs, more purchasing power and higher standards of living for the people of the underdeveloped areas of the world. Without SUNFED, point 4 and other technical assistance programs may turn out to have educated, trained, and improved the health of millions and dressed them up with no place to go to work, either on the land or in industry.

The recent course of Soviet Russia in its relations with other nations make two things abundantly clear. One, we can expect no relaxation of Soviet efforts to achieve their objective of world domination and, two, they are making every effort to win the minds and hearts of the uncommitted people of the world by a whole complex of methods, among the most important of which is economic aid on a large scale. We can, and indeed must, block their efforts in this direction, even as we have thus far succeeded in blocking their attempts at domination through a preponderance of military power.

SUNFED is not a new idea, since last session I joined with other Members of Congress in asking support for the proposal. SUNFED and other multinational programs, by their very nature, cannot be smeared as vehicles for new efforts at colonialism. In fact, as compared with bilaterial proposals being made by Communist traveling salesmen, such programs can fairly be recommended as anticolonial and essential for strengthening and maintaining healthy nationalist movements of liberation, self-determination and self-government.

Therefore, I do feel that it is of the utmost importance that the United States lift its long-standing veto against SUNFED, which is most desired by the so-called "have-not" nations in those areas of the world where the contest between Communist imperialism and Democracy is going to be won or lost in the months and years immediately ahead.

At this time when major administration policy for the coming year is being drafted and approved, I earnestly hope that you will find it possible to recommend United States participation in this program. Such participation by our country would be strong evidence that we stand ready to do our share in fighting communism with adequate measures for military security and, of equal importance, with economic means as well.

Sincerely yours,

FRANK THOMPSON, Jr.,
Member of Congress.

[From the Washington Post and Times Herald of April 30, 1956]

LODGE ASKS AID THROUGH U. N.

(By Rex Harrelson)

UNITED NATIONS, N. Y., April 29.—Ambassador Henry Cabot Lodge, Jr., said today the present world situation requires the United States to channel a larger share of its foreign aid through the United Nations.

In meeting the challenge of the new Soviet competition, he said, such a move would offer "some real advantages over a program sponsored by the United States alone."

"Multilateral aid," Lodge added, "offers a way to prevent the so-called auction which some are trying to promote between the United States and the U. S. S. R. as to which will spend the most in an underdeveloped country."

The chief United States delegate outlined his views when asked about the current reappraisal of the foreign aid program now under way in Washington. His statement was the strongest indication to date that the Eisenhower administration might divert substantial amounts of economic aid through the U. N.

UNITED STATES CHIEF SUPPORTER

It had been known, however, the administration was concerned both by the stepped-up program of Communist economic aid and by increasing criticism of the United States bilateral aid program.

Asian leaders have been pressing for a new emphasis on multilateral programs, particularly those of the U. N. technical-assistance program and the proposed special U. N. Fund for Economic Development.

Up to now the United States, although the major supporter of the U. N. aid program, has channeled only a tiny segment of its foreign aid through this medium. Russia has given little more than token contributions.

The United States, for example, gave $15.5 million toward the 1956 U. N. technical-assistance program in comparison with $153 million spent on its bilateral point 4 program. Russia contributed nothing to the program until 1953 and has since given only about $1 million a year.

BID TO RUSSIA TOO

Lodge's statement was a bid for Russia, as well as the United States, to join in pooling more of their aid under U. N. supervision. He expressed the belief the proposed move would offer special benefits to the recipient countries.

One advantage, he said, is that a sound multilateral program would provide "no cover for engaging in political penetration, which is what the Communists do and which we are unjustly suspected of wanting to do."

Lodge suggested that U. N. technicians, sent into the underdeveloped countries, might be given special uniforms which would make it difficult for them to engage in "surreptitious political activity."

The Russians have supplied few technicians under the U. N. program. In 1955, for example, out of 564 experts supplied by the U. N. only 5 were Russian. The United States supplied 95 and Britain 84.

Lodge said the United States should maintain both bilateral and multilateral programs.

POINTS TO WORLD STATUS

"But," he added, "the present world situation is one which requires our giving new emphasis to multilateral programs. We can do this without any additional expense by diverting a percentage of our foreign aid funds to multilateral channels."

Allocation of substantial increases to the U. N. would raise several questions in Washington and in the world organization.

In the past, the United States has insisted on a matching arrangement under which it would contribute no more than 53 percent of the total technical assistance. A question, therefore, would be whether the United States would raise or abandon this ceiling in the event other countries would match larger United States contributions.

Another would be whether the United States would drop its opposition to the U. N. Special Development Fund and start it off with a substantial contribution. Refusal of countries like the United States and Britain to support the fund has been responsible for the long delay in its establishment.

FROM UAW INTERNATIONAL RELATIONS RESOLUTION ADOPTED APRIL 1, 1955, CLEVELAND, OHIO

It should be abundantly clear that our chances of avoiding atomic war, or, if such war should come, our chances of winning it, will depend upon the kind of leadership which the free world is able to provide to the millions of people who are at this moment in open revolt against hunger and oppression. We must make obvious by deeds and action that there is a democratic alternative to the false hopes held out by Communism. We must establish again by deeds and action our faith and our belief in the right of all people to win freedom from despotism, whether it be imposed by other nations which bind them to colonial status or by foreign corporations which extract their wealth without just compensation or by their own ruling classes which monopolize their land and exploit their workers. To the struggling people of the Middle East, Africa and Asia, we must demonstrate that we are on their side in support of their aspirations for genuine political and national independence.

Representatives of 30 Asian and African nations will soon gather in Bandung, Indonesia, to consider these vital matters. We urge the President of the United States and the Congress to continue and expand our technical and economic aid directly and through the United Nations to the underdeveloped and uncommitted countries of the world. Such concrete action will be fresh proof that the American people do not look upon these peoples as merely forces against Communist imperialism but that we have a deep and genuine concern with their well-being.

We strongly urge Congress to approve and provide the $80 million for the Special United Nations Fund for Economic Development (SUNFED) in order to further demonstrate the deep concern of the people of America to take immediate and practical steps toward world peace.

FROM AFL–CIO 1955 CONVENTION RESOLUTION ON FOREIGN POLICY ADOPTED DECEMBER 7, 1955

Resolved, conscious of our responsibilities at this crucial period, the AFL–CIO herewith declare their support of the following guiding principles for an effective American democratic foreign policy and sound international labor relations:

1. Effective foreign policy cannot be improvised and piecemeal. It must have a clear and definite orientation and be consistent, sustained, and vigorous in its application. Its motivating and paramount aims must be the mobilization of all our moral and material resources for developing a system of international relationships to maintain peace, protect freedom and national security, and enable a growing population to enjoy a rising standard of living.

2. Integration of our foreign political and economic policies is essential, if the great technical resources and mighty industrial potential of the United States are to be geared to increasing the productivity, raising the purchasing power, and improving the living standards especially of those economically underdeveloped countries which are devoted to human liberty and peace.

3. Undeveloped and underdeveloped continents and regions where many hundreds of millions nurse their grievances and their hopes constitute a fertile field for Communist operations. In dealing with rudimentary human problems the world over, we must be concerned primarily with two immediate needs—the need for food, health, and irrigation in the underdeveloped countries and the burning desire for independence and equality. By ministering to such fundamental needs we will be on firmer ground as we seek to win new adherents to the free world.

4. We know that communism is a false solution; we believe that democracy is the true solution. Communism is weakened when democracy is strengthened. The representatives of democracy must go out into the underdeveloped regions with specific plans, programs, and projects to help raise living standards, for helping to end all colonialism, for winning these peoples as equal members of the free-world community. Thus, we will make it possible for them to have a stake in the defense of a civilization worth defending.

5. Our country has done some of this. UNRRA was a beginning. American labor supported the Marshall plan because it was conceived and largely administered in this spirit. Point 4 was an imaginative gesture in the same direction, but tragically all too little. Toward the same end, the Special United Nations Fund for Economic Development (SUNFED) provides real possibilities for developing and expanding worthy projects for the fundamental improvement of the economic conditions of the needy peoples. Our responsibilities include, but are not limited to, a firm and effective military defense of established positions against Communist subversion and aggression. Positive measures for social and economic betterment are an indispensable part of the program for the defense and victory of the free world.

This Science Business

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. CHENOWETH. Mr. Speaker, I am sure that the Members of the House will be interested in excerpts from a speech delivered by Dr. Louis T. Benezet, President of Colorado College, before the district Rotary convention in Colorado Springs, Colo., on April 23, 1956. Dr. Benezet calls attention to the importance of science teaching in our schools and colleges, and the necessity for developing the scientific talents of our new graduates. I take pleasure in presenting this fine address by Dr. Benezet:

THIS SCIENCE BUSINESS

It is wonderful to live in this comfortable world that science has created for us. Yet the reaction, I am afraid, has set in in the schools to the extent that some students now come seeking that education too be made as comfortable as the comforts in their homes. This has produced a strange paradox. Material blessings in America were made possible by men over the past 100 years who penetrated the mysteries of science. To the comforts that science has provided that day's generation has become so imbued by the comforts that science has provided that more and more students are refusing to study science in college—because it's not a comfortable subject to take. Our life has been made easy by electronics; it even opens doors for us. The fundamentals of electronics come from mathematics. Mathematics is an abstract science and rough going; so, why take mathematics? You can get a good job without it.

What I am trying to say, in other words, is that this universal standard of a comfortable life we have invented for ourselves—which by the daily practice of our life we have stamped as holy—has now invaded the school curriculum; and you blame the schools because this is so. The result is that students in greater numbers come seeking careers in the processing of men and materials for some commercial gain, rather than careers dealing with the origins of knowledge. The course is easier and the career pays better.

Another great part of our trouble with science comes from a very stark fact. That fact is, we no longer have high-school science teachers. The number of teachers available for high-school physics, chemistry, and mthematics has dropped over 50 percent in 5 years—this, in the most highly advanced technical Nation in the world.

In the State of Oklahoma in the past year 31 high schools eliminated mathematics and physics altogether from the curriculum. The reason: they could not find any teachers to teach the subjects. A national expert has said this is typical throughout the country.

Where are the teachers who used to start our young people toward scientific careers, or at least scientific understanding in the high schools? Why, they are working in industry, where the pay is better and the life freer. And what is industry saying? Why, industry is saying "Where in heaven's name are we going to get enough scientifically trained people next year?"

Educators receive a good deal of finger-wagging about how woolly headed they are in contrast to hardheaded, practical businessmen. Let me give you a description of how hardheaded industry is approaching the problem of too few scientists and technicians. Industry is currently committing an almost perfect example of the man who killed the goose that laid the golden egg. Because it can't get enough young science graduates, it is hiring away the high science teachers; and thereby it guarantees the drying up of future supplies of new scientists. The high school science teacher goes to work in the industrial company. The school superintendent throws up his hands, and drops physics and mathematics from the curriculum. The high school students then go on to college without these subjects ever having crossed their paths. Naturally they do not pursue them in college, lacking the background to do so. We, too, are losing a science professor to industry next year. When they graduate 4 years later, the ranks of science majors are very thin indeed. The placement men from industry then come around and say to the colleges, "What's the matter? You aren't giving us any science majors any more."

We face a crisis in our industries because of the shortage of people to do their technical thinking, and their research for them; yet industry, growing more desperate, moves toward making the situation catastrophic by picking off the high school teachers who might send young scientists their way in 4 or 5 more years. As a result, those who are eligible are being offered ridiculously high starting salaries. I could recite stories of industrial offers and special inducements for these men to come to work for them that would sound almost as princely as what a big university alumni club will do to get itself a winning football team. The techniques are remarkably parallel. The sad thing is, industry knows this is happening; yet little has yet been done to stop the merry-go-round.

Although we may educate just enough scientists to keep our civilization going, we shall find we have produced a tiny race of ruling geniuses surrounded by millions of scientific numskulls. Plato called for a republic ruled by philosopher-kings; but the base of his republic was supplied by slaves. I don't think the situation bodes too well for democracy. It is a dangerous thing to have the elements of power in the hands of a few; and to have the power of science known to few Americans might prove no exception.

We are in a box in this science business. What is the way out?

In the first place, we must lay hold on all the science teachers we have left and make it worth their while to stay. When I say that, I am also asking a better return for the whole teaching profession; for if you have ever tried to run a school, you know you do not pick out a certain type of teacher and elevate his station above the rest.

We must, second, help our science teachers see more clearly the ties between their teaching and the future of society. We should bring them to science institutes—as our college happens to be doing next summer—to let them mingle with top people of research and technolcgy, so that when they return to their schools they can have a better sense of their mission, and a better knowledge of how their subject relates to the rest of the world of science.

Teaching chemistry in high school thus becomes more than memorizing 92 elements, or the properties of potassium, or that H_2S makes rotten eggs. Teaching chemistry can show a boy the vision of a whole new world.

By starting with the conservation of those science teachers left, we can preserve the original producers of scientific thinking in the young. It will be a bare stopgap, for we need many science teachers and as soon as possible. How shall this be done?

The quick answer is a totalitarian answer: require math and science of every student in school and college. It is a bad answer, however, and one due to failure. It will only succeed in producing some very bad scientists, or an engineer who might build a bridge that crumbles beneath you one day. It denies the real facts of differing mental ability—that your boy may have real talent with numbers, problems and space relationships, while my boy simply doesn't have this gift, but is good with words, ideas, and human situations. And it would also crowd out other needed subjects, which we have not had a chance to talk about today.

Rather than requiring science of all students, we should work harder in the schools to bring out genuine science talent earlier and stay with it. To encourage scientifically talented boys and girls toward the fascinating and useful careers that lie ahead, we must firmly ask that industry restrain itself from grabbing the best of them. The best of them should not be industrial technicians or applied researchers, they are needed as pure researchers and teachers. Today teaching has to take what's left; and there isn't getting to be anything left.

In addition to identifying and sticking with young scientific talent in the earlier stages of school, we need to work harder on

general courses of modern science understanding—courses for the majority who will not become scientists. We need to shed some of the frowning mystery of science to the layman.

This calls for courses to present, for instance, the march of new knowledge over the past 100 years: what it has done for man's living, what it can do in the future, and—this may be of more importance than anything else—what science by itself cannot do. Such broad science-understanding courses can help build a climate in the schools that makes it easier for those with science ability to want to push on. Too often in high-school students' minds the word "scientist" is preceded by the adjective "mad," and comes straight out of the TV late show. Another popular illusion is that a boy must have the genius of an Einstein to handle science at all. Good scientists need to be bright, but no brighter than good lawyers, or good business heads, or good ministers.

The German-Polish Boundaries

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. MACHROWICZ. Mr. Speaker, in his remarks published in the CONGRESSIONAL RECORD of February 8, 1956, which were called to my attention recently, the gentleman from Tennessee [Mr. REECE], while criticizing the separate from Germany of territories to the east of the Oder and Neisse Rivers, deals at length with the particular problem of East Prussia. He supports in this connection the views expressed in an attached memorandum of Dr. Richard Sallet, a native of that province. Congressman REECE's conclusion is:

That the Government of the United States as well as the Governments of the United Kingdom and the French Republic, should not leave the shadow of a doubt that East Prussia and the other German provinces east of the Rivers Oder and Neisse are, according to international law, a part of Germany within her boundaries of December 31, 1937, that are today still under wartime Red Polish and Soviet administration. The Government of the United States should seize upon a proper moment to restate the legal position in no uncertain terms.

As a general remark may I remind my colleague that the actual territorial changes between Poland and Germany have taken place as a result of the outcome of World War II. This war was provoked on September 1, 1939, by Hitler's brutal assault on Poland. In violation of international law, large parts of Poland were incorporated to the Reich and the population expelled from there to the so-called General Government, formed out of the remaining parts of the country then under German occupation. An unprecedented reign of terror prevailed throughout the whole war in German-occupied Poland during which over 3½ million people were tortured in concentration camps and executed. Warsaw, the capital of the country, was razed to the ground, private property confiscated, and Polish culture systematically destroyed.

At Potsdam the United States, United Kingdom, and the U. S. S. R. arrived at the decision to place under the administration of the Polish state the territories east of the Oder-Neisse. They recognized at the same time in article XII the right of transfer of the German population to Germany.

In execution of the latter provision the Inter-Allied Control Committee in Berlin accepted, on November 20, 1945, a detailed plan which stipulated in article 1 that the entire German population to be removed from Poland—3½ million persons—should be admitted to the Soviet and British zone of occupation. In article 3 points (a) and (b) it was further stated that 2 million Germans should be directed to the Soviet zone and 1½ million to the British.

Millions of Germans having already left the country at the approach of the Soviet armies, the number of 3½ millions indicated by the Inter-Allied Committee covered practically the majority of those who had so far remained on those territories.

It is therefore evident that a de facto situation has been thus created with the consent of the three major powers.

The final settlement of boundaries at the Peace Conference can therefore be only envisaged as a formal recognition of the existing state of affairs. The more so, as since 1945 those lands have been repopulated by millions of Poles who have contributed through their efforts to the economic postwar reconstruction and industrial development of this territory.

To ask the United States Government—as suggested—for a declaration on German frontiers, based on the status of 1937, seems to be outside the scope of a realistic approach. Such a declaration would in fact alienate the people of Poland and other captive countries while playing in the hands of Communist propaganda.

It would do no good to our international position and be a heavy blow to our prestige.

It seems strange that the case of East Prussia has been chosen to support German revisionistic aims in the United States, as the history of that province was marked by the "Drang nach Osten" policy, one of the main causes of both World Wars.

Another Curtailment of States Rights

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. MASON. Mr. Speaker, when a snowball starts rolling down a mountainside, it gathers both speed and momentum as it rolls. The same is true when the United States Supreme Court adopts a policy of curtailing the powers left to the States by the Constitution. The present Supreme Court Justices are speeding up that process.

Last Monday the Supreme Court invaded the police powers of the State of Illinois and declared by a 5 to 4 decision that an Illinois court in a criminal case involving the crime of robbery had failed to comply with a legal technicality in its treatment of the case.

David Lawrence has discussed the incident so well in an article entitled "Extending Federal Police Power," that I include the same as a part of my remarks:

[From the Washington Evening Star of April 27, 1956]

EXTENDING FEDERAL POLICE POWER—NEW MOVES SEEN OPENING WAY FOR UNITED STATES TO ACT IN LOCAL CIVIL RIGHTS CASES

(By David Lawrence)

The day is not far off when the Federal Government will take over some of the important functions of maintaining law and order which hitherto have been considered by the courts to be solely the responsibility of States, counties, and cities. An extension of the Federal police power is underway.

The latest move whereby the House of Representatives is being asked by its Judiciary Committee to pass legislation permitting the Attorney General to bring civil suits to enforce civil rights—if confirmed as constitutional by the Supreme Court in a future case—would mean that Congress could provide criminal penalties, too. In fact, Chairman CELLER of the House Judiciary Committee recently sponsored exactly such a provision which, for reasons of political expediency, was temporarily dropped from the committee's bill on civil rights in favor of one being pressed by the administration.

What it all means is that the new measures, although not aimed at labor unions, will be feared by them—at least by those unions which depend on goons and strong-arm men to overturn a worker's auto at the factory gate and beat him up. For, if the new measures on civil rights are passed and sustained in the courts, it's the opening wedge toward protection of the right to work both by the Federal Government and the States.

Historically, the Constitution has been interpreted as meaning that no State can pass a law abridging the right to vote or the freedom of the press or any of the privileges and immunities of citizens. But up to now this has been construed by the Department of Justice in administration after administration and by the Supreme Court in decision after decision to mean that, unless it can be shown that State enforcement machinery has actually broken down, the Federal police power cannot be lawfully interposed.

Only last Monday, however, the Supreme Court of the United States reached into the procedures of the State of Illinois in a case which didn't involve a Federal crime at all—indeed, it was a local case of robbery—and ruled that the State court hadn't complied with a technicality in procedure. Who is to decide, for instance, whether a stenographic copy of the testimony shall be given free or charged for when a petition for appeal is filed? Up to now, the Supreme Court of the State of Illinois has thought it could handle such a question as a State matter. The Suprime Court of the United States by a 5-to-4 vote this week said the Illinois court was wrong. Justice Harlan of the Supreme Court, in a minority opinion, said:

"As I view this case, it contains none of the elements hitherto regarded as essential to justify action by this Court under the 14th amendment. In truth, what we have here is but the failure of Illinois to adopt as promptly as other States a desirable reform in its criminal procedure. * * * I think it is beyond the province of this Court to tell Illinois that it must provide such procedures."

Thus, the trend is toward Federal usurpation of police power, while complete control of State court procedures by the Supreme Court of the United States, even to the minutest detail, passes from the States to the Federal Government.

The Constitution now, in other words, is what the Department of Justice and the Supreme Court together may say it is. The Constitution heretofore has been construed by the Supreme Court to mean that no State can make any law abriding the right to vote on account of race or color, and that no State may fail to guarantee the right of the citizen to "life, liberty, and property." But up to now the Department of Justice has not intervened to punish murder on the picket line or in racial troubles unless there was evidence of a breakdown of the enforcement machinery of the State itself.

Recently—in 1953—the labor unions closed down several newspapers in New York. The unions acted in concert and some of them ignored their contract obligations to work. They accomplished together by conspiracy the denial of a constitutional right. They abridged freedom of the press. But the Department of Justice held this was a State matter. Likewise, in case after case of violence at the factory gate, the Department of Justice has not intervened, even though unions do act in concert and carry on their activities as organizations sanctioned by Federal law.

With the new proposals that look into "economic pressure," on the other hand, the Attorney General would be given the power to enforce civil rights instead of leaving it to aggrieved citizens to bring suits. It would be a short step then to Federal intervention and the enactment of criminal penalties to deal with labor-union violence and coercion and intimidation and labor-union elections and membership activities.

Maybe on balance the gain for the country on the "right to work" side for many millions of white and Negro workers would, in the long run, far outweigh the disadvantages to a few States in the South which have, by one means or another, discouraged Negroes from voting. So far as these State laws on qualifications for voting are concerned, the record is clear—they apply to both whites and Negroes. But in enforcement there is a question. The new civil-rights measures, therefore, if passed, would permit the Department of Justice to look into pressures behind all State laws affecting individual rights. It would be a far-reaching change.

Farm Problem Is Now Political

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. ARENDS. Mr. Speaker, under leave and revise and extend my remarks I am calling attention to the excellent editorial, entitled "Farm Problem Is Now Political," which appeared in the Gibson City Courier of last week. This is an outstanding weekly newspaper in my district.

I think the editorial explains exactly what has taken place in connection with farm problem. It expresses what I have expressed many times; and I frankly think that our farmers resent the fact that politics has played a major role in dealing with their difficulties, with the result that there has been undue delay and failure thus far to enact constructive legislation.

No sound solution to the farm problem will ever be found unless it be treated solely as an economic question, without regard for any political considerations and possible consequences.

The editorial follows:

FARM PROBLEM IS NOW POLITICAL

Democratic leaders in Congress have done what they set out to do. They have made the farm problem a political football. They did this, not because a vast majority of them believed in 90-percent rigid supports, but because they wanted to get President Eisenhower down in the political arena with them. No President since George Washington has been able to remain as aloof from politics as Mr. Eisenhower. This has caused frustration among the Democratic politicians who have been unable to attack him directly. They have tried to attack his administration as a "big business" one, and have without any success whatever attacked his handling of foreign affairs. They had to sink to attacking his ability to physically serve, and that met with little response from voters.

As a result they maneuvered him into a position where he had to veto the farm bill. They have attacked him personally as one who is without feeling for the welfare of the farmers. They intend to make this an issue in the campaign, really the only strictly political issue they have. The sad part of it is that the farm question should not be political.

President Eisenhower could easily have allowed the farm bill to become a law either with or without his signature, telling the people that while it was not up to the standards he set, he would attempt next year to secure a better bill. That would have been the smart thing to do, according to many politicians.

The President, however, does not always accept the easy way. He places principle above expediency. He is in the habit of doing what he thinks is right, and did not change his practice.

Many farmers and farm leaders believe the President acted wisely when he vetoed the farm bill. Charles Shuman, president of the American Farm Bureau Federation, former president of the Illinois Agricultural Association, and himself a Democrat, was satisfied with the veto, saying, "The President's veto was obviously based on sound economic facts and not on expedient political considerations. He will be applauded by most farmers of the Nation. His veto has given Congress another opportunity at this session to adopt sound farm legislation."

On the other hand, the large number of farmers who believed the farm bill would help solve their problems will not take kindly to the veto. The Farmers Union has declared that the veto leaves that organization with no other course than to fight against the reelection of President Eisenhower next November.

Mr. Shuman believes the President will gain in stature "because most farmers, even if they wish high supports, will respect the President's integrity in vetoing the bill."

P. O. Wilson, secretary-manager of the National Livestock Producers, made a statement along the same lines, hailing the President's courage in vetoing the farm bill and added that the bee is now on Congress.

Mr. Eisenhower did not meekly send the bill back to Congress with a veto attached. He went before the American people, speaking particularly to farmers. He told them it was a bad bill, and one which would do harm to agriculture in the long run. There are many farmers who honestly disagreed. Even if they are wrong and the President is right, they will blame him for not signing the farm bill which the Democrats maintained would bring relief to hard-pressed farmers.

Mr. Eisenhower immediately raised supports on major crops, telling his radio and television audience that this act would put a half billion dollars into farmers' pockets. Then he asked that Congress pass at once his soil-bank plan, and called upon the lawmakers to provide for advance payments of another half billion dollars. These two acts would place a billion dollars in farm accounts.

Furthermore, the President let Congress know that he would call a special session following the political conventions, in the event Congress failed before adjournment to pass the soil-bank plan.

This was a fighting Eisenhower, willing to meet his opponents at their own game, while still maintaining his personal integrity. He will fight the Democratic politicians for the good will of American farmers, and in his down-to-earth, friendly, man-to-man style he started his campaign with the speech directed to farmers.

A lesser man might have been willing to send his veto, and depend upon the support of independents and city people to uphold him. Not the President. He thinks he is right. He is not one to run from a fight.

The President knows, as does everyone else, that the Democrats in Congress are using the farm issue as a political football. He has put Congress on the well-known spot. Congress has approved his soil bank plan, but the Democrats told the President he would have to accept everything else in the bill if he got the soil bank program.

Now, Mr. Eisenhower says in effect, "If you Congressmen want to help agriculture, pass the soil bank plan. We all can agree on that. It will at least be a start."

President Eisenhower has given evidence that he realizes, as much as do his opponents, that the political campaign for the Presidency is underway. While the Democrats did manage to get the President into the political arena where they can criticize him, he has also managed to put them in the light of refusing to pass a type of farm legislation, the soil bank, upon which all can agree. He can go to the country on his position.

The Democrats in Congress were prepared, if he had signed the farm bill, to charge the President with playing politics, substituting a desire to please people for his principles. They thought they had Mr. Eisenhower either way. If he signed, he was a demagogue; if he vetoed, he was against the farmer.

Instead, Mr. Eisenhower has emerged ahead. Even if he should lose the votes of 200,000 farmers in Illinois, which of course is very doubtful, he will have strengthened his position with independents and with the country as a whole. He carried Illinois by nearly half a million votes in 1952.

The politicians are dealing with a man whom they do not understand too well, for he is forthright and honest.

Communist Campaign for Repatriation of Refugees

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. MACHROWICZ. Mr. Speaker, one of the problems confronting the

Western World today is that of the Communist campaign for repatriation of refugees. Although this campaign has not been very effective to date, there is a danger that it could so become unless we take proper effective steps to counteract it.

The Assembly of Captive Nations in New York has recently issued a memorandum on this subject, which I believe to have very valuable suggestions and proposals. I therefore attach it hereto and commend it to my colleagues for study and consideration:

MEMORANDUM ON THE PROBLEM OF REFUGEES FROM THE CAPTIVE EUROPEAN NATIONS

In their statements before the 20th Congress of the Communist Party of the USSR, the Soviet rulers have made it abundantly clear that they now expect to conquer the world without war. Their confidence in the achievement of this goal without a major holocaust was obviously based on their belief that the free world will allow itself to be morally disarmed. This is to be brought about, on the one hand, by allaying the fear and distrust felt by the free world toward the Communist system and, on the other hand, by promoting everywhere a "healthy respect" for the Communist military might.

To deceive the free world on the true nature of the Communist system, Moscow has confronted the world with several major moves:

1. The spectacular condemnation of one-man dictatorship and the equally insistent affirmation of the principle of collective leadership—both calculated to suggest that the Soviet Union is now evolving toward a normal form of government.

2. The revival of popular front tactics, implying that the triumph of communism might be achieved not only by way of violence and revolution, but also by the use of normal parliamentary procedures.

3. A pledge for the introduction of a 5-day working week and a raise in wages both intended to indicate that the benefits enjoyed by labor in the free enterprise system will also become available in the Communist world.

The statement made by Marshall Zhukov at the 20th Congress of the Communist Party in Moscow, to the effect that the whole area of the United States can be devastated by Soviet hydrogen bombs and guided missiles was destined to instill terror and fear in the hearts of all men in the free world.

The Communist campaign for the repatriation of refugees forms another part of the Soviet plan for moral disarmament of the free world. Its aim is to demonstrate to the free world that the new social system installed in the "people's democracies" exerts an irresistible attraction upon the political exiles from the captive European nations; that the latter have themselves given up hope in any change in the status quo; that the refugees themselves disavow and repudiate their own campaign against the Communist system and are ready to accommodate themselves to unalterable facts.

The use of all these psychological weapons should induce—in the view of the Communists—the average United States citizen to raise the question whether the Communist system is not approaching gradually the democratic one; and, if so, whether it is worthwhile to defend freedom at the risk of a war which would destroy civilization itself.

AIMS AND MEANS OF THE COMMUNIST CAMPAIGN FOR THE REPATRIATION OF REFUGEES

It is obvious that the campaign for the repatriation of refugees aims at lulling to sleep the conscience of the free world. The exiles and refugees from the captive European nations constitute strong anti-Communist centers in the free world. They are the best source of information on Communist practices, as most of them witnessed the workings of the Communist regime. They have unmasked the hidden aims of the Communist program worked out in Moscow, and thus, hinder the moral disarmament of the free world.

Moscow is intent upon stopping these activities of the exiles by inducing them to return home. The Soviets hold the political exiles and refugees responsible for the proclamation of the United States policy of liberation. They are credited with having influenced the respective ethnic groups who—in turn—are supposed to exert effective pressure upon the United States administration. The Soviets hope that once the exiles return to their homelands, the policy of liberation will be abandoned and forgotten.

On the other hand, the Communists hope that the return of refugees, especially of outstanding political and military leaders, scientists, writers, poets, artists and other intellectuals whom they may lure with special bait, will convince the subjugated nations of the futility of any hope for liberation. Should the exile leaders return home, this would prove that they have lost faith in the help promised by the West for the liberation of their nations. This would make it easier for the Communist regimes to break the resistance of the subjugated nations and to dominate them.

In order to induce the exiles to return home, the Soviets and their satellite Communist regimes have established special organizations for the purpose of establishing contacts with the exiles. Separate radio stations have been set up behind the Iron Curtain calling the refugees home. Thousands of brochures and propaganda leaflets are sent out to the exiles for the purpose of influencing them. Their families living in the captive countries are forced to write letters to their relatives living abroad urging them to return. They are even granted facilities to make phone calls, for instance from Poland to Great Britain at the expense of the Communist regime, to talk to their relatives to this effect. In some cases, exiles were even invited to come back for a short visit, their free return passage being guaranteed by the State. Last but not least, the Communist agents personally approached some of the exiles, making lucrative proposals in case they decide to return.

HOW TO COUNTERACT THE COMMUNIST CAMPAIGN FOR REPATRIATION OF REFUGEES

The free world is thus confronted with the need to counteract the Soviet plan by measures designed to render ineffective the repatriation campaign.

It should be understood that it is not the Communist propaganda which may influence some of the exiles to return home, but—the unfavorable conditions in which they are living in certain parts of the free world. A reappraisal of the free world's attitude toward the exiles would be necessary. The latter should be given the opportunity, denied them so far, to take full part in the fight against communism. To this effect, the following measures would seem to promise the best results:

(*a*) *Legal measures*

1. United States immigration laws should be liberalized to admit immigrants from territories where insecurity, lack of work, camp life, create ideal breeding ground for Communist propaganda. About 414,000 refugees are still under the care of the U. N. High Commissioner for Refugees, of whom about 65,000 still live in camps.

2. Better possibilities should be created for those who are eligible under the Refugee Relief Act of 1953 to come to the United States, and the expiration date of the RRA, set for December 31, 1956, should be extended so as to give all refugees who so desire the possibility to immigrate into the United States.

3. The exiles and refugees, especially recent refugees, should be given in the countries of their residence all the necessary social and legal aid.

(*b*) *Social and economic measures*

1. Special facilities should be made available in order to enable each refugee to find work suited to his skills and capabilities.

2. Special training should be organized for those refugees who cannot practice their old profession, and have not acquired a new one.

3. For those who are unable to work because of age or infirmity, suitable homes should be set up, and medical and other necessary care provided.

4. Fellowships, grants-in-aids or loans should be given to those who interrupted their studies or professional training, in order to enable them to continue and finish their studies, and thus, help them to return to their chosen profession. Easy credit terms should be extended to farmers from central eastern Europe to enable them to settle on farms.

5. The incurably ill should be properly cared for and admitted to suitable free countries, including the United States.

6. War veterans from the captive European countries should be made eligible for the benefits accorded to American veterans.

7. Charitable institutions, such as homes for orphans, etc., organized by or for the refugees and exiles in the free world, should get all necessary support.

(*c*) *Cultural measures*

1. The cultural heritage of the captive European nations should be preserved by promoting the establishment of institutes of creative work for exile scientists, writers, artists, and other intellectuals. Existing institutions should be assisted to continue and expand their work. They should be enabled to engage in publishing activities, in assisting writers, artists and other intellectuals to continue their work, to have their books published, pictures exhibited, etc.

2. Subsidies should be provided for existing refugee cultural organizations, scientific institutes, libraries, higher and lower schools, theaters, summer camps for children and other similar institutions.

3. It should be made possible for the children of refugees to learn the language and history of their nation and to grant them scholarships so that they would not be tempted by scholarship offers from the Communists.

(*d*) *Political measures*

The full mobilization of all available forces for the fight against the Moscow plan of peaceful world conquest requires the full participation of refugees and exiles in this fight. To this effect, the following further measures could be usefully adopted.

1. Raising the problem of peaceful liberation of the countries behind the Iron Curtain to the level of a foremost international question, and keeping it on the agenda of all international conferences.

2. Recognizing the political representations of the exiles, if not formally, then as de facto national representations, in order to enable them to carry on and further develop their activities.

Nixon Adds to Strength of GOP

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edi-

torial from the San Diego Union of Saturday morning, April 28, 1956:

VICE PRESIDENT'S DECISION—NIXON ADDS TO STRENGTH OF GOP

The Republican Party welcomes Vice President NIXON'S decision to seek renomination.

Although the Republican National Convention is 4 months away, Mr. NIXON'S decision, which was given a hearty second by President Eisenhower, makes it certain that voters again will have the opportunity to cast their ballots for the leadership combination which returned good government to Washington.

This will be a new crusade led by a President and Vice President who can campaign not only on the basis of what they hope to do but on what they have accomplished in the past 3½ years.

President Eisenhower will remain close to Washington most of the time during the election, limiting his travels to eight plane trips to regional points. He does not believe a President should go barnstorming across the country.

Mr. NIXON thus will carry the Republican crusade to the grassroots, a factor which will be important in the Republican effort to recapture control of Congress.

In 1954 he carried the brunt of the GOP national campaign. His capable presentation of the issues was credited with saving the GOP from more than mild defeat in off-year elections which normally would have been a strong swing to the opposition.

During the 1956 campaign, vice presidential candidates will be subject to close public scrutiny.

Although Mr. NIXON is not without critics, it is well to remember that most of the attacks against him stem from partisan opposition which recognizes him as an able and strong opponent. Even the Vice President's most partisan opponents seldom have questioned his ability in office.

RICHARD NIXON has proved to be a capable diplomat, a strong presidential advisor and a leader described by Mr. Eisenhower as the best-informed Vice President in history. He is an asset to the Eisenhower crusade and, more important, to the Nation. He put into words the other day what the administration has meant to the American people.

"We (the administration) decided to give the free American economic system a chance to work," he said. "We removed controls from the economy, we got the Government out of business rather than putting it in, we cut spending, we cut taxes, and we adopted fiscal policies designed to encourage the initiative, the dynamism, and the ingenuity of the American people."

The results, he said, are the good times we enjoy today.

Service Careerists Need Incentives

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of Thursday, April 19, 1956:

PLUGGING THE HOLE—SERVICE CAREERISTS NEED INCENTIVES

President Eisenhower's urging of Congress last week to increase incentives for Americans to choose military careers reflects a fundamental fact: We need first-rate men to man a first-rate military establishment.

Despite several notable improvements instituted during the Eisenhower Republican administration, there is still considerable loss of superior officers and men from the services to civilian life. The inducements of a long-term military service still are not on a par with those of comparable careers outside.

The President defined the problem: "Only when we have created a career military service which can compete with the attractive opportunities available in civilian pursuits will we be able to stop the wasteful losses from the armed service and attract individuals to those services."

How large are these wasteful losses?

Rembert James, military editor of the San Diego Union and Copley News Services, inventoried the losses in a series of articles for this newspaper in 1954. He pointed out that the taxpayers may have as much as $10,000 invested in the training of technical specialists but that close to 90 percent of them were leaving the service after fulfilling their selective service obligations.

One of his most disturbing findings was that only 19 percent of the United States Strategic Air Command were military careerists. With 4 out of 5 men reservists, the outfit assigned the major responsibility for any retaliatory mission must constantly train new men to take the places of those who leave for greener pastures.

Since the time that Mr. James made his survey, the dangerous trends which he described have been partially arrested. Service pay and allowances have been increased. Enlistment bonuses have been enlarged, particularly for men early in their careers. Fringe benefits, whittled away during the Truman administration, have been partially restored and established as part of service compensation.

But as the President pointed out, more must be done. Servicemen living in substandard military housing should not be forced to pay all of their housing allowance. Servicemen's widows should have adequate survivor benefits. Military dependents should have access to Government-sponsored medical care wherever they are. Other injustices and inequities should be corrected.

The career military man does not pursue his hazardous profession because he seeks great riches. But such a man cannot be expected to expose his wife and children to hardships and uncertainties.

When the civilion-service equation is put in better balance, there will no longer be any doubt about having enough first-class men for a first-class military service.

The Richmond County Medical Society's Plan for the Control of Narcotic Addiction

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein the article entitled "The Richmond County Medical Society's Plan for the Control of Narcotic Addiction," by Herbert Berger, M. D., F. A. C. P., Staten Island, N. Y.:

THE RICHMOND COUNTY MEDICAL SOCIETY'S PLAN FOR THE CONTROL OF NARCOTIC ADDICTION

(By Herbert Berker, M. D., F. A. C. P.)

In January 1953 the Medical Society of the County of Richmond in New York after considerable study passed the following resolution:

"1. Whereas the medical professional in its traditional role as guardian of the public health has been distressed by the narcotic problem and its apparent increase; and

"2. Whereas the average user of narcotics must spend from $15 to $100 per day to keep himself supplied with drugs; and

"3. Whereas the crime in drug addiction stems from the inability of persons of moderate means to purchase drugs at present illegal prices; and

"4. Whereas the most serious of these crimes is the conversion of each addict into a salesman with consequent formation of new addicts; and

"5. Whereas the use of morphine and heroin in themselves do not incite these unfortunate people to crime, as both drugs are depressants; and

"6. Whereas the narcotics trade exists only because of the huge profits involved (for example, 2 pounds of heroin can be bought for $10 in China and sold after cutting and packaging for $80,000 or more): Then, therefore, be it

"*Resolved*, That the Medical Society of the County of Richmond favors the legalizing of the distribution of narcotics free of charge with proper safeguards, hereinafter to wit:

"1. Establish narcotics clinics in all cities as the need appears under the aegis of the United States Public Health Service.

"2. Register and fingerprint all who apply to prevent reregistering in other clinics.

"3. Do not demand that they be enforcibly confined, as they are now.

"4. Determine the smallest amount of pure drug that will relieve the patient of his symptoms.

"5. Administer this uncut material by the doctor or under his supervision and under sterile precautions.

"6. Keep accurate records of dosages.

"7. No supply ever to be given to the addict, dosage to be given only at the clinic.

"8. Nominal charge for the actual cost of the drug, possibly 15 to 30 cents.

"9. Make an effort to effect a cure, where possible, using hospitalization if the patient acquiesces."

The passage of this resolution excited the enthusiasm of the public press and has been followed in turn by a not inconsiderable degree of interest among social workers, psychologists, psychiatrists, the clergy, and addicts themselves. Those who are seeking a solution to the problem of juvenile delinquency, as well as a number of organizations devoted to the study of criminology, have seen fit to comment favorably on these suggestions. After appropriate action by the coordinating council of the five counties comprising the city of New York, this resolution was presented to the house of delegates of the Medical Society of the State of New York. It was referred to the council committee on public health and education and studied for an entire year. In May 1954 the house of delegates of our State society passed this resolution and referred it to the American Medical Association. The problem is now before a committee of the American Medical Association. Therefore, it seems proper that the resolution be called to the attention of physicians throughout the United States who may now have an opportunity to understand the background and the thinking that went into the preparation of these thoughts. Similar joint resolutions have been introduced into Congress. If some of the material that follows seems elementary, it is written so only because by Federal

fiat the medical profession has been separated from the care of these sick people, the narcotic addicts. It is quite possible that many physicians have neither seen, recognized, nor treated a person afflicted with addiction.

THE NARCOTIC ADDICT AS A PERSON

There are few people in this enlightened country of ours who are so badly misunderstood and maligned as these unfortunates. Our novelists and some of our less well-informed sources of general information have pictured him as a fiend and a devil, subhuman, and possessed of none of the gentler civilized attributes. Since most physicians are inexperienced with the votaries of opium, even we, who of all people should be aware of this faulty characterization, know little about these individuals. I was utterly amazed to meet a veritable Casper Milquetoast, my first experience with a long-addicted person. Perhaps as this story unfolds the reasons for our lack of authoritative information in this important medical area may become apparent.

There are no individuals who do not at times experience periods of depression or elation. A mature personality recognizes these alterations in his mood as normal. Most of us have learned that blue days are temporary and will ultimately be followed by better ones. We overcome our despair with patience or sometimes by the finding of a new hobby, a vacation, a new job or home, or perhaps a new interest. The narcotic addict, however, cannot tolerate these depressions and valleys in his daily living. He is incapable of using his own native talents for overcoming these unpleasant episodes. He wants to reach and stay at the heights of elation and happiness constantly. This is a perfectly normal, human desire shared by all of us. Our narcotic patient, however, differs in that he seeks to attain this plateau of joy chemically rather than from the use of his own inner strength and convictions. Even this small introduction to a large and involved subject should make it apparent that drug addiction isn't even a disease. It is merely a symptom of one.

What then is wrong with the euphoria that these people seek to achieve endlessly? The fault lies not with the pleasant state of mind which they hope to perpetuate but rather with their lack of insight into themselves and their lack of understanding of reality. A problem deferred with narcotics remains unsolved. It persists tomorrow or the next day so that these individuals, like so many of the rest of us, are procrastinators of the worst sort. Whatever strength of character they may once have possessed is lost as they everlastingly retreat from life and the making of decisions. Without going into this subject to a length interesting only to the serious student of psychiatry, it becomes apparent that these are sick individuals, suffering not from narcotic addiction but from lack of will power and strength of personality. They differ little from those of us who eat too much and hardly at all from the alcoholic who seeks as well to solve life's problems chemically.

THE NATURE OF ADDICTING DRUGS

We physicians have been using narcotics for thousands of years, and we know full well the effect of these medicaments on our patients. They are sedatives, inducing sleep or relieving anxiety. With them our patients may achieve surcease from pain or worry. Their larger problems may become smaller or even insignificant to them. Can the lurid articles in the daily press make us, who have a grounding in pharmacology, believe that narcotics do anything else for an addict? Under the influence of opiates the addict like our other patients becomes relaxed and at ease. He is incapable of violent crime while under the influence of these drugs and cares nothing for sex. He is incapable of sex. Many of them tell me that their entire interest in this subject disappears when they are so sedated. In fact, many of these individuals are better citizens with narcotics than they are without. Please do not interpret this as a suggestion that they be used in the treatment of certain psychogenic states. An observation that those of us who are interested in this subject make, time and time again, is that the individual who has been using these materials as self-treatment for anxiety demonstrates all of his symptoms as he is removed ever further and further from the addicting material. Many calm and quiet individuals who are able to work steadily while using narcotics find themselves becoming antisocial, belligerent, and endlessly difficult without these substances.

This, then, should introduce us to a new concept of these patients because actually every reader of this paper probably has met, and knows now, a narcotic addict who may hold a position of responsibility in his own community extending from bank presidents to doctors to locomotive engineers. These people perform their work perfectly without detection until for some reason they run afoul of the law in their efforts to gratify their habit. Compare our addict, if you will, with a diabetic. The latter is able to lead a normal life as long as he gets all of life's necessities and insulin. The drug addict, similarly, is able to function adequately as long as he receives the same necessities of life that our diabetic needs, but he, in addition, needs not insulin but narcotics.

There are two features which are ascribed to narcotics as though they exhibited these pharmacologic characteristics alone. These drugs produce both tolerance and dependence. By the former we mean that it takes ever increasing doses to produce the same effect. Your self-treated constipated patient tends to use ever larger and larger doses of his favorite laxative in order to produce the same effect on his bowels. Dependence is some characteristic of the nerve cell which demands these materials in order to function properly. Such dependence appears in many other diseases, for example, the use of vitamin B_{12} in the treatment of pernicious anemia.

Let us picture for a moment a potential narcotic addict who has never met a peddler. He might be the antisocial person who throws a stone through the stained glass window of the church to which he does not belong or who sets fire to his school when he has been disciplined therein. Perhaps he is a member of one of our numerous lunatic fringe societies, or he may be found in our jails or in our underworld because some of his antisocial behavior has made him a criminal. Not too long ago such a person came to my attention who, after experiencing many difficulties in adolescence, became a moderate user of narcotics. For the past 45 years he has operated a railroad switch tower at a busy junction. He has been praised by his supervisor as a diligent, conscientious worker who never misses a day and on who he can depend utterly. This individual unfortunately acquired tuberculosis and came to my attention only when he was admitted to a sanitorium, thereby being separated from his usual sources of supply. In summary, then, these materials are used as self-treatment by certain mentally sick individuals. They do not incite the user to violence. In fact, the very opposite is true.

CRIME AND DRUG ADDICTION

If these drugs do not promulgate criminal tendencies, why are crime and narcotic addiction so closely allied in our minds? In the United States the addict is not recognized officially as a psychopath but rather as a criminal. Now this is an entirely man-made situation. We could make our diabetics criminals just as quickly were we to forbid them insulin. Similarly, our experience with prohibition proved to us that we could make criminals out of devotees to alcohol. We recognized this error in our thinking when the 18th amendment was repealed. Now, by the ukase of the Bureau of Narcotics, we have divorced the addict from a legitimate source of drugs. He may not obtain these materials from his physician, nor can be obtain them through his pharmacist. To him they have become a way of life. They are, in his warped reasoning, necessary for his very existence. Therefore, he obtains them through the underworld or by stealth. The peddler, like the bootlegger of the 1920's, was happy to have this artificial opportunity created for him my our legislative efforts.

Narcotics are not very expensive, costing little more than aspirin to produce. There is a rather large tax on these materials, but even so, 20 or 30 cents would supply the daily needs of most addicts. Actually, however, since the price of these materials has been artificially heightened by the nature of their source, many of these people spend from $15 to $100 a day to gratify their addiction. This, then, is the source of crime. How many individuals do any of us know who can spend $100 per day on drugs in addition to all the other expenses of living. It becomes apparent that few could hope to do this by legitimate means. Actually the situation is compounded even further by additional factors. The narcotic addict must keep his illness secret to avoid the censure of his neighbors, so that he can stay out of the clutches of the law. As we have pointed out before, the materials are sedatives so that every capacity which he may have once had for earning large sums has ben lost by this action of narcotics. Therefore, as one addict described the situation, each day is spent in a frequently futile effort to acquire sufficient money to gratify the habit.

The type of crime to which these individuals turn is interesting. Since many of these people are rather meek, their methods of acquiring money are rarely violent. They are shoplifters, policy slip runners, bookies, pilferers, and the like. Murder is a rare crime among them. Females practice prostitution. Married women have been known to sell the furnishings from their homes to obtain moneys which should have been spent for food and other necessities. Many prostitutes have never seen the money their efforts have earned. Instead their procurer or madam pays them in narcotics. This tends to keep them from leaving the house. In some cities of the United States as many as 86 percent of all apprehended prostitutes were narcotic addicts.

Actually these are the least of their crimes. The most serious is the introduction of neophytes to addiction. The narcotic peddler is usually an addict. In New York City he is given 25 percent of all the narcotics he can sell. Therefore, the addict is the largest single cause of the spread of this symptom complex. Who are these initiates? In most instances they are children of high school age who are easily induced to take narcotics as a new adventure. They want desperately to be one of the crowd and intensely fear criticism of being "chicken."

THE MAGNITUDE OF THE PROBLEM

Because the sale and distribution of narcotics is illegal in the United States, we have no accurate figures as to the number of addicts in this country. Actually, we know only of those individuals who run afoul of the law. This amount seems to be increasing. An estimate made in 1918 by a commission appointed by the then Secretary of the Treasury estimated that we had a million addicts. This was about 4 or 5 times the number of sufferers prior to the passage of our first law of control, the Harrison Act. None of the figures from any source, whether it be the Commissioner of Narcotics, our courts of law, the Federal hospitals for the care of narcotic addicts, our prison popula-

tion, or the Bureau of Customs who seize a certain amount of narcotics each year, are accurate. The United Nations estimates that no more than 10 percent of all of the material smuggled into the United States is ever seized. In 1952, 4,000 ounces were so acquired by the Government; and if this were 10 percent of the total, then 40,000 ounces were smuggled into the country, which should be sufficient to supply 180,000 addicts. The number of individuals who have been apprehended for narcotic violations has increased 1,200 percent in the last 7 years. The adoption of our resolution will lead to the acquisition of some accurate information as to the nature of this problem and its magnitude.

THE CAUSE OF OUR PRESENT SITUATION

Most of the narcotics introduced into the United States in the latter part of the 19th century and the first 14 years of the 20th reached this country through Chinese Tongs. A good deal of the material so introduced was powdered crude opium which was smoked in parlors, very much as liquor is consumed in saloons. An occasional non-Chinese member of our community used this substance. Perhaps even larger numbers of individuals had become accustomed to various proprietary medications which were sold across drugstore counters without prescriptions which contained more or less narcotics. Querulous children were treated with nostrums containing paregoric. This was a well-recognized remedy for teething. Women used such substances for the relief of menstrual cramps and discomfort. A great number of apprehensive people used patent medicines containing opiates rather regularly to reduce their nervous tension.

In an effort to cope with this situation which had become a matter for concern in the press of the early 20th century, there was passed the Harrison Stamp Act. The purpose of this piece of legislation was to control the sale of these materials and to tax them. Since that time each vial of narcotics carries a stamp very much like that found on bottles of liquor. It is obvious that the Congress expected that this would be a tax measure because its enforcement was placed in the Treasury Department. The term "narcotic addict" does not even appear in the act. As a result of rulings by the Chief of the Bureau of Narcotics and by subsequent interpretations of these decrees by the Supreme Court, it has become illegal for practicing physicians to administer narcotics to addicts. The legal machinations by which we in medicine were separated from these unfortunates is a story in itself. It has been told very well by Mr. Rufus King [1] recently in the Yale Law Review. Remember the regulations were made by the Bureau and not by Congress.

All of the legislation, Federal, State, and municipal, is punitive in nature. The net result of this type of control has been to make the acquisition of narcotics ever more difficult and consequently ever more expensive. It follows then that each new measure actually incites new crime. In every instance this observation has been borne out. I am sure that those who have profited enormously from the sale of these substances welcome every new legal effort at control. There is no need to question why there are so many who are interested in pushing narcotics. The profits are beyond all realization. Five or ten dollars spent for narcotics in the Orient easily secreted under the shirt of a seaman can be smuggled into this country and sold for over $100,000 after being properly cut, diluted, and peddled. When one considers how impossible it was to prevent the smuggling of alcohol, which is thousands of times more bulky and with a considerably smaller profit involved, one can readily sense the futility of legally controlling narcotic addiction by such means.

Senator Royal S. Copeland, a physician from New York, recognized that many addicts would be left without any legitimate source of supply after the enactment of the Harrison Act. He suggested, therefore, that clinics be made available for these individuals so that they might be able to gratify their needs at small prices without recourse to the underworld. These clinics followed none of the regulatory devices which are suggested in our resolution. Nonetheless, they were attended by thousands of patients throughout the country. They were not well conceived, but they were an attempt in the right direction. They might ultimately have been made to work properly, had they been given the opportunity to correct their own errors. They were closed by a decree from the Bureau following a report by a committee of the American Medical Association in 1919 which suggested that narcotic addiction could best be cured within an institution. While the Bureau of Narcotics acted rapidly on the AMA suggestion, closing the clinics at once, it was not until 1935 before proper, Government-controlled institutions were inaugurated, first at Lexington, Ky., and later in Fort Worth, Tex., in an effort to handle this problem.

At the present time the United States has become a vast game preserve stocked with hundreds of thousands of narcotic addicts, a few of whom can be apprehended at will by our enforcement officers. The apprehension of an occasional smuggler or of some user or peddler (and the latter two terms are frequently synonymous) receives newspaper headlines, and we, who may not be interested in the subject, might then feel that the problem is being solved.

PRESENT METHODS OF TREATMENT OF NARCOTIC ADDICTION

Narcotic addicts who are not convicted of a crime and, therefore, incarcerated in jails may either by their own volition or on recommendation of appropriate penal, social, or medical authorities be recommended for admission to either of the Federal hospitals. Only one of these accepts females. Treatment in these institutions is excellent, there being brought to bear on the problem not only medical but religious, social, and vocational guidance. The treatment is long, from 4 to 12 months, and costs on an average $4,000 per patient.

The relapse rate of these patients is unknown. It is probably extremely high. Authorities in the institutions speak of 69 or 75 percent in various articles. Addicts give us the impression that the relapse rate is practically 100 percent. One addict that I interviewed received his first dose of heroin, after leaving the hospital at Lexington, in Pittsburgh as he changed trains to New York City. It would seem that only 5 percent of these patients stay completely well. If this figure is true, and it is probably quite accurate, then each cure costs the taxpayers of the United States $100,000. We in medicine would never accept so poor a record in the treatment of any disease. It becomes very difficult to say much in favor of a program of therapy with so enormous a rate of failure.

Yet our Government is committed to this utterly untenable policy. Perhaps the degree of ineptitude of our methods can best be exemplified by studying the situation in England where addicts may be treated by their own physicians and where there are reported for the year 1953 311 addicts, and there may be, according to the British authorities, 50 or 75 more in the entire British Isles, an area with a population of 40 million.

There is some light to be found in this picture in that in Detroit, Chicago, and New York City some followup methods are now being utilized. The report of the Provident Hospital under Dr. Walter Adams [2] in Chicago makes excellent reading, and I commend it to those of you who are interested. In New York City where the problem is most acute, particularly in our underprivileged areas, we have some facilities for the hospitalization and followup of juvenile patients, but nothing for adults.

In the therapy of so complex an individual as a narcotic addict, embracing as it does every class of human being, it becomes apparent that some, perhaps many, patients are incurably addicted. For such an individual there remains only three possibilities: (1) Incarcerate him for life, (2) put him to death, or (3) grant him some narcotics legally under proper regulation.

The first of these is too costly and would take many valuable citizens out of circulation. In addition, the addicts themselves would not voluntarily enter hospitals. They rarely go to Lexington or Fort Worth now of their own volition and then it is not to break the habit but to "kick it down" to a price they can afford.

The second has been tried at various times in dictatorships in the Orient. It hasn't worked there, and it is not likely to be enacted in any civilized country like the United States.

The third represents to us the only likely approach.

THE RICHMOND COUNTY PLAN A PRACTICAL REMEDY

The plan which has been described in the original resolution is as simple as it is direct. It embraces really only two steps:

1. Recognize the addict for what he is, a mentally sick person whose prime symptom of illness is addiction.

2. Let us bring to bear on this unfortunate psychopath the whole weight of our great knowledge in medicine, sociology, psychiatry, religion, and humanity so that this sick individual may again be made well and to rehabilitate him so that he can live without narcotics if this can possibly be done. If this is not possible with our present state of knowledge, then let us carry him on narcotics under our control until we learn enough about this subject to effect eventually a permanent cure.

What can we expect from this program?

1. To learn the magnitude of the problem.

2. To stop crimes committed by addicts in order to obtain the price of drugs.

3. To stop the introduction of addiction to new people by the present users who are trying to guarantee their own sources of supply.

4. To prevent death and disaster to those addicted individuals who inject impure, dirty, infected materials into themselves. Many lose their lives from overdosage or from "hot shots" which contain poison. This is the way the underworld disposes of a dangerous addict who has no money to purchase drugs or who informs on the "higher ups."

5. To empty our jails of these noncriminals or those pople who have become criminals only through our own inept legislation.

6. To give us the opportunity to study addiction so that we may eventually discover a real cure for this disease.

Naturally such a program will require careful safeguards:

1. It will demand the establishment of clinics in our larger cities and individual physicians [3] in smaller localities.

2. Narcotics should be administered only at the clinic. The addict will never be given a supply of medications.

[3] Howe, H. S.: New York State J. Med. 55: 341 (Feb. 1) 1955.

3. He must be fingerprinted and properly identified, registered, and photographed. Only those who are actually addicts can be treated. These can be readily recognized either by incarcerating them and withdrawing them from the narcotics after strict seclusion or by the administration of narcotic antagonists such as Nalline.

4. Hospitalize those patients who the medical personnel at the clinics feel can best be served by inpatient techniques. These should be individuals who request hospitalization after being so advised by the clinic physicians. They should not be forcibly incarcerated unless their physical or mental condition is so critical as to make them a menace to society.

OBJECTIONS TO THE PLAN

This plan is opposed by the Federal Bureau of Narcotics. I believe these gentlemen to be entirely sincere in their concept of narcotic addiction as a wholly criminal matter. I can only cite in rebuttal the existence of the problem after 40 years of such methods and its apparent growth under this technique. They feel that pride would keep addicts from registering in such clinics, and it is quite true that some might not, but 1,500 registered in the early clinics of 1918 on the first day. At the present time all addicts are cheats since they will do practically anything to secure the drugs they so urgently need. Under our plan some may continue to be dishonest, but that number ought to be a great deal smaller than it is now.

We hear a great deal about the contagious nature of addiction and that clinics, by bringing addicts together, will increase their numbers. Actually the necessity to sell drugs on the part of one addict to another in an effort to guarantee his own sources of supply is the most common cause of the spread of this condition. The disease itself is not contagious. There seems little reason to believe that an individual would continue to steal and commit crimes in order to obtain drugs when they can be obtained free.

Since some individuals use drugs frequently during the course of a day, we hear the objection that it will be inconvenient for them to return to the clinics as often as necessary. Pharmaceutical chemists [4] tell me that any time that the need arises they can prepare a repository narcotic that will have a 24-hour or longer effect.

CONCLUSION

It seems that narcotic addicts, like the rest of us, by normal attrition tend to reach the termination of their span on this earth. By such natural means many of our present incurable addicts will in time disappear. Should the pusher no longer find it necessary to induce our youth to become addicts to gratify his own narcotic needs, then it would seem that time alone under our technique will solve this problem even if we acquire no new information from our experience with these people when we have the opportunity to treat them. In view of the medical profession's extraordinary record of accomplishment in the past with the management of so-called incurable diseases, it seems probable, God willing, that we might find the answer to this one as well.

Development of the Mineral Resources of the United States

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Assistant Secretary of the Interior, Felix Edgar Wormser, before the joint session of the Lead Industries Association and the American Zinc Institute, at St. Louis, April 24, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ASSISTANT SECRETARY OF THE INTERIOR, FELIX EDGAR WORMSER, BEFORE THE JOINT SESSION OF THE LEAD INDUSTRIES ASSOCIATION AND THE AMERICAN ZINC INSTITUTE, ST. LOUIS, MO., APRIL 24, 1956

Three years in Washington serving the Nation in fostering the development of its mineral resources have been a rich but sobering experience. Time will not permit me even to highlight my impressions and observations, but I welcome this opportunity to pass on to you some thoughts which have come to me.

Let me begin by telling you, candidly, that I am proud of the record the present administration has made in the development and management of the country's natural resources since it assumed office. The record in the minerals area, as in other segments of resource development, speaks for itself.

The Bureau of Mines reported recently that last year the dollar value of minerals and mineral fuels produced in the United States broke all records. It was the best year in history, with an output of over $15 billion. Measured by the overall income of the American people—now over $300 billion per year—attractive corporate earnings, a buoyant stock market, and extraordinarily high employment, indeed, measured by almost any test that can be applied to an economy, the result is one in which we can all take pride.

Not everybody has shared in this prosperity. There are business failures every day. And there are many mines that cannot operate profitably even within this generally favorable economic environment. We have yet to devise a system that will ensure satisfactory results for everyone. No collectivists' economy has done it—not even with planned production and a lot of people busy at Government expense. The best they can do is to distribute the burden and make everyone poorer for the effort.

Others may differ with my own analysis of the fundamental prosperity of the mining industry. I observed in a recent report of the Western Governors' Minerals Conference a statement that the condition of domestic mining, with the possible exception of copper, ranges from poor to critical and its future is indeed uncertain. I thought there could be no possible doubt about the copper industry being prosperous with record-breaking prices prevailing, and certainly aluminum, iron and steel, lead and zinc, molybdenum, uranium, sulfur, and many others haven't suffered. They have had excellent years.

There are good reasons why the minerals industries are, by and large, experiencing great prosperity. The most important, I believe, is that this administration has restored the vital element of confidence in business planning—confidence that there will be no unnecessary intervention by the Government in the everyday activities of our citizens—confidence that there will be no effort to impose more controls over industry—confidence that business will no longer be the whipping boy of Government.

One of the greatest apprehensions the businessman has is that reasonable Government regulation, which we have come to accept, will deteriorate into arbitrary and punitive bureaucratic controls.

Perhaps equally important has been the unalterable determination of this administration to improve the international economic and political environment. Europe has been experiencing a boom and its appetite for metals and other minerals has grown to such an extraordinary degree that one can easily become a bit anxious as to how the total world demand for these materials will be supplied. A good illustration is the high demand for copper, even at extraordinarily high prices. The administration is seeking also to improve the purchasing power of underdeveloped countries so that countless millions abroad, some living virtually on the edge of poverty, may look forward to a better day.

These policies are, of course, directed toward the maintenance of peace. War inevitably brings about high prices, but the aftermath generally brings about chaotic conditions. This administration's policy is clear. It will leave no stone unturned in its foreign and domestic policies in the search for peace. War is a disturber of international markets and causes gyrations which plague both consumers and producers.

Under these policies our industrial activity is at an extraordinarily high level and, as I said before, the economies of other nations are similarly moving upward. The prices of metals and other minerals today by historical standards are good and the outlook, to my mind, is equally satisfactory. I cannot become pessimistic about the future of the minerals industries.

It was only 3 years ago, you will recall, that the administration was called upon to give serious thought to the precarious position of the lead and zinc mining industry. Lead was 12 cents and zinc was 9½ per pound. Soon thereafter the Government entered the market to make purchases for the military stockpile. These purchases siphoned off surplus American stocks and helped to bolster the entire world market. At the same time the spectacular growth in the European economy and our own sustained high level of productivity have brought world production and world demand for these commodities into virtual balance.

Those who characterize our domestic lead- and zinc-mining industry as in distress, obviously compare current output with that of the middle twenties when lead production

was over 600,000 tons a year and zinc production exceeded 700,000 tons. They point out that costs have increased far out of proportion to prices received, and they charge, too, that through national policies the domestic mining industries have been sold down the river to foreign interests.

It is true that current domestic mine production of lead is about half of what it was in the twenties, and zinc a little better than two-thirds. Imports have supplied the balance of our needs.

There has, of course, been a great increase in the cost of producing both lead and zinc. Those raw-material industries which have been able to maintain their competitive positions have done so mainly through the development of improved techniques to increase productivity per man per day. The opportunities of making the economies through mass production open to manufacturers will not generally be found in most metal and mineral industries by the very nature of the business. I need not dwell on this aspect of a problem with which most of you have to wrestle every day, for it is one well known to producers.

Needless to state, however, this problem is aggravated by the constantly declining grade of domestic ore. Since the twenties, we have been pushed more and more into a realization that the metal supply of the future will have to be derived from still lower content lead and zinc ores unless some new metal provinces are found containing richer deposits. Significant new discoveries would help. I believe there are still lead deposits to be found in the United States even though it is getting tougher and tougher to find them.

These circumstances place the domestic mining industry in a difficult position. In order to keep its customers, it must avoid undue advances in prices, which indubitably would destroy outlets that have been built up and cultivated over the years. Once lost, markets are difficult to recapture.

With reference to the criticisms of foreign economic policy, I'm sure we all fully realize how dependent American industries are on imports of lead and zinc. The problem of preserving a reasonable balance between imports and domestic production is extremely difficult, particularly during periods of partial mobilization. Sometimes Federal policies during these periods appear to work at cross purposes. During the Korean emergency, for example, Federal policies encouraged expanded production abroad as well as at home. During this period prices abroad were such as to attract considerable quantities of foreign production. At the same time the domestic-mining industry was denied the higher prices prevailing in world markets by the price-control program designed to curb inflation.

Following the Korean episode, demand projections did not fully materialize and we found ourselves with sizable commercial surpluses. These have now been largely removed by Government purchases for the stockpile.

Apparently, the greatest concern of those who feel all is not well with the lead and zinc mining industries is: What is to be done after stockpiling ceases? Everyone admits that Government purchases have provided a substantial support to lead and zinc prices. Ultimately, these purchases must cease. Will the domestic mining industry then require some form of assistance? And, if so, what?

In the belief that when stockpiling is complete, lead and zinc mining will require assistance beyond that offered by the present tariff, leaders in the industry have advocated the enactment of an import tax. They propose that the Congress now place a tax on imports of lead and zinc, in addition to the existing tariff, this tax to take effect only when the price of either commodity should fall below a predetermined level.

This scheme is similar in principle to the import tax on copper—a 2 cents per pound tax which the Congress has temporarily suspended so long as the price stays above 24 cents. It automatically becomes effective once again whenever the price falls below the 24 cents level.

The general principle of giving moderate protection to a domestic industry when it faces injury from falling prices appeals to me. A reasonable import tax, applied to lead and zinc, would help maintain domestic mining operations for both defense and commercial purposes and yet permit all needed imports. It should serve to give the domestic producer a slightly larger price than that of the world markets, and at the same time impose little penalty on the foreign producer selling in the United States markets. It would not, of course, protect the lead and zinc mining industries from major dips that might result from unforeseen changes to which our economy may be subjected, but it would be a much better device for assistance than a subsidy.

This administration recognizes that a strong, vigorous, and efficient domestic mineral industry is essential to the long-term economic development of the United States. What do we mean by a strong, vigorous, and efficient mining industry? To my mind, this means one that is able to stand alone competitively without artificial stimuli from the Government, and by stimuli, I mean devices which would involve dipping into the Treasury of the United States. A tariff or an import tax is a stimulus, to be sure, but it does not invite governmental controls.

Tariff increases, as you all know, have not been popular with this administration. The administration has not, however, favored the removal of tariffs at the expense of American labor standards or a sound domestic economy.

The President did, of course, reject the recommendation of the Tariff Commission 2 years ago that the duties on lead and zinc be increased to offset the injury being experienced by the domestic industry. It is not always recognized that the President, in acting upon a recommendation arising from an escape-clause investigation, must take into account many factors affecting the national interest. Sometimes these involve other segments of the domestic economy, sometimes important strokes in our foreign relations are at issue. There were such factors present when the decision on the lead and zinc escape-clause recommendation had to be made.

While attention has been focused on the President's statement at that time that purchases for the long-term stockpile would be undertaken, little thought has been given to another step which the President indicated he was taking.

"I am directing," he wrote to congressional committees, "the Secretary of Agriculture to initiate action designed to acquire lead and zinc of foreign origin * * * for the supplemental stockpile."

What significance does this action have for the lead and zinc industries?

Perhaps you know that the Commodity Credit Corporation has long had authority to exchange surplus agricultural commodities in its possession for other commodities and to sell the proceeds in the open market. In 1954 the Congress, in an effort to dispose of some of the surplus piling up after the Korean emergency, authorized the sale of 1½ billions of these agricultural surpluses for local currencies abroad. That act, Public Law 480 of the 83d Congress, known as the Agricultural Trade Development and Assistance Act, spelled our various ways in which the Government might make use of these foreign currencies.

One of the uses proposed by the Congress for these local currencies is to buy strategic and critical materials. You may ask what is to be done with them after they have been bought. They are to be placed in a supplemental stockpile under the same safeguards applied to the national strategic stockpile.

Public Law 480, in addition to authorizing sales of surpluses for local currencies, emphasized existing barter legislation and directed the Secretary of Agriculture to use every practicable means to export Commodity Credit Corporation commodities through barter.

What is the effect of all this to be? Simply that the Government is embarking upon a program of acquiring critical and strategic materials over and above those needed for military stockpiling and that these acquisitions are to be isolated from commercial markets in the same manner as the military stockpile. They will be frozen. Every effort is being made by the Department of Agriculture, working closely with the Interior Department, to prevent these transactions from creating unfortunate fluctuations in the metals and minerals markets. The important significance to the mineral industries is that these programs to dispose of agricultural commodities can serve to lift surplus stocks of minerals and metals from the international markets, and thus bring about higher prices. International metal and mineral markets are sensitive to shifts in supply and demand, even though such shifts may be created solely by Government intervention in the market place.

You will probably want to know how big an accumulation of strategic and critical materials can be procured. Obviously, with agricultural products worth billions available for disposition, it is easy to see that, theoretically, several hundred million dollars worth of metals and minerals might be obtained through these programs. The President, of course, will have the final determination as to the size of the supplemental stockpiles that may be acquired, but the goals in any event are bound to be high, and purchasing and bartering could go on for years. This will necessarily be a slow process as the very operation of barter, while having a stimulating effect on the metal markets, will have the reverse effect on the international agricultural markets.

From all of this you can gather that we may have here a new and powerful influence in international metal and mineral markets which could prove of material benefit to segments of our domestic mineral economy for some time to come.

While I am on the subject of agriculture, let me take a moment to discuss the Government's relationship to agriculture and to the mineral-producing industries respectively. All of you know that over the years we have followed national policies of supporting the prices of basic farm products, but have not accorded the mineral industries similar treatment. It is not only in the basic policy of price supports, now firmly fastened into law, that agriculture seems to occupy a more favored position. Many agricultural exports, such as wheat, are subsidized, and rigorous controls are established on the imports of numerous agricultural commodities, especially sugar. Indeed, should the mining industry ever become imbued with the idea of international commodity controls, they have the example of sugar before them to see what can be done. My own preference, if an industry must have it, is Government assistance free of control.

Moreover, agriculture is assisted by section 22 of the Agricultural Adjustment Act, whereby the President is authorized to impose quotas on the imports of farm products when such imports threaten to render ineffective a domestic price-support program. There are, of course, fundamental differences between the problems of agriculture and those of mining which we need not go into here. Suffice it to say, that through tech-

nology farmers have not only increased their hourly yield per worker, but have materially increased their yield per acre. In contrast, instead of getting more out of an acre of land, as the farmers do, we, in mining, have to take the mineral resources as nature fashioned them, and, as we are keenly aware, they have become leaner and leaner. We are getting less per acre of mineral ground than we did a few years ago.

I know that at times miners have toyed with the idea of using the parity concept to assist them, but, if we were to apply the same parity principle to metals as we do to farm products, we should find that metal prices are considerably higher than any parity formula would provide. Nor do I think that the mining industry would enjoy the Government controls accepted by agriculture. What miner wants to have the Government tell him what to produce, and how, and where to market it? I have an idea that the domestic mining industry would prefer other avenues of Government assistance when conditions warrant some measure of support.

Important in current discussions today is the pending measure in the Congress that would authorize the United States to join the Organization for Trade Cooperation, or OTC as it is popularly known. I am aware that the American Mining Congress and other mining groups have publicly opposed OTC. May I tell you quite frankly that I believe some of the fears expressed about OTC are groundless and stem largely from a misconception of the intent of the legislation and the nature of the organization itself.

Charges have been made that the Executive has gone beyond the authority granted by the Reciprocal Trade Agreements Act and committed the Government to arrangements under the General Agreements on Tariffs and Trade, by which the Congress of the United States has been completely estopped from enacting legislation affecting foreign trade. This is not true. But beginning with this bogeyman, opponents of OTC have proceeded to build it into a supra-national agency with powers of life and death over our foreign trade. Nothing could be farther from reality. The general agreement is a multilateral trade agreement, negotiated under the authority of the Reciprocal Trade Agreements Act. OTC will provide minimum machinery for the agreement, will sponsor multilateral trade negotiations, and will offer a forum for international consultation and the discussion of trade disputes which so often occur when trade agreements come into force. It will have no police power.

The approval of OTC by the Congress would give no additional authority by Congress to approve lower tariffs, and would, by no stretch of the imagination, constitute an abdication by Congress or a delegation of its authority to some international agency. OTC, while expected to stimulate an expansion of world trade, is no subversive movement to bring about free trade. I can well understand how some segments of mining may have been unhappy over some of the tariff concessions made by the United States pursuant to the Reciprocal Trade Agreements Act, particularly by the apparent failure to distinguish between cutting ad valorem rates and cutting specific rates. I believe, however, that anyone who will take the time to study the record prosperity in our great country over the last 3 years, will conclude that a significant factor in this prosperity has been the program of trade liberalization. It is certainly to our own interest to foster international trade, provided, of course, we establish proper safeguards against injury to domestic producers.

OTC is not an international commodity agreement either. I think you know where I stand on the subject of international controls. This administration has made abundantly clear its opposition to international commodity agreements designed to stabilize prices and control production. It may be, of course, that some future administration may be attracted by such agreements, but OTC would not alter in any way the existing authority of governments to enter into or to refuse to enter into commodity agreements, and there certainly is no encouragement in it for the promotion of such economic illusions and pitfalls.

President Eisenhower has strongly urged the creation of OTC. He sees in it an important forum for the interpretation of the American way of business. It is an essential part of his overall program of maintaining the peace, and of sustaining a high level of economic activity in the United States.

OTC represents, I believe, an opportunity to impress the nations of the world that the wonderful achievements of industry in the United States have been made by following competitive business practices. It is an opportunity to encourage other nations to dispense with Government enterprises, rid themselves of cartels, and lift the heavy hand of bureaucratic controls. It is an opportunity to sell capitalism.

I don't know how many of you heard the extemporaneous comments which the President delivered before the recent meeting of the Advertising Council in Washington, D. C. At that time, he made a plea for more attention abroad to the features of our own competitive enterprise economy which has given us such an extraordinary high standard of living. He termed it "free competitive capitalism." I was delighted at this endorsement for so often capitalism has proven to be a smear and a sneer word. In fact, over the last hundred years, capitalism has taken quite a beating while socialism—or communism—has been heralded as the best economic system to increase the fortunes of the masses.

I have spoken much longer than I originally intended. I could go on indefinitely to speak of many problems which cross my desk every day, and which, though they may appear at first to be remote from your direct interest, are of vital importance to the mining industry, but I have spoken enough. I should like to conclude on an optimistic note.

If we continue to be successful in maintaining the peace of the world, and if the energies of people everywhere continue to be expended in improving living standards, I do not believe we shall have to worry much about tariffs, quotas, stockpiling, barter, or subsidies to assist domestic mining industries. My own concern is that inadequate supplies of some of our metals and other minerals may actually retard our progress and that of the free world. We are experiencing the greatest prosperity any nation has ever known. American labor is receiving the highest wages in history. Confidence in the future characterizes most of our business.

I am proud, pardonably so, I hope, to be a member of President Eisenhower's administration to which a measure of credit must be given for some of these accomplishments.

United States Supreme Court Decision in Squire *v.* Capoeman

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 30, 1956

Mr. MURRAY. Mr. President, in the case of Squire versus Capoeman, the United States Supreme Court decided last Monday that Indians are exempt from the Federal capital-gains tax on funds obtained by the sale of standing timber on an individual trust allotment. The majority opinion, written by Chief Justice Warren, concludes with the strong statement that to impose the tax would be "at the least, a sorry breach of faith with these Indians."

The Capoeman decision constitutes a significant victory in the continuing legal battle to stop the elimination of traditional Indian tax exemptions. In holding for the taxpayer, the Court cited both treaty and statutory safeguards over Indian property, and stressed the present-day need to prevent reductions in the direct income of individual Indians from their trust lands. The Court further quoted with approval of the time-honored principle that "Doubtful expressions—in the law—are to be resolved in favor of the weak and defenseless people who are the wards of the Nation, dependent upon its protection and good faith."

Most Members of Congress are familiar with the deplorable poverty on Indian reservations, and with our efforts to raise the living standards of Indians throughout the country. In the Capoeman case, the Supreme Court has recognized and affirmed a national policy laid down by Congress to protect the income of Indians from trust property during the period that the United States remains charged with that trust and with the responsibility to foster Indian welfare.

I ask unanimous consent that the complete text of the opinions in the Capoeman case be printed in the Appendix of the RECORD.

There being no objection, the opinions were ordered to be printed in the RECORD, as follows:

SUPREME COURT OF THE UNITED STATES—NO. 134—OCTOBER TERM, 1955—CLARK SQUIRE, COLLECTOR OF INTERNAL REVENUE FOR THE DISTRICT OF WASHINGTON, PETITIONER, *v.* HORTON CAPOEMAN AND EMMA CAPOEMAN, HIS WIFE—ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

APRIL 23, 1956

Mr. Chief Justice Warren delivered the opinion of the Court.

The question presented is whether the proceeds of the sale by the United States Government of standing timber on allotted lands on the Quinaielt Indian Reservation may be made subject to capital gains tax, consistently with applicable treaty and statutory provisions and the Government's role as respondents' trustee and guardian.

When white men first came to the Olympic Peninsula, in what is now the State of Washington, they found the Quinaielt Tribe of Indians and their neighboring allied tribes occupying a tract of country lying between the Coast Range and the Pacific Ocean. This vast tract, with the exception of a small portion reserved for their exclusive use, was ceded by the Quinaielts and their neighbors to the United States in exchange for protection and tutelage by the treaty of July 1, 1855, and January 25, 1856, 12 Statute 971. According to this treaty, the Quinaielts were to have exclusive use of their reservation "and no white man shall be permitted to reside thereon without permission of the tribe." Article II. Years later, Congress passed the General Allotment

Act of 1887.[1] Thereunder, Indians were to be allotted lands on their reservations not to exceed 160 acres of grazing land or 80 acres of agricultural land,[2] and 25 years after allotment the allottees were to receive the lands discharged of the trust under which the United States had theretofore held them, and to obtain a patent "in fee discharged of said trust and free of all charge or incumbrance whatsoever,"[3] though the President might extend the period.[4]

Respondents, husband and wife, were born on the reservation, and are described by the Government as fullblood, noncompetent Quinaielt Indians. They have lived on the reservation all their lives with the exception of the time served by respondent husband in the Armed Forces of the United States during World War II.

Pursuant to the treaty and under the General Allotment Act of 1887, respondent husband was allotted from the treaty-guaranteed reservation 93.25 acres and received a trust patent[5] therefor dated October 1, 1907.[6] During the tax year here in question, the fee title to this land was still held by the United States in trust for him, and was not subject to alienation or encumbrance by him, except with the consent of the United States Government, which consent had never been given. The land was forest land, covered by coniferous trees from 100 years to several hundred years old. It was not adaptable to agricultural purposes, and was of little value after the timber was cut.

In the year 1943, the Bureau of Indian Affairs of the United States Department of the Interior entered into a contract of sale for the standing timber on respondent's allotted land for the total price of $15,080.80. The Government received the sum of $8,418.28 on behalf of respondent in that year.[7]

Upon demand of petitioner, collector of internal revenue for the district of Washington, respondents filed a joint income tax return on October 10, 1947, for the tax year 1943, reporting long-term capital gain from the sale of the timber in that year. Simultaneously, they paid the taxes shown due. Thereafter they filed a timely claim for refund of the taxes paid and contended that the proceeds from the sale of timber from the allotted land were not subject to Federal income taxation because such taxation would be in violation of the provisions of the Quinaielt Treaty, the trust patent, and the General Allotment Act. The claim for refund was denied, and this action was instituted. The district court found that the tax had been unlawfully collected and ordered the refund (110 F. Supp. 924). The court of appeals, agreeing with the district court but recognizing a conflict between this case and the decision of the 10th circuit in the case of *Jones* v. *Taunah* (186 F. 2d 445), affirmed; (220 F. 2d 349). Because of the apparent conflict, we granted certiorari (350 U. S. 816).

The Government urges us to view this case as an ordinary tax case without regard to the treaty, relevant statutes, congressional policy concerning Indians, or the guardian-ward relationship between the United States and these particular Indians. It argues:

"As citizens of the United States they are taxable under the broad provisions of sections 11 and 22 (a) of the Internal Revenue Code of 1939, which imposes a tax on the net income of every individual, derived from any source whatever. There is no exemption from tax in the Quinaielt Treaty, the General Allotment Act, the taxing statute, or in any other legislation dealing with taxpayers' affairs.

"Even if it be assumed that the United States would be prohibited from imposing a direct tax on the allotted land held in trust for the taxpayers, there would, nevertheless, be no prohibition against a Federal tax on the income derived from the land, since a tax on such income is not the same as a tax on the source of the income, the land."[8]

We agree with the Government that Indians are citizens and that in ordinary affairs of life, not governed by treaties or remedial legislation, they are subject to the payment of income taxes as are other citizens. We also agree that to be valid, exemptions to tax laws should be clearly expressed. But we cannot agree that taxability of petitioners in these circumstances is unaffected by the treaty, the trust patent or the Allotment Act.

The courts below held that imposition of the tax here in question is inconsistent with the Government's promise to transfer the fee "free of all charge or encumbrance whatsoever." Although this statutory provision is not expressly couched in terms of nontaxability, this Court has said that—

"Doubtful expressions are to be resolved in favor of the weak and defenseless people who are the wards of the nation, dependent upon its protection and good faith. Hence, in the words of Chief Justice Marshall, 'The language used in treaties with the Indians should never be construed to their prejudice. If words be made use of, which are susceptible of a more extended meaning than their plain import, as connected with the tenor of the treaty, they should be considered as used only in the latter sense.' *Worcester* v. *The State of Georgia*, 6 Pet. 515, 582." *Carpenter* v. *Shaw*, 280 U. S. 363, 367.

Thus, the general words "charge or incumbrance" might well be sufficient to include taxation. But Congress, in an amendment to the General Allotment Act, gave additional force to respondents' position. Section 6 of that act was amended to include a proviso—

"That the Secretary of the Interior may, in his discretion, and he is authorized, whenever he shall be satisfied that any Indian allottee is competent and capable of managing his or her affairs at any time to cause to be issued to such allottee a patent in fee simple, and thereafter all restrictions as to sale, incumbrance, or taxation of said land shall be removed and said land shall not be liable to the satisfaction of any debt contracted prior to the issuing of such patent."[9]

The Government argues that this amendment was directed solely at permitting State and local taxation after a transfer in fee, but there is no indication in the legislative history of the amendment that it was to be so limited.[10] The fact that this amendment antedated the Federal income tax by 10 years also seems irrelevant. The literal language of the proviso evinces a congressional intent to subject an Indian allotment to all taxes only after a patent in fee is issued to the allottee. This, in turn, implies that, until such times as the patent is issued, the allotment shall be free from all taxes, both those in being and those which might in the future be enacted.[11]

The first opinion of an Attorney General touching on this question seemed to construe the language of the amendment to section 6 as exempting from the income tax income derived from restricted allotments.[12] And even without such a clear statutory basis for exemption, a later Attorney General advised that he was—

"Unable, by implication, to impute to Congress under the broad language of our Internal Revenue Acts an intent to impose a tax for the benefit of the Federal Government on income diriyed from the restricted property of these wards of the Nation; property the management and control of which rests largely in the hands of officers of the Government charged by law with the responsibility and duty of protecting the interests and welfare of these dependent people. In other words, it is not lightly to be assumed that Congress intended to tax the ward for the benefit of the guardian."[13]

Two of these opinions were published as Treasury Decisions.[14] On the basis of these opinions and decisions, and a series of district and circuit court decisions, it was said by Felix S. Cohen, an acknowledged expert in Indian law, that "It is clear that the exemption accorded tribal and restricted Indian lands extends to the income derived directly therefrom."[15] These relatively contemporaneous official and unofficial writings are entitled to consideration. The Government makes much of a subsequent Attorney General's opinion,[16] which expressly overruled an earlier opinion,[17] on the authority of *Superintendent of Five Civilized Tribes* v. *Commission* (295 U. S. 418).

This case is distinguishable from the case at hand. It involved what the Court characterized as "income derived from investment of surplus income from land,"[18] or income on income, which Cohen termed "reinvestment income." The purpose of the allotment system was to protect the Indians' interest and "to prepare the Indians to take their place as independent, qualified members of the modern body politic." *Board of Commissioners* v. *Seber* (318 U. S. 705, 715.) To this end, it is necessary to preserve the trust and income derived directly therefrom, but it is not the necessary to exempt reinvestment income from tax burdens. It is noteworthy that the Superintendent case did not involve an attempt to tax the land "surplus."[19]

The wisdom of the congressional exemption from tax embodied in section 6 of the General Allotment Act is manifested by the facts of the instant case. Respondent's timber constitutes the major value of his allotted land. The Government determines the conditions under which the cutting is made.[20] Once logged off, the land is of little value.[21] The land no longer serves the purpose for which it was by treaty set aside to his ancestors, and for which it was allotted to him. It can no longer be adequate to his needs and serve the purpose of bringing him finally to a state of competency and independence. Unless the proceeds of the timber sale are preserved for respondent, he cannot go forward when declared competent with the necessary chance of economic survival in competition with others. This chance is guaranteed by the tax exemption afforded by the General Allotment Act, and the solemn undertaking in the patent. It is unreasonable to infer that in enacting the income-tax law, Congress intended to limit or undermine the Government's undertaking. To tax respondent under these circumstances would, in the words of the court below, be "at the least, a sorry breach of faith with these Indians."[22]

The judgment of the court of appeals is affirmed.

Mr. Justice Reed, dissenting.

My view is that the sale price of the timber in excess of its market value on March 1, 1913, was a capital gain, subject to Federal income tax. *Jones* v. *Taunah* (186 F. 2d 445), *Cf. Choteau* v. *Burnet* (283 U. S. 691); *Superintendent* v. *Commissioner* (295 U. S. 418). The gain is taxable income like the value of annual crops.

Mr. Justice Harlan took no part in the consideration or decision of this case.

Footnotes at end of speech.

[2] 25 U. S. C. sec. 331.

[3] *Id.*, sec. 348.

[4] *Ibid.* The trust period here involved has regularly been extended by Executive Order. See note following 25 U. S. C. sec. 348, and see 25 U. S. C. sec. 462, which provides: "The existing periods of trust placed upon any Indian lands and any restriction on alienation thereof are extended and continued until otherwise directed by Congress."

[5] The term "patent" inadequately describes respondents' interest. "Congress * * * was careful to avoid investing the allottee with the title in the first instance, and directed

Footnotes at end of speech.

that there should be issued to him what * * * is in reality an allotment certificate." *Monson* v. *Simonson* (231 U. S. 345).

[6] In pertinent part, the patent provides:

"Now know ye, That the United States of America, in consideration of the premises, has allotted, and by these presents does allot, into the said Horton Capoeman, the land above described, and hereby declares that it does and will hold the land thus allotted (subject to all statutory provisions and restrictions) for the period of 25 years, in trust for the sole use and benefit of the said Indian, and that at the expiration of said period the United States will convey the same by patent to said Indian, in fee, discharged of said trust and free of all charge or incumbrance whatsoever. * * *."

[7] This sale seems to have followed a pattern generally adopted by the Government in selling timber from Indian allotments. Huge areas of forest are put up for competitive bids by lumber companies. These tracts include the tribal forest lands and individual allotments, with the consent of tribal councils and indiviual aliottees. The successful bidder is required to make an immediate advance payment of a large proportion of the estimated value of the lumber in the tract. Since as much as 640 million board-feet have been sold at one time, this requirement makes it economically infeasible for any but the largest companies to submit bids. The uncertainties of such large-scale operations, which are to be carried on over 25- or 30-year periods, coupled with local quality and accessibility variables, has resulted in substantially lower than prevailing market bids. In some instances, the return to other sellers of comparable timber was 2 or 3 times that received by the Indians. See Transcript of November 28, 1955, Joint Hearing of Subcommittee on Legislative Oversight Function of the Senate Committee on Interior and Insular Affairs and of Subcommittee on Public Works and Resources of the House Committee on Government Operations, 2151-2217, and passim.

Taxes in Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. MARTIN of Pennsylvania. Mr. President, it is embarrassing to announce anything detrimental to a Senator's own State. However, we are all anxious to build a stronger America. Taxes are giving Pennsylvania a disadvantage.

I am placing the following articles in the RECORD because to my mind one of the most serious things in the United States today is the increasing cost of government. It should be our aim to cut the cost of government.

From a Federal standpoint, we should be giving constant thought to the reduction of the public debt. I feel that heavy public debt and taxes are more dangerous to our security than are invading armies and bombs.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Pittsburgh Sun-Telegraph of April 26, entitled "Suicidal Taxes," an editorial published in the Pittsburgh Post-Gazette of April 27, 1956, entitled "Leaving the Valley," and comments by John M. Cummings in the Philadelphia Inquirer of April 30, entitled "Industrial Growth Hit by Tax Flaws in State."

There being no objection, the editorials and newspaper comments were ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Sun-Telegraph of April 26, 1956]

SUICIDAL TAXES

Has Pennsylvania, as represented by the government at Harrisburg, set out to kill itself as a manufacturing State?

The question is not so mock-sensational, not quite so ridiculous, as it may seem to be.

It is prompted by the Westinghouse Electric Corp.'s announcement that it plans to build a new plant in Indiana and transfer one of its departments at East Pittsburgh there because, among other reasons, the tax situation in Pennsylvania is "unfavorable."

During the legislature's discussion of Governor Leader's proposed manufacturer's excise there was impressive testimony that the excise would keep new industries from coming to Pennsylvania and might cause some now here to leave.

Comparative figures showing the extent to which corporations are taxed here and in other States do not present Pennsylvania in an inviting light, so far as corporations are concerned.

Some of them say their tax burden has become almost intolerable.

The Westinghouse company's decision is particularly convincing.

Here is a corporation which was born in Pittsburgh, derives its name from a Pittsburgher, and has its largest plants and its general offices in Pittsburgh.

Innumerable ties—economic, historical, and sentimental—bind Westinghouse to Pittsburgh.

The company has found it necessary to expand the plant at East Pittsburgh, where it makes switchgear apparatus. There is no room for expansion at the existing location.

Still the company was reluctant to remove the business from Pennsylvania. A. C. Monteith, Westinghouse vice president, says the company considered two localities in Pennsylvania for the new plant. But he adds:

"An unfavorable tax situation in the Commonwealth was a contributing factor in our decision to locate elsewhere."

So Pennsylvania is to lose a multi-million dollar manufacturing establishment employing some 450.

Governor Leader talks of bringing new industries to the State to provide employment for people in the industrially depressed areas such as the coal mining regions, where many miners are idle.

The way to attract industries is to make the State attractive.

Governor Leader has not contributed to this by his tax program.

Nor has he helped by his administration's attitude that the recent Westinghouse strike was not a strike but a lockout.

It is to be hoped that the company's decision to remove one of its East Pittsburgh departments out of the State will produce some sober thinking on the subject at Harrisburg.

[From the Pittsburgh Post-Gazette of April 27, 1956]

LEAVING THE VALLEY

Westinghouse will move its switchgear department from East Pittsburgh to a new, multi-million dollar plant near Bloomington, Ind. It is doing so for several reasons, says the company, among them "an unfavorable tax situation in the Commonwealth [of Pennsylvania]."

The new plant, which is to be completed by 1959, will employ about 450 people and will directly and indirectly contribute to the prosperity of Bloomington and Indiana. Pittsburgh and Pennsylvania will be the losers.

Westinghouse cannot be blamed for the move. It is in business, competitively so, and cannot afford to make decisions, however commendable in sentiment, that are not largely justified in dollars and cents. Rather, the blame must rest with this district and with the government in Harrisburg if an industry, and especially a home industry, finds it can fare better elsewhere.

We suspect that Westinghouse had other reasons for withdrawing its big switchgear operation from East Pittsburgh that were fully as compelling as those regarding taxation. And one of them, we further suspect, has to do with the labor history of Turtle Creek Valley.

Westinghouse's plants in East Pittsburgh have long been beset with union troubles almost unmatched elsewhere in the Nation. During 1954 and 1955, some 40 walkouts occurred there. For causes good or ill, leadership of the IUE local in East Pittsburgh, many of whose members once belonged to the old Communist-dominated U. E. local, has seemed notably truculent. It will be recalled that Westinghouse production at East Pittsburgh was shut down for 6 weeks late last summer in a labor dispute that proved a curtain-raiser to Westinghouse's recently ended strike of 5 months.

Moreover, the governmental tone in Harrisburg and elsewhere in this State has not been such as to attract industrialists. While Ohio and particularly the city of Columbus acted vigorously to curb violence and vandalism during the Westinghouse strike, the Leader administration and politicos in some of our cities were inclined to look the other way. The ruling by the Leader administration that the Westinghouse strike was a lockout, thus making unemployment compensation available to the strikers, was a most flagrant and political wrenching of the

facts. It could hardly elicit confidence in the fair play and impartiality of Pennsylvania government in an industrial dispute.

The Westinghouse move does not toll a bell for industrial development in Pennsylvania, but it certainly rings an alarm. State and local officials would do well to hear it and undertake what for Pensylvanians is a needed, if agonizing, reappraisal.

[From the Philadelphia Inquirer of April 30, 1956]

INDUSTRIAL GROWTH HIT BY TAX FLAWS IN STATE

(By John M. Cummings)

It isn't likely Governor Leader will be back in Harrisburg tomorrow to welcome the return of Senators and Representatives who have been on a brief vacation which had its roots in the primary election. Some of the lads will return to what they call the job as lawmakers' reject. They were given the old heave-ho by the voters.

At last accounts the governor was aboard a Navy vessel somewhere in the Atlantic. This put him at sea in a literal sense in contrast to the figurative sailing he has been doing since the beginning of his administration.

With the governor out of the picture, we are reduced to the extremity of addressing a few words to the members of the assembly. At the time a recess was decreed the tax problem was still very much in the forefront of discussion on Capitol Hill. This discussion will be resumed, picked up just where it was dropped when the solons headed for home to mend their political fences.

Let us have your attention, then, Mr. Speaker Andrews, of the house, and you, Lieutenant Governor Furman, and President pro tempore Taylor. You all will recall that a little while back there appeared in this corner of the paper a learned dissertation on the woes of the Pennsylvania Railroad in its effort to build up business along its right-of-way in our noble Commonwealth. It contained these paragraphs:

"In the 12-month period ending April 1 new industries with a total value of $534 million located along the right-of-way of the Pennsylvania Railroad in the State of Ohio.

"In the same period new industries along the right-of-way in this State were valued at $9,600,000."

Many, if not all, the industries which picked Ohio locations had an opportunity to settle down in Pennsylvania. But they refused to come into this State because of the uncertinty of the tax setup.

It is not the desire of this corner to have the lawmakers run away with the notion that this was an experience peculiar to President Jim Symes and the Pennsylvania Railroad. Gentlemen of the general assembly, meet Joe Fisher, president of the Reading Co.

Only recently it seemed likely one of the largest manufacturing concerns in the Nation would take title to a 40-acre plot in Northeast Philadelphia. Here was to be erected a plant which would have given employment to some 3,500 to 4,000 skilled workers. It was along the Reading Railroad, since the company is of a type which demands ready access to rail transportation.

The manufacturing division of the company in question approved the site. So did the sales division because it was right in the center of the big eastern market. But when the proposal was laid before the corporation's top officers at general headquarters in a large Midwest city it was rejected. Why?

The same old story. The company had no way of knowing what the tax setup would be in Pennsylvania this year or at any time in the foreseeable future. It wasn't a question of looking for tax-free land. The company was perfectly willing and happy to pay its share of the load. But its officials would like to have some inkling of the kind of taxes they may be expected to pay.

So, from present indications, the plant will be located in New Jersey. On the other side of the Delaware they have a stabilized tax setup. An industry locating there is not buying a pig in a poke—a tax pig, that is.

This is only one of several experiences of a similar nature which have troubled the Reading as well as the Pennsylvania. For the chaotic conditions of Pennsylvania's fiscal affairs, Governor Leader, as Democrats and Republicans so well know, must shoulder a major share of the blame. Already he has slumped $36 million which would have been collected had he displayed a modicum of horsesense before the old sales tax law expired. It's time for action of a constructive sort at Harrisburg.

Careful With That Facade

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial dealing with the Capitol, published in the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAREFUL WITH THAT FACADE

Springtime seems to move people to refurbish their homes and yards, and Congress is no different. Thus Congress plans a $100 million expansion inside and around the Capitol. Since the Capitol is not only a building but a public symbol, the American people ought to know what Congress plans to do with it.

The legislators already have authorized a second Senate Office Building, a third House Office Building, remodeling of the 3 present office buildings and purchase of land on the fringes of the present 135-acre Capitol tract. Honest work is much to be admired, so few citizens will quarrel with Congress' demand for working space.

But there is a distinct and important quarrel with Congress' plan to rebuild the east front of the Capitol itself, moving it 32.6 feet farther east. A recent editorial in Architectural Forum called this project a "monumental folly" and a "prize piece of architectural boondoggling." The magazine further said the initial expenditure of $5 million was "sucker bait" to start a job which would cost $15 million.

Time and again, the magazine said, Capitol architects had proposed this idea under one pretext or another. This time Congress wants more hearing rooms and corridor space. Time and again the American Institute of Architects has opposed the idea for fear that the alterations would upset the balance of the building and destroy the unpretentious sensitive architecture of the east facade, where the Capitol undeniably puts its best face forward.

The governing board of the American Institute of Architects has even offered to help solve the internal space problem without ruining the facade. But congressional leaders have defended their right to alter the building and their sense of esthetics.

Is it wise for Congress to ignore such distinguished counsel? For Congress does not own the Capitol, but only lives in it. The people own the Capitol. We suspect that in matters architectural, the people would rather listen to the American Institute of Architects than to Congressmen.

Sidney Hillman Foundation Awards

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the announcement of April 19, 1956, from the Sidney Hillman Foundation describing the special awards in the fields of journalism, magazines, and books for 1955 by that foundation.

Particularly, I wish to call attention to the award won by the weekly newspaper Labor, which is published by the Railroad Brotherhoods of America. When I was a good deal younger than I am now, a college student at the University of Oregon, in fact, I can remember reading in Labor about the great legislative feats of such liberal Senators as George W. Norris, Robert M. La Follette, Charles L. McNary, Burton K. Wheeler, Robert F. Wagner, and many other giants of the past. Labor always has been a publication which has worked for humanitarian legislation and which has helped to keep the torch of civilization burning brightly.

It is my understanding that the editors of Labor submitted two main groups of entries in the Sidney Hillman contest. These were: First, a series of editorials which exposed and disclosed the packing of Federal regulatory agencies with appointees either hostile or indifferent to regulatory laws they are supposed to enforce; and, second, a series of news articles analyzing the threats to American civil liberties and civil rights posed by witch hunts and so-called guilt by association.

I extend my personal congratulations to the editor and manager of Labor, Mr. Ruben Levin, and to his entire staff and to the Railroad Brotherhoods of America for this recognition which has come to one of the most courageous and forthright weekly newspapers in the United States.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

Awards in recognition of outstanding work in daily and labor journalism, magazine and book fields during 1955 were made today, Wednesday, April 18, by the Sidney Hillman Foundation in the grand ballroom of the Biltmore Hotel.

Ben Bagdikian, columnist and special writer for the Providence (R. I.) Journal and Bulletin, received a $500 award for a series of articles analyzing Government security programs and revealing the defects in them.

Murrey Marder, reporter for the Washington Post and Times Herald, also received a $500 award in daily journalism for his ar-

ticles on various aspects of civil liberties. Mr. Marder had previously won an honorable mention from the foundation for his reportorial work.

Dr. Robert Engler, professor of political science at Sarah Lawrence College, won a $500 Sidney Hillman Award in the magazine field for a series of six articles appearing in the New Republic, dealing with oil and politics.

Ruben Levin, editor of Labor, the weekly published by the railway unions in Washington, won the $500 labor press award for a series of articles dealing with the emasculation of Federal regulatory agencies, and with various aspects of civil liberties.

John Lord O'Brian, outstanding constitutional lawyer, won the $500 award in the nonfiction field with his "National Security and Individual Freedom," published by Harvard University Press. His book warns that fear and mutual suspicion will not purchase security.

The Sidney Hillman Foundation was created in 1947 to keep alive the late labor leader's ideas of enlightened labor-management relations, race relations, civil liberties, world peace and related interests.

Dr. Harold Taylor, president of Sarah Lawrence College, was the principal speaker at today's ceremonies which were broadcast over station WNYC from 3 to 3:55 p. m. Jacob S. Potofsky, president of the Sidney Hillman Foundation and the late labor leader's successor as president of the Amalgamated Clothing Workers of America, AFL–CIO, presented the awards.

The judges who made the awards today were: William L. Shirer, novelist and commentator; Lewis Gannett, book editor, New York Herald-Tribune, and Evans Clark, editorial writer, New York Times.

The Sidney Hillman Foundation, during the past year, has awarded $35,000 in labor and related fields. These include scholarships, grants-in-aid, prizes for distinguished public service and for lecture series at colleges and universities in various parts of the country.

Refrigerators and Children

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. DIRKSEN. Mr. President, on occasions in the past few years, a wave of horror has gone over the country as children became trapped and lost their lives in abandoned refrigerators. At long last, it appears that an enterprising and alert producer has taken stock of this danger and done something about it. It comes to my attention through an editorial in the Wallace Enterprise of Wallace N. C., on April 19, 1956, entitled "Children and Refrigerators" and I ask unanimous consent that it be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REFRIGERATORS AND CHILDREN

In spite of nationwide publicity over the past several years, in spite of the fact that 36 State legislatures have passed laws designed to prevent these tragedies, 18 more children suffocated inside refrigerators in 1955!

In the past 10 years, 113 children over the Nation have lost their lives through the impulse to hide in an abandoned refrigerator—the perfect, too perfect, hiding place. Hence the legislation making it a misdemeanor (it should be a felony) to throw out a refrigerator without removing hinges and doors. But, it should be remembered that not all of these children have died in discarded equipment on vacant lots or trash heaps. The kitchen refrigerator, empty and open for defrosting, is just as tempting when a hide-and-seek game is on and mother has gone to the store or is talking on the phone. In many homes, this death-trap may be on the back porch or even in the basement.

But today, while Congress is considering ways and means of putting an end to these hideous mishaps, a long-range answer, better than any legislation, comes from a manufacturer. The Admiral Corp. has announced that all its new dual-temp refrigerators will be equipped with a safety release, by which the door may be opened from the inside. A luminous plastic button on the inside-release, that glows in the dark and attracts the hidden child's attention, requires only a slight push to open the way to safety and freedom.

In view of the great concern of American manufacturers for the safety as well as the quality and convenience of their products, we may be sure that the rest of the industry will follow Admiral's lead. But, even so, for years to come—until the last of these old-fashioned booby-traps is reduced to scrap—the responsibility of removing the doors before discarding is a vital one.

Think of the 13 adventurous little people who will never play hide-and-seek again. Think of August 12, 1953, when five youngsters from the same family perished in airtight blackness in Proctor, Ark., and of August 13, 1953, when 4 more—3 from 1 family—met the same fate in Richmond, Va. In a word, think.

Fortieth Anniversary of the Irish Republic

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. O'MAHONEY. Mr. President, at the request of the Ancient Order of Hibernians in America, I ask unanimous consent to have printed in the Appendix of the RECORD an eloquent recognition of the proclamation 40 years ago of the freedom of the Republic of Ireland.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Forty years ago Easter Monday fell on the 24th of April. It is a date which will always remain the brightest and most significant in Ireland's history, for it was on that date that Ireland once again asserted its national independence. It was on Easter Sunday, 1916, that the Republic of Ireland was proclaimed a republic designed to take its place among the nations of the world as the rightful government of a free, united Ireland.

Forty years have gone by since the Easter week rising and the proclamation of the Irish Republic. Seven patriots placed their signatures on the proclamation: Clarke, McDermott, Pearse, Connolly, McDonagh, Kent, and Plunkett. These men knew when they signed the proclamation that they were doomed, but this knowledge could not keep them from signing. They knew that they were standing for liberty; they were willing to die to focus the attention of the world upon Ireland, the fact that it was not free to govern itself. They were speedily captured and promptly executed.

They will never be forgotten by those who know, as George Washington, Thomas Jefferson, and all the patriots who founded the United States knew, that freedom is a divine gift to people. They shared the faith in liberty that has always characterized the men and women of the Irish race.

The seven men who knew they were facing death could still write in their proclamation of Easter week in 1916 these words of Christian forbearance as they once more tried to throw off the foreign yoke:

"We place the cause of the Irish Republic under the protection of the Most High God, whose blessing we invoke upon our arms, and we pray that no one who serves that cause will dishonor it by cowardice, inhumanity, or rapine."

The proclamation of the Irish Republic, which follows, is a literary gem of liberty:

Dated Monday, April 24, 1916, in the city of Dublin:

"We declare the right of the people of Ireland to the ownership of Ireland and to the unfettered control of Irish destinies, to be sovereign and indefeasible, the long usurpation of that right by a foreign people and government has not extinguished the right, nor can it ever be extinguished except by the destruction of the Irish people. In every generation the Irish people have asserted their right to national freedom and sovereignty; 6 times during the past 300 years years they have asserted it in arms in the face of the world; we hereby proclaim the Irish Republic as a sovereign independent state, and we pledge our lives and the lives of our comrades in arms to the cause of its freedom, of its welfare, and of its exaltation among the nations."

An Open Letter to Congress

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial by Regis F. Cusick, Jr. from the Voice of Fort Black, official newspaper of the Fort Black Post, No. 538, American Legion, Department of Pennsylvania, Hazelwood, Pittsburg, Pa., entitled "An Open Letter to Congress," dated April 6, 1956:

AN OPEN LETTER TO CONGRESS

APRIL 6, 1956.

Members, House of Representatives, United States of America.

DEAR SIRS: There is now before your Veterans' Affairs Committee, bill H. R. 7886, which calls for a liberalization of existing laws concerning veterans pensions. As a citizen and as a veteran, I urge all of you to use your influence to the end that this bill may become law.

Some might say my interest is a selfish one as I am a veteran. Be assured that my daily prayer includes the request that the merciful God will continue to help me, at least to the extent that I may never qualify for benefits under this legislation. I would include all veterans of the world wars in that prayer but, alas, it is already too late for some.

The bill concerns the veterans who by reason of disability or age have become to all intents and purposes unemployable. It

would raise the monthly benefits to these veterans a few dollars and would increase the qualifying income limitations slightly. But chiefly it declares that when a veteran has reached the age of 65, he will automatically be considered unemployable and will receive a pension if he qualifies under the income limitations as set forth in the bill and is otherwise eligible. It is not a general pension.

You will be high pressured by certain groups to vote against this bill. You will find among them, to an extremely large extent, people, industries and organizations who have benefited in one form or another (for the most monetarily) from laws you have made in the past because you felt their passage justified. Among them too, you will find those who had some very fine defense contracts during the world wars that were on a cost-plus basis.

Not so the veteran. In these dire emergencies he raised his right hand and swore to defend his country at the cost of his own life if necessary and was assured a few dollars per month and keep adjustable to existing conditions. A grateful American people later granted him benefits under certain circumstances as the cost of war and to my belief the provisions of H. R. 7886 are also the cost of war but make it the plus if you will. In any event bring a little equalization to the contract of the veteran.

To those who cry "cost" I ask you to remind them that a sound economy is based on the ability of all to purchase the necessities of life and that through this purchasing comes the means of defraying such costs. We will all contribute. Most of us gladly.

In conclusion allow me to urge you to make firm the steps of the disabled veteran, to allow the "old soldier" to square his shoulders and with uplifted head say, "In 1956 the Congress of the United States personally thanked me for my service to the country. They approved H. R. 7886. In my infirmness, in my old age, I shall not hunger."

Please accept my thanks for your considerations.

Sincerely,

REGIS F. CUSICK, Jr.

Third House of Congress?

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. FORRESTER. Mr. Speaker, the Daily Mirror, New York City, April 25, 1956, issue carried an editorial entitled "Third House of Congress?"

This editorial demonstrates that there is a tidal wave of resentment arising over our land concerning the United States Supreme Court invading the legislative field. I think this editorial will be of genuine interest to the membership of this House, and the people generally.

The editorial reads as follows:

THIRD HOUSE OF CONGRESS?

The constitutional question before the American people, since Earl Warren has become Chief Justice of the United States, is whether the Supreme Court is a third house of Congress legislating on its own.

The Constitution clearly defines the functions of Congress and the procedures concerning the passage of legislation.

The Constitution does not with similar clarity define the functions of the Supreme Court. Chief Justice John Marshall, however, by a series of basic decisions, determined the supremacy of the Court in matters constitutional. But nowhere has it been asserted that the Supreme Court is a legislative body.

Nevertheless in the case involving the United Mine Workers District 50 against the Arkansas Oak Flooring Co., the Supreme Court does legislate. No question of constitutionality is raised. The Court makes new law.

Under the Taft-Hartley law, officers of a union are required to file an oath to the effect that they are not Communists. This John L. Lewis has refused to do for no better reason than that he will not do it. His choice is to disregard the law which was also the choice once upon a time of Al Capone and others who believed that the Volstead Act was all wrong and that they would not abide by it.

The National Labor Relations Board, obeying the law, has required union officials to take this oath before they would be certified for collective bargaining purposes. Now along comes the Court and upholds the right of a union official, if he chooses, to violate the law.

By taking this position, the Supreme Court reopens the entire labor field for infiltration by Communists, many of whom have been forced out of labor unions by this provision of the Taft-Hartley law. Actually a a number of labor unions were expelled from their national organizations because of Communist affiliations.

In effect, this Supreme Court decision requires an employer to bargain with a labor union even if all its officers are known Communists and therefore agents of Soviet Russia.

The Supreme Court does not declare the Taft-Hartley law unconstitutional. It simply makes its optional for a labor leader to obey the law or to ignore it, and it requires an employer and the NLRB to abide by whatever decision the individual labor leader makes as to whether he will be law-abiding or not.

Such a decision is encouragement for disobedience of the law and could be used as a precedent for all sorts of evasions. There is, for instance, a tax law. Why should not each individual American citizen, following the reasoning of the Supreme Court decide for himself whether he chooses to obey the law, file a return, and pay the income tax? Using the language of this decision, failure to file could not be regarded as a "confession of guilt," but rather the choice of the individual as to whether he would make certain information public. If it is a good law for John L. Lewis, why not for any gander?

Something curious has crept into the Supreme Court and it has become very disturbing to the American people. It is difficult quite to analyze what has happened, but the same judges were not legislating before Earl Warren became Chief Justice. Maybe he has given a new tone to the Court, the tone not of a high judicial body but of a third House of Congress.

Mr. Speaker it was not so apparent to the press and the public, but fairness demands that lawyers admit that our Supreme Court has been legislating for more than 20 years. It is true, however, that the Supreme Court, under Justice Warren, has become so bold in its legislative activities that the press and the public are discovering that the Supreme Court is acting as a third House of Congress, in defiance of the Constitution. I have the idea that the press and the public intend to do something about it.

The Dangers in Doing Nothing

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in a recent issue of the New York Times, and reprinted as an advertisement in the Washington Post and Times Herald, as well as in the New York Herald Tribune, through the interest of A. N. Spanel, chairman, International Latex Corp.

The editorial, entitled "The Dangers in Doing Nothing," is worthy of close study.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DANGERS IN DOING NOTHING

There are many items of dispute concerning the Middle East, but on one aspect everyone except the Russians is agreed—the situation is deteriorating. Such being the case, what is the United States going to do about it? We must be clear in our minds that the United States cannot much longer sit back and do nothing, which has been the case for the past 6 months or so. No other country in the free world is in a position today to exercise real, decisive power.

The story for these whole 11 years since the war ended has been one of protecting and strengthening the Middle East against Russian pressure in the light of the collapse of British and French power. The Truman doctrine of 1947 bolstering Greece and Turkey, the extension of NATO to the eastern Mediterranean and beyond to Pakistan, the economic and military aid—these and other measures have been positive exertions of American power, often made with our allies. But last September the Russians moved into the Middle East with arms for Egypt, with offers of arms to other Arab countries, with economic and technical aid. There has been a new upsurge of Arab nationalism. The whole of French North Africa has been in ferment and today Algeria is like a keg of dynamite. The British completed their withdrawal from the Suez Canal Zone to Cyprus and now Cyprus is in flames. The Arab-Israeli conflict has gone from bad to worse.

There has been and still is a good deal of talking going on behind the scenes with the British and French and perhaps something will come of it. We try quietly and diplomatically to prevent a fire from breaking out here or there. Yet the situation goes on deteriorating.

We encouraged the formation of the "northern tier" of states into the Baghdad Pact of Turkey, Iraq, Iran, Pakistan, and Britain—but we refused to join it. Why? If it is good for these states it is good for the United States and in any event the Baghdad Pact has no reality without us.

We are parties to a Triparte Declaration of of 1950 with Britain and France guaranteeing opposition to either the Arabs or Israelis if there is an aggression against the present frontiers. But this is a mere declaration of intention that has never been submitted as a treaty to our Congress. It is a weak instrument with which to keep the peace in such a tense and heated region.

We say we will not furnish arms to Israel because we do not want to see an "arms race." This merely confuses the issue. How have we kept the peace in the world

against Russia since the war except by arming ourselves and our allies to the point where the Russians do not dare to start a war? It is not an "arms race" to let Israel acquire fighter planes for defense against the Ilyushin bombers the Czechs have sold to Egypt. There may well be war in the Middle East if one side gets much stronger than the other. We even failed to back France in shipping a standing order of 12 Mystere jet planes to Israel.

We are letting the British and French Governments condemn the nefarious activities of Egypt in stirring up bloodshed and hatred in North Africa and the Middle East without ourselves saying a word.

It is argued that we must not antagonize the Egyptians or the Arabs of the Moslem nationalists or the Greeks or the Turks or, evidently, anyone except our old allies the British and French. Is it possible to be the greatest power in the world and not antagonize someone?

These gnawing, insistent questions keep cropping up as one thinks about the dangerous situation in the Middle East. One wonders why we are apparently doing nothing. One wonders what we can do. The only unquestionable fact is that we cannot let the situation deteriorate much further without grave peril.

Blast Given Farm Bureau

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an article entitled "Blast Given Farm Bureau," from the Portland Oregonian of April 22, 1956. The article describes criticism of present Farm Bureau agricultural policy by Marshall Swearingen, a cattle rancher in the vicinity of Bend, Oreg.

In my opinion, Mr. Swearingen's disagreement with the agricultural program of the Oregon Farm Bureau Federation is particularly significant because for 6 years Mr. Swearingen was secretary and executive president of the Oregon Farm Bureau. Yet Mr. Swearingen now realizes that the farm program backed by the Oregon Farm Bureau—and by the American Farm Bureau Federation—is not consistent with the best interests and welfare of family-size farmers, neither in Oregon nor in the Nation.

I also ask unanimous consent that the letter by Mr. Swearingen, as published on the editorial page of the Oregonian of the same date, be printed in the Appendix of the RECORD. In the letter Mr. Swearingen the former head of the Oregon Farm Bureau Federation, challenges sharply the philosophy motivating President Eisenhower's veto of the farm bill. I think it is pertinent for Members of the Senate to read the personal observations of this Oregon cattle rancher, as he describes the fate of himself and his own family under the agricultural price decline which has prevailed during the 3½ years of the present administration.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

BLAST GIVEN FARM BUREAU

An ex-president of the Oregon Farm Bureau Federation Saturday charged that the bureau was motivated by politics and was not representing the majority of its members in its position on farm policy.

Marshall Swearingen, Bend rancher, who resigned in 1953 after 6 years of service as secretary, executive vice president, and president of the Oregon Farm Bureau, made his charges in a letter to Charles B. Shuman, president of the American Farm Bureau Federation.

The Farm Bureau has been a stanch supporter of flexible farm price supports and other farm policies of the Eisenhower administration.

Swearingen challenged Shuman to poll Farm Bureau members on the question of whether the farm policies of the organization "and the political action of its officers and spokesmen" are helping the farmers' economic position.

RANCHER BLASTS BUREAU

In his letter, the Bend rancher said:

"After an extensive trip through the country talking with present and past members, I am convinced that Farm Bureau has not for the past several years and does not now represent the majority of its members on farm policy."

He asserted the living standards of 3 million commercial family farmers have hit the skids "while you editorialize about free enterprise, while your organizers, State secretaries, and Washington representatives mimic your Republican policy of boom for the big and bust for the small."

DOMINATION CHARGED

Swearingen declared the Farm Bureau has become dominated by large and semilarge operators "who have the time and money to become self-styled spokesmen for the farmer."

Objective, he said, is liquidation of the family farmer. The letter continued:

"I charge that the philosophy of the present administration of the Farm Bureau is the same as the present Republican administration in Washington—the philosophy that in bigness only is there efficiency."

SHAME ON IKE

To the EDITOR:

Your editorial, The Farm-Bill Veto, does a good job complimenting President Eisenhower for what you hope to be his greatest political move of the campaign.

His 9-point farm program should be called 9-hole program. He and Benson could then bury the family farmer and still enjoy a game of golf over their economically dead bodies.

Low supports or low prices cause the present surplus, not high or rigid 90 percent supports. That cost-price squeeze, plus the loss of 25 percent of our foreign market, plus a lagging domestic ability to buy, has resulted in a surplus.

What would you do if your advertising rates dropped 30 percent? You would do what the farmer has done—try to produce more.

From the Department of Agriculture we find what has happened when prices on supports are lowered. Between 1952 and 1955 supports on oats dropped 22 percent, production increased 30 percent, supports on sorghum grains dropped 24 percent, production increased 173 percent, soybeans support dropped 20 percent, production upped 30 percent, barley supports dropped 23 percent, production shot up 71 percent, butter supports down 17 percent, production up 9 percent, and so on.

My unsupported price on hay and pasture and cattle dropped 3 years ago until our living standard suffered a real decline. I simply produced more hay, planted more pasture, and fed more calves.

What about the soil bank? Ike could have started a soil bank under existing legislation. Why didn't he? If you would check with the Senate Agriculture Committee you will find he did not want it. His Department of Agriculture wrote the Senate committee on September 30, 1955: "The Agriculture Department recommends against the enactment of this soil-bank bill sponsored by Senator HUMPHREY. We do not believe it would be an effective means of obtaining adjustments in production."

Why does your great paper get so excited about these surpluses? There was only 3 months' supply of wheat, 1½ months' supply of corn, and 2 months' supply of feed grain when Benson took over. There are only 2 commodities, wheat and cotton, in over 8 months' supply today.

Thousands of your readers have worked for the two-price system on wheat. Ike could have accepted that 3 years ago.

Why not admit the fact that unless the present philosophy of government is changed and the present trend toward feudalism stopped, there will be no more small business?

MARSHALL SWEARINGEN.

General Agreement on Tariffs and Trade

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I beg to advise the House that today I presented to the Congress a petition from the Ohio Glass Workers Protective League of Newark, Ohio, over the signatures of their president, William A. Daugherty, and their secretary, James Burden. It sets forth their opposition to enacting H. R. 5550 and instead to bring the General Agreement on Tariffs and Trade before the Congress in accordance with the treatymaking provisions of the Constitution.

I respectfully ask the membership of this body to analyze carefully this petition.

We, the undersigned, respectfully petition and memorialize you in accordance with amendment I to the Constitution of the United States of America, to refrain from enacting H. R. 5550 and instead to bring the General Agreement on Tariffs and Trade before the Congress of the United States in accordance with the treatymaking provisions of the Constitution, for the following reasons:

1. Passage of H. R. 5550 would impair the right of petition and redress guaranteed in our Constitution, since tariff policy and foreign commerce would be made subject to determinations by an international agency.

2. H. R. 5550 would hinder labor and business from obtaining effective action by the Congress of the United States, as guaranteed by article I, section 8 of the Constitution, which declares: "The Congress shall have power to lay and collect taxes, duties, imports and excises * * * to regulate com-

merce with foreign nations, and among the several states * * *"

3. H. R. 5550 would remove from Congress its full and effective freedom to exercise its Constitutional responsibilities in these fields.

4. H. R. 5550 would remove tariff and trade policy determinations from the Federal Government and subject them to an international organization in which the people of the United States are not adequately represented and where the United States delegate would have but one of the 35 votes, the same as the Grand Duchy of Luxembourg, Haiti, and other countries with populations less than many cities and States in this Nation.

Now, therefore, we request that this petition and memorial be formally placed before the Congress of the United States.

WILLIAM A. DOUGHERTY, *President.*
JAMES BURDEN, *Secretary.*
Ohio Glass Workers Protective League.

Concentration of Economic Power

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith an address I made before the Economics Society, the City College of New York, on April 27, 1956:

CONCENTRATION OF ECONOMIC POWER

(Speech of Representative EMANUEL CELLER, Democrat, New York, before Economics Society, the City College of New York, April 27, 1956)

I am pleased to discuss with you the problems posed to both our competitive economy and to our political institutions by the increasing concentration of economic power in the United States. Increasing control over a growing percentage of American business life by a relatively few corporate empires is one of the critical developments in our postwar society.

As Chairman of the House Committee on the Judiciary, at the beginning of this session of Congress, I established a subcommittee concerned exclusively with antitrust problems. Early in the first session, the Antitrust Subcommittee, of which I am chairman, conducted extensive hearings into current antitrust problems facing the country.

During these hearings the subcommittee heard testimony from 52 witnesses representing all points of view on numerous economic problems. Nearly everyone of these witnesses discussed in some degree the problems flowing from the economic fact that today a preponderance of the economic life of the country in many fields has been garnered by a few large corporate organizations.

There are two main reasons why I am concerned about the concentration of economic power in the United States. First, is that concentration of business, if it progresses sufficiently far, unavoidably will lead to some kind of state socialism, dictatorship, or some other form of excessive governmental control over the lives of individuals. Such extensive governmental supervision and regulation is not in the heritage of the American people and, I am convinced, it is not the desire of the American people. The other reason for my concern is that a concentrated industrial system is inefficient when compared with the flexibility which this country has demonstrated flows from a business community competitively organized.

We have only but to look at the history of the other industrial countries in the Western World to ascertain the political results caused by the channeling of the business life into the hands of a few. The unrestrained growth of monopolies and cartels inevitably has resulted in the development of private concentrations of power so strong that necessarily the issue became whether big business would control the government or whether the government would have to seize control of big business. This was the history in Germany and in Italy. In Germany the business interests thought they could take over the government by using Adolf Hitler as the puppet. As a result, the German people found that a system of private monopoly led to dictatorship and ultimately to disaster.

As to the efficiency argument, I believe, it is misleading to argue that a high degree of industrial concentration is the price of technological progress. This is illustrated by Mr. T. K. Quinn, a former vice president of the General Electric Co. in charge of the appliance division, in his book, Giant Business, Threat to Democracy. Mr. Quinn says "original inventions are no more plentiful, proportionately, in big than in small organizations." Citing concrete examples, Mr. Quinn argues that "in the electrical appliance industry, the better clothes-washing machines have not been produced by the monster companies but by the relatively small, independent companies specializing in one or two products. This is also true of ranges, vacuum cleaners, radios, toasters, mixers, home freezers, fans, clocks, heaters, air conditioning units, etc." The accomplishments of the giants lie not in the field of inventing, but in using their capital advantage for the purpose of moving in, buying out, and absorbing the smaller creators. In Mr. Quinn's opinion the prospects of technical progress are greater where the centers of initiative are diffused, where thousand of individuals and organizations have the incentive to work and think for the future.

Following World War I the economic growth of the country during the 1920's led to increased concentration in business. That pattern has been followed in the industrial expansion succeeding World War II.

Since the war numerous studies have been made which demonstrate that our economy is tending to become more controlled by a handful of giant corporations.

The Senate Judiciary Committee in the 81st Congress reported an industrial concentration in the United States as follows:

"The extent to which the American economy has become concentrated and centralized in the hands of a few giant corporations was strikingly revealed before this committee in figures presented by Dr. Wilfred I. King, professor emeritus of economics at New York University. The figures which he presented reveal an extraordinary level of concentration. Thus, his figures show that in 1946, the latest year for which such data are available, one-tenth of 1 percent of the total number of all American corporations—the giant firms with assets of $100 million and over—owned 49 percent of the assets of all American corporations; 2 percent of the number of corporations owned 78 percent; 8 percent of the number owned 89 percent of the assets; and 12 percent owned 92 percent of the assets. At the other end of the scale, 45 percent of the number of corporations—the small firms with assets of $50,000 or less—owned less than 1 percent of the assets."

At the end of 1952, corporations with more than $100 million of assets had 52 percent of all the assets of manufacturing corporations. Two and one-half years later, 57 percent of the assets were held by corporations of this size. If this rate is not checked it will take about 20 years for all of the manufacturing assets of the country to become concentrated into such giant corporations.

The growing domination of the marketplace by larger corporations and its effect on small business was recently highlighted by the Senate Small Business Committee which reported these facts: "While the prosperity of 1955 brought a profit rate of 14.4 percent to the biggest corporations (those of assets over $100 million) the smallest corporations (those with assets of less than $250,000) reported earnings in the first 6 months of 4.5 percent. * * * Between the first halves of 1952 and 1955, while the giant companies' earnings 'went through the roof' the smallest manufacturing plants' profits headed for the cellar. Expressed in percentages the earnings of the small concerns fell off 27.4 percent between the two periods while the earnings of the large companies increased by 58.5 percent. * * *

"There is an ominous significance" the report concludes, "in an economic atmosphere which makes it possible for the Nation's mammouth corporations to reap profits while the general run of small enterprises are worse off than they were 3 years ago."

This industrial concentration is perhaps most graphically expressed by the following:

At the present time 3 companies make more than 90 percent of all our silk; 3 companies make over 95 percent of our tin cans and tinware; 3 companies make 90 percent of our linoleum. Three huge corporations control cigarettes, whisky and automobiles.

Prof. Adolph Berle in the statement to the Antitrust subcommittee remarked on the industrial structure becoming characteristic of American business. He said: "In industry you find a standard pattern of not less than 2, nor more than 5, large corporations which have 50 percent or more of the volume of that industry between them." This pattern Mr. Berle said "is typical of more than half of American industry, and the most important half."

An important aspect of the pattern of concentration in the United States is that rarely is an industry controlled by a single firm, a monopoly in the popular or classical sense of the term. Where an industry is dominated by a concentrate of a few large companies, however, their actions in many instances result in the same bad effects as a true monopoly.

More and more it is apparent that in those industries in which are relatively few, large-scale, heavily financed companies of comparable size are dominant in production and distribution, there is not active price competition in the industry. In many industries where this condition prevails there appears to be a "follow the leader" policy in pricing and selling. Each member of the industry, both the large and smaller concerns, individually elects to follow the policy of not changing his prices until the "leaders" change their prices. When prices do change, each company, strangely enough, individually elects to charge precisely the same prices as the leaders.

Although the effect upon the consumer of this practice is the same as in the case of a monopoly, it is a difficult condition to correct under the antitrust laws. If the Government can establish the existence of an actual or tacit agreement among the various companies in the industry to adhere to and to follow the prices or other market practices of a leader, then the companies can be charged with conspiracy or combination to monopolize or restrain trade. In many instances, however, it is not possible to find evidence of an actual agreement and the courts have been reluctant to infer the existence of a conspiracy in the absence of some direct evidence of an agreement. This is one of the problems of concentra-

tion that has been plaguing antitrust enforcement officials in dealing with this problem.

Because of the difficulties surrounding attemps to correct abuses of concentration by means of antitrust laws, some people have advocated alternative proposals to deal with the problem of concentration. It is significant to note that most of these alternative proposals, although emphasizing the benefits of competition, nevertheless call for an increase in the supervision and regulation by the Federal Government over economic behavior.

Prof. Louis B. Schwartz, of the University of Pennsylvania, for example, recommends the creation of a free enterprise commission to take over the antimonopoly functions of the Federal Trade Commission. Such a free enterprise commission would have the power by regulation to define and prohibit anticompetitive practices; and to prohibit intergration and mergers unless specifically approved. Such a commission also would have the power to compel reorganization of excessively large enterprises as well as other broad regulatory powers over the economy.

Other witnesses before our subcommittee recommended legislation comparable to the Public Utilities Holding Company Act be enacted in order to empower agencies of the Government to compel, in appropriate instances, the dissolution of the giants in the economy to smaller economic units.

Whether concentration has progressed to a degree which requires such far-reaching proposals at this time is debatable. I would much prefer that the solution to the problem of concentration be reached within the basic framework of our existing antitrust legislation. I am reluctant to impose additional supervisory, regulatory, or planning authority over the economy unless the growth of large-scale firms precludes any other solution for adequate protection of the public.

Another aspect of the problem of consolidation of economic power which needs emphasis is the role of the Government itself in contributing to increased concentration. The Government, by its administrative decisions, influences in a significant manner whether industrial capacity shall be concentrated in the hands of a few or whether economic power shall be sufficiently dispersed so as to provide a favorable climate for free enterprise. The procurement policies in both World War II and the Korean war are cases in point.

During World War II, for example, in military procurement the 100 largest corporations received 66⅔ percent of the prime contracts awarded. More than 51 percent of such contracts went to the top 33 corporations. During this period the top 10 corporations got fully 30 percent of the war contracts.

Moreover, the major portion of subcontracts also went to the largest companies. It is significant that in 1943 prime and subcontract records of 252 of the nations largest corporations, receiving the bulk of the prime contracts, showed that these companies subcontracted only 34 percent of the value of their contracts and three-fourths of the value of those subcontracts went to firms with over 500 workers.

In the first year of the Korean war the concentration of defense contracts was even greater. According to the findings of the Senate Small Business Committee, the top 50 corporations got almost two-thirds of the dollar volume of defense contracts while the top 10 corporations got 40 percent of the total. For the 5-year period from July 1950 through June 1955, 100 companies and their subsidiaries received 62.6 percent of the military prime contract awards. In the 2-year period from July 1953 through June 1955 the top 100 companies received 65.4 percent of military prime contract awards. And in the 6-month period from January through June 1955 the top 100 companies received 68.4 percent of the military prime contract awards.

There are several reasons underlying the flow of Government defense contracts to the larger corporate organizations. Defense orders, for one thing, tend to be heavy in industries already dominated by a handful of large companies. In the short run at least, procurement officials have little choice but to make use of the facilities and know-how of the giant organizations. Moreover, it is the easiest course for military procurement officials to deal with one large firm than it is to deal with a multitude of small firms.

Further, large enterprises enjoy certain obvious advantages in getting Government business. They can afford to employ agents in Washington who keep them informed about pending governmental action, the considerations that are likely to influence such action, and, most important, the persons who are likely to make important decisions. Unlike smaller operators, they can afford to assemble information to support their interests and make sure this data is in the hands of appropriate people at the proper time. The consequence is that Government officials become more familiar with the point of view of big business and imperfectly informed about the point of view of smaller concerns.

Another illustration of the type of Government action which contributes to increasing industrial concentration is found in the surplus-property-disposal programs following World War II. The War Assets Administration reported that the 250 largest manfacturing corporations in 1946 had acquired 70 percent of the total surplus disposals. Since these companies owned and operated 67 percent of the Nation's manufacturing facilities before the war, it is apparent that the agency's plant disposals helped increase industrial concentration above the already excessive 1939 level.

In the field of antitrust enforcement itself administrative decisions sometimes result in weakening the volume of competition in the economy and crystallizes the pattern of industrial concentration. The recently negotiated consent decree between the Government as plaintiff and the American Telephone & Telegraph Co. and the Western Electric Co. as defendants is a case in point.

In that case, the Government in 1949 filed an antitrust complaint designed to put an end to the Western Electric's illegal manufacturing monopoly which had been developed and existed under the protection of the monopoly enjoyed by the American Telephone & Telegraph as a public utility. While the operations of American Telephone & Telegraph are subject to public utility regulation, the manufacturing functions of its wholly owned subsidiary, Western Electric, were not so regulated.

In its complaint the Government charged type of activity least susceptible to effective regulation. The benefits flowing from competition in a free enterprise system are generally considered to be most readily realized in the manufacturing area of the economy.

In its complaint the Government charged that Western Electric manufactured and supplied more than 90 percent of all telephones, telephone apparatus, and equipment sold in the United States. It also charged that American Telephone & Telegraph required its operating companies as well as its long lines department to buy substantially all of its equipment from Western Electric. The significance of this is indicated by the fact that American Telephone & Telegraph owns and operates more than 98 percent of the long distance telephone facilities in the United States, and owns and controls operating companies which furnish approximately 85 percent of the country's local telephone service.

To remedy the almost complete lack of competition in the manufacture, distribution, and sale of telephone equipment, the complaint sought a separation of Western Electric from American Telephone & Telegraph and a dissolution of Western Electric through competing manufacturing concerns. Relief of this kind was the principal reason the case was brought.

In the consent decree terminating this case on January 23, 1956, however, attempts to secure this kind of relief were abandoned. Instead of separating Western Electric from A. T. & T., the decree solidifies Western Electric's subordination to A. T. & T. and gives Government sanction to the very monopoly which the complaint was designed to break up. Western Electric is left with some 80 to 90 percent control of the manufacture and sale of telephonic equipment, and A. T. & T. will purchase its equipment only from Western Electric.

If Western Electric had been separated from the domination and control of A. T. & T., being a strong, substantial entity in its own right with ample resources for independent research and development, it would have been in a position to give effective competition to RCA and to Westinghouse in many electronic manufacturing fields. Competitive rivalry in these fields could not but have resulted in benefits to the public.

Under the decree, however, we are faced with the specter of these corporate organizations of planetary magnitude by Government fiat restricted to separate majestic orbits in their own spheres of the economy. Further, by extending the public utility concept from A. T. & T. to include Western Electric's manufacturing operations, the decree requires the Antitrust Division of the Department of Justice and the courts to take the role of regulatory bodies. This is a role foreign to their primary functions and which they are ill equipped to perform. By extending such regulatory functions to manufacturing, the decree abandons the competitive principles underlying our free enterprise system and is contrary to the most basic philosophies of antitrust enforcement.

Another instance where Government antitrust action contributed to maintenance of monopolistic condition and increased concentration of economic power is found in the Attorney General's approval, in September 1954, of the Iranian Consortium. In his approval the Attorney General permitted the same companies named as defendants and participants in a pending monopoly case to combine and carry out a joint operation in Iran. In the Oil Cartel case, filed April 21, 1953, the Attorney General charged these companies have since 1928 engaged in a conspiracy to control the petroleum trade of the world. According to the complaint the defendants have: Agreed to eliminate competition among themselves by establishing market quotas, fixing prices, curtailing production, and limiting facilities, secured and maintained control of foreign petroleum production; divided among themselves foreign production and marketing territories; and monopolized pipeline transportation facilities, tankers and patented processes relating to refining.

The Iranian Consortium is an organization composed of the major international oil companies, who produce at least 87 percent of the free world's oil, created to reestablish the Iranian oil-producing industry.

In essence, what occurred was this: The Iranian Government decided to nationalize the properties of Anglo-Iranian Oil Co. (now renamed British Petroleum Co.) which for years had an exclusive concession to produce oil in Iran. The British Government owns more than 50 percent of the stock of that company.

Nationalization culminated the disagreement over the amount to be paid Iran and

other terms of the concession. Western oil governments and the other oil companies having concessions in the Middle East countries, supported the British.

Iranian public feeling, however, made it necessary that the British monopoly be at least partially displaced. The new international cartel was the answer. Perhaps it was the right answer, from the military-diplomatic point of view, despite some indications that we may have succeeded in diverting a portion of Iranian ill will from the British to ourselves, and despite rumblings of protest heard in Europe against the economic consequences of the Near-East oil cartel.

Prof. Louis Schwartz described the effect of the approval of the consortium to both the Antitrust Subcommittee and the Attorney General's Antitrust Committee as follows:

"Objections to the plan from the standpoint of American antitrust policy are formidable. Here were huge enterprises already established on various concessions in the Middle East with more than adequate reserves of oil. Some of them had already been officially accused of conspiring to maintain an artificially high price for this cheap middle eastern petroleum. The Wall Street Journal reported the open secret that one of their main concerns in entering this pool was to see to it that Iranian production should not return to the world market too rapidly so as to hurt the world price. Only the antitrust laws stood in the way. This obstacle was surmounted by an extraordinary dispensation granted by the executive department, without sanction of any statute of Congress. Moreover this executive exemption contained no conditions designed to safeguard the public interest or the interest of American oil refiners who must buy foreign crude. When the American Five and their European partners meet to discuss Iranian production policy they must inevitably take into account their production and sales from other concessions and even at home. Discussion of production becomes in the end discussion of the market and of price. No representative of the American public sits in on these discussions. There is no guarantee of any sort that this private cartel coordinating production of the world's cheapest oil will give the public the benefits of its low costs."

During our investigation into current antitrust problems, our subcommittee attempted to evaluate the arrangements made in the Idanian consortium. The subcommittee, however, has been unable to secure copies of the contracts and arrangements among the oil company participants in the consortium necessary for such an evaluation. Even though the contracts are between private companies, distinguished from governments, the Secretary of State informed the subcommittee, "it would not be in the interest of the United States to divulge their contents at this time, since making them public would affect adversely the foreign relations of the United States."

The Secretary of State informed the subcommittee that he had conferred with the Governments of Iran, Great Britain, France, and the Netherlands and has ascertained that all of these Governments strongly objected to the disclosure of the various documents among the oil company participants. In view of this objection the subcommittee has been unable to make a definitive analysis of antitrust aspects of this matter. It is clear, however, that approval of the consortium has reinstituted the control of the major internation oil companies over this important natural resource in Iran.

During this session of Congress, the Antitrust Subcommittee is conducting an investigation of monopoly problems in industries which are under the jurisdiction of the Federal regulatory agencies. These hearings were instituted as a result of the frequent allegations made in our hearings on current antitrust problems, that, in operation, Federal regulatory agencies had become unduly industry-oriented and had sanctioned excessive economic concentration in the industries subject to their jurisdiction. The purpose of the investigation is to determine whether or not it is true that public regulation has gradually shifted its objective from protecting the public interest to protecting the monopolies created under its aegis.

Thus far, the subcommittee has received information from representatives of the Department of Justice, and from various academic experts in this field. We have also probed deeply into the activities of the airlines industry and its regulatory agency, the Civil Aeronautics Board. Since the investigation is incomplete with additional evidence still to be received, the subcommittee is not in a position to come to any conclusions as to these problems. Sufficient testimony has been adduced thus far, however, to make one question the wisdom of increasing the scope of regulation by the Government in additional areas of the economy.

The problems involved in maintaining effective supervision in the public interest over the operations of regulated industries by public agencies are formidable. While it is still too early to assert that governmental regulation by commission or board has failed to adequately protect the public interest, I am firmly convinced that to the maximum extent possible, the public interest in the long run will be better served if the impersonal forces of competition are the determining factors in establishing prices and controlling the growth of business opportunities.

One of the most basic values of free competition is that it minimizes governmental intervention. Competition is a viable, self-perpetuating system within which men conduct their economic activities free from dictation by the government. It is an institutional arrangement consistent with our historical concept of limited government. In view of our experience with direct government intervention in economic matters, it doesn't seem to me that the best answer to the problem of economic concentration is to broaden government regulation over industry. A far less dangerous course would be to assure that automatic forces of competition in the market place be the determining factor in the solution of this problem.

In conclusion, I think that you will all agree that the problems presented by increasing concentration of economic power in the United States, are most intricate. Further, the problems are of such gravity that no precipitous action should be undertaken on any particular phase. Tinkering with the economic processes without a full comprehension of the results likely to ensue could create more problems than are solved.

I am convinced that it is essential to maintain in full vigor enforcement of the antitrust laws to cope with these problems even though in some respects results to date have not been fully satisfactory. It is clear that without the existence of antitrust legislation and enforcement, the problem of concentration would be much more acute than it presently is. Monopolies in the classical sense long since would have become the rule in most of our major industries.

I am also convinced that much can be done under existing antitrust legislation to solve the special problems presented by the current pattern of economic development we have discussed. If proceeding in this manner is inadequate, however, and further Government regulation is required, I am convinced a great deal more consideration must be given to assure that the regulatory bodies are surrounded by sufficient safeguards to protect the interest of the general public.

Underemployment in Rural Sections as Well as Unemployment in Industrial Localities Should Be Embraced in Legislation for Government Aid to "Distressed Areas"

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. HAYS of Arkansas. Mr. Speaker, there is pending before the House Banking and Currency Committee a bill introduced by the distinguished chairman, the gentleman from Kentucky, Mr. SPENCE, to provide Government aid for distressed areas. The bill, while containing many admirable features, does not include rural areas suffering from underemployment but in its present form is confined to industrial situations. On previous occasions I have called the attention of the House to the economic difficulties of rural areas caused by underemployment, and yesterday I was given the privilege of appearing before the Committee on Banking to urge that economic difficulties in the rural sections be embraced in pending legislation. Under leave to extend my remarks, I include excerpts from my statement to the committee as follows:

Mr. Chairman, I am happy to appear in support of the bill to provide Government aid to industrial regions which are not sharing in the general economic advance of the country. I appreciate the courtesy of the Committee in giving me this opportunity. I am most concerned, however, over the fact that the bill's present wording does not give significant attention to the very real problems of rural areas of underemployment as distinguished from unemployment. Before I go into a detailed discussion of this matter, I wish to make it very clear that I would not lend my support to any measure that would cause unemployment in any other region of the country by providing Federal funds to redistribute existing industrial potential. The rural areas, however, are entitled to share more equitably in the continuing expansion of American industry and they do not wish to profit at anyone's expenses by taking away something he now has.

The Joint Committee on the Economic Report has pointed out the paradox of modern economic society, that geographic pockets of chronic unemployment and underemployment remain during periods of full employment. This problem is particularly acute in certain agricultural regions of the country where the farmers are unable to earn an adequate income from their small holdings. Available data from the Bureau of Agricultural Economics, Information Bulletin No. 108, June 1953, indicates that 37.7 percent of the commercial farms of the United States are classified as low-production farms, defined as farms with a $250 to $2,499 value of sales in 1949 with the operator working off farm less than 100 days and farm sales exceeding the value of other farm incomes. The percentage of farm-operator families receiving under $1,000 per year net money income (in 1949) was 28.1 percent with an additional 24.8 percent receiving between $1,000 and $1,999 (Columbia University Study, 1955). Whatever income increase has taken place since 1949 has easily been offset

by the rise in the cost of living and therefore from 25 to 50 percent of our farm families are in a relatively low-income bracket, with regard to constant dollar purchasing power.

I should like to propose an amendment to the Spence bill to include such rural underemployed areas within the bill's coverage. With loan funds made available as well as technical assistance, rural areas could be aided in increasing their per capita or family incomes. This would be in accord with the joint committee's recommendations in its report of January 5, 1956, on low income population that the Federal Government aid, by means of technical assistance and Federal loan guarantees, recognized and approved local groups engaged in attracting new industry into the area, and also develop other ways of providing off-farm employment. It is my belief that such loan funds would provide a real stimulus to private investment in such areas which have particular economic advantages not now being realized. The industries I have in mind are the food-processing ones which could be designed for part-time labor in conjunction with farm operations. The establishment of such small industries would not only give employment to people who prefer to live on the farms, but would also provide ready markets close to the farmer. A good example of this in Arkansas is the Atkins pickle plant which enables the farmers to enjoy extra income from a good crop of cucumbers. The payroll has been a boon to farm people and the business interests of the community. Encouragement of more such activity would benefit the entire country without causing any damage to any existing industries. The Secretary of Agriculture, in his report on the problems of low-income farmers in April 1955, said that "measures should be taken to bring low-income-farms areas into full consideration in industrial expansion," and I can see no better way to start this process than by including underemployed agricultural regions in the assistance provided by this bill.

Mr. Chairman, a few days ago a distinguished constituent of mine, Mr. Winthrop Rockefeller, was in Washington. He is chairman of the Arkansas Industrial Development Commission and in describing the commission's work he emphasized the fact that he shares my views regarding food and timber processing plants. He stressed the lack of capital for this purpose now available in Arkansas and other States.

I am joined in this effort by Senator FLANDERS, of Vermont, who, I am advised, will introduce a similar amendment to bills pending in the Senate dealing with the problems of unemployment. This should be convincing evidence that there are no elements of sectionalism in this proposal. Above everything, Mr. Chairman, I am eager for the committee to understand that we do not wish to take away from any area any part of the industrial strength that they enjoy. We believe that the industrial areas have a stake in the sound and balanced economic life for the agricultural sections, and it is in that spirit that we press for consideration of the rural industries idea.

A New Fresh Hard Look at Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Janesville (Wis.) Daily Gazette on the subject of foreign aid:

FRESH HARD LOOK AT AID

Two proposals made by Paul G. Hoffman, currently an automotive company executive and former administrator of the Marshall plan, are deserving of greater consideration than they are likely to get.

Speaking at a national church conference, Hoffman said that "peace can only be built by nonmilitary means," and that there is need for bringing the advantages of freedom and democracy to the attention of peoples all over the world. America, he believes, is failing to gain the full advantage of its costly aid programs because it is not expounding the part which freedom and the American system play in making such vast aid programs possible. One of the best means of reaching the ear of peoples in distant lands is via the church, he told the conference.

His other suggestion was that an independent citizen commission of experts take "a fresh hard look" at the entire foreign-aid program. The suggestion was that such a group be appointed by the Secretary of State to make a determination of the resources and needs of beneficiary nations and to choose the means by which American programs could be effectively carried out.

As for his other proposals, Hoffman retains the giveaway attitude so common among those who have had any contact with the foreign-aid program. His estimate that $200 billion will be needed in the next 5 years appears fantastically generous, and his assignment of $175 billion of this to military aid seems to belie his expressed idea that peace will not be won by military power.

Foreign aid on its current or an enlarged scale will continue just as long as the American taxpayers will stand for it. Literally hundreds of projects for which tax dollars are being spent abroad have almost no relation whatsoever to American interests or security, or to the efforts to convince wavering populations of the merits of the American system as against communism.

We have three possible excuses for spending tax money abroad, to bolster military defenses for American security, for rendering aid to needy peoples in the form of free-will charity, and of countering as well as may be the Communist propaganda campaigns which are intended to discredit America in the eyes of foreigners.

A good many of the aid programs would hardly fit in any of these classifications. Foreign aid is strictly a Washington affair, and the chance that any independent, citizen commission will be permitted to put its fingers in as Hoffman suggests is extremely remote.

The Next President of the United States

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include a very informative and inspiring address by the Honorable David L. Lawrence, mayor of Pittsburgh and Democratic committeeman for the State of Pennsylvania. The address was delivered to the District 11 Conference of the United Steelworkers of America, held on Saturday, April 28, 1956, at the Penn Harris Hotel in Harrisburg, Pa. The rousing applause given Mayor Lawrence by the steelworkers' delegates at the conclusion of his speech is the best indication of the fact that the audience which packed the huge ballroom of the Penn Harris approved his hard-hitting analysis of the 1956 Presidential campaign. Mayor Lawrence's address follows:

Less than 28 weeks from now—in 191 days, to be exact—the quadrennial of American democracy, presidential election day, will take place once again.

Measured in the course of history, that's not much time.

But reckoned in the light of human frailty and political fate, 28 weeks can bring whole new political developments and political results.

No one could have believed, in November of 1952, that the Democratic Party would rebound as quickly and as energetically as it did the following year, and every election that followed after that.

The Democrats made an astonishing political recovery from the Eisenhower defeat of 1952.

We are a stronger party today than we have been for many years.

In the special Congressional election of 1953, Democrats won seven of the eight seats in contest.

In 1954, we won control of the Congress.

In 1953, we won the governorship of New Jersey for the first time in many years.

In 1954, we won eight more governorships from the Republicans—including New York, Pennsylvania and Minnesota.

And last November, the trend to the Democratic Party was universally expressed across the country.

We gained important cities in New York and Connecticut; we gained state senators in New Jersey; we held the governorship of Kentucky by a record-breaking majority. In New York City, we held the pivotal borough of Queens.

Indiana—a farm State—was amazing.

There were 30 Democratc mayors in Indiana on Election Day. The next day, there were 73 Democratic mayors-elect.

Here in Pennsylvania, quite frankly, we were all surprised at the extent of the gains, and, of course, delighted.

In 1954, we elected our first Democratic governor in 20 years. George Leader's majority was 284,000. That tide is evidently still at flood.

The mayoralty contest in Philadelphia received much national attention. The young Republican candidate was given the slickpaper buildup in national magazines. He was taken to the White House and made one of "Ike's Boys." He was given the special blessing of the Republican national chairman. Our two Republican Senators, neither of whom live in the Philadelphia area, campaigned for him.

And with all this, Richardson Dilworth defeated him by a greater majority than the Democrats had achieved the last time out.

In Allegheny County, of which Pittsburgh is the seat, we won everything. No Republican is in elective office in the county, except in two minority offices which they must have by law.

But, while gratifying, these victories were not unexpected.

It was the sweep around the State that made political history in Pennsylvania last November.

Democrats won 7 mayoralties from Republican control, and lost 2 which we had held. The population of the cities which we gained is 443,000. The population of the two cities we lost is 25,000.

Democratic mayors preside over every city in the State with more than 100,000 population—Philadelphia, Pittsburgh, Scranton, Erie, Reading and Allentown.

Political realists have long said that the measure of a party's strength is in its courthouses.

In Pennsylvania, 11 county governments were Democratic before election.

Now, there are 25.

Nowhere in Pennsylvania did we lose a county government to the Republicans. We gained the county commissioners in 14 counties, with a combined population of more than 1,800,000 people.

Oldtime Democratic counties, lost in previous elections, came back to the fold. More important still, we broke entirely new ground.

A Democratic board of county commissioners has taken office in Bucks County, the home county of the venerable Joseph R. Grundy, arch apostle of Pennsylvania republicanism.

A Democratic board of county commissioners has taken office in Beaver County, a county whose Republican tradition goes back to the Civil War and the enormously powerful Republican leader of olden days, Matt Quay.

Seven Democrats defeated seven Republican judges in the State.

In county after county, where the Republicans have held undisputed power since the Jackson era, Democrats were elected to county and local offices.

Beyond any question, the party never did so well in this traditionally Republican State even at the peak of the Roosevelt days.

Anyone can argue, of course, over what constitutes a trend; in the final analysis, to be sure, you do not pay off on trends. You have to go out and win the big one.

But trend or not, the fact is clear that the Democratic Party has made consistent, solid, crunching gains—steadily for a period of 3 years.

Control of Congress is a fact, not a trend. Control of State houses, court houses, city halls, is a fact.

It doesn't matter whether these elections have been straw votes or not. What does matter is that they have settled, each of them, their particular issues, and the Democratic Party is far stronger across the country than it has been for many years.

It is the kind of order of battle that any Democrat likes to see, as a presidential election comes upon us.

For we have built in our States and cities exactly the right defense against the massed weight of Republican power in industry, in finance, and in the medium of opinion.

They have the concentration of corporate efficiency and skill.

We have the concentration of political efficiency and skill.

The Democratic official, the democratic political worker, the democratic citizen, has a buoyancy, a pride, a resilience that the Republicans never know—and I suspect that we have a sheer love of combat as well.

The great men of our party have been the dedicated men, from Jefferson to Wilson, from Jackson to Franklin D. Roosevelt and Harry Truman.

The great days of our party are always the days when the Nation and the world need inspired leadership, and we serve as the instrument of that leadership.

A Democratic Secretary of Agriculture believes he should fight for improvement in the economics of the farm—not fight against the farmer.

A Democratic Secretary of Labor believes he should fight for labor and a constant rise in our living standards—not weakly compromise the issues.

A Democratic Secretary of Health, Education, and Welfare would really believe in health, education, and welfare.

And a Democratic Secretary of State might avoid the television playlets, the tourist diplomacy, and the consequent confusion of world peace with soap opera and nervous excursions to the brink of war.

If there was ever any doubt about the character of the Republican team in Washington today, or the job they cut out for themselves, the outgoing Secretary of the Interior, millionaire Douglas McKay, set matters straight at the outset of the Eisenhower administration.

"We are here in the saddle," he said, "representing business and industry."

Despite the usual remote relationship between Republican words and Republican deeds, Mr. McKay's statement of purpose has been given firm substance by booming corporation profits during the months of the Eisenhower era.

General Motors, this last year, profited to the annual rate of $1,300,000,000, an all-time world's record to equal the 4-minute mile.

There is still more proof in the figures which show corporation profits generally last year, after the Republican tax bill was put into effect, were up 27 percent over those of 1954.

Now, there is nothing wrong with corporations making money—that's what they are in business for.

But there is something wrong, shabbily wrong, when big business profits zoom up 27 percent, while the average person's take-home pay increases a meager 4 percent, which was the extent of his progress this past year.

Income for stockholders, that 8 percent of the American public, climbed a clean 12 percent in 1955.

But for the 15 percent of America's population which lives on farms, the economic trend has been in a less favorable direction.

Three years ago, under a Democratic administration, the farm families of this country had an annual income that came to $13,500,000,000.

Last year, in 1955, under a Republican administration, farm income was more than $4 billion below that figure. In 1955, in fact, farmers' income declined 9 percent below 1954 earnings, going from bad to worse, with little hope or encouragement coming from the Eisenhower administration in Washington.

What's wrong here, of course, is that farm families are not listed on the New York stock exchange.

Or take another example:

During 1955, the income of such industrial giants as Monsanto Chemical, United States Steel, and Jones & Laughlin climbed between 70 to 100 percent above 1954 returns.

But in the same year 10,969 other businesses went out of operation, failed, closed down.

These were the small manufacturers, the corner groceries, the clothing stores and the furniture shops that were once the strength and core not only of our American economy, but of our whole American society as well.

Almost 11,000 of these enterprises, which were in operation at the beginning of 1955, had ceased to exist at the year's end. During the 3 years of the Republican administration, the average number of business failures has been 10,300, while, in the 7 Democratic years preceding Eisenhower, the average annual number of failures was only 6,300.

Small business certainly isn't sharing the business optimism or the business profits of the large corporations under the Eisenhower banner of peace and prosperity.

What is wrong here, again, is that the butcher and the baker are not listed on the New York stock exchange either.

Not much in the way of dividends or investment income comes from them, or from the farmers, or from the workingmen.

To the obvious misfortune of many Americans, the big business character of the Eisenhower administration has more faces than the bullish corporate profit statements or the blueblood collection of millionaires in the National Cabinet.

By becoming so onesided, so devoted to a single viewpoint and a single interest, the Republicans have violated a basic principle of American public life.

The American people, through their history, have expected their major political parties to be cross sections of the Nation, of the people, by the people and for the people.

They expect the parties to maintain a balance, to provide for the interplay of forces, to equalize pressures so our whole society may achieve harmony and progress.

Today's Republican Party has thrown all this overboard, giving, instead, a Government of big business, by big business, and for big business.

I think this should be made clear: business and corporate enterprise are not evil forces.

They are an integral part, a vital factor, of our capitalistic society and of our entire social and economic structure.

They have helped vigorously in building this Nation, and they have contributed immensely to the material progress of the country.

Men of great ability and of unquestioned integrity are active in the management of banks and corporations.

But to turn over the vast machinery of the Federal Government, with its great economic influences and its management of the whole complexities of our economic system, to one group of our people is as dangerous as it is unjust.

The point is that we Democrats have no quarrel with business, big or little.

We do quarrel with the belief that only the corporate point of view is to prevail.

We admire the qualities which lead to business success, and the everincreasing productivity which business leadership is bringing to our lives.

But we also admire the qualities of scholarship and thought—the qualities of the despised egghead.

We admire the life of the farm, and the desire of men to live in contact with the earth and growing things.

We admire the press and push that comes from labor, the reluctance to be satisfied with things as they are; the desire to move forward and to move one's family forward into a rising living standard, year by year.

The Republicans accused us for years of being a class party.

It is ironic that in their tenure of office they have made themselves into the tightest of class parties—the party of the business executive and no one else.

They are a mirror image of the Wall Street Journal, except when a moment of political dismay rushes them into some gesture they hope will hold the farm vote or the labor vote or some equally mythical racial or religious vote.

The truth is that you do not get these votes by gestures.

You get the support of the majority of the American people—from the farm to the factory, from the schoolroom and the office, from Americans of every race and religion—when the people feel that they have not been excluded from your councils and heart.

In the Democratic Party there are no mental barriers.

And when election day comes around this November, the confident Republicans of April will be jittery and afraid because, by that time, the sober second thought of the American people will be in full evidence.

By that time the massive strength of the Democratic Party—the Nation's majority party—will be in full deployment.

By that time, the Eisenhower record will be fully known to the American people, and the President will have been finally forced to accept responsibility for his own appointees and his own administration.

Up to now, we have had 3 years of sidestepping.

The declining hog market was Benson's.

The rising stock market was Eisenhower's.

The failures and frustrations in our foreign policy were Dulles'.

The Geneva spirit—remember that?—was Eisenhower's.

The polio vaccine snafu was Mrs. Hobby's.

The conversion of the Republican Party to the welfare state was Eisenhower's.

We have had a conscious effort to create a myth of an American President as a personal symbol of the State—above party and above criticism as is the Queen of England in her island kingdom.

Eisenhower is guided politically by a formidable group of political manipulators—Dewey, Brownell and Hagerty—the old crowd from New York now practicing at 1600 Pennsylvania Avenue.

The Secretary of State in this administration will go before a committee of the Senate and shamelessly pretend that all is well in our world position when the whole world knows that we are weaker than at any time since Pearl Harbor.

The Attorney General in the administration will use the instruments of justice for political prosecutions, and leak the threat of more to come.

The Vice President in this administration will involve the Supreme Court and the infinitely difficult question of integration in a boastful political speech.

There is no desire to lead the American people.

There is, instead, a constant attempt to manipulate, to falsify, to play a game of let's pretend.

We are facing a public relations approach to Government in which the accomplishment is nothing while the appearance is everything.

Fortunately for the country, this whole complex of Eisenhower political advantage can be defeated.

The Democrats must count on the fundamental good sense of the American people.

They have the Democratic Party as the instrument of that good sense.

The Democratic Party is the majority party of the American people because it has willingly served the interest of the majority.

It is the workingman's party; it is the farmer's party; it is the party of the schoolteacher and of the small-business man.

It is content to let the Republicans be the millionaire's party.

The Democratic Party is not afraid of leadership, not afraid of change, not afraid of action.

George Leader has proved that fact as Governor of Pennsylvania, in an administration which has been maligned by the press but which is setting a pattern of accomplishment that will serve as a high standard of achievement for years to come.

A Democratic President will reestablish America's leadership throughout the world, revitalize our own efforts for social and economic progress, invigorate the fight for higher standards of living which must be our goal and our search in meeting the future.

A Democratic President will get this country back on the track, where we say what we mean, and mean what we say.

That President—the next President of the United States and all the Presidents in the foreseeable future—will inherit immense problems.

We must recapture America's position of leadership in the world.

We must learn how to compete for the minds as well as the fears of men.

We must be able to achieve a world where freedom and security are not incompatible, where we can challenge the Communists, not in atomic warheads alone, but in the preservation of peace and the advancement of mankind.

The next President of the United States must bring the farmer back to parity in our society; not the parity of dollars in the market place alone, but in the respect and understanding of his fellow citizens, as well.

The next President must deal with the problems of race relations, making sure that the power of the Federal Government will be used temperately and wisely so all Americans will gain the birthright of our Constitution and our professed beliefs.

The next President must be concerned with the continuing expansion of our economy, with full employment in the face of automation, with a steady increase in the standard of living for all Americans.

The world is full of dangers, the seething Middle East, the constant menace of Formosa, the discontent of our allies everywhere, the continuing collapse of the old diplomacy and the old colonialism.

But it is also full of hope.

Man's ingenuity, his ability to construct as to destroy, has never been so great in all recorded history.

The next President of the United States must know a time for greatness. He must not be tired; he must not be spent; he must be ready for the future, whatever the future holds.

He must be a man of leadership, of courage, of action and of good and strong faith.

Such a man can come only from the Democratic Party, whose ideals and philosophies encourage action and stimulate leadership, while Republicans skirt action and shun leadership.

That is why I am sure that with the Democratic Party ready for the conflict, the people of America will not fail either us or themselves.

That is why the candidate nominated by the Democrats in Chicago this August will be the next President of the United States.

Federal Highway and Highway Revenue Acts of 1956

SPEECH

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 27, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10660) to amend and supplement the Federal-Aid Road Act approved July 11, 1916, to authorize appropriations for continuing the construction of highways; to amend the Internal Revenue Code of 1954 to provide additional revenue from the taxes on motor fuel, tires, and trucks and buses; and for other purposes.

Mr. TOLLEFSON. Mr. Chairman, I consider it essential that sound Federal-aid highway construction legislation include a provision requiring prevailing wage standards as outlined by the Davis-Bacon Act. This act provides a sound and fundamental concept of the role of Government in Federal programs sponsoring construction. The principle of the law is time-tested and has been valuable as a remedial measure to protect contractors and craftsmen from unfair contract bids. Failure to include it is manifestly unfair to law-abiding contractors who may be underbid by other contractors paying below local existing wages. It is a necessary measure to eliminate existing unfair bidding advantages of contractors who pay low wages in areas where union rates prevail. The Davis-Bacon provision in the highway-construction measure would provide a proper wage scale.

This provision would prevent the Federal Government from becoming a party to the breaking down of existing prevailing practices regarding wages, hours of work, health, welfare, pensions, overtime provisions, and other working conditions which have been privately negotiated between contractors and construction craft unions.

Originally, the Davis-Bacon Act was enacted in 1931 because the Congress of the United States realized the seriousness of the labor problems created by Government construction contracts which, at that time, were operating to the advantage of the lowest bidder and creating an imbalance in the labor market when nonunion workers were brought into a State to work for exceedingly low wages.

Since 1931, however, when the Davis-Bacon provision has been applied by the Congress it has to its credit the following accomplishments:

First. Equality of bidding opportunity has been guaranteed to all contractors. It protects them against unfair competition and restricts the area of competition to economy and efficiency.

Second. Local employment has been assured by the provision because no advantage can be gained by importing workers from lower wage rate areas.

Third. It protects the standard of living of the local craftsmen.

Fourth. It has fostered industrial peace wherever it has been applied because it removes the prime cause of disputes on these projects.

Fifth. Collective bargaining has been encouraged by it.

Sixth. It has prevented the disturbance of local economies.

Seventh. Through this provision contractors have been able to receive an adequate supply of skilled, experienced, and competent construction craftsmen at the wage rate contained in the contract specifications.

Federal acts which have provided for a prevailing wage clause include the following:

Housing Act of 1937, as amended by the 1949 act;

Federal aid for public airport development of 1946;

Hill-Burton Facilities and Hospital Construction Act of 1946;

School survey and construction of school facilities in federally affected areas of 1950;

Defense Housing and Community Facilities and Service Act of 1951;

Slum clearance and urban renewal program in the Housing Act of 1954;

Multifamily rental housing under the Federal Housing Administration Lease Purchase Contracts Act of 1954.

In my opinion, it would be an act of gross neglect for the Congress, in the light of these facts, to enact legislation for a large highway-construction program without the Davis-Bacon provision. This would seriously hamper the program and the interests of labor.

Case of Personal Products Corp. Before National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. DIRKSEN. Mr. President, it appears that in certain remarks made by the distinguished Senator from Oregon [Mr. MORSE] on the functioning of the National Labor Relations Board, he alluded to a case cited as that of the Personal Products Corp.

This corporation was represented by the firm of Seyfarth, Shaw & Fairweather, a very distinguished and reliable firm of attorneys. On reading the remarks by the Senator from Oregon, they wrote him at considerable length and sent me a copy of their letter. I believe in the interest of presenting both sides of the matter that this letter should be included in the CONGRESSIONAL RECORD, and I therefore ask unanimous consent to have it published in the Appendix.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEYFARTH, SHAW & FAIRWEATHER,
Chicago, April 23, 1956.

Hon. WAYNE MORSE,
United States Senate,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORSE: We have read with considerable interest your remarks to the Senate concerning the functioning of the National Labor Relations Board under the Eisenhower administration and, particularly, that portion dealing with the Personal Products Corp. case (at pp. 4873 to 4874 of the CONGRESSIONAL RECORD), since our law firm represented the employer in that case.

We feel that many of your statements were based on an inadequate analysis of the facts and the law involved in the case. They also incorrectly imply that the case was instigated and decided by Eisenhower appointees to the Labor Board. We are therefore setting forth below facts which we feel you should consider in the hope that you will correct the statements which you made on March 23.

1. The alleged unreasonable attitude of Personal Products Corp. in collective bargaining.

You stated that "although the company admitted that it could afford to increase wages, and although other companies across the Nation were granting wage increases, this company refused to offer any wage increase at all." Undoubtedly this statement was intended to convey the impression that the company approached the bargaining table in a completely arbitrary and unreasonable frame of mind. Both your facts and conclusions are wrong.

During the negotiation, the company did make at least two separate and substantial proposals for increasing the wages of their employees and improving their fringe benefits. These proposals were made despite the fact that the wages and fringe benefits paid by this company were already far above the average in the State of Illinois and in the country as a whole. These proposals were also made in the face of union demands totaling about 70 cents per hour in cost and an announced position of the union representative that fairness is out insofar as bargaining was concerned. Early in the negotiation, the union negotiator announced that wages would be established at this company solely on the basis of the driving force of the bargaining agent. You may verify these facts by examining the NLRB hearing transcript which we will be happy to make available to you. We call your attention particularly to page 1310 of this transcript.

2. The union did not strike, because the plant was located in a private industrial area where the union would not be permitted to picket.

You stated that one of the reasons why the union did not call a full-fledged strike was because the company's plant was located in a private industrial district where the union could not even engage in peaceful picketing. On September 1, 1953, the union did call a strike and did picket the company premises. The company made no attempt to halt peaceful picketing. Only when violence later erupted did the company seek an injunction to restrain the violence.

3. The company filed its unfair labor practice charge with the "Eisenhower Board."

You stated that the company "filed a charge with the Eisenhower Board." This remark was undoubtedly intended to convey the impression that Eisenhower appointees were employer biased and responsible for issuance of the complaint and the decision. Again both your facts and your conclusions are wrong. The facts in this regard are as follows:

(a) The unfair labor practice charge was filed on February 16, 1953, and the complaint was issued on June 5, 1953. All of the personnel involved with processing of the charge and issuance of the complaint were appointees and hirees of the prior, Democratic administrations. We are referring in particular to the field examiner, the chief field examiner, the regional director, and the General Counsel himself. Even the five members of the Board itself were still Democratic appointees at the time the complaint was issued.

(b) The attorney who tried the case before the trial examiner was hired by the Board during the Democratic Truman administration.

(c) The trial examiner who heard the case was hired under the Democratic administration.

(d) The decision of the Board, finding the union guilty of bad faith bargaining, was a unanimous decision by 2 Democratic appointees and 2 Eisenhower appointees. Incidentally, one of the concurring members was Mr. Peterson, who, we understand, was closely associated with you prior to his appointment to the Labor Board.

(e) The decision of the Board was based on a prior decision of the Board in *Phelps-Dodge Copper Products Corp.* (101 NLRB 360 (1952)), wherein the Board had stated that slowdowns and intermittent stoppages were "irreconcilable with the act's requirement of reasoned discussion in a background of balanced bargaining relations upon which good faith bargaining must rest." This decision was issued before President Eisenhower was even inaugurated, by a Board composed entirely of members appointed by Democratic Presidents.

4. It is clear that a slowdown is not a violation of the Nation Labor Relations Act.

You stated, "Now if there is one thing that is clear in the act it is that a slowdown is not a violation of the act." You thus cavalierly disposed of a question which the United States Supreme Court recently decided to review. (*NLRB* v. *Textile Workers Union of America* (case No. 690, April 2, 1956).) In your argument on this point, you state that the National Labor Relations Act "legalized the so-called slow down as a strike weapon," and you concluded that slowdows cannot be enjoined or restrained. In support of your conclusion, you cite the United States Supreme Court decision in *United Automobile Workers* v. *Wisconsin E. R. B.* (336 U. S. 245). The case you have cited actually refutes your argument. There the union contended that slowdowns and "quickie" stoppages were protected as lawful strike action under section 13 of the act, which you have cited. The Supreme Court ruled that section 13 conferred no such immunity. The Court stated:

"If we were to read section 13 as we are urged to do, to make the strike an absolute right and the definition to extend the right to all other variations of the strike, the effect would be to legalize beyond the power of any State or Federal authorities to control not only the intermittent stoppages such as we have here but also the slow down and perhaps the sit-down strike as well. [Citing cases.] And this is not all; the management also would be disabled from any kind of self-help to cope with these coercive tactics of the union except to submit to its undeclared demands. To dismiss or discipline employees for exercising a right given them under the act or to interfere with them or the union in pursuing it is made an unfair labor practice and if the rights here asserted are rights conferred by the Labor-Management Relations Act, it is hard to see how the management can take any steps to resist or combat them without incurring the sanctions of the act. It is certain that such a result would be inconsistent with the whole purpose disclosed by the Labor-Management Relations Act amendments to the Labor Relations Act. Nor do we think such is the result of any fair interpretation of the text of this act."

You have lifted from context the statement of the Supreme Court that the Labor Board has no authority to deal with the problem of slowdowns and "quickie" stoppages. We are enclosing a copy of the amicus curiae brief that we filed with the Supreme Court in support of the Board's petition for writ of certiorari in the Personal Products case. We feel that the argument which we presented in this brief should be considered by you before you conclude erroneously that the Automobile Workers case stands for the proposition you have pronounced. Certainly, the mere fact that the Supreme Court has granted review in the case should cast considerable doubt on the logic of your position.

In the light of the granting of certiorari by the Supreme Court and in the further light of the facts we have set forth herein, we hope that you will review and correct the remarks which you made concerning the Personal Products case.

Respectfully,

SEYFARTH, SHAW & FAIRWEATHER.
By JOHN T. VANAKEN.

The Effects of Crime

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 30, 1956

Mr. BEALL. Mr. President, the attributes of brevity and impact are not traditionally the most outstanding characteristics of the communications of many men in public life. Therefore, when a man in high office combines those two features and uses them for a noble cause, the occasion is more than worthy of note.

An example of such a case is a pamphlet recently prepared by Mr. Anselm Sodaro, State's attorney for Baltimore City. Although the publication is addressed to the youth of Baltimore, its blunt, factual message concerning the effects of crime is actually an open letter to all American youth.

More than 30 States have requested copies of the pamphlet since it was first printed recently, and 52,000 copies have been ordered for distribution. In an effort to help bring the fine work to the attention of still more young men and women, I request unanimous consent that the pamphlet be included in the Appendix of today's RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

To the Youth of Baltimore:

It isn't worth the chance.

Here's why:

Do you realize that committing a crime means —

Disgrace and embarrassment to you.

Grief to your parents and your loved ones—they also must share in your disgrace.

Expenditure of money by you or your parents to employ a lawyer and engage a bondsman to furnish bail pending your trial.

Imprisonment in a penal institution pending trial if you or your parents are unable to furnish bail.

Possible imprisonment after trial, and perhaps for many years.

Your conduct and movements will be checked because you will be a criminal who has to be watched.

You will be avoided by decent people and become the object of contempt or pity.

Yes; the road of crime is not only the most hazardous, but the least profitable.

Do you know that—

By being arrested or found guilty of a crime your future is handicapped.

Getting a job is difficult when you have a criminal record. A criminal record will seriously affect your ability to obtain a good job after leaving school. In the business world, or with the city, State of Federal Government, employers shun persons with a criminal record. You may be deprived of gainful employment during the best years of your life.

You may lose certain citizenship rights, if convicted of certain crimes, your right to vote will be taken away.

Your changes of dating and marrying a fine person will be lessened. No respectable young lady or young man wants to date or marry a person who has come into conflict with the law or has a criminal record.

You are doing a disservice to your country. The high rate of juvenile crime is providing unfriendly governments throughout the world with effective propaganda.

Remember—The Youth Court is a criminal court, and being young or a first offender does not necessarily mean you'll get off.

Do you know that—

If you steal an automobile you can be sentenced to the penitentiary for 15 years and if you ride in a stolen car you are just as guilty as the one who stole it.

If you break into a house or building you can be imprisoned for 20 years.

If you rob with a weapon you can be imprisoned for 20 years.

If you carry a weapon or a switch blade knife you can be sent to prison for 2 years.

If you use narcotics you can be sentenced to 5 years for the first offense, 10 years for the second offense and 20 years for the third offense.

Keep in mind that 953 offenders between 16 and 20 years of age were put on trial in the youth court in 1955, and 504 were sent to prison, and many for a long time.

A WORD TO THE PARENTS

Delinquency can be prevented. The ultimate solution of the problem is in the hands of the parents, through closer supervision of children, inquiring of their whereabouts and knowing the kind of company they keep.

Many youthful offenders come from good American homes and potentially good parents, and all are not the product of broken homes or families facing economic instability.

Statistics reveal that 80 percent of the 16-to-18-year-old offenders turn to crime after 10 o'clock at night. This, I call the "hour of danger."

Parents: Ask yourself each night at 10: Where are my children? With whom are they associating? What are they doing? How much time am I giving my children?

I am sure that you will agree with me that we, as parents, are in a much better position to prevent juvenile crime than any or all of the law-enforcement agencies.

ANSELM SODARO,
State's Attorney for Baltimore City.

What the President Said After the Lights Went Out

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith a column by Mr. Williard Shelton in the current issue of the AFL–CIO News:

(This column might be subtitled: "What President Eisenhower said to American editors—not the people—after the lights went out.")

The lights are the little red lights on the TV cameras that tell a speaker he is on the air. The occasion was a dinner of the American Society of Newspaper Editors in Washington.

The President, for the cameras and the country, made a formal speech telling the new Soviet rulers that they should right Stalin's wrongs. He proclaimed America's opposition to colonialism.

This speech, although telecast domestically, was obviously aimed abroad—at the Soviets, our western allies, at the uncommitted or neutralist countries.

But President Eisenhower decided on a postscript. After his party arrived at the dinner, the chairman was told the President would like to talk informally after the TV section was ended.

So the TV lights wents off—and Eisenhower began talking off the cuff, from just some key phrases arranged on cards.

As frequently happens in such cases, the Presidents' sentences became involved, lengthy and sometimes difficult to follow exactly. As an example, after mentioning Japan's trade difficulties, here is what the transcript says:

"But the next thing we come up against, we are very certain in our own minds that some of these nations—not all the United States people, you know—but some of them are very loud in their denunciation of any country that trades with the Communist countries. So they (presumably the Japanese) can't trade with their natural markets, with Manchuria and China. So finally all of these southeastern markets—all the southeastern Asia markets, have been largely destroyed—they are so poor they can't support Japan. So what does Japan do? Where are we chasing her? Chasing her to one place. She has to look less and less—I mean to the mainland next to her. She has to, now, begin to look rather longingly, unless something is done.

"Now that is the kind of cross purpose that comes up, and this goes on around the world. Britain and France and Germany, indeed every country with which we deal, has some problem different economically from our own."

What the President seemed to be saying was that by refusing to trade with Japan sufficiently the United States is driving the Japanese into the arms of Red China or the Soviet Union.

He also seemed to be saying that to adopt a fixed stand against trading with Communist nations would sacrifice one of our great assets.

"There are no easy panaceas. You can't say 'we simply won't trade with the Communist nations'—make that work for all of us. In fact, such a statement is, to my mind, giving up one of the great strengths for which the Yankee has always been noted: he is a good trader."

Now if this means the two things suggested, Eisenhower is asking for a major shift in American foreign policy—and one that might cause him trouble.

But the President didn't talk directly to the people. He seemed to be telling the editors he would like them to go home and let the new idea trickle down to their readers.

The speech was a domestic speech—a speech pleading with Americans to support new concepts. But his speech aimed abroad was telecast here, and his speech asking American support wasn't telecast.

It is an extraordinary reversal of the usual White House practice—and the speech went almost unreported. It came late on Saturday night, its meaning was obscure, tried to interpret it hastily—and relatively few know anything about it.

The explanation seems to be that the White House was upset by Adlai Stevenson's speech to the editors assailing the Eisenhower administration's foreign policy; and was further upset by a 2-to-1 vote among the editors themselves asserting that the United States is losing the cold war with Russia.

So the President apparently decided close to the last minute on his postscript and talked almost as long in the postscript as in the formal speech.

The question may be asked: If the President thinks that a major change in policy is necessary to keep Japan from slipping into Soviet arms, to help Britain, France, and Germany solve their economic problems by trading with Communist countries, why not take it to the people?

Why not trust the people and tell them what the administration thinks? Why save it for a handful of editors?

A Farm Letter

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. CANNON. Mr. Speaker, under leave to extend remarks, I include in the

CONGRESSIONAL RECORD a copy of a letter written by my colleague, Hon. PAUL C. JONES, of Missouri.

Mr. JONES represents one of the great agricultural districts of the Mississippi Valley and has long been a member of the Committee on Agriculture and is considered to be an authority on the subject which he discusses in the accompanying letter.

The letter is as follows:

APRIL 19, 1956.

ST. LOUIS GLOBE-DEMOCRAT,
St. Louis, Mo.

DEAR MR. EDITOR: I have just read two of your editorials, A Very Bad Bill and Veto the Farm Bill, both published before President Eisenhower's veto of the farm bill, and I think both of these editorials emphasize the fact that you know as little about the farmer's problems as does the President.

I note particularly your statement, "the reason the overwhelming majority voted for General Eisenhower was because he represented integrity in America." It appears that you omitted two very important words from that statement which should have included the words "they believed" between the words "because" and "he". I say this advisedly, for there is no question but that the farmers of America believed the President when he said at Brookings, S. Dak. on October 4, 1952, "The Republican Party is pledged to the sustaining of the 90 percent parity price support, and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guaranty in the price supports of 90."

How can you justify the use of the word integrity when the President has done nothing to carry out the pledge he made to the farmers in his election campaign of 1952?

Like so many of our city friends you accept the false premise that the high prices paid by the consumer are a result of "high" prices received by the farmer, and there are no facts to bear out this statement. For instance, 10 years ago wheat was selling at $3 per bushel in the United States and the average price of bread was 13.8 cents per pound, whereas today with wheat bringing about $2 per bushel, you are paying approximately 18 cents per pound for bread. This is just one of many examples which could be presented. Never before in the history of the world have consumers been able to buy so much food for an hour's labor, and the farmer's share of this same food dollar was never less.

You, like so many others who have gone off on a tangent, and the further you go the further you are from the truth, insist on referring to 90-percent price supports as "high" supports. If the subscription price of your paper was $10 a year which it is not, would you consider that you were getting a high price if I sent you a check for $9 to cover a year's subscription? Yet, when you ask a farmer to accept 75 percent of parity, he wouldn't even have the $7.50 to pay for a subscription.

Farmers are not asking "parities up to the ceiling" of 100 percent. They are asking that they be treated in a manner that will permit them to at least keep their heads above water. Farmers are not demanding subsidies despite the fact that they have been contributing to subsidies for other segments of our economy, including your own newspaper for many long years. They are giving something in return for a guaranteed price-support program, agreeing to bring production in line with demand. This administration has failed miserably in its efforts—because it has made no effort—to bring about consumption of an overabundance of production. There is no surplus of food in the world today; there is no surplus of fiber, but there is an underconsumption because of an administration that has devoted all of its efforts to to prove that a farm program that has enabled the farmer to enjoy some of the comforts of life will not work.

If the President is not playing politics, why did he at the time he vetoed the farm bill which would have helped all farmers, raise the price supports for wheat, grown principally in an area which is traditionally Republican; why did he raise the price supports on corn with no limitation on production to influence the farm vote in Iowa and other traditionally Republican areas; when he stated at the same time that higher supports would encourage greater production and add to the surplus?

And while I am asking questions, why don't you change your masthead to tell the truth that the Globe-Democrat is the same Republican newspaper that it has always been, beating the drums for the GOP?

Democratically yours,

PAUL C. JONES,
Member of Congress, 10th Missouri District.

What the Postal Workers Want and Should Get

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 30, 1956

Mr. ANFUSO. Mr. Speaker, it was my distinct privilege and personal pleasure to address the annual rally of the joint conference of Affiliated Postal Employees, held in New York City on Sunday afternoon, April 29. I discussed some of the current problems and the objectives presently being sought by the postal workers, as well as the need for early enactment of these measures.

Under leave to extend my remarks in the RECORD, I want to insert the text of my address on the above occasion:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO AT JOINT CONFERENCE OF AFFILIATED POSTAL EMPLOYEES, NEW YORK, SUNDAY APRIL 29, 1956

President Dave Silvergleid, Roy Hallbeck, and all my good friends in the postal service, it is always a great delight for me to join with you at these public rallies and to have the opportunity to exchange a few thoughts. Let me thank you first for extending the invitation to be here with you today and to address this fine gathering.

During the years that I have come to know your leaders and your membership more intimately, I have found that you are an alert group, always prepared to speak your mind freely, forcefully and intelligently. You do not hesitate to speak up and to criticize where criticism is needed. And this is the way it should be in a democracy.

You may have heard the story of the two German fishermen who were trying their luck on opposite banks of the Rhine River. The one on the bank of the American zone was hauling in plenty of fish, but the one on the Russian side couldn't get a bite. Finally, the fisherman on the Russian side got disgusted and he shouted:

"How do you manage to catch so many fish, while I get none?"

"Very simple," replied the man on the American side. "The fish over here aren't afraid to open their mouths."

In a democracy like ours we are not afraid to speak our minds and to say what we please—Even if we are Government workers. Your rally today is an excellent example of that freedom, of bringing your gripes into the open, of criticizing, and of seeking the means to improve your lot, your working conditions, your benefits, and your security in life.

Last year, the question of a salary increase was uppermost in your mind. That matter has been resolved, though not as satisfactorily as I had hoped. You may recall that I advocated an $800 increase for all postal and Federal employees, and I voiced the opinion that anything less than a 10 percent pay increase would be inadequate. I still feel as strongly about it today as I did a year ago, and it is my sincere hope that in the not too distant future Congress will rectify the shortcomings of last year's pay increase. Your request for a $600 increase is justifiable. I need not tell you that I shall be glad to support it. It will not be an easy task to reach this goal. As a good friend of yours I must tell you that you are facing an uphill fight, and you must therefore gird yourself well if you want to be successful.

This year, other problems and other objectives are holding your attention. I refer specifically to such matters as the need for a better and more liberal retirement system, recognition of employee organizations, the establishment of a system for merit promotion, and seniority established by law. Every one of these objectives is a good one and should have been enacted a long time ago. I know that you and your families are vitally interested in achieving these objectives in the near future. With the proper campaigns and push—as I know from experience that you postal workers can do—you ought to be successful before very long.

The one that stands the best chance for early achievement, it seems to me, is the retirement bill (S. 2875) by Senator OLIN JOHNSTON, chairman of the Senate Post Office and Civil Service Committee. As you undoubtedly know, the committee gave its unanimous approval to this measure recently, and the chances appear to be quite good that it may still be enacted during this session of Congress.

I don't want to go into a lengthy discussion of the major provisions of this bill. I am sure that most of you are by now generally familiar with these provisions. Suffice it to say, that the average retirement annuities would be increased by about 25 percent; retirement would be possible at any age after 30 years of service; benefits for the disabled would be increased substantially; survivors benefits would also be considerably increased, and a number of other important benefits. Let me assure you that there is not an employee in the Federal service, regardless of his salary or his age, who would not benefit greatly through the enactment of this bill.

No wonder the measure is described as "the greatest forward step in Federal employee legislation in 30 years." I regard it as the most far-reaching step in the revision of our retirement system in many years. This measure meets head-on most of the retirement needs of all those who are now on the Government payroll.

Let me caution you, however, as a good friend, that as long as the bill has not been enacted there are always dangers. In this instance, too, there are some hurdles which must still be crossed before it becomes law. The biggest of these is the fact that the Republican administration is opposed to the retirement bill, primarily on the old lame excuse of economy.

You must remember also that we still have to push it through Congress. I want you to know that I am not only for it and will strongly support it when it comes before the House of Representatives, but I have

done more than that. I have personally talked to Congressman MURRAY, the chairman of the House Post Office and Civil Service Committee, and to several members of the committee regarding the bill. I have their assurance it will be given prompt and proper consideration. This measure is among the top bills on my list for this session.

Incidentally, let me assure you that in my talks with Mr. MURRAY and other committee members, I also mentioned other legislation in which postal workers are vitally interested. For example, I stressed the importance of recognizing employee organizations, like yours and others of similar type. It is most unfortunate that Federal employees do not enjoy certain rights in the field of labor-management relations as do employees in private industry. Government workers have a right to join unions of their choice, but the unions cannot impose upon them an obligation to strike against the Government. There is also no requirement that the Government recognize such unions as spokesmen for Federal employees. Thus, effective labor-management relations are practically nonexistent in Government service.

This is an injustice which needs to be corrected. Several bills have been introduced which call for practical machinery to deal adequately and fairly with labor-management problems which come up in Government service. They provide official recognition of employee unions, the requirement that departments and agencies deal with the unions on personnel matters and employee grievances, and also recommend arbitration of disputes. While as yet there has been no action on these bills, I am happy to know that the Senate Post Office and Civil Service Committee will begin hearings on May 15. I do hope such legislation will be enacted at an early date. The principles and objectives of union recognition are reasonable and just. I regard this legislation as among the most important Federal employee measures now before the Congress.

As for the question of merit promotion, all I will say at this time is that we should have had it a long time ago. A sensible and workable program for the promotion of employees on the basis of merit is long overdue. Unfortunately, there is a disposition in certain quarters to discredit the civil service merit system and to wreck it by filling positions on the basis of political endorsement. It is wrong and it is harmful all around. The whole present system is not working satisfactorily. I know this from the letters I receive at my office, and I know it from the views expressed to me by employee organizations which are sponsoring this legislation. Senator JOHNSTON has recently introduced a bill (S. 3456) along these lines, and I am all in favor of its enactment into law.

In conclusion, let me assure you that Congress is working hard on various phases of legislation and I am certain that the end of the session will show a fine record of accomplishments. Gradual progress is being made in the field in which you are interested, not only in the problems I discussed with you today, but also in others, such as the question of seniority, health insurance for Government employees at no additional cost to you, and other matters.

You have many good friends in Congress who are constantly on the alert for your interests. But your organization and similar organizations cannot let up for a minute. You too must pitch in and get behind us with enthusiasm. I know you can do it, when you want to. It is like the old saying: Even if you are on the right track, you will get run over if you just sit there.

The Dedication of the New Passenger Terminal at the Cleveland Hopkins Airport, April 28, 1956

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

Mr. VANIK. Mr. Speaker, permit me to call the attention of my colleagues in Congress to the dedication of the new passenger terminal at the Cleveland Hopkins Airport in Cleveland, Ohio, on April 28, 1956. This new $3,500,000 passenger terminal is the latest phase of a $22 million modernization program which is designed to place Cleveland's air terminal in the front ranks of America's airports.

The city of Cleveland has every right to be proud of this new terminal. It is an exemplary step forward in the field of air travel in our rapidly shrinking world. The construction of this terminal was made possible by the passage of a local bond issue paid for by the citizens of Cleveland although the airport serves the entire metropolitan area.

Of particular interest to the air traveler is the big new parking lot providing adequate accommodations for the commuter who leaves his motorcar at the airport for a day's business in another city.

The next items for construction on the agenda at the Cleveland Hopkins Airport are two privately financed airplane hangars estimated to cost $4 million and a new north concourse soon to get underway.

Federal contributions have been a great factor in the construction of the airport facilities in Cleveland, but the local citizens have made every effort to contribute their fair share toward this important community asset.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Barkley, Anderson, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Bible, Neuberger, Laird, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Wofford, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.

Yellowstone National Park

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. METCALF. Mr. Speaker, on March 29, 1956, I included with my remarks on the need for improvement in national park facilities an article by Prof. A. R. Patton. The former Montana resident recalled Yellowstone National Park as it was in the 1920's thereby demonstrating the need for improvement in park facilities today.

Among the letters prompted by appearance of the article is the following from Mr. Harry W. Frantz, correspondent of foreign service, United Press, Washington:

WASHINGTON, D. C., *April 3, 1956.*

Hon. LEE METCALF,
Representative from Montana, House Office Building, Washington, D. C.

DEAR MR. METCALF: Friends of Yellowstone Park find great interest in the article about Yellowstone in the twenties, which you inserted in the CONGRESSIONAL RECORD of March 29, 1956.

Prof. A. R. Patton has evoked nostalgic memories of the park in a period when the tremendous tide of motor tourists was still in an early stage.

Yellowstone Park has a great wealth of western pioneer traditions, no less than scenic wonders, and inspires among its countless visitors an "all America" feeling which is not soon forgotten.

I venture to send you a minor contribution to the Yellowstone annals which I wrote in 1923, about the time when the Patton family was saluting Old Faithful.

Attached to my story is a brief article, which is self-explanatory.

Cordially,

HARRY W. FRANTZ,
Correspondent of Foreign Service, United Press, Washington, D. C.

The article mentioned and an excerpt from Haynes Yellowstone Guide follows:

THE GRAND LOOP ROAD OF WONDERLAND

(By Harry W. Frantz)

YELLOWSTONE PARK, WYO., September 15, 1923.—History loves roads. Tradition follows the route of a great highway. The story of Japan lingers along the Tokaido, linking the east capital at Tokyo with the west capital at Kyoto. In the dust of the Grand Trunk Road is the mystery of India. Of Rome what was greater than its great highways—the Via Appia and the Via Ignatia? Nor can American history ever be disentwined from the overland route and the Santa Fe Trail.

Gravel and bridges and engineering skill alone do not make a road great. The footprints and the hoofmarks and, if you will, the tireprints of countless travelers are required. And, too, the road must lead somewhere—to a mosque, to a shrine, to a sacred river, to Tartary or to Mecca.

Slowly but as certainly as mathematics the Grand Loop Road of the Yellowstone Park is becoming a great national highway. It is a road entwined in the lives and the dreams of an ever-growing number of people, the path of pilgrims seeking the god of the open air. About it, too, there accumulates a great volume of traditions—the passing of presidents and princes, the meetings of poets and peasants.

There is no road in America of more varied appeal or charm. Already it is the route of citizens from every State. Sometimes, too, it is the pathway of elk and deer and bear. Beside it bloom great fields of magic wild flowers. It leads past the remarkable hot springs formations, into the world's greatest geyser basins, along the shores of America's most beautiful lake and to the brink of a canyon unparalleled for the sheer gorgeousness of its coloring.

Think a minute as you swing along the Grand Loop—it is barely born in the sense of history, yet it is hallowed by great associations. In whole or in part it was the route of Sheridan, of Arthur, of Roosevelt, of Harding, of Kipling, of Burroughs, of Chief Joseph, of General Howard, of Buffalo Bill Cody—to mention a very few. Into its making went the genius of many engineers—Chittenden perhaps the greatest among them—and the labor of many men. This Grand Loop Road is barely 150 miles in length, but from it radiate roads into every community of the land. So the pilgrims come hundreds to traverse its tens of miles.

Every guidebook will tell you the geography of the Grand Loop Road. You can reach it from the north or the south or the east or the west. It starts at Mammoth, once the old post of Fort Yellowstone and now headquarters for the park. It goes past Liberty Gap and the terraces of Mammoth Hot Springs, around the foot of Jupiter and skirting Angel. Next there are the Hoodoos, the Silver Gate, the Golden Gate. The snowy peaks of the Gallatin Range loom over the road as it crosses the plateau. Of Obsidian Cliff the guidebook tells, and of the terrifying steam-vents of Hellroaring Mountain.

The road passes Norris Geyser Basin with its fearful drift of steam clouds, tarries at the bulb-blubbing Mammoth Paint Pots, leads down the gorge of the Gibbon and up that of the Firehole, introduces you to the geysers and immense pools of Lower Basin, enchants you on the brink of the Morning Glory pool, and finally arrives at every park traveler's objective, Old Faithful.

The Grand Loop then twice crosses the Continental Divide, and the traveler sees in the remote distance the lovely mountains of the Teton Range, the Grand Teton, guidepost of the pioneers, looming highest among them. Down to Yellowstone Lake it drifts, trestling into the very home of the trout, then cutting across the mountain past the Knotted Woods to the Natural Bridge and again to the shores of the lake. Northward it leads now, through great meadows grazed by elk, past the silvery placid childhood of the Yellowstone River, and down to its hectic youth in the falls and Grand Canyon.

There is a bridge with lines as light as lace and the road runs over it to Artist Point. From this magic vista the road sees no need of taking one farther, so doubles back to the east side of the canyon. Then northward the loop road climbs, over Dunraven Pass, along the shoulder of Mount Washburn, past the straight-ribbon canyon of the middle-aged Yellowstone, under Overhanging Cliff, and into a region of broad open spaces bound by the distant peaks of the Absarokas. Now the road leads through a land loved of animals, the home of antelope, beaver, and mule deer. The long mesa of Everts rises again on the right, the Electric Peak stands ahead, and the Grand Loop finds its end on the meadow at Mammoth.

Such, very briefly, is the geography of the Grand Loop Road of the Yellowstone. But the scenery does not exhaust its charm. Everyone will find his fascination in sights or experiences akin to his interest.

Is it flowers that you love? Suppose it is early in July. The purple-fringed gentian, which many think the most beautiful flower of the Rockies, is blooming by the roadside. On the hot springs terraces is a yellow flower known colloquially as butter and eggs. There are water lilies in Isa Lake at the Continental Divide, and immense fields of yellow dog-tooth violets await you on Dunravan Pass. The pink wild geranium grows everywhere. There are violets if you look for them—and asters and wild roses and, amid the sagebrush and greasewood, the rare rock rose.

Or perhaps you are more interested in animals? Well, Jesse James, the highway bear, lurks in the shadows near Continental Divide, and it may be your sugar ration that he will demand. There is very chance that you may see herds of noble elk grazing in the Gibbon Meadows, and deer in the woods at any point along the road. The pronghorn antelope may cross the road before you as you cross the Crescent Mountain. There are beaver dams by the loop at many points; woodchucks and ground squirrels test out their speed under the flying wheel of automobile wheels. By a little detour you can see the buffalo.

Not flowers, not beasts; then people perhaps.

Lend your eye to the traffic on the Grand Loop Road: Automobile camp outfits with canvas tops, successors to the covered wagons, sheltering sagebrushers just off the plains; touring cars bearing licenses from New York or Toronto or Los Angeles or where you will, their occupants avid for distance; long caravans of yellow buses laden with tourists, passing with the regularity and precision of military convoys; hitchhikers carrying their own packs but ever hoping for a lift from a friendly automobilist; uniformed rangers patroling on horse or motorcycle; cowboys or horse wranglers riding before or after the pack outfits from dude ranches; cook wagons, road gangs, truckloads of Boy Scouts from Wyoming or Idaho, horseback parties of red-neckerchiefed girls from the East; everyone coming from somewhere and going somewhere else—the Grand Loop Road their temple for a day.

Round and round the pilgrims go, ever seeking the new and strange, finding it or not as they are trained to know it. The Grand Loop cannot help them; it only paves the way for them. Some will love the peaks, some will love the road itself—its good granite base, its timbered parapets, and, even at times, its gray drifting dust.

[From Haynes' Yellowstone Guide]

THE GRAND LOOP ROAD OF THE PARK—THE ADOPTION OF THE NAME

"Gravel and bridges and engineering skill alone do not make a great road. The footprints and the hoofmarks, and if you will,

the tireprints of countless travelers are required. And, too, the road must lead somewhere—to a mosque, to a shrine, to a sacred river, to Tartary, or to a Mecca.

"Slowly but as certainly as mathematics the Grand Loop Road of the Yellowstone Park is becoming a great national highway. It is a road entwined in the lives and the dreams of an ever-growing number of people, the path of pilgrims seeking the god of the open air. About it, too, there accumulates a great volume of traditions—the passing of presidents and princes, the meetings of poets and peasants."

Harry W. Frantz, publicity director of Yellowstone National Park during the season of 1923, wrote a splendid article entitled "The Grand Loop Road of Wonderland," from which these paragraphs are quoted. The title has been officially approved by the National Park Service and will be perpetuated in Yellowstone nomenclature.

Supt. Horace M. Albright, of Yellowstone National Park, in a letter dated December 17, 1923, to J. E. Haynes, wrote in part: "I have your letter of December 3 and am heartily in favor of adopting your suggestion that hereafter we call our 'loop' road system 'The Grand Loop Road of the Park' * * *. I will advise the other franchise holders and the railroads."

The Grand Loop Road of the park is reached by way of all park entrances. It connects Mammoth Hot Springs, Norris Geyser Basin, Lower Geyser Basin, Old Faithful, West Thumb of Yellowstone Lake, Lake Outlet, Grand Canyon, and Tower Fall. Its net length, exclusive of optional side roads, is 137.9 miles. The distances from the park boundaries to the Grand Loop Road are as follows: From the north, 4.5 miles; west, 13.5 miles; south, 23.6 miles; and from the east, 27 miles.

Mr. Frantz has made a more intensive study of the Yellowstone region than almost any other writer. He made a vagabond tour 12 years ago, and came again to the park in 1923 with a sincere desire to help the American public to appreciate its natural wonders and its animal population.

The closing paragraph of The Grand Loop Road of Wonderland carries a thought important to every person interested in the development of a greater general appreciation of the park:

"Round and round the pilgrims go, ever seeking the new and strange, finding it or not as they are trained to know it. The Grand Loop cannot help them; it only paves the way for them. Some will love the peaks, some will love the road itself—its good granite base, its timbered parapets, and even at times its gray drifting dust."

Mr. Speaker, in spite of narrow highways and overcrowded campgrounds, the Grand Loop Road is a road of wonderland enjoyed by more thousands each year.

Establishing a Commission and Advisory Committee on International Rules of Judicial Procedure

SPEECH
OF
HON. RUTH THOMPSON
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 30, 1956

The House in Committee of the Whole on the State of the Union had under consideration the bill (H. R. 7500) to establish a Commission and Advisory Committee on International Rules of Judicial Procedure.

Mr. KEATING. Mr. Chairman, I yield 2 minutes to the gentlewoman from Michigan [Miss THOMPSON].

Miss THOMPSON of Michigan. Mr. Chairman, I wish to associate myself with the passage of the bill H. R. 7500. I believe it is a good bill and hope it will be enacted.

Make It the Real Thing

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. BOSCH. Mr. Speaker, it appears that in the very near future the Congress will again be asked to vote on the question of an enlarged foreign-aid program. It has become increasingly evident that the American people are wary of the effectiveness of these programs. Whatever may have been the experiences of the past, it has forcibly demonstrated that we cannot buy friends nor can we buy peace.

Questionnaires sent to the constituency of my congressional district over the past few years and most recent tabulation of my present questionnaire indicates that a majority favor substantial decrease and in a great many cases a discontinuation. It is for this reason that I would favor a thorough reappraisal of this program so that the American people may have all the facts, figures, and results.

Under leave to extend my remarks, I include an editorial on this subject published in the New York World-Telegram of April 30, 1956.

The editorial follows:

MAKE IT THE REAL THING

It's an old bureaucratic custom to call for a study of a program when criticism by Congress and the taxpayer gets hot, or when the bureaucrat doesn't know what to do next. The objective of the bureaucrat, with a vested interest in the program, is to load the study in his favor.

That's what is happening on the foreign-aid program.

Never has a major government program needed such a thorough reappraisal and overhaul.

The foreign-aid program has dispensed some $55 billion in grants and loans since the war. Most observers abroad, including some of our best allies, agree that the present system is obsolete and, in some cases, doing more harm than good.

Yet for many months both the administration and Congress merely have been trying to patch up the old program to cope with the new dynamic moves of the Kremlin.

Belatedly, far too late to do any good for the pending appropriations requests, both Congress and the administration are conceding the need for a thorough study of the aid program.

But what kind of study group will be set up? Will it be executive branch officials, dominated by and dependent on the professional foreign bureaucrats? If so, the time and money will be wasted.

Rather, study should be made by a group of men who can be critical but constructive, forward-looking but not hesitant to profit by past mistakes. There must be no suspicion that the study's major purpose is just to perpetuate a program which admittedly is in dire need of the sharpest analysis.

To be of any value at all, such a study must be made under the jurisdiction and authority of Congress; preferably jointly by the House and Senate. We suggest a commission of two groups—Members of the Senate and House, and a group of non-Government citizens.

Furthermore, the commission should investigate not only economic aid but military aid, which is by far the greater program now.

To do any good, the study must be real, not just a front to hide unpleasant facts.

Parcel Post Limitations

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PELLY. Mr. Speaker, I know there are many Members of the House who oppose the present parcel-post size and weight restrictions. The following resolution of the Northwest Apparel Manufacturers Association indicates the hardship of such limitations on small industries of this type in my part of the country because in the State of Washington as elsewhere we have many small communities served only by parcel post.

I trust favorable action on H. R. 9566 will be forthcoming. Meanwhile on behalf of the major producers of sportswear and related apparel, I include the following resolution in support of this bill:

RESOLUTION IN SUPPORT OF H. R. 9566

Whereas the existence of an efficient, economical parcel-post system is essential to the pattern of life of our citizens and businesses in both rural and urban areas; and

Whereas the present discriminatory parcel-post size and weight limitations seriously disrupt the service once enjoyed by all at great and unnecessary cost and inconvenience; and

Whereas there is no nationwide substitute for parcel post that can and will serve all citizens regardless of address; and

Whereas the present size and weight limitations have been both a financial and an administrative burden to the Post Office Department; Be it hereby

Resolved, That the Pacific Northwest Apparel Manufacturers Association, representing 17 businesses in Portland and Seattle, favors immediate enactment of H. R. 9566 and restoration thereby of uniform parcel-post size and weight limits. It is respectfully requested that Representative THOMAS M. PELLY insert this resolution in the CONGRESSIONAL RECORD and that he request the chairman of the Post Office Committee to schedule hearings now on parcel-post size and weight so that the citizens of Seattle, Wash., and Portland, Oreg., may have relief from the present law before the current legislative session is concluded.

Indian's Day in Court

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. UDALL. Mr. Speaker, on March 15, the gentleman from Montana [Mr. METCALF], the gentleman from Oklahoma [Mr. EDMONDSON], and I joined in a 40-minute discussion on the floor of the House to protest an attempt by the Justice Department of the Eisenhower administration to emasculate the Indian Claims Act of 1946.

This act has been rightly termed by students of history as one of the highest acts of conscience of any civilized country in dealing with its aboriginal people.

The present situation is succinctly stated in an editorial appearing in the Washington Post and Times Herald last Monday. Those of us in Congress who are interested in justice for the Indians wholeheartedly endorse the Post's conclusion:

We think the life of the Commission should be extended without crippling restrictions so that it may finish the job that Congress gave it.

I present herewith the full text of this editorial:

INDIAN'S DAY IN COURT

The fight over the jurisdiction of the Indian Claims Commission has attracted little public attention, but it is of great importance to some groups of Americans. The Department of Justice is seeking to amend the 1946 act creating the Commission on the ground that the courts have misconstrued the intent of Congress and opened the door to payment of Indian claims which might aggregate as much as $5 billion. Friends of the Indians assert that the act has been correctly interpreted and that the estimates of Government liability under it are grossly exaggerated.

As to the meaning of the law, it is noteworthy that the Court of Claims, which has dealt with more Indian claims than any other court, examined the legislative history of the act with great care. It concluded that Congress did authorize the Indian Claims Commission to exercise jurisdiction over original Indian title cases. The Department of Justice petitioned the Supreme Court to review that decision, and the court declined. In the light of this judicial record it would be most unusual and arbitrary for Congress to throw out by legislative action many cases already begun at substantial cost under the act of 1946. The Association on American Indian Affairs estimates that the proposed amendment would upset about two-thirds of the cases already filed with the Indian Claims Commission.

Experts who have been dealing with these cases for many years say that, while claims have been large, recoveries have amounted to only 1.7 percent of the amount claimed. If this experience should hold true in regard to future cases, recoveries would not amount to billions of dollars, but to about $135 million. Important also is the probability that, if this amendment should be accepted, Congress would itself once more be deluged by special bills to permit the consideration of tribal claims. It was largely to free itself from this legislative burden that Congress in 1946 gave broad jurisdiction over such claims to the Commission. We think the life of the Commission should be extended without crippling restrictions so that it may finish the job that Congress gave it.

Do We Want the Second-Best Air Force?

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 26, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Members an article that appears in the current issue of the Reader's Digest which is entitled "Do We Want the Second-Best Air Force?" This is the first of two articles by Francis and Katharine Drake. My attention was drawn to this article by two distinguished citizens of my district, former Mayor Luke F. Ryan, of Northampton, and Theodore Farnham Loeb, of North Wilbraham. I would like to have the first article included with my remarks.

DO WE WANT THE SECOND-BEST AIR FORCE?

(By Francis and Katharine Drake)

(The first of two articles telling what must be done for the United States Air Force at once if Soviet Russia is to be deterred from ever starting world war III. Written after 4 years of patient research at Air Force bases across the world, this is the story of men, the humiliating record of how a great nation is treating those on whom it depends for its very existence. The second article will concern machines—the truth about the combat planes our Air Force has and others it desperately needs.)

Creeping paralysis is today overtaking our entire Air Force. One third of our planes are grounded for lack of sufficient skilled men to keep them flying. In Strategic Air Command, the world's No. 1 peace-enforcer, 30 percent of our precious global bombers are earthbound, powerless to strike back at an aggressor. In Tactical Air Command (responsible for shorter missions) it is the same story. In Air Defense Command (entrusted with the defense of our cities), hundreds of our latest jet fighters are unflyable in battle.

This shocking situation is of formidable importance to the Nation. Unless it can be remedied, it will eat the heart out of our ability to deter aggression. World war III can be prevented only so long as we can maintain peace by deadlock, i. e., promise total destruction to any aggressor starting total war. Our planes must be able to take off at the drop of a hat and cancel out many hundreds of key enemy targets in one great saturation attack. We are losing this vital ability.

It is a grim fact that today, out of every 100 of our global bombers, 30 are grounded at any one time. Moreover, of the remaining 70 that take off, 15 more have to turn back because of malfunction in the air. Only 55 can be depended on to strike their targets. These appalling figures are not guesswork. They derive from current practice missions.

This wholesale breakdown in combat readiness is due to one main factor: the inability of the Air Force to hang on to its skilled help. Recent dropouts have been as follows: 1954—186,000 failed to reenlist; in 1955—213,000; in the first half of fiscal 1956 the rate has risen to 260,000.

The critical part of these losses is that the dropout rate is highest among the men who are needed most—the skilled technicians who are the mainstay of the service. In SAC, for example, 80 percent of the K-system-bombsight mechanics eligible to quit in 1955 did so; so did 88 percent of the radar technicians, 81 percent of the electronic experts, and 75 percent of the jet-engine mechanics. In that year 42,600 of SAC's trained men left the Air Force.

Because of these losses SAC is only 50 percent manned in the high-skilled levels. Its flight personnel has been similarly hard hit. Today its brilliant flying teams cannot fully muster even 1 crew apiece for its global bombers, whereas we should have 2 crews for each ship.

To replace these losses the Air Force is perpetually enlisting fresh volunteers. But it's an endless struggle: no less than 90 percent of the newly trained skilled technicians quit at the end of their first 4-year term. This means that the average skill of our airmen is constantly sinking. Modern combat planes are tremendously complicated weapons, involving a total of 239 assorted skills. Men who work on them need long and costly training. It takes an enlistee 3 years to qualify for bomber maintenance; it costs $25,000 for his training. It takes 5 years and costs $618,000 to train the triple-rated commander of a B–47. When such men quit, not only does their training cost go down the drain but the same amount again must be forthcoming to train replacements.

In 1955 personnel losses in SAC alone cost the taxpayer $837 million. Losses for the entire Air Force totaled no less than $2 billion. In short, taxpayers are being forced to pay for the training of 10 men to retain 1.

What is back of this mass walkout? Why are so many of our most capable young men turning their backs on an Air Force career? The answer is twofold. First, pay at the skilled levels is miserably low, far below that offered by industry. Second, living conditions are miserably inadequate.

There is a public impression that all service families enjoy the life of Riley—free housing, free medical care, generous insurance, income-tax exemption, cutrate buying at base stores—fringe benefits that traditionally bridged the gap between service and industry pay. This is not true. Today fringe benefits are all but nonexistent. The Government has reneged on them.

To appreciate the predicament tens of thousands of Air Force personnel, suppose we trail Airman Bill Smith through his first hitch.

Bill is 19 when he joins the Air Force, intelligent, ambitious. Classified for radar training, he spends the first 30 months rewardingly enough, his head in a book or over a workbench, learning his job from master technicians, training for duty in SAC. Living in barracks, he has few expenses, few complaints.

Then he makes airman first class ($140 a month before taxes), sends for his girl, marries, and applies for family housing. The recruiting promise was free housing for married personnel—but SAC has 90,000 families and only 16,800 houses. Instead of free quarters, Bill is given the regulation $77 a month allowance to rent civilian accommodations in the nearest town, 15 miles distant (most bases are isolated), plus $1.05 a day for food.

There are plenty of areas where $77 would rent comfortable quarters; but the vicinity of a large, underhoused air base is not one of them. For every vacancy, many applicants line up. When landlords see uniforms, rents soar; like most civilians, landlords think Uncle Sam pays for everything. Near some bases, especially in the South, Air Force families are paying as much as $100 a

month for unheated wooden shacks with outdoor privies. Overall, there are some 250,000 Air Force families who are forced to chip in $20 to $50 a month above their quarters allowance for shelter.

The Smiths finally get a furnished apartment for $95, including utilities. Besides this, Bill must dip into his own pocket for around $20 a month for gas and oil to commute to and from the base daily. After paying rent, taxes, gasoline, there is $29 a week left out of his pay and allowances for living. Food averages $15 a week. That leaves the Smiths exactly $2 a day between them for clothing, supplies, spending money.

Mrs. Bill figures on economizing by shopping at the post exchange, where discount prices are supposedly traditional. She has an uppercut coming. She finds that food prices are no cheaper, frequently higher than downtown; stocks are restricted, selections less attractive, and there are no specials. The newlyweds require some basic equipment. They find an electric grill priced at $23.50 in the PX; the the duplicate sells for $17.50 downtown. An identical set of dishes sells for $1.55 more at the PX than in the 5-and-10. When Bill squawks, he is told that base stores are now forced to make high profits and turn them over to welfare funds for swimming pools and other recreational facilities which Bill, in common with the public, assumed were paid for by the Government. (In 1955, SAC PX's alone turned in no less than $3 million net profit to welfare funds.)

The grapevine gives Bill the background of this squeeze play. Retail merchants have an aversion to low-priced sales by the Government to servicemen. Their powerful lobbies are agitating in Washington to have base stores closed altogether, have already succeeded in restricting their stocks, raising their prices, imposing a 3½-percent surtax on all foods and a 10-percent tax on all PX sales—a strange gesture of gratitude to the airmen who are protecting their homes and families.

About this time Bill Junior is on the way, and Mrs. Bill runs smack into one of the bitterest of all service grievances—lack of the promised medical care. The Air Force, overall, is 40-percent short of sufficient doctors, nurses, beds, facilities, equipment, even drugs, to care for its uniformed personnel alone. In SAC there are only 413 doctors to handle 180,000 men, scattered all over the world. The 304,000 SAC wives and children must make do with whatever care is left over. Men rate prior attention at all times; wives and children, even emergency cases, are often kept waiting for hours.

Of the doctors provided, over 80 percent are draftees fresh out of medical school, almost all of whom quit as soon as their 2-year hitch is up. There are no house calls, even for patients too ill to be moved. Only a minority of Air Force babies can be born at base hospitals, for lack of facilities. A shocking proportion of their mothers suffer from inexperienced handling and are forced to undergo subsequent repair work. At one of our largest bases, a veteran medical officer, a career doctor, told the authors: "Don't worry about exaggerating our troubles. It isn't possible. No matter when we get through, there are always 50 more waiting outside."

At Bill's base there is no obstetrician, virtually no prenatal care, no guarantee of a bed when the time comes. The Smiths wind up doing what most Air Force couples have to do. They borrow from their families, get a civilian doctor, and junior is born at the city hospital. From then on, the battle of the budget, on $2 a day, becomes a nightmare of spaghetti menus, patched shoes, evaporating savings.

But there are things on the credit side, too. There is the sense of fraternity shared only by men who stand guard over their country, the pride of belonging to an elite corps. Then, too, an airbase is a sociable place and, with hundreds of families in the same fix, nobody puts on airs, troubles are shared, everyone helps out. Dependents' Mutual Assistance, a volunteer organization started by Mrs. Curtis LeMay (wife of SAC's fighting boss), is a lifesaver at SAC, especially during those long weeks when men are away on global missions.

There comes the great day when Bill, superbly trained, master now of the most secret equipment in the Air Force, is tapped by SAC for the big stuff; he is aglow at having been found worthy of such great responsibility. He works with tough, dedicated men, from whom a nod of approval counts for more than a page of praise from anyone else. Hearing those eight screaming jets blast his B–52 in from a global mission, listening to the blow by blow from her crew, is an incomparable thrill. Bill becomes proudly possessive—my crew, my plane. He averages 14 hours a day making sure that his job is perfectly done. But now comes the career haymaker.

With its critical shortage of maintenance men, SAC is obliged to hire technical representatives from industry to help out. Often as not these tech reps are ex-airmen themselves, trained at the taxpayers' expense. Working alongside Bill on identical jobs, the civilians are earning up to $1,200 a month, compared to Bill's $247 (including allowances). When Bill thinks about reenlisting, the facts of life on the outside are brought home to him.

Here they are: Everywhere big industrial concerns are desperate for skilled help. Their representatives visit every base, their advertisements fill every paper. Highly paid jobs are waiting for all trained Air Force technicians. A C–124 panel engineer, drawing $194 from the Air Force, can make $545 for the same job with an airline. A master sergeant, drawing $400, can make $745 on the outside. A line chief, earning $375, is offered $600 as an airline lead mechanic.

These are only starting wages. Opportunities for promotion are unlimited. Firms are gunning for tens of thousands of additional skilled men over the next 5 years. The blandishments of industry, quite aside from high wages, are multiple and persuasive. They include the 40-hour week, paid vacations, group medical and dental care, moving allowances, retirement schemes and, frequently, valuable profit-sharing privileges.

The Smiths put in some sober thinking, but no amount of figuring can alter the essentials. The Air Force offer: a $639 bonus to reenlist; present pay $247 a month; eventual top pay, $450 a month; eventual pension, $152 a month after 20 years' service. The industry offer: present pay $550 a month, unlimited opportunity for advancement, and valuable fringe benefits. Bill has to decide what is best for his wife and baby. He quits.

The factors impelling enlisted men to leave the Air Force apply equally to officers. Officer paychecks are bigger, but so are the demands upon them, including regular assessments for charities (nonservice), clubs, incessant entertaining of VIP's and Congressmen. Out of 2,500 SAC pilots eligible to quit before 1958, no fewer than 2,000 plan to do so. This will have the alarming result of breaking up no less than 1,000 combat-ready crews. Who can blame these young men, when industry is waiting with pay scales which within 2 years will enable them to earn more than a brigadier general, in 8 years to earn more than a 4-star chief of staff of the Air Force. (A chief of staff earns $15,000 a year; a senior airline captain up to $20,000.)

If conditions in this country are unhappy, those prevailing at our bases abroad are worse. Even in up-to-date countries like England and France, thousands of our service families are living in privation. In Japan conditions are disgraceful, but the low point comes in Africa.

French Morocco, the Air Force's greatest overseas bastion, has been the scene of indiscriminate bombing and shooting. Here USAF families are quartered as much as 65 miles from bases; they live in insanitary, jerry-built houses, near turbulent native areas, without telephones, transportation or protection. In Sidi-Slimane, wives and children, hurriedly rescued from impending mob violence, have had to be housed for months in canvas tents pitched on mud 2 feet thick. For lack of barracks, airmen are crowded into wood-and-canvas Dallas huts, which leak in winter and are insufferable in the desert heat of summer. With few French doctors available, hospitals (mostly of the Quonset-hut type) are inhumanly crowded.

At one of them, staffed by 4 doctors for 5,000 souls, the authors saw men, women, and children crowded into the same ward. Male patients were required to use outside latrines in all weather. Women and children shared a single toilet which, shielded by a sheet, was in a cubicle occuped by a dying woman. Americans would burn with shame to hear foreigners snickering at the way in which the richest country in the world treats some of its finest young people.

The mass walkout caused by Air Force living conditions is gravely imperiling the advantage we have enjoyed over Russia. The Soviet air force has no trouble in keeping its skilled men. The reason is not, as many might suppose, the duress of the slave state. On the contrary, the Russians have made their air force careers so attractive, so laden with honor and prestige, that volunteers throng to join it. Soviet air officers enjoy the top 5 percent of the national living scale, with a standard of comfort excelled only by the Politburo. Their pay—nearly three times that of the infantry—is untaxed. Only the best housing is good enough for them. Many supplies, including uniforms and cigarettes are free. They rate a 50-percent discount at all stores and restaurants and on all forms of transportation. A single valor decoration entitles the wearer to free travel for life. Enlisted men share the same benefits in proportion to their ranks and skills.

Secretary for Air Donald A. Quarles sums up the USAF problem thus: "I can think of no invention, no new aircraft, no weapon, that would increase our Air Force capability in a measure so great as would be achieved by providing a stable corps of trained personnel."

If peace by deadlock is to be preserved, the Secretary's goal must be achieved. It can be achieved if the Congress, supported by the people, wills it. After 4 years of researching Air Force personnel problems at home and abroad, evaluating the living conditions of officers, airmen, and their families, it is the belief of the authors that it would require the following minimum program to reach the goal:

Pay: The present Air Force method of paying by rank should be replaced by the industry system of paying by skill, and pay will have to be increased by at least 50 percent for the highest skills. (A recent Gallup poll showed that taxpayers were almost 3 to 1 in favor of raising service pay.) This move would actually save money, for it is cheaper to raise a skilled man's pay from $3,000 to $5,000, providing he reenlists, than it is to spend $25,000 a year to train his replacements.

Since even a 50-percent raise will still not equal the pay offered by industry, the difference must be made up by (a) restoring the $1,500 tax exemption formerly granted servicemen, and (b) restoring the fringe benefits that have traditionally formed part of service pay, as follows:

Housing: Construction must be radically stepped up. The Air Force is 250,000 units

shy; it has only 20,000 under construction for the whole of 1956. There is a way to build the necessary houses and still save the taxpayers' money. The Air Force is now paying out $450 million a year in quarters allowances. This money disappears into the pockets of civilian landlords. Under the Capehart law, however, the Air Force has the power to order new houses, assume the mortgages, and pay them off out of this same quarters allowance. As things are, we shall pay landlords $3½ billion of rent during the next 8 years and have nothing to show for it. For the same money, in the same time, we could house every family in the Air Force, and have no further capital disbursements thereafter.

Medical care: A bill (H. R. 9429) has been introduced, providing for a group-insurance scheme under which service families would be able to use private doctors and hospitals, at Government expense, whenever service facilities were unavailable. This scheme would cost $10 a month per family. It is a good scheme, way overdue, a product of long study by numerous commissions. If it is adopted, it will banish at one stroke one of the major hardships of service life.

Commissary and PX privileges: The value of these privileges should be restored immediately. It can be done by removing the 3½-percent surcharge on food, the 10-percent tax on PX sales, reestablishing nonprofit prices and throwing out lobby-finagled curbs on what may be stocked and sold.

Education: Present Government subsidies toward college degrees should be made available to men who stay in the service, instead of being restricted to the men who get out. The Government now offers a man $639 for his first reenlistment, but, if he does not reenlist, it offers him $5,280 for a free college education. It would cost only $1,600 to subsidize the same education, through evening study, for men who agreed to reenlist for, say, another 6 years. This would not only raise the standard of education throughout the service but provide a major inducement to an Air Force career.

Life insurance: This should be increased to at least $25,000. The present maximum of $10,000 was established nearly 40 years ago when widows could bring up children at one quarter the present-day costs, and when the hazards of jet flying were unknown.

Air Force surveys indicate that if some such program were put through, the reenlistment rate for skilled men would jump to about 65 percent, which would be ample for all needs. Such a retention of trained men would permit a tremendous cut in the everlasting retraining programs. Without buying another new plane, we could greatly increase our combat readiness. SAC estimates that with even a 5-percent improvement in maintenance and operation, it would be enabled to place 200 additional bombers over targets on any given day.

From the human point of view, some such program is shamefully overdue. Men who forego the freedom and rewards of private industry and dedicate their lives to the defense of their country can never be repaid solely in money. But one thing we can do is to make sure that they will not be deprived of a decent American standard of living while guarding their country.

In the words of former Secretary for Air Harold E. Talbott: "We have the master weapons and the master plan. To persist in treating the master help like stepchildren is a reckless policy, for trained men are the only people in the world who can give plans and weapons any meaning. Our diminishing supply of skilled help in the Air Force is the most critical problem facing the Nation today."

Every American citizen who values the safety of his country should write his Congressman now and demand a decent living for the men who guarantee our safety.

The Discharge Petition and Home Rule

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 27, 1956

Mr. PELLY. Mr. Speaker, occasionally I have found constituents who desired information on the procedure in the House of Representatives to prevent a House committee having absolute control over legislative bills referred to it.

It is generally known that the rules of the House of Representatives provide for discharging a committee from consideration of a bill, but the details of this rule and how it works are not always fully understood. In essence, of course, a discharge petition is a House motion to order a standing committee to desist from holding a particular bill for consideration and calling the measure to the floor of the House for deliberation so the will of the majority of the House may prevail as against the will of a committee.

Under unanimous consent, of course, any Member if recognized by the Speaker for that purpose, may make a motion to discharge any committee from further consideration of a bill. To supplement this procedure and force bills out of reluctant committees there is the so-called discharge rule XXVII, clause 4, of the Rules of the House.

Under this latter parliamentary procedure the first and only bill ever to become law, I am advised, was the wage and hour bill in 1938 in the last session of the 75th Congress. Others, however, have been passed under such a threat. The Bill Digest Section of the Legislative Reference Service of the Library of Congress at my request compiled some statistics on the motion-to-discharge rule. From the 61st Congress to date, 788 discharge motions have been filed; 29 motions obtained sufficient signatures to be printed on the Discharge Calendar; 21 of these were granted discharge hearings under the rule; 19 bills were discharged from committees, and 15 of these passed the House.

Six distinct forms of discharge rules have been adopted since the first one in 1910. The present one was adopted in 1931.

When any Member wishes to discharge a committee from further consideration of any bill, he or she must file a written petition at the Clerk's desk. A majority of the House membership or 218 signatures are required before discharge may be successful. When the necessary signers are obtained the petition and names of signers are printed in the RECORD and referred to Calendar of Motions to Discharge Committees.

Any bill or resolution must have been referred to a committee at least 30 days before a motion to discharge the committee from further consideration can be filed; or in connection with a resolution to discharge the Committee on Rules the bill must have been referred at least 7 days prior to such referral.

When a motion to discharge a committee is brought up before the House, it will be debated for 20 minutes—10 minutes for proponents, 10 minutes for opponents—hardly sufficient time, I submit, to make a full argument pro and con.

Discharge rules must be printed on the calendar at least 7 days, and during this time the committee having jurisdiction of the bill can make a report on the bill to the House and thereby block consideration of the discharge petition unless it is the Rules Committee. After such a report, if a bill is not otherwise privileged, it may stay on the calendar until adjournment unless a resolution to grant privileged status is introduced and then discharged from the Rules Committee by the regular procedure.

Furthermore the leadership by arranging a plan of recessing day by day instead of adjourning before discharge day arrives can block consideration.

What does this amount to? It means the House of Representatives has a unique procedure in case a committee refuses to make a report on a measure at least 30 days before the committee, and on which a majority of Members desires a vote. The purpose is to retain for the majority a possible power as against the program of leaders—committee or otherwise.

To sum up, the operation of the discharge rule works like this. Any Member may file a petition at the Clerk of the House's desk requesting recall of a measure from a committee to which it was referred when such committee refuses to make a report on that measure after it has been before it for 30 days—or 7 days if it is the Rules Committee. If and when 218 Representatives sign the petition, it is placed on the Discharge Calendar. After 7 days on that calendar, any signer may move, on the 2d and 4th Mondays of the month, that the House consider the motion. Then if the vote is affirmative the measure is recalled and either goes on the House Calendar or is immediately considered as previously explained.

The discharge rule is subject to wide conflict of opinions by the membership. Experience indicates that the rule gives leadership a means of obtaining consideration for bills it favors, but where leadership opposes a measure which is favored by a large segment of House membership, the procedure generally fails.

Many legislators oppose the procedure of the discharge rule as dangerous, and many Members personally observe a practice of not signing any discharge petitions. Why?

One reason given against signing discharge petitions is that consideration of bills without public hearing and full committee consideration is believed to lack proper safeguards and to constitute a dangerous practice.

It seems to me, Mr. Speaker, that an exception to the above as far as safeguards is concerned would be a bill such as S. 669, the home-rule bill for the District of Columbia which the Senate passed 59 to 15 on June 29, 1955, after committee consideration and public hearing. Now the bill reposes in the House committee as it has in past years

with no action scheduled. Since it could be that the southern Democratic-dominated House committee is not representative of the thinking of the full House membership—and I judge this to be the case—and since a similar measure has been given hearings on three separate occasions and passed the Senate in 1949, 1951, and 1955, I think every other avenue has failed. It is time to force the Democratic leadership to live up to its platform and Republican like myself who favor home rule should act.

Therefore, Mr. Speaker, after much thoughtful consideration I have determined, in this instance, to sign the petition at the Clerk's desk to discharge the Committee on the District of Columbia from consideration of S. 669. I have previously declared my support for this legislation.

If other Republicans would join me and with liberal Democrats we succeeded in securing the necessary signatures, it would soon smoke out who is responsible for burying this legislation.

Today, May 1, 1956, after 82 years of disenfranchisement the residents of the District of Columbia have enjoyed limited voting rights and are balloting for delegates to their respective national political conventions.

It has seemed to me an appropriate day, believing as I do in the right of self-government, to sign the discharge petition on S. 669, the so-called home-rule bill.

At least I have felt it a symbolic act signifying personal belief in the constitutional right of suffrage and civil rights even though I have some objection to the parliamentary procedure necessary to accomplish the objective.

Protecting the Consumer Under H. R. 496

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a letter from the Honorable Irvine M. Levy, the able city sealer of Chicago, who has made an outstanding record that has won him national acclaim in the protection of the consuming public. Mr. Levy's suggestion of a strengthening amendment to H. R. 496, now under consideration, I am sure, will have strong support among my colleagues close to the consumers. His letter follows:

DEAR CONGRESSMAN: A bill known as H. R. 496 has been presented to the Congress by Representative ABBITT, of Virginia, and has been referred to the Interstate Committee. The bill is of importance to all consumers.

The purpose of this bill is to require the weighing of hams and packaged meats at the time of sale to the consumer. In principle, this is a very fine idea, because meats do shrink; and if the consumer must pay for the weight marked on the package when packed, he will pay for shrinkage which he does not receive. However, under Representative ABBITT's proposal, the packers would put the weight of the package wrapping on the package, and this would be deducted from the gross weight when the entire package is weighed by the retailer at the time of sale; but here is what actually happens: The shrinkage from the meat is absorbed by the wrapping, which is airtight, and the shrinkage remains in the wrapper, increasing the paper or tare weight put on by the packer. This, of course, results in the consumer paying for the shrinkage which he does not receive.

In Chicago we have had a longtime practice of requiring the retailer to remove the wrapping from the hams and other packaged meats, showing the net weight at the time of sale. We believe that a bill which would include our practice described above (which does result in savings to the consumer) would in the aggregate amount to vast sums which would accrue to the benefit of the general public.

The National Conference of Weights and Measures will be held in Washington from May 21 to May 25, and I am sure this matter will be discussed by the weights and measures officials in attendance at that time.

Sincerely,

IRVINE M. LEVY,
City Sealer.

Nickies Still Hinting

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 17, 1956

Mr. BOSCH. Mr. Speaker, the recent program of the Russian leaders in their desanctification of Stalin makes one wonder why all this verbal propaganda rather than deeds and actions to prove the sincerity of their program. Now, we find a propaganda barrage for an invitation to visit the United States.

If we are considering such an invitation and I for one look upon the same with much suspicion, I suggest we not forget some things which could be done forthwith to demonstrate good faith, to wit:

First. Release the 400 Americans still illegally restrained.

Second. Permit the satellite nations to freely elect their own governments.

Third. Admit guilt for Katyn murders.

Fourth. Remove the falsity of the fabricated confessions of the Moscow trials.

Fifth. Reveal the truth of participation in the Korean conflict.

Under leave to extend my remarks, I include an editorial from the New York Daily News of May 1, 1956:

NICKIES STILL HINTING

Red boss men Nikita Khrushchev and Nikolai Bulganin arrived home yesterday after their 10-day peek at Britain. They had praise for British hospitality in general, though they didn't care for some of the crisper cracks tossed at them by unawed British workers. In people's Russia, such wise guys become quickly dead.

The most significant feature of the Nickies' broadcast at Moscow's military airport, though, was their repeated hint that now they'd like to be invited to America.

Why the Nickies should want to see us, we don't know. Certainly the Bronx cheers they'd draw here would make those British hecklers sound real jovial by comparison.

However, if the new managers of Joe Stalin's old Red slaughterhouse are really sincere in wanting to impress the United States of America and the world with their change of heart and tactics, here's how they could start off:

Just take your claws off East Germany, boys, and permit the unification of that key country. Then give your Kremlin O. K. to genuine free elections in Russia's colonies—Bulgaria, Czechoslovakia, Rumania, Hungary, the Baltic States, etc. Words are fine, but if Bulganin and Khrushchev really crave those good relations with the free world, they'd better come up with some authentic, reassuring deeds.

More About Cars

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, our colleagues will recall that from time to time I have placed in the RECORD letters received from automobile owners. These letters indicated the need for the remedial legislation introduced by various Members of Congress, including myself, directed at improving automobile marketing practices. One such letter, dated March 12, 1956, appears at page A2543 of the RECORD of March 21 and refers to a new Ford car.

Subsequently I received a letter from the Ford Motor Co., dated March 31, 1956, indicating that they had been made aware of the complaints of this particular owner through the intercession of our distinguished colleague from Georgia [Mr. FORRESTER]. The company's letter also set forth the efforts which they had made to correct the complaints.

I think it is appropriate to now set forth the last letter received from the same car owner, as follows:

COLUMBUS, GA., *April 28, 1956.*

HON. ABRAHAM J. MULTER,
Member of Congress,
United States Representative,
House of Representatives,
Washington, D. C.

DEAR SIR: According to a recent issue of Automotive News magazine, my letter to you regarding the poor workmanship of the new Ford I purchased has been read into the CONGRESSIONAL RECORD. I would like to commend you on this action, as well as all the others, which you have taken in the interest of the consumers of America.

You no doubt will be interested in learning what has transpired in the past few weeks in regard to my dealings with the Ford Motor Co. In all I've made 24 trips to the dealer, traveled in the process 960 miles, and lost 41 hours from my work to date trying to get the car fixed. The Ford Co. finally sent the regional service manager in to work on the car, but only after I was forced to appeal to the Congressman from this district, the Honorable E. L. FORRESTER. Congressman FORRESTER not only wrote Henry Ford II about my difficulties but referred my letter to the Monroney committee of the Senate. Hon.

David Busby, special counsel for the Monroney committee, replied to Congressman FORRESTER's letter. He stated that this committee had received many, many complaints, both from the public and automobile dealers, about the poor workmanship of cars and the difficulties in obtaining proper service. Mr. Busby stated that one Florida dealer had even gone as far as to call today's new cars "Do it yourself kits."

It has been suggested by some sources that the reason why automobile manufacturers are so careless in the inspection and assembly of today's new cars, as well as being indifferent to their mistakes, is because they had contributed heavily to the campaign funds of the present administration. If this is true and they are running roughshod over the rights of millions of car buyers, it should be made one of the issues of the forthcoming elections. If this is true, you no doubt will have tremendous opposition and pressure against your bill to require manufacturers to road test all the new cars which they produce. But of one thing we can be reasonably certain: Next to a man's home and family, a car is his most cherished possession. For this reason, men in every walk of life would resent a situation which is contrary to his rights and where he fails to get value received for his hard-earned dollars.

Today, thanks to the help of Congressman FORRESTER, I've finally been able to get such things as defective steering corrected in my car which had endangered the safety of myself and family during the past 4 months. Even now, though, the car still has some defects that need correcting. During this period I have made frequent requests that the Ford Motor Co. either give me my money back or a new car. Of course this was greeted with total unconcern. Finally believing that they would not want me to have to pay for their mistakes, I asked them if they would reimburse me for the 960 miles I had traveled to and from the dealer and for the 41 hours I had lost from work. Mr. Carl T. Doman of the Ford Motor Co. replied that they could not do this since I had bought the car from a dealer 30 miles distant from my home. Even though the dealer brought the car over to my home in order to sell it. Even though I was not responsible for the many defects the car developed during the warranty period. Even though they failed to fix these defects and I had to call on my Congressman for assistance. Even though I bought the car in good faith thinking it was of good workmanship. The simple truth is that they want me to pay for their mistakes.

The Ford Motor Co. may be content with their policy which has caused me these many months of heartache and cost me almost $200. They may continue to take advantage of other buyers in the future who like myself placed faith in the integrity of the manufacturer. In so doing however they will be exploding the myth which now prevails in regard to the dependability of the Ford Co. and its products. The public will become more educated and able to avoid the pitfalls and blind alleys he might be led into when he buys a new car. The highly touted warranty will be revealed in its true light. A man may at some distant date get his car fixed under the warranty agreement but only when the manufacturer and dealer are so inclined. He may, as in my case, get such things as defective steering corrected, but, he will have to make 24 trips to the dealer driving in the process almost 1,000 miles, lose 41 hours from his work at his own expense, and appeal to his Congressman before he gets some degree of satisfaction.

I cannot say whether or not other automobile manufacturers would allow such a thing to happen to one of its customers. I can only speak from my own experience with the Ford Co. Of one thing I am sure and that is that no buyer in America who places his confidence and faith in a manufacturer should have to pay and suffer for that manufacturer's carelessness and indifference. Nor should any buyer be misled into believing he is buying a good product and find instead he has purchased one of inferior quality. It simply is not justice.

Even though the Ford Co. is satisfied that they are not even morally obligated to stand by their product to such an extent as to give me a new car, they should at least feel obligated to reimburse me for the expense I've undergone as a result of their carelessness and indifference. It just does not seem right that a great corporation can afford to give away millions of dollars and yet let a customer who has placed faith in their integrity suffer for their mistake.

I have every confidence that you, Senator MONRONEY, Congressman FORRESTER, and others will find the way to correct this situation. I also believe that you will explore the political significance of today's car market. Last but not least I know that you distinguished gentlemen will find ways and means for revealing to the buying public all true facts pertaining to this issue. I know there is some truth to the old saying that "The wheels of justice grind slow, but they grind."

Very truly yours,

WALLACE A. KITCHEN.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Are We a Nation of Softies?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, increasingly these days leaders in all walks of life are expressing concern with the rejection by the Armed Services of about 35 percent of our young men because of physical unfitness. In a recent editorial the Washington Star commented that:

Dr. Paul Dudley White, the most celebrated of the President's heart consultants, seems to have exaggerated a bit in recently declaring to a House Appropriations Subcommittee that ours is "one of the unhealthiest countries in the world today." Yet, although his statement does not square with statistics showing that average life expectancy in America is considerably higher than in most other lands, there can be little doubt that we are in danger of becoming a Nation of softies.

What is needed to meet this situation is a national program designed to make our people aware of the value of good health. Recently Dr. Joseph B. Wolffe, president of the American College of Sports Medicine, urged President Eisenhower to appoint a Special National Commission on Fitness, composed of leading medical, physical education, and other scientific, and welfare authorities, on Federal and State levels, to put the facts of the Nation's fitness together and hammer out a practical program for the Nation's health. Dr. Wolffe went on to say that:

We need more emphasis on play, and less on display. Fewer than 5 percent of our elementary schools have indoor gymnasiums, most of which are large enough for basketball only. Many stand idle, with sports equipment unused for hours, except when school teams are using them. Members of the cheering section need education for fitness even more than members of the varsities, and competitive sports are desirable only if youngsters are taught the joy of competing to improve and not merely to prove.

The Special National Commission on Fitness should, if established, make a study of the health programs of other countries and seek to make the experience of other peoples available to us.

Some of these health programs are amazingly thorough. I commented on some of these programs—CONGRESSIONAL RECORD of April 27, 1955, page 4397, and May 9, 1955, page A3104—at the time I introduced a bill, H. R. 4109, to establish an advisory board of representatives of national organizations to assist the National Memorial Stadium Commission created by the joint resolution of December 20, 1944.

Sports Illustrated carried a very important article by Horace Sutton on April 16, 1956, entitled "The Olympian Fields of Moscow" which detailed the extensive plans of the Russians for four stadiums to be built in Moscow. How different is America's lack of concern with adequate sports facilities in our own Nation's Capital.

Fortunately, in recent days bills have been introduced in the Senate and House to remedy this amazing oversight in our own country. Senator FRANCIS CASE of South Dakota, introduced S. 3700 on April 23, and Senator PAT MCNAMARA of Michigan, introduced S. 3637 which is a companion measure to my own earlier H. R. 4109. In addition, I have introduced a companion measure to Senator CASE's bill, as H. R. 10740.

I include here the article from Sports Illustrated of April 16, 1956, for the information of my colleagues. I am convinced that we ignore the activities of the U. S. S. R. in the sports field at very grave peril to ourselves. Included, also, is a short statement by the Honorable Milo F. Christiansen, Superintendent of Recreation, District of Columbia Recreation Department, Washington, D. C., on Recreation for Physical Fitness. Mr. Christiansen, one of the country's really outstanding leaders in the field of recreation, is past president of the American Recreation Society.

[From Sports Illustrated of April 16, 1956]

THE OLYMPIAN FIELDS OF MOSCOW

(By Horace Sutton)

It takes but one fast glance down the Moscow River Valley from the escarpment in front of Moscow University's 38-story skyscraper to realize that Russia is not merely out to cop the Olympics in Melbourne in 1956 but that it will make a bid to win them on its own territory in 1964.

As the April thaws dissolve the white satin comforter that has lain over the Lenin hills and the Luzhniki suburbs since last fall, a vast park of nearly 350 acres splotched with the skeletal forms of the most ambitious sports plant ever built in Russia, in Europe and perhaps in the world is revealed for the first time.

Construction crews aided by volunteer flying squads recruited from the Soviet Union's most famous athletic aggregations are swarming over the developing shapes of a stadium that will seat 100,000, an open-air swimming pool with seats for 13,200, a small stadium to hold 15,600, and a covered arena that will seat up to 17,000.

Under the melting snows that run down the embankment now to swell the curving Moscow River are the outlines of 8 football fields, 30 tennis courts, 17 volleyball courts, and 15 basketball courts. Soviet athletes will be able to compete and practice in 24 sports at the same time. A playing area, separate and complete, is being built for children. An international youth athletic festival is on the books for 1957.

But the reason for the immediate rush—the work schedule for the giant project has been pegged at 23 months—is the giant sports show being planned for this July. A mammoth spartakiad will bring together some 10,000 of the best athletes culled from the 16 Soviet republics. They will fight it out in a program of 165 matches. The winners, sifted from all-Russia's best sports talent, will have plenty of time to catch a slow boat for Melbourne where the summer Olympics begin in November.

Soviet athletes in from the far Asiatic provinces, Tartars up from the Kazan, indeed, even sophisticated Muscovites all converging on the sports center for the old collective try this summer, can hardly but be dazzled by this razzle-dazzle sports extravaganza. Above the seats of the main stadium, for instance, will be a circular deflector. The device has been designed to shade the football field during playing hours which vary from month to month. It will also hold 500 floodlights for night football games and provide illumination for television and newsreels. Simultaneously it will help protect the arena from strong winds blowing across from the Lenin Hills. As Soviet sports officials point out, a wind velocity of more than 6.6 feet per second would make track records inaccurate.

The Russians are trying out a new gimmick in the smaller stadium, too. First-row spectators have been elevated one tier so as not to distract the players. As the Russian magazine Sporting Games indicates, "The calm white walls surrounding the arena will further help the players to concentrate on the game." Nor will teams be distracted by warming up on the playing fields. A pair of warmup halls is being built under the stadium. And when the game is done, a player will not merely repair to the showers; he may relax like a tsar, or a quota-meeting worker, in an oversized bathtub with a built-in seat.

A battalion of architects under the direction of Alexander Vlasov, the man who executed a 100-yard dash from New York back to Russia last year after being accused of overdecorating Moscow buildings, has designed a waterfall which will cascade over the outside wall of the swimming-pool stadium. However, they have also thought to install a functional heating system under the pool which will permit water-polo teams to practice 7 months a year. A freezing system in the covered arena will permit hockey players to disport themselves in summer. Playing hockey in the frostbite temperatures of a Russian winter never bothered a Russian, but it has severely hampered foreigners. A team from Britain played in the open-air Dynamo Stadium last winter before a crowd of 11,000 who sat in the unprotected stands in a temperature of 26 below. Cognac and wine were sold in the interests of self-preservation, but the situation wasn't serious enough to permit the sale of vodka.

Until now Moscow has never had a big indoor arena. Indoor events—boxing, for example—are usually staged in the circus at a time when the troupe is off playing in the hinterlands. When Sonja Henie came barreling into town from Oslo intent on staging her ice show in Moscow, the circus was busy playing the circus. When Miss Henie suggested requisitioning the Bolshoi Theater, that hallowed gold-and-plush auditorium sacred to the concert and ballet, the Russians were aghast.

The new covered stadium, completely air-conditioned, can hold as many as 17,000 spectators, depending on the games, and it will be larger than the Paris Velodrome d'Hiver. A

roomy training room can be converted into a meeting room at a moment's notice, and a collapsible platform can be raised in the main hall for mass meetings.

In the Russian athletic scheme, the arena under the stands is not merely a place to decide partisan feelings. The space under the main stadium is being divided into four floors each girded by a circular passageway wide enough to drive an electric car. On the top floor there will be lodgings for 340 competitors as well as a pressroom connected to the press box in the stands. The third floor will house 8 gymnasiums, a conference hall for 250, 2 movie theaters each holding 250, a restaurant for 300 and a cafe for 300.

The comfort of the Socialist Soviet spectator seems to have become a prime consideration. Five thousand citizens can eat at one time in the restaurants, snack bars, mobile kitchens and local automats. It will be quite an improvement over the situation this winter when I watched youngsters ski along a path to Dynamo Stadium en route to a hockey game, stop to buy snow-dusted, cream-stuffed crullers from a snow-dusted lady vendor. Between halves of the game (played with a ball and curved sticks) between the Sverdlovsk Officers Club and the local Dynamo team a spectator could stave off hunger with an 81-cent orange or a 90-cent chocolate bar.

In the Luzhniki sports center there will be tonic, too, for the Soviet soul. Burbling fountains will delight the ear, decorous pools will relieve the eye, leafy trees will shade the brow. Frescoes will decorate the principal buildings and wide promenades will lead down to the banks of the river.

A spur line of Moscow's famed subway is being extended to accommodate the university and the sports center. The Moscow River will be widened and a higher elevation provided for the park as a protection against spring floods. Boat races will be held on the river and piers are being installed "for the use of visitors in attaching their vessels." Not only will there be free parking for the comrades' yachts, but, says the Soviet architectural journal, "luxurious laws will serve as a background for the calm and bright outlines of the sports buildings. * * * This," the magazine concludes, "will create a feeling of triumph and glory." With all this new equipment, it would seem that Ivan is at last ready to play for keeps.

Opinion Poll Report

EXTENSION OF REMARKS
OF
HON. S. J. CRUMPACKER, JR.
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. CRUMPACKER. Mr. Speaker, during the past several weeks, in accordance with my annual custom, I have been conducting an opinion poll among my northern Indiana constituents on some of the important issues currently confronting Congress.

Early in April, using a mailing list established from previous opinion polls, approximately 12,000 ballots were sent to voters in the Third District counties of St. Joseph, Elkhart, La Porte, and Marshall. Questionnaires also were printed in several district newspapers and readers were asked to fill them out and return them to me with their answers.

The response this year was well above the average for similar mail surveys. More than 4,000 ballots have been returned so far and they are still coming in.

Many voters added comments to their ballots explaining or qualifying their replies. Others expressed views on issues not covered in the poll. These have been carefully noted and have been helpful to me in determining the sentiment of my constituents on current problems.

The results of my 1955 poll are given below. Within the limitations implicit in any survey of this nature, they reflect the opinions of a substantial cross-section of voters in a typical midwestern congressional district.

	Percent		
	Yes	No	Not voting
1. Do you favor the Eisenhower administration program of flexible price supports for basic farm products?	78	17	5
2. Do you favor the transfer of unused immigration quotas from western European countries such as England and the Scandinavian nations to southeastern European countries such as Italy and Greece where immigration quotas are heavily oversubscribed?	30	64	6
3. In spite of the all-out effort of Postmaster General Summerfield to economize and obtain more efficient operation of the Post Office Department, the postal deficit is again approaching ½ billion dollars a year, and post-office buildings and facilities are steadily becoming more antiquated and inadequate. In view of this, do you favor an increase in postal rates to meet the postal deficit and to provide better post-office buildings, equipment, and service where needed?	74	22	4
4. Do you favor the granting of arms aid to Israel in the present Arab-Israeli dispute?	26	61	13
5. Do you favor the continuance of our foreign-aid program generally?	50	44	6

A separate tabulation of farmers voting on the first question revealed a vote of 66 percent in favor of the Eisenhower price-support program, 30 percent in opposition, and 4 percent undecided, amongst farmers alone.

In order to stimulate interest in public affairs among future citizens of my district, I also conducted a separate poll this year among high-school students. More than 1,000 students took part, voting on the issues in class under the supervision of instructors after a discussion of the pros and cons. Here are the results of the voting among high-school students:

	Percent		
	Yes	No	Not voting
1. Do you favor the Eisenhower administration program of flexible price supports for basic farm products?	56	31	13
2. Do you favor the transfer of unused immigration quotas from Western European countries such as England and the Scandinavian nations to Southeastern European countries such as Italy and Greece where immigration quotas are heavily oversubscribed?	27	67	6
3. In spite of the all-out effort of Postmaster General Summerfield to economize and obtain more efficient operation of the Post Office Department, the postal deficit is again approaching ½ billion dollars a year, and post-office buildings and facilities are steadily becoming more antiquated and inadequate. In view of this, do you favor an increase in postal rates to meet the postal deficit and to provide better post-office buildings, equipment, and service where needed?	63	31	6
4. Do you favor the granting of arms aid to Israel in the present Arab-Israeli dispute?	19	67	14
5. Do you favor the continuance of our foreign aid program generally?	70	22	8

Economic Impact of the Highway Program

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. FALLON. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an address entitled "Economic Impact of the Highway Program," delivered yesterday by Mr. William S. Lampe, editor, Pittsburgh Sun-Telegraph, before the Chamber of Commerce of the United States, at its 44th annual meeting.

The Pittsburgh Sun-Telegraph is one of the publications of the Hearst papers, which have in the past 4 years been one of the strongest advocates for better roads for the American people. They have used many thousands of words in their news editions and editorials to inform the American people of the emergent conditions which we face with our present highways.

Mr. Lampe's remarks reveal the time and effort which have been spent in collecting and assembling facts, not only with respect to the present conditions of our highways but the needs, benefits, and savings which can be expected when this legislation becomes law. His remarks are succinct and to the point, and I feel sure will be of interest to every Member of the House:

ECONOMIC IMPACT OF THE HIGHWAY PROGRAM
(By William S. Lampe, editor, Pittsburgh Sun-Telegraph)

There are two ways to present an argument—assemble facts and state conclusions, or state the conclusions and give the supporting facts. As a newspaperman who was trained to put the conclusions in the opening paragraph and then support them, I incline toward that method. Therefore, I will

present three statements on the subject, two of which I borrowed and one of which is my own.

The first comes from the Governors' conference report to President Eisenhower, and I quote: —

"An adequate highway system is vital to the continued expansion of the economy. The projected figures for gross national product will not be realized if our highway plant continues to deteriorate. The relationship, of course, is reciprocal—an adequate highway network will facilitate the expansion of the economy which, in turn, will facilitate the raising of revenues to finance the construction of highways."

My second statement is contained in the Journal of the American Society of Civil Engineers. It is a statement by B. D. Tallamy, chairman of New York State Thruway Authority. He was discussing in this instance a limited-access highway, the New York Thruway, but his statement is appropos because the Federal highway program provides for limited access wherever it is indicated.

We will be using more of Mr. Tallamy's statement later, but here were his conclusions: "Experience with the New York Thruway has shown how limited-access highways foster safety, save travel time, reduce wear and tear on vehicles and drivers, relieve travel on parallel roads, and promote astounding economic development of the area through which the expressway runs. Conservative estimates credit the Thruway for attracting at least $150 million in new or expanded enterprises, with an annual payroll in excess of $100 million." Mr. Tallamy adds that the problem is how to finance the additional expressways that are needed across the nation, but for our purposes here today that problem has been solved where it was most difficult ot find a solution—in Congress.

Now for my own conclusions based on a reading of all of the material we had available to us. I am convinced that when the Federal highway bill becomes law in something like its present form, we are all going to be wondering, 5 years from now, why there had to be so much arguing and testifying and compromising and dealing to get the program underway. I mean that the benefits, both social and economic, are going to be so obvious to everyone that even the present opponents of the program (and there are some) are going to have to admit they were wrong. I think that not even the bald statistics of various phases of the benefits of adequate highway construction tell the whole story as it will be told in the years to come. I believe that even those antiprogram arguments that seem to have the most merit today all will have collapsed under a flow of benefits we can suspect only dimly in 1956.

In those three statements I think I have stated the conclusions I reached. The remainder of this discussion will be a recitation of surveys, reports, and studies that contribute, in one way or another, to the general findings.

THE ECONOMIC IMPACT

The economic impact will be felt directly and indirectly. It will be felt by differing segments of the economy at differing times. I will try to follow a more or loss chronological order.

DIRECT BENEFITS

The highways we are talking about first have to be planned, programed, provided with rights-of-way, then constructed. Many benefits flow from the direct act of construction; others follow when the road is in place and in use.

The highway construction industry has been operating at something less than 50 percent of capacity, and it feels able to absorb the expanded program. The increase in the use of construction materials will be about 50 percent for each of the first 3 years of the program, and the increase will reach a maximum in 1961.

The predictions—and I ought to say here that everything I am discussing is a prediction or an estimate or an educated guess—are that while there will be temporary, regional shortages of cement the program will not be seriously hampered thereby. In 1954 the total productive capacity of the cement industry was about 265 million barrels. Highways used 45 million barrels. It is estimated that the highway cement demand will reach 112 million barrels in 1959. We are told that with a 13-year highway program assured, the cement industry will expand to provide for the necessary increase in demand. In fact, it has been expanding to keep pace with the highway expansion of the past several years.

The asphalt industry produces 80 million barrels annually, and the highways use some 50 million barrels of that. Enormous expansion of this industry is a relatively easy matter. About 85 percent of the Nation's improved rural roads today use asphalt. One problem here is that there will be exhaustion of deposits of asphalt.

In 1954, the aggregates industries produced 810 million tons of stone, sand, gravel, slag, and other products. Of this total, 357 million tons went for highway uses. The aggregates industry believes that it can increase production about 40 percent with existing plants, but to handle the demand during the peak construction years there will have to be an additional 560 portable plants or their equivalent in large, stationary plants. This will necessitate exploration for new sources and longer hauls to construction sites. The costs of these materials can be expected, therefore, to rise.

It takes between 420 and 450 tons of steel for every million dollars worth of new roads. If total expenditures on all road systems rise to $11 billion a year, then it would require about 5,200,000 tons of steel, 7 times the amount used on the roads during 1954. This is metal actually used in construction and does not include that which will be needed for trucks, tractors, earthmovers, and other highway construction machinery. The steel industry expects to add 15 million tons to its capacity by 1959. While this probably will provide the basic metal, at present there is a shortage of heavy steel structural shapes and this shortage is expected to continue into next year.

This steel industry expansion already is underway, and for 1956 alone will require investment of about $1,200,000,000. The investment for steel's expansion in 1956–58 will be about $3 billion, with still more to come in the future. And when the President's signature on this new highway bill assures steel of a 13-year expanded demand for the structural shapes used in highway construction, certainly you will see expansion in that direction as well.

There are also steel substitutes which could play a larger part in construction. Thus if concrete is available for bridge construction when steel shapes are not, the engineers can specify concrete or, in some cases, other types of metal.

The construction-machinery manufacturing industry does about $2 billion worth of business annually, and about one-third of this is in machinery for highway building. The industry is operating at something like 50 percent of capacity and can readily produce the new equipment that will be needed. Machinery in the hands of contractors is idle about one-third of the time. It is estimated that highway equipment sales will rise about 70 percent the first year of the program and perhaps 150 to 200 percent at the peak of demand.

In addition to these basic materials, there are some miscellaneous products that are worth mentioning. An $11 billion program will require 908,000 new traffic signs in a single year, and the first 2 years of the program will require a total of 10 million gallons of paint. What about the direct employment of manpower in highway construction? It is estimated that by 1958 more than 130,000 additional on-site workers will be needed by this program. The employment total at present is about 220,000 so the total by 1958 would be 350,000. By 1961 this figure will become something like 500,000. Remember these are on-site construction workers only. We do not have any estimate on additional jobs created elsewhere because of the program, but we can be sure the number will be impressive.

It should be pointed out that the assumption by the Federal Government of 90 percent of the cost of constructing the National System of Interstate Highways is going to give the 48 States additional funds to spend on other systems of roads, including secondary roads.

I have gone into some detaill on these statistics at the great risk of boring you, but I believe they are not boring to anyone interested in the industries concerned. To them they must be the most exciting figures that they have seen in years.

Incidentally, in our preliminary research for the Hearst newspapers campaign, we came across statistics which we combined into a single intriguing statement. We printed it with some misgivings since we could not make up our minds whether it would be regarded as anti-American or anti-Russian. It can be read both ways. Here is the statement: "More automobiles are stolen each year in the United States than are produced each year in the Union of Socialist Soviet Republics."

A final direct beneficiary of the highway program will be the contractors. There industry, as we mentioned, was operating at less than 50 percent of capacity in 1954. It will be at capacity and that capacity will have to be increased during the life of the program.

The program, even before actuality, has spurred research into many facets of the highway industry. The latest tools of science are being studied to determine how they can be applied to the highway field. Before we are done we will see a transformed industry, much more efficient, more mechanized, and one that may make the estimated costs of the whole program lower than we believe today. These are some of the direct benefits that will come with the actual start and progress of construction itself.

INDIRECT BENEFITS

The indirect benefits will accrue to many millions who have no interest in construction.

First, let us take the passenger-car driver. This fellow is going to have to pay about $7 a year in additional taxes for his share of the Federal highway program. If he is driving now on obsolete highways—and he is a rare driver if he isn't—and drives in the future on modern roads—and he will—the savings are going to be at least 1 cent per mile. If he drives an average of 9,000 miles a year his savings will be something like $90 a year. His net profit is going to be $83 a year, and we presume he will do something with the $83, even if he invests it in Old Grand-Dad, that will redound to the Nation's economic benefit. In addition, many more of our citizens are going to be around to keep the $83.

Modernization of the Interstate Highway System alone is expected to save 3,500 lives per year. And the Interstate System is only 40,000 miles out of a national total of 3⅛ million miles of streets and roads.

There are many sets of figures in this field, but here is one generally accepted: The cost to motorists annually for driving on obsolete streets and roads is $5,300,000,000. This is more money than was spent on all street and road construction annually until very re-

cently. If we add to that cost, the economic loss due to death and injury and other nonoperating costs, we get a figure something like $7½ billion.

It seems odd, when you take a look at it, that we should pay more in auto-insurance premiums than we pay in gasoline tax to build roads that would cut accidents in half and, therefore, reduce our premiums. I doubt if any member of the United States Chamber of Commerce attempts to do business quite that way.

Of course, we're paying in other ways, too, but I don't know what the figure is. I don't even want to hear it if there is one. For instance, just about everything any one of us buys travels on a truck at some time. If a motorist wastes a penny a mile on obsolete streets and roads, what does a truck operator waste? The New York Truck Association figures it cost the trucks of New York $150 million in 1950—all waste.

A truck stopped in traffic might as well be back in the terminal as far as the truck operator is concerned, and he wouldn't be paying for the driver's time and the waste of gasoline. And when the operator pays for waste, we pay it to him in his rate schedule. As I said, I don't even want to know what that is costing me.

In short, then, adequate roads will save us money in operating costs of our own vehicles, operating costs of commercial vehicles, and presumably lower carrier rates, lower insurance premiums because of few accidents, and in other obvious ways.

One of the obvious ways that may not belong in an economic survey is the time you and I will save as individuals. What is time worth to us? How often have you sat stalled in congestion and wished there were some way you could get home before your disposition came completely apart? At those times would you have paid $7 to get there? Well, the $7 a year you're going to pay in additional Federal taxes will do the job for you in many cases.

What else happens when we build the roads that this program calls for? A new, modern, adequate road transforms the area through which it passes in many, many ways, and they all have a bearing on our economy. Land values increase enormously, and the tax rolls are so benefited thereby that the highway frequently pays for itself, as far as the taxing government is concerned, in a few short years. Here are some examples, selected at random: Land along the route of the Northern Sacramento Freeway in California sold for $600 an acre in 1947—before the freeway. Two years after the freeway opened for traffic the price was $1,100 an acre. In 1950 it was $7,100 an acre, and in 1951 it was $10,000 an acre. There were no similar land-price increases in the Sacrament area not served by the freeway. Land along the New York Thruway near Syracuse sold for about $714 an acre in 1951; $6,000 an acre in 1955. The Syracuse story as told by the Mr. Tallamy we previously quoted is an amazing one.

Access to the Thruway brought the Syracuse area a group of plants constructed by such corporations as General Motors, General Electric, Carrier Corp., Allied Chemical and Dye Corp., Bristol Laboratories, and Western Electric Co. At one of the Syracuse interchanges there was a piece of property containing 23 acres. No water, sewer, or gas facilities were available. The plot was worth $100 an acre before the Thruway. In March 1955 a machinery company bought it for $46,000, or $2,000 per acre. Remember, that the Thruway is not yet completed but where it is open certainly it is a new road. This development along it is only beginning.

Here is what the eloquent Mr. Tallamy has to say on this whole subject: "The tremendous toll that outmoded highways exact in lives, property damage, human misery, and sheer economic waste alone compensate for the cost of constructing modern highways against many factors, but paramount among them is the economic growth and development that have become synonymous with new expressways and major highway construction programs.

"We have underemphasized these benefits, in spite of the fact that they far outweigh the cost of providing the highways themselves."

Perhaps we should rest our case here on the theory that when you have made a sale, beat it. There are just a few more things that ought to be said. This program is not going to be all sweetness and light in your State, your county, or your hometown. There are going to be many vehement route squabbles, particularly in those communities that are afraid a limited-access highway will doom them to economic death. In this regard, let me say this: If the Federal program did not contain a limited-access provision for the interstate system, I very much fear that the Hearst newspapers would have had to oppose it. Without limited access, where studies indicate it is needed, you doom the road to obsolescence before you build it. It would be throwing away billions of tax money. I hope that in your own States you will support the engineers when they recommend limited access on other vital State roads not on the interstate system.

Residents of our larger cities are aware of the necessary destruction of private homes and business places that accompany the construction of expressways. Many, many smaller cities that have otherwise insoluble traffic-congestion problems are going to have to build similar expressways, and if they are on the interstate routes the Federal program calls for limited-access highways—or none. Again, there will be pained outcries from those who want congestion solved, but not through their living rooms, showrooms, salesrooms, or assembly plants.

Again, I hope that you will support the officials who will have to make these decisions.

CONCLUSION

Abraham Lincoln once described a man as "coming out where he went in at." I am going to requote my own personal conclusions after my study of the material that I have presented to you today:

"I am firmly convinced that when the Federal highway bill becomes law in something like its present form, we are all going to be wondering 5 years from now why there had to be so much arguing and testifying and compromising and dealing to get the program underway. I mean that the benefits, both social and economic, are going to be so obvious to everyone that even the present opponents of better roads programs (and there are a few) are going to have to admit they were wrong. I think that even the bald statistics of various types of benefits of adequate highway construction do not tell the whole story as it will be told in the years to come. I believe that even those anti-program arguments that seem to have the most merit today all will have collapsed under a flow of benefits we can only dimly suspect in May 1956."

Thank you.

Alben W. Barkley

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 1, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Evening Star and the Washington Post:

[From the Washington Star of May 1, 1956]

ALBEN BARKLEY

The American political stage has lost one of its favorite players in the death of Alben Barkley. And that his death should come literally on-stage while speaking lines that singularly reflected his innate humility, provided a fitting curtain for a memorable career.

Alben Barkley began life on a Kentucky farm. When that life ended nearly 79 years later, it had become a mirror of three-quarters of a century of American history—the period in which a young but virile Nation arose from its post-Civil War suffering to move steadily on to unprecedented heights of greatness in strength and morality. For most of that time, Alben Barkley played a major role. Since 1913, save for the brief interlude of 1953–54, Mr. Barkley had been in the American Congress—eloquent as a youthful Congressman, powerful and persuasive as Senate majority leader during most of the New Deal period, benevolently forceful as Vice President. As a junior Senator during the past 2 years, he was an elder statesman whose proud devotion to party was exceeded only by his devotion to country.

The years had dealt kindly to Alben Barkley and it was understandable to those who knew him. Politics did not shape his character, or make of him a man obsessed with ambition and preoccupied with self-interest. To a greater degree, it was the warmly human Kentuckian who left his impact on the politics of his time. His humor and his kindliness rubbed off on many of those who shared a place with him on the political stage. It was fully in character that he died saying, "I would rather be a servant in the House of the Lord than sit in the seat of the mighty."

[From the Washington Post and Times Herald of May 2, 1956]

ALBEN W. BARKLEY

Even in their expression of sorrow over the death of Senator Alben W. Barkley, his friends and acquaintances throughout the land are retelling his jokes, quips, and humorous stories. The big, good-natured man with the booming baritone voice made an impression on his fellow countrymen that will not soon be forgotten. Though he was a prodigious worker and a devoted public servant, he was never solemn about it. His hearty laugh and his spontaneous humor became his badge of identification and will ever be associated with his memory.

Mr. Barkley was a key figure in the history of the last two decades. People came to associate his name with almost every big contest which the Democratic Party waged in that period. Probably more than any living member of his party he was entitled to the cognomen of Mr. Democrat. But his partisanship had a genial quality that won him the affection of Republicans and Democrats alike. By relying upon humor instead of venom, he made his appeal universal.

His greatest work was done as majority leader in the Senate from 1937 to 1947. In that period he piloted through the Senate important legislation of Franklin D. Roosevelt's New Deal and Harry Truman's Fair Deal. Senator Barkley could be relied upon to go down the line for almost every administration measure. His record for party regularity in the House and later in the Senate was a large factor in his election as majority leader. The death of Senator Joseph T. Robinson in the midst of F. D. R.'s fight to enlarge the Supreme Court had left the Senate in a state of confusion. Only the President's intervention shifted the leadership to Mr. Barkley in preference to the more independent-minded Pat Harrison.

In appreciation for that support, Majority Leader Barkley stood by F. D. R. with remark-

able tenacity through the prewar and war years. He was not, however, a man to be walked on. When Mr. Roosevelt wounded his sensibilities in a tax veto message, he resigned his leadership and was overwhelmingly reelected. This dramatic demonstration of confidence in him did not go to his head, nor did the incident turn him against F. D. R. A few months later he presented Mr. Roosevelt's name for a fourth presidential nomination.

Mr. Barkley would have been the logical choice for the vice presidential nomination in 1940 and 1944 if he could have been spared from the position of majority leader. His election to the Vice Presidency in 1948 at the age of 71 was generally regarded as a reward for a lifetime of public service. But the Veep made it a working position and lent powerful support to the Truman administration without any show of sourness because a man of lesser political experience was in the White House. When Mr. Barkley, having retired from the Vice Presidency, once more demonstrated his vigor and invincibility in Kentucky by winning election to the Senate in 1954, he received an ovation from his former colleagues without any regard for party lines.

His friends and admirers were especially pleased when sunshine came to predominate in his personal life after long years of sorrow and struggle. His first wife, to whom he was devoted, Dorothy Brower, of Paducah, became an invalid, and he followed a rigorous schedule of lecturing, while he was majority leader, to pay the doctor bills her illness entailed. Mrs. Barkley died in 1947. Two years later, however, the hearty and irrepressible Veep met and married a charming widow, Mrs. Carleton S. Hadley, and this romance filled his remaining years with the warmth and satisfactions he had richly earned. Alben Barkley will be remembered as a man of many estimable human qualities, as well as a superb storyteller and a beloved leader in the great affairs of his day.

Site of Proposed Jet Air Base

EXTENSION OF REMARKS
OF
HON. RUTH THOMPSON
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Miss THOMPSON of Michigan. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert a letter from one of my good constituents in relation to the site of the proposed jet air base in my district, which merits your consideration:

HOWARD BLACK CHERRY CO.,
Traverse City, Mich., April 28, 1956.
Hon. RUTH THOMPSON,
House of Representatives,
Washington, D. C.

DEAR MISS THOMPSON: May I extend to you my heartiest congratulations on the stand you have taken with reference to the jet air base. Your statement, as published in the Traverse City Record-Eagle under date of April 23, is particularly astute and to the point.

Frankly, I had wondered how long some of those weird statements this paper has been publishing for the past 2 years would go unchallenged. Now, you have "laid it on the line," the truth is out in the open, and the taxpayers of this region can easily see that it would cost them more in taxes than the "Dollar Patriots of Front Street" could possibly make from the personnel of the base.

Other items which the inarticulate taxpayer would have to pay, would be the cost of providing additional school buildings, additional teachers for the children of the Air Force personnel, additional fire and police protection, to say nothing of additional "off base" housing which would be necessary.

I am particularly gratified that you had the courage to make the statement that there were two sides to this jet-base argument; that it is not all "sweetness and light." Up to now, the people of this region have heard only that side of the argument as expressed by the local merchants, tavern keepers, etc.

Anyone who did not agree that the base should be located close to Traverse City was called unpatriotic and even communistic. We were told that "we would just have to get used to the noise and the intolerable conditions whether we liked it or not, and if our resort property was ruined, we should grin and bear it for the sake of national defense."

All this we should do in order that a very few of our patriotic citizens could make a "quick buck" from the air-base payroll.

In closing, I want to say that all honor is due you far taking the stand that matters of this nature are for the civil authorities to decide. When the Traverse City Chamber of Commerce set up the hue and cry, "Let the military decide where the base is to be located," they were acting in direct contradiction to the ideas of the men who founded this country, and contrary to accepted Government procedure and our American way of life.

I certainly hope I will never see this country in a position where our legislators will be forced to "let the military decide" on matters of purely local import.

Cordially yours,

HOWARD BLACK,
Chairman, Public Relations Committee,
Long Lake Association, Inc.

Every American Thrills to Sight of His President

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial entitled "Every American Thrills to Sight of His President," which appeared in the New Castle (Ind.) Courier-Times, issue of April 25, 1956.

It is a very dramatic presentation of the events surrounding the recent meeting of the American Society of Newspaper Editors:

EVERY AMERICAN THRILLS TO SIGHT OF HIS PRESIDENT—RESPECT FOR OFFICE ATTACHES TO PERSON IN THE WHITE HOUSE

Every American thrills to the sight of the country's President and to the sound of his voice. Regardless of political affiliations or beliefs, all good citizens have a respect for the office that attaches to the person in the White House.

So it was that we felt especially privileged to be in his intimate presence when he addressed the American Society of Newspaper Editors in the ballroom of the Statler Hotel in Washington Saturday evening. Good fortune placed us in a point of vantage probably 25 feet in front of the elevated speaker's table and slightly to one side.

As the editors assembled speculation spread regarding whether Ike would come for dinner or show up just in time to make his speech, scheduled for broadcast beginning at 10 o'clock. Others took their places at the speaker's table, and it seemed likely that he would come later, but just then word spread across the room like one giant whisper that the President was in the hotel.

In a few minutes there he was passing within a few feet of us to ascend the end of the platform—and with him was Mamie, too. At the moment the President reached his place at the table the orchestra began the national anthem.

On one side of the speaker's platform stood the American flag and on the other side, the flag of the President with its blue field centered with the great seal of the United States, and around the seal 48 small stars. There were other notables at the table, including the Chief Justice and Mrs. Warren and James Hagerty, the Presidential press secretary. One fellow kept bobbing around the speaker's table, talking to the President occasionally and then to television and radio technicians, and others at our table informed us that this was Robert Montgomery, who coaches the President on his speaking.

How thin the President is. That was the first thing that struck us. And how very blue his eyes. As he sat through 2 hours of dinner and miscellaneous introductions awaiting the hour for his address, we were struck by the extreme modesty and humility with which he conducted himself. Here is a military man without arrogance; a politician without guile. No wonder people love him.

The President spoke for 35 minutes reviewing the administration's foreign policy. After a brief pause at the conclusion of the speech it was announced that "we are off the air now, and the President wishes to speak informally to those in the room." It was an off-the-cuff talk, the sort of thing in which the President handles himself so well. He spoke of the need for the press to help the American people understand the problems of foreign policy—stressing particularly the need of this country to trade with other countries if we are to keep the free world free. He pointed to Japan, which has no place to turn if we refuse to trade with her, and will certainly be driven into the arms of the Communists if our people demand tariffs against Japanese goods. He pointed out the terrific pressures under which the leaders of the new countries of Asia and Africa labor. Their peoples are expecting results in the way of better living conditions, and if they don't get them under democratic governments, then communism is sure to come in.

When the speech was over, the cheers acknowledged and the last famous Eisenhower smile flashed, the President waved goodbye, and 6 or 8 Secret Service men fairly enveloped him. They formed a protective escort that swept him toward the side door through which he had entered. He wasn't too happy about it. They had separated him from Mamie, and every few steps he turned, like a nervous bridegroom, to look back over his shoulder and make sure that she was coming all right.

Apportionment to States of Federal Highway Funds Pursuant to H. R. 10660 and Federal-Aid Highway Act of 1956

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. FALLON. Mr. Speaker, the Committee on Public Works has been receiving numerous inquiries concerning the

apportionment of Federal highway funds to the various States under the provisions of the Federal-Aid Highway Act of 1956 (H. R. 10660), which passed the House April 27, 1956.

The following table sets forth the approximate amounts which will be apportioned to each State for the fiscal years 1957, 1958, and 1959:

Approximate apportionment of Federal highway funds pursuant to H. R. 10660 and Federal-Aid Highway Act of 1954

PRELIMINARY—SUBJECT TO SUCH REVISION AS MAY BE REQUIRED TO CONFORM TO SEC. 108 (f) OF H. R. 10660

[Millions of dollars]

State	Fiscal year 1957			Fiscal year 1958			Fiscal year 1959		
	Primary, secondary, and urban ($725)	Interstate ($1,200)	Total ($1,925)	Primary, secondary, and urban ($750)	Interstate ($1,700)	Total ($2,450)	Primary, secondary, and urban ($775)	Interstate ($2,000)	Total ($2,775)
Alabama	14.7	19.6	34.3	14.9	26.7	41.6	15.5	31.4	46.9
Arizona	9.0	11.2	20.2	9.2	15.3	24.5	9.6	18.0	27.6
Arkansas	10.9	11.4	22.3	11.1	14.8	25.9	11.5	17.4	28.9
California	38.8	112.1	150.9	40.1	169.7	209.8	41.4	199.6	241.0
Colorado	11.3	9.2	20.5	12.0	11.4	23.4	12.3	13.4	25.7
Connecticut	6.6	26.2	32.8	6.9	40.6	47.5	7.1	47.8	54.9
Delaware	3.0	4.0	7.0	3.1	4.8	7.9	3.3	5.6	8.9
Florida	12.0	24.7	36.7	12.3	36.2	48.5	12.8	42.6	55.4
Georgia	16.9	34.9	51.8	17.2	51.2	68.4	17.7	60.2	77.9
Idaho	7.3	6.4	13.7	7.5	7.8	15.3	7.7	9.2	16.9
Illinois	32.1	55.1	87.2	33.0	77.9	110.9	34.1	91.6	125.7
Indiana	17.4	42.4	59.8	17.7	63.4	81.1	18.3	74.6	92.9
Iowa	15.9	15.7	31.6	16.1	20.2	36.3	16.6	23.8	40.4
Kansas	15.1	12.3	27.4	15.3	15.1	30.4	15.9	17.8	33.7
Kentucky	13.0	24.9	37.9	13.3	36.0	49.3	13.8	42.4	56.2
Louisiana	11.5	24.5	36.0	11.9	36.0	47.9	12.2	42.4	54.6
Maine	5.5	7.9	13.4	5.6	10.7	16.3	5.8	12.6	18.4
Maryland	7.8	21.3	29.1	8.0	31.8	39.8	8.3	37.4	45.7
Massachusetts	13.2	40.6	53.8	13.7	61.2	74.9	14.1	72.0	86.1
Michigan	24.9	63.3	88.2	25.5	94.7	120.2	26.3	111.4	137.7
Minnesota	17.6	25.2	42.8	17.8	35.4	53.2	18.4	41.6	60.0
Mississippi	11.7	13.7	25.4	11.9	18.0	29.9	12.3	21.2	33.5
Missouri	20.4	31.1	51.5	20.7	43.7	64.4	21.4	51.4	72.8
Montana	11.5	9.2	20.7	12.2	11.2	23.4	12.6	13.2	25.8
Nebraska	11.9	7.1	19.0	12.5	7.8	20.3	13.0	9.2	22.2
Nevada	7.1	5.1	12.2	7.5	5.4	12.9	7.7	6.4	14.1
New Hampshire	3.2	4.1	7.3	3.3	4.9	8.2	3.4	5.8	9.2
New Jersey	13.5	63.7	77.2	14.0	99.3	113.3	14.4	116.8	131.2

Wisconsin	16.6	18.1	34.7	17.0	23.6	40.6	17.6	27.8	45.4
Wyoming	7.1	14.7	21.8	7.5	21.6	29.1	7.7	25.4	33.1
Hawaii	3.3	----------	3.3	3.4	----------	3.4	3.5	----------	3.5
District of Columbia	4.2	7.8	12.0	4.4	11.1	15.5	4.5	13.0	17.5
Puerto Rico	5.1	----------	5.1	5.2	----------	5.2	5.3	----------	5.3

The approximate apportionments of interstate system funds authorized under H. R. 10660 for the fiscal years 1957 through 1969—subject to such revision as may be required to conform to section 108 (f) of the bill—are as follows:

Interstate funds, fiscal years 1957–69, inclusive ($24,825,000)

Alabama	$389,752
Arizona	223,425
Arkansas	215,977
California	2,477,535
Colorado	166,327
Connecticut	593,317
Delaware	69,510
Florida	528,772
Georgia	747,232
Idaho	114,195
Illinois	1,136,985
Indiana	925,972
Iowa	295,417
Kansas	220,942
Kentucky	526,290
Louisiana	526,290
Maine	156,397
Maryland	464,227
Massachusetts	893,700
Michigan	1,382,752
Minnesota	516,360
Mississippi	$263,145
Missouri	638,002
Montana	163,845
Nebraska	114,195
Nevada	79,440
New Hampshire	71,992
New Jersey	1,449,780
New Mexico	250,732
New York	1,427,438
North Carolina	263,145
North Dakota	114,195
Ohio	1,452,263
Oklahoma	402,165
Oregon	340,103
Pennsylvania	811,778
Rhode Island	131,573
South Carolina	196,118
South Dakota	101,783
Tennessee	404,648
Texas	930,938
Utah	253,215
Vermont	188,670
Virginia	608,213
Washington	498,983
West Virginia	275,558
Wisconsin	345,068

Results of Questionnaire mailed by Hon. John F. Baldwin, Jr., of California, to Residents of the California Sixth District

EXTENSION OF REMARKS

OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. BALDWIN. Mr. Speaker, early this year I issued a questionnaire to each family of registered voters in my district, which is the Sixth District of California. It has been most encouraging to receive such a fine response to this questionnaire. My constituents not only answered the questionnaire, but wrote additional comments on the back of the questionaire or on supplementary attached sheets. I have read all of these replies personally, and they have been most helpful to me.

The tabulation of the questionnaire is summarized below:

1. The Navy has proposed to acquire as a safety barrier more than 4,500 acres of property within a 2-mile radius of the loading piers at the Port Chicago naval magazine. This would include the town of Port Chicago, the town of Nichols, and portions of Clyde and Shore Acres.

Answers from Port Chicago residents: Do you favor (a) That the Navy be authorized to acquire the property, 28.3 percent; (b) That the Port Chicago naval magazine be removed from Contra Costa County, 53.4 percent; (c) That the Navy be denied its request to acquire the property, but the Port Chicago naval magazine be allowed to continue to operate within the confines of its present property, 15.5 percent; no opinion, 2.8 percent.

Answers from all of Contra Costa County: (a) 26.5 percent; (b) 30.9 percent; (c) 39.1 percent; no opinion, 3.5 percent.

2. The Army has proposed to acquire 22,000 acres of property in the Potrero Hills area near Suisun for use as an Army Outloading Ammunition Terminal.

Answers from Fairfield-Suisun residents: Do you favor (a) That the Army be authorized to acquire the property and funds be appropriated for this purpose, 53.4 percent; (b) That the Army be denied its request to acquire the property, 44.3 percent; no opinion, 2.3 percent.

Answers from all of Solano County: (a) 60.1 percent; (b) 33.8 percent; no opinion, 6.1 percent.

3. Present farm surplus production, and resulting lower prices, is now receiving much study. One proposal now under consideration is a soil bank plan. Are you in favor of the soil bank plan? 40.6 percent; or opposed to it, 50.4 percent; no opinion, 9 percent.

4. Congress now has under consideration a social security bill which would (a) lower the age at which women could receive benefits, from 65 to 62 years; (b) lower the age at which physically disabled people could receive benefits, from 65 to 50; (c) extend social security coverage to dentists, lawyers, osteopaths, chiropractors, veterinarians, and optometrists, and (d) provide for a one-half percent increase in the social security payroll tax on both employees and employers. Do you favor, 71.3 percent; or oppose, 24 percent, this measure? no opinion, 4.7 percent.

5. Congress now has under consideration a highway plan which would expand Federal expenditures for construction of Federal interstate highways, with the view to making these four-lane, divided highways. The expanded program would be paid for primarily by increased Federal taxes on highway users (the increase in Federal gasoline taxes might amount to about 1 cent per gallon). Do you favor, 81.3 percent, or oppose, 14.7 percent, the proposed expanded Federal highway construction program? No opinion, 4 percent.

6. Two alternate plans have been under consideration by Congress for the development of power in Hells Canyon of the Snake River between Oregon and Idaho. Do you favor (a) Federal construction of a high dam in Hells Canyon? 31.1 percent; (b) construction by a private utility company of three smaller dams in Hells Canyon? 31.1 percent; or (c) do you have no preference on it? 37.8 percent. (The results on this question were quite unusual. Of 11,687 tabulated responses, there was practically an exact tie between those who favored Federal construction of a high dam, and those who favored construction of 3 smaller dams by a private utility. There were 3,636 who favored Federal construction, 3,635 who favored private construction, and 4,416 who had no preference.)

7. The Veterans' Administration has proposed to close the Oakland Veterans' Administration hospital, which serves the veterans of the East Bay, including Contra Costa and Solano Counties. In its place the Veterans' Administration proposes to build a new hospital. The following two general areas are under consideration as a site. Please check which site you would favor: (a) Contra Costa County, 80.8 percent; (b) Palo Alto, 10.1 percent; no opinion, 9.1 percent.

Are We a Nation of Softies?

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, recently I saw an editorial in the Washington Star commenting on the rejection as physically unfit for military duty of about 35 percent of our young men. Alarmed by this state of affairs I asked Mr. Milo F. Christiansen, the able superintendent of recreation of Washington, D. C., for a statement as to what our country's recreation leaders were doing to meet this grave situation. I submit this statement here and want to take this occasion to compliment Mr. Christiansen for his important and informative comment. Mr. Christiansen is past president of the American Recreation Society.

RECREATION FOR PHYSICAL FITNESS

(By Milo F. Christiansen, Superintendent of Recreation, District of Columbia Recreation Department, Washington, D. C.)

Are we a nation of softies? Doctors and physical educators say that we are. From our pioneer days Americans have always tried to turn a hard job into an easy one. The result has been the vast technological advance of the past 150 years.

As we have made our jobs easier we have found ways of improving our health. We have better medical care. We eat and live better, and we have more rest and leisure than ever before. Our life span is longer. A child born in 1900 was given an average life of 47.3 years. Today's children on the average are expected to live 69.8 years.

But improved health for the Nation does not necessarily mean better health for all individuals. We must take care of our physical body—keep it fit—if we are to benefit from the opportunities for better health and longer life. With all this potential, Dr. Paul Dudley White, foremost of the President's heart consultants, recently said America is one of the unhealthiest countries in the world today." Dr. Hans Kraus, of New York's Bellevue Medical Center, tells us that 78 percent of the American children he tested could not perform acceptably his tests of physical fitness while only 8.5 percent of European children failed.

We hear, too, that 35 percent of our young men are rejected by their draft boards because of lack of fitness. Other studies show that although American males are growing heavier for their age and height, there is no indication that this increased weight is due to anything but fat.

Nor is the problem restricted to our youth. The mortality rate from degenerative diseases, particularly heart disease, is exceptionally high between the ages of 35 and 55. Doctors indicate that the lack of regular physical exercise is a factor in this high mortality rate.

Apparently we are healthy enough to exist in this push-button age of automation, but not rugged enough to meet vital military standards. Our automobiles, soft mattresses, and well-heated homes make it difficult to stay fit. We have to learn how to keep physically fit and still enjoy the luxury of modern living.

Some people blame our high schools and colleges for our softness. They claim there is too much emphasis on competitive sports for a very few rather than physical fitness for all and particularly for those who need it the most. There may be some basis for this accusation, but fundamentally there is nothing wrong with a strong competitive sports program provided there is equal emphasis on an intramural and physical development program.

In fact, there may be an argument for even greater intensification of competitive athletics. The United States made a very poor showing before the Russian athletes in the winter Olympics. Informed sources rate the Russians as favorites for the summer games. A Russian victory will be our loss in the cold war. Such a loss would be of immediate propaganda value which may adversely affect America's foreign policy.

Another accusation against the high school and college sports program is that they do not teach sports skills which can be carried over into adult life. Again this may be true in some cases, although modern physical education theory recognizes the importance of a lifelong awareness of the need for exercise to keep physically fit and insure adequate health. The accusation then should be directed not to competition as such or an erroneous theory of physical fitness but to those individuals who do not take full advantage of the opportunities available to them.

For those of us who cannot make the first team, or even the intramural team, there are opportunities for our participation at our own level of skill in a recreation program sponsored by a public or private recreation agency. The trend for municipalities and counties to provide recreation facilities and leadership for their citizens brings physical fitness within the reach of all who desire it.

Virtually every major city in the United States has some provision for the voluntary recreation of its inhabitants. Over 3,000 cities with over 25,000 inhabitants have public recreation departments with most of them in operation all year long.

The modern recreation program is not just a play program for children. It is a means for every man, woman, and child to forget the cares and tensions of daily living and enjoy themselves. It is a way of satisfying basic human needs that cannot be satisfied in any other way. It is all to the good if, while satisfying these human needs, the American people are also keeping themselves physically fit.

Public recreation provides the facilities we need to keep physically fit. The open spaces of our cities include park areas for hiking, horseback riding, and camping. There are municipal golf courses for devotees of this sport at a minimum charge. Public bathing beaches or lakes provide opportunities for swimming, boating, and a variety of water sports. Tennis courts are lighted for evening play and often surfaced for use all year long. Recreation centers and playgrounds provide both outdoor and indoor facilities for physical development. Softball, baseball, and football fields are spotted throughout the cities for use by all. School gymnasiums are open after school hours and in the evenings for basketball, volleyball, badminton, and a host of other activities.

In addition, public recreation provides trained leaders and program organizers to form teams into leagues, teach skills, and coach the teams. There is no reason why a person of any age or sex cannot find some physical activity of interest with a group of the same approximate skill. Recreation leaders see to it that everyone who desires has an opportunity to participate. The volume of participation makes it possible to organize groups at several degrees of skill so that participants will not lose out just because they are not good enough for the first team.

Although recreation is comparatively new as a governmental service, great strides have been made in recent years. There is an awakening of interest in public recreation by progressive communities all across our Nation. We can look forward to the day in our generation when public recreation will be an integral part of every municipal governmental structure. Our cities must realize the importance of recreation as a means of enriching life, of keeping their citizens healthy and physically fit.

The important need now is to create a desire among all our citizens to keep physically fit. Until every American realizes the advantages of physical fitness we will remain a Nation of softies, a product of a push-button civilization that failed to take full advantage of its potential for balanced living. Constructive use of our leisure time and proper care of our bodies are as much obligations of citizenship as our responsibilities to vote and defend our country. A nation is only as strong as its people. Through recreation we can experience the joy of living to the fullest extent and reap the harvest of improved health, sound bodies, personality and character growth, social adjustment, and balanced living.

The Federal Highway Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. CRAMER. Mr. Speaker, after many months of arduous and diligent labor, the Roads Subcommittee and the Public Works Committee of the House reported to this body a Federal highway bill.

This bill is one of the most important that will come before this session of Congress, and it is my hope that the Senate will pass the bill by a margin equal to the House vote of 388–19, and that this Nation will be provided upon pasage, with a good workable measure that will mean much to the safety of our citizens, the economy of our Nation, our national defense, and provide adequate communication between centers of economic interest.

The action of the House was universally hailed by my constituents in the First District of Florida, and the advantages to the State of Florida, and the Nation were well pointed out in the editorial columns of two of our leading newspapers. I believe these editorials will be of interest to the entire Nation, and, under unanimous consent, include the editorial of the Tampa Sunday Tribune, of April 29, 1956, and that of the St. Petersburg Independent of Saturday, April 28, 1956, in the RECORD:

[From the Tampa Tribune of April 29, 1956]

NOW FOR THE BIG PUSH

The House looked necessity in the face and acted responsibly in the interest of the entire Nation in passing by a 388 to 19 vote the $51 billion longrange highway construction bill.

The action is one of the bright spots of this year's congressional record.

At the core of this gigantic program is a provision to build 40,000 miles of superpriority highways linking 42 State capitals and 90 percent of all cities over 50,000 population. The military and civil defense aspects of this part of the improvement program do not need emphasis.

What should be underlined, however, are the great benefits Florida in general and the West coast area in particular stand to reap from final passage of the overall program.

Funds are provided in the bill for a third bridge across Old Tampa Bay, linking Hillsborough and Pinellas Counties. Moreover, Tampa is scheduled to have two connections on the national system of interstate highways.

This community would be the terminal point on a route running northward to connect with a cross State northern artery from Jacksonville through Lake City, Tallahassee and Pensacola, which would go on to New Orleans. The Tampa-St. Petersburg area would also be linked in the route running cross State through Lakeland, Orlando, and Daytona Beach and connecting with another interstate route from Jacksonville to Miami.

Under the bill, according to Representative William C. Cramer, Florida will receive some $70 million in the next 2 years. The biggest portion, about $58 million, will be allocated for the interstate highway system to be constructed in the State. More than $5 million will be available for primary roads, about $3½ million for secondary roads and a little more than $3 million for urban roads.

During the remaining life of the 13-year construction program, Florida is scheduled to receive an average of $50 million annually.

All this is sweet news to motorists and to those connected with business, agricultural and other interests in the State, who are well aware that extension and modernization of our highway system are basic requirements for the safety of our growing population and for the good health of our economy.

There's a not-so-cheering side to the picture, of course. The program won't come all laid down and paid for.

The House measure calls for new and increased taxes totaling $14 billion on the people who use the roads during the next 16 years. This includes a raise of 1 cent in the present Federal tax on each gallon of gasoline and diesel fuel. It also includes higher taxes on tires, trucks, buses, and truck trailers.

We think, however, this is the fairest way to finance the construction program. We certainly approve of the pay-as-you-go principle. It is far better than the proposal originally advanced by the Eisenhower administration to set up a separate corporation to issue bonds. And since those who use the new highways will receive the greatest benefits, it is only right that they should shoulder the biggest share of the burden.

The important thing now, of course, is to push the bill the rest of the way through Congress.

A quite different bill was approved by the Senate last year. It was more moderate, calling for some $18 billion in construction, and carried no tax provisions.

But the heartening fact is that leading Senators are agreed on the broad principles of what the Nation needs in the way of good highways. Many of them also seem inclined to approve the tax features of the House bill.

With such wide agreement, there is no occasion for any undue delay. Senators should roll up their sleeves and speed the final version of the program to the President in time to take advantage of good construction weather this summer and fall all over the country.

[From the Petersburg Independent of April 28, 1956]

LONG-RANGE ROAD PLANNING

The recent trouble experienced in attaining the rights-of-way for Tyrone Boulevard may well have been avoided under a provision of the multi-billion-dollar Federal highway bill approved by the House Public Works Committee.

For years action had been sought to rebuild and widen that section of Alternate United States 19—one of the most dangerous and rundown pieces of highway in the county. Both the State and county recognized the need. But finally when funds were available to rebuild and widen the highway the appraised value of the rights-of-way was so high that the project was nearly lost.

Had the rights-of-way been attained when the need for reconstructing was first recognized they could have been purchased at a reasonable rate and everything ready when the construction contract was let.

The Tyrone Boulevard case, of course, is not an isolated example. This sort of thing is experienced by the State frequently, particularly in urban areas where the price of land is steadily advancing. The State and county recognize the need for a new road. By the time construction funds are available, perhaps a new subdivision has sprung up in the vicinity, and the price of land has advanced. It may be necessary to move buildings adjacent to the highway or to take a strip of land so wide from a particular plot that the remainder becomes useless. Thus, the cost of the highway becomes exorbitantly high.

A provision in the new Federal highway bill, written into the measure by Representative WILLIAM C. CRAMER, will permit the States to use Federal funds to purchase rights-of-way up to 5 years in advance of construction. If the bill is finally adopted by both Houses, the States will be able to purchase rights-of-way well in advance and avoid one of the factors in the high cost of road construction.

To be able to take advantage of the provision, however, the States will have to look well beyond current highway needs and provide a long-range highway program looking to the future.

The current State administration is doing just this—planning the highways that will be needed in the future. Unfortunately, however, our past experience has been that each change in administration is followed by an overhauling of road plans. Much that has been planned by a former administration is thrown out the window in order that the new administration may pay off its political debts with new highways.

The new road code adopted by the last legislature may go far in halting this practice. But the State still needs a long-range highway program that carries on from one administration to the next.

The Cramer provision in the new Federal highway bill should have the effect of encouraging long range planning by the States. At the same time it should aid in preventing situations like the Tyrone boulevard case in which a city is suddenly called upon for huge financial outlays for rights of way when there is no money in the till to purchase them.

The Democratic Party Will Win in 1956

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. DINGELL. Mr. Speaker, the Democratic Party has not lost the election in 1956 despite the mighty blasts of press agentry emanating from the Republican Party and some of its house organs. The fact that the Democrats can win in 1956 is well recognized by Mr. Joseph C. Harsch, special correspondent to the Christian Science Monitor, in an article in the April 12 edition of that splendid paper.

For the benefit of all, I say that the Democratic Party will deserve to win and will win in 1956, if we come forward with a vigorous campaign, and a sound platform for the benefit of all the people of this country, and bring forth one of our many well qualified candidates.

I hope all will read Mr. Harsch's excellent article:

STATE OF THE NATION: THE ILLINOIS PRIMARY

WASHINGTON.—In the 1952 Illinois primary the Republicans obtained 68 percent of the total vote cast, compared with 32 percent for the Democrats.

In the 1952 Presidential election in Illinois Dwight D. Eisenhower obtained 60.1 percent of the vote and Adlai E. Stevenson obtained 39.9 percent.

In the latest primary election in Illinois the Republicans obtained a little more than 50 percent of the total vote cast and the Democrats a little less (the final totals are not in at this writing).

And in Cook County Mr. Stevenson ran well ahead of Mr. Eisenhower.

One primary doesn't prove anything, as political history in the United States has demonstrated so often.

But two things about this latest primary are of extreme interest to politicians.

One is that ESTES KEFAUVER did not secure the 10 percent of write-ins which his supporters had hoped for. This may have been small comfort to Stevensonians, but it was of comfort and it put him back in what one Democratic politician described as a "convalescent condition" after his misfortune in Minnesota.

Second, the Stevenson vote ran behind the Eisenhower vote, but by nothing like the proportions which public-opinion polls have been leading most people to expect whenever Mr. Eisenhower is pitted against any potential Democratic candidate.

There are probably many explanations of this second phenomenon, but there are some things about the political pattern in the United States which continue to be puzzling and this is another one for the list.

For example, since 1952 the Democrats have—

1. Taken nine governorships and lost none.
2. Won some 500 State legislature seats and lost 5.
3. Won both Houses of Congress in a period of booming prosperity, whereas Herbert Hoover held both at his midterm election in spite of the fact that the country was in the depths of the depression. (Democrats actually organized the House after the 1930 elections when an initial Republican advantage of two seats was wiped out by vacancies.)
4. Won 8 out of 9 special congressional elections.
5. Won many cities, including the surprising 1955 upset in the control of Indiana's main cities, an event which never has been explained adequately.

The most surprising thing about these election results is that the Democratic Party which won them possesses no single acknowledged leader, is riven by deep internal rivalries and divisions, has no national set of policies, and has had most of its stock of old issues preempted by the Republicans. And yet when it has gone to the polls locally it has done better than normally would be expected in a country which is booming with prosperity, is at peace, and is led by a President as undoubtedly popular as is Mr. Eisenhower.

There is no millstone on the Republican Party's neck today such as it had to carry into Herbert Hoover's midterm election of 1930 after the depression broke. And Mr. Hoover was not a popular President, as Mr. Eisenhower is. Yet it is a puzzling fact that the Hoover Republicans of 1930 did better than the Eisenhower Republicans of 1954. And now Adlai Stevenson, by no means a popular figure comparable to Mr. Eisenhower, comes fairly close to the Eisenhower vote in the Illinois primaries.

There are some facts about the Milwaukee vote in the Wisconsin primary which perhaps need a second look in the light of the Cook County vote in Illinois. There was a general assumption after the Wisconsin vote that the Democrats had lost ground in the city vote in Milwaukee and the Republicans had gained.

But a reexamination of the Milwaukee vote shows that the Republicans took 67.3 percent of the primary vote in 1952 compared with 56.8 percent this time.

And if one looks at two wards which could be particularly meaningful as to labor and Negro votes, the following comparison emerges:

The Milwaukee 12th ward is industrial. Republicans took 44.8 percent of the primary vote there in the 1952 primary. They took 40.6 percent this time.

The Milwaukee sixth ward is heavily Negro. The Republicans took 49.3 percent in the 1952 primary, and 42.9 percent this time.

None of this proves for a moment that the Democratic Party is enjoying a rising political tide in spite of Eisenhower popularity, peace, and prosperity. Each item in it does raise questions which have yet to be answered satisfactorily. There is something puzzling about the voting pattern. It doesn't fit entirely with the polls of Eisenhower versus Stevenson or Kefauver popularity. The voting fails to show the overwhelming Eisenhower strength which the opinion polls shows.

A Bill To Establish Federal Maritime Board as a Separate Independent Agency in the Executive Branch of the Government

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, I have today introduced a bill to establish the Federal Maritime Board as a separate independent agency in the executive branch of the Government. It is appropriate, therefore, that I make this brief statement in explanation of the reasons why I believe this legislation should be enacted.

Under the Merchant Marine Act of 1936 there was established the United States Maritime Commission. The Commission was vested with authority to carry out not only the regulatory powers contained in the several shipping acts, but also the operational and promotional responsibilities created by the 1936 act itself. As the years went by, serious deficiencies of administration were disclosed by several investigations of the Maritime Commission. As a result, the Commission was legislated out of existence by Reorganization Plan No. 21, which set up the Federal Maritime Board and the Maritime Administration in the Department of Commerce. The Board was composed of three members and was charged with responsibility for carrying out the regulatory functions performed by the former United States Maritime Commission. It also was vested with authority to perform the functions relative to the awards of subsidy and related matters. Maritime Administration, on the other hand, was charged with responsibility for carrying out all the other functions previously carried out by the Maritime Commission. This separation of functions was a step in the right direction, but unfortunately it did not go far enough. The main deficiency in the organization established by Reorganization Plan No. 21 was in the fact that the Chairman of the Maritime Board was made ex officio the Maritime Administrator. This fact alone has served to defeat the very purpose underlying the separation of the functions previously performed by the Maritime Commission. In submitting his plan to the Congress, former President Truman referred to the conclusion of the President's Advisory Committee on the Merchant Marine, which in 1947 stated:

> It appears to the Committee that the organizational structure of the Maritime Commission as set up in the Merchant Marine Act of 1936 is wholly inadequate for the efficient conduct of the multitude of diverse activities for which the Maritime Commission is now responsible. The deficiencies of the statutory organization for administrative action are regarded by the Committee to be the most serious obstacle standing in the way of the development of the merchant marine of this country.

Experience in the workings of the two agencies, the Board and the Administration, since their creation in 1950, has demonstrated that the regulatory functions which suffered by reason of the limitations necessarily placed on the one individual who attempts to serve in both capacities. This was a mistake from the beginning. If the job to be done was too big for the five-man Maritime Commission, how could one man give the necessary time and attention to directing the activities of the Board and of the Administration?

During the past 8 months, I have served as chairman of a special subcommittee set up to consider the activities of foreign-freight forwarders and brokers. These are activities which are subject to regulation by the Federal Maritime Board under the Shipping Act of 1916.

We have held extensive hearings and investigations into this subject, and though the conclusions of the subcommittee have not yet been crystalized, it has been apparent to all the members that this field has been sadly neglected by the Maritime Board. I say this not so much in criticism of the Board, because I feel that the workload presently imposed upon the Chairman of the Board, who is also the Maritime Administrator, is beyond the capabilities of any one single individual no matter how capable he might be.

Only recently, there appeared in the press a story which illustrates how incongruous the situation can become where the one man tries to wear two hats. The Maritime Administrator is presently appealing to the Board for its ruling on some matters which are acted upon by the Administrator. So in effect, the Administrator is appealing to himself and to other members of the Board.

The bill which I have introduced would amend Reorganization Plan No. 21 so as to remove the Maritime Board from the Department of Commerce and make it an independent agency in the executive branch. This independence, I believe, is essential to the efficient performance of duties by a regulatory body of the nature of the Maritime Board. Under this organizational setup, the personnel and facilities of the Board would be entirely independent of the Maritime Administration.

One other change of significance which would be made under my bill is to lengthen the terms of the members of the Board to 6 years. This would serve a twofold purpose in that it would be more attractive as an office in the Federal Government. And also it would give a degree of permanence to the Board which it has lacked since its establishment in 1950.

In closing, I might say that I have discussed this bill with the chairman of the Merchant Marine and Fisheries Committee, Mr. BONNER, and he has assured me that as soon as the executive branch has had time to adequately consider the proposal, he will assist in arranging early hearings on it. I might add also that in my discussions of this proposal with other members of the committee and with representatives of the maritime industry, I have received overwhelming support for the principles encompassed in the bill.

Rewarding Irresponsibility

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. HAYWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 1, 1956:

REWARDING IRRESPONSIBILITY

For 7 sweltering weeks Washingtonians walked or bummed rides to work last summer. Efforts to bring the management of the Capital Transit Co. and the striking AFL transit union together had proved altogether fruitless, very largely because of the public-be-damned attitude of the company, which had in effect provoked the strike. Finally, recognizing that it was futile to hope that the company would place its public responsibility first, Congress passed a bill canceling the franchise of the Capital Transit Co. after 1 year. President Eisenhower signed the bill. After noting that neither party to the dispute had discharged its obligations to the public, he added: "* * * both the Congress and the Commissioners of the District of Columbia have concluded that the Capital Transit Co., beginning several years ago and continuing up to the present time, has failed to measure up to its responsibilities in the District."

It is this mood and frustration that the House of Representatives needs to remember in appraising the bill now before it to restore the franchise to the Capital Transit Co. This bill not only would renew the franchise virtually on the company's terms; it also would hand the company on a silver platter vast tax concessions and immunity from all but cursory regulation.

Has anything in the past 8½ months given indication that the company has developed a more enlightened labor relations policy or a heightened sense of responsibility to the community? It has not. Has anything changed the attitude of Louis E. Wolfson from his expression last summer that the "Commissioners represent the public, the union represents labor, and the board of directors, of which I am chairman, represents the stockholders" (thus totally ignoring the responsibility of a public utility for public service)? There is no evidence of it.

Admittedly the Senate bill, which instead of restoring the franchise would create an interim public authority to operate transit in Washington, does not provide any easy solutions. But the situation must be judged on the alternative available. Would the public interest be served by rewarding the irresponsibility of the Capital Transit Co., thus jumping from the frying pan back into the fire from which Congress rescued the community last summer? Such a weak-kneed "solution" would be monstrous. We hope the House will recall the sore feet and inflamed tempers of last summer, and the reasons for them, when it votes this week.

The Truth About Taxes

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to put into the RECORD The Truth About Taxes. The records are available for anyone to see and the publication of these records, Mr. Speaker, certainly should stop some of the wild remarks and statements that are being made relative to the tax program which we all admit is high. The record will show that unnecessary expenditures are being cut and that for the first time in many years, we have a balanced budget. We hope, with the continuation of these efficiencies that at an early date we will again be able to cut taxes and reduce our national debt. A reduction in taxes means an increase in buying power or an increase in wages for all.

I insert, herewith, an article entitled "The Truth About Taxes":

Democrats parroting the Truman fabrication that, of the "$7 billion tax cut * * * put across in 1953," by the Republicans, "corporations and people with incomes over $5,000 a year got 91 percent of the cut and all the millions of taxpayers with incomes of less than $5,000 a year got only 9 percent of the cut," should be corrected as follows:

1. Of the total $7½ billion annual tax cut made possible by Republicans in 1954, 62 percent of the cuts went to individuals, only 38 percent to corporations.

2. Not 9 percent, but 23 percent went to people in the under $5,000 category.

3. Most people got a 10–11 percent income tax cut; but for those in the highest brackets the cuts scaled downward to only 1 percent at the top.

4. The under $5,000 group received more than its fair share of the income tax cuts, because the people who paid 33 percent of the total income taxes collected under the Democrats got 37 percent of the tax reductions made possible by the Republicans in 1954.

(The above figures are official Treasury Department computations.)

5. The real "high tax party" is the Democrat Party, because 14 of the 15 income tax increases (but only 3 of the 10 reductions) since 1913 were enacted by Democrats.

LITTLE FELLOW GETS BREAK

6. The average $4,000 family man with wife and two children) in 1932 paid only $12 in Federal income taxes—but he paid $266 in 1952—22 times as much. Republicans made it possible to give the $4,000 man a 10 percent income tax cut. At the same time, the millionaire was given only a 1 percent cut in the 1954 Republican tax reduction, proving that, proportionately, the little fellow received a much bigger tax break than the big fellow.

7. The Roosevelt-Truman administrations in 20 years increased the Federal tax burden on everyone by 31 times—from $2 billion to $63 billion. Hidden taxes that were unknown in 1932 mushroomed under the Democrats to the point where by 1950 they exceeded $760 a year per family.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. WATTS. Mr. Speaker, the death of ALBEN BARKLEY comes as a profound shock to all of us. It seems that in His plan of things the Almighty has provided that each generation will have an outstanding leader in a particular chosen field—an individual endowed with talent so extraordinary that he stands above comparison. It seems that this individual is especially touched by the hands of the Creator to be the example and the goal toward which all who would succeed must steer their course. Such a man

was ALBEN BARKLEY. But, Mr. Speaker, ALBEN BARKLEY was an exception to this exceptional rule. ALBEN BARKLEY excelled in statesmanship. He was possessed of an overabundance of those traits of character and human qualities from which flow the true spirit of Christianity and reflect the personification of gentlemanly principles.

ALBEN BARKLEY died while pronouncing the rule by which he lived. Measured by material wealth, his origin was laid deeply in the lower echelons. Measured by those intangibles of spiritual and character-building qualities, his origin was unsurpassed in its richness. He came from pioneer stock of the early Kentuckians. His boyhood and his early manhood were cloaked in an environment requiring long days of hard and arduous toil for mere survival. Throughout the whole of this, Mr. Speaker, the light of ALBEN BARKLEY'S exceptional qualities shone with the brilliance of the sun. The pinnacle that he achieved was willed to him by the people whom he served and whom he loved in an effort to evidence their respect, their esteem, and their affection for him.

Mr. Speaker, this Nation has suffered a terrific loss. Because of his vast experience in Government, his firsthand knowledge of international and domestic problems, his impeccable character and his love of country, the Nation was afforded a guarantor of its security and a defender of its freedoms that will be difficult to replace.

Yes, Mr. Speaker, ALBEN BARKLEY was great, but he was humble. Truly, today he must be "a servant in the house of the Lord."

I join with a saddened and mournful Nation in extending heartfelt sympathy to the members of his family.

"If TVA Is To Be Responsible to Congress, It Follows That Congress Must Be Responsible to TVA," St. Louis Post-Dispatch

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. EVINS. Mr. Speaker, we hear many appeals that the TVA should be kept responsible to Congress. Those who know of the achievements of TVA know and realize that this agency of the Government reports to Congress, seeks its annual appropriation from the Congress and is responsive and responsible to Congress in its every demand. On the other hand, Congress has a responsibility with respect to this great agency of the Government. Responsibility is not a one-way street.

There are those who would deny to TVA a loan of any further appropriated funds and also deny to this agency the right to use its accumulated corporate funds. The St. Louis Post-Dispatch in a recent story, has well pointed out as we hear so many cries of responsibility that the Congress has a responibility toward a very coniderable part of our country which is solely dependent upon a Government agency for its source of electric power supply.

A summary of the St. Louis Post-Dispatch article is carried in a recent editorial in the Nashville Tennessean entitled "A Two-Way Street." This timely editorial is deserving of wide consideration, and I therefore ask, Mr. Speaker, unanimous consent that this editorial be reproduced in the RECORD for the benefit of all Members of the Congress.

The editorial follows:

With Congress deadlocked over proposals to permit the TVA to finance its own plant expansion either out of its power revenues or by issuing bonds, much is heard these days about responsibility—of a sort.

The TVA, it is said, should be kept "responsible to Congress," by which it is meant that the agency should not be authorized to undertake any new construction—regardless of how it is financed—without the express approval of Congress.

Among those holding this view is one of the stanch newspaper friends of the TVA, the St. Louis Post-Dispatch. But the Post-Dispatch imparts to responsibility a considerably broader meaning than many of the Members of Congress do.

"If TVA is to be responsible to Congress," says the newspaper, "it follows that Congress must be responsible to TVA. Responsibility is not a one-way street.

"From the beginning of the Eisenhower administration, both Congress and the executive department have displayed little sense of their responsibility to TVA or TVA's responsibility toward the very considerable part of our country which it is solely responsible for supplying with electric power."

How true that is. And how ironic, when it is noted that defense installations of the Government itself are now consuming more than half of all the power produced by the TVA.

Despite repeated warnings of an inevitable power shortage in the TVA area, both the administration and the Congress have defaulted on their responsibility as though the TVA could build new generating units without either appropriations or some kind of self-financing plan.

Unless and until Congress is willing to fulfill its responsibility to the TVA, its talk of the TVA's responsibility to Congress thus will have a decidedly hollow ring.

Two Appraisals of Foreign Policy

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. QUIGLEY. Mr. Speaker, on the afternoon of April 21 the Honorable Adlai Stevenson addressed the American Society of Newspaper Editors, meeting in Washington, on the subject of our foreign policy. That same evening President Eisenhower addressed the same audience and chose to discuss the same subject.

The two speeches were analyzed editorially by the St. Louis Post-Dispatch in issues of April 22 and April 23. The analyses of the Post-Dispatch are extremely pertinent; and under leave to revise and extend my remarks, I include these two editorials:

[From the St. Louis Post-Dispatch of April 22, 1956]

MR. STEVENSON'S APPRAISAL

Adlai E. Stevenson made a sober and sobering criticism of American foreign policy in his address to the American Society of Newspaper Editors Saturday.

It was an impressive, eloquent, responsible, and constructive appraisal. There was no partisanship in it. On the whole, it was fair to the Eisenhower administration.

Mr. Stevenson would have been more completely fair, in our judgment, had he given President Eisenhower credit for relieving the anxiety of the whole world when he made clear, through his conduct at the Geneva Conference, that the United States stands for peace. But it is true that the initiative the President held in his hands at that moment has not been followed up.

It is true that we, the American people, have been drifting steadily downward in world opinion; that we are all too often regarded as seeking military solutions to the exclusion of others; that our policy has fallen into a deadly sterility for want of fresh idea; and that unless we move rapidly to regain the initiative in the new era of world affairs now upon us, our leadership will atrophy dangerously in the days ahead.

These are facts which anybody not misled by Secretary Dulles' incantations can recognize. Neither President Eisenhower nor Mr. Dulles, let it be said, wanted a decline of American influence and prestige to come about. But it is not intentions that are at stake. Results are what count. It is essential that the United States recapure the political and moral leadership of the world which it has come so dangerously close to letting slip away.

Mr. Stevenson offers three thoughtful proposals for beginning that task, and all of them deserve the most earnest consideration.

Like Atomic Energy Commissioner Thomas E. Murray, he would explore the possibility of abandoning further H-bomb tests as a first step toward disarmament. He would channel more of our economic aid through the United Nations in an effort to create a great and truly international development fund for the aid of former colonial lands. And, third, he would change the spirit in which we conduct foreign policy—replace armed power as the symbol of our policy, end the sloganeering, bluff and bluster, cultivate a "decent respect for the opinions of others," and in general behave as the leader of a coalition rather than a big power dragging others to the brink.

As Mr. Stevenson said, what all this adds up to in essence is carrying out the program which President Eisenhower laid before the same society of editors just 3 years ago. The prospectus was brilliant. The blueprints were fine. But what has actually happened to the American position since that speech does not match the preview. It is high time that our direction be reversed.

[From the St. Louis Post-Dispatch of April 23, 1956]

SO FAR AS IT WENT

President Eisenhower's address at the annual dinner of the American Society of Newspaper Editors in Washington Saturday night was both reassuring and distinctly disappointing.

The address was reassuring because it summarized the basic elements of the President's peaceful approach to current international problems. It was disappointing because the speech was described in advance as a major foreign policy address and in

content and delivery did not measure up to that high billing.

On the plus side was President Eisenhower's statement of three guidelines, as he called them. These were:

First, our participation in the maintenance of a collective shield against aggression to allow the free peoples to seek their goals in safety.

Second, our cooperation in the partnership of the free community wherein the conditions of freedom will flourish.

Third, our striving by peaceful means to induce the Soviet bloc to correct injustices and pursue peaceful purposes with other nations.

In rather more specific terms, the President also used the occasion to plead for long-term foreign aid on the grounds that recipients of our economic assistance could not plan adequately if all commitments were on a year-to-year basis.

Thus so far as it went the President's address to the editors and to the country on television and radio was hopeful and in the right direction.

But the anticipation was for a truly important foreign policy address such as the moving statement of pacific plans just 3 years ago before the same audience, such as the President's historic atomic energy address to the U. N. or his appeal for peace at Geneva last summer. Measured by these previous Eisenhower efforts the address fell far short of expectations.

Actually, through some mysterious division of his subject matter by the White House staff, the President's more significant remarks were made informally to the editors and their guests after the close of the network address. He appeared to be relieved that the formal event was over and spoke with relatively more enthusiasm off-the-cuff.

But even then President Eisenhower showed little concern with the obviously dangerous drift in world affairs. Instead he listed Vietnam, Trieste, Iran, the Suez and other parts of the world as evidence that things are going better. He had little to say about the Middle East and he took no note of the fact that just that morning a substantial group of the editors had voted 2 to 1 that the United States is losing the cold war in the uncommitted areas of the world.

Following the Dulles line, the President accounted for the change in Kremlin policy as evidence that the Soviet leaders had come to view their course as unsuccessful. "Any time your policy is winning," he said, "you don't change."

Yet Mr. Eisenhower himself proposed the creation of "rotating advisory board" of private citizens to assist the Government in the formulation and development of policies, including apparently foreign policy. Using the President's own view of the Russian change, it may be wondered why, if the Eisenhower-Dulles conduct of foreign affairs is wholly successful, does the administration need outside help?

This idea of a board of detached consultants has merit but it would have had far more merit 3 years ago—after a presidential election, not a few months in advance of the next election.

Perhaps the President felt he might embarrass the negotiations now in process between the British and the Russians if he had been more positive or if he announced some new course or challenging departure in present policy. If that was in his mind then he might well have referred hopefully to the London meetings and given them encouragement from Washington.

What the Eisenhower foreign policy needs most of all is implementation in Congress and particularly among the Republicans in Congress.

Only last Thursday an important test—on the Bricker rider to the International Labor Organization appropriation—only eight Republican Senators voted to uphold the President. Thirty-five Republican Senators voted against him. Just two more Republican votes would have enabled the Democrats to carry the day for Dwight D. Eisenhower.

And so the President's address, though largely general, was good so far as it went. Yet, for the reasons indicated above, it disappointed his audience and doubtless the country as well. Meantime the White House liaison to the Senate had better get busy. When only eight Republican Senators back an Eisenhower stand for foreign affairs something more than words is urgently required.

Miss Margaret Moul

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. QUIGLEY. Mr. Speaker, as her Representative in Congress, I am pleased to invite the attention of my colleagues to the accomplishments of a lovely young Adams Countian, Miss Margaret Moul, of East Berlin.

This talented young woman, who will present her graduation recital at the Juilliard School of Music on Thursday evening, May 3, has won a Fulbright scholarship award and will continue her musical studies in the fall at the Vienna Academy of Music.

I congratulate Miss Moul on her accomplishments to date, and wish her continued success in her chosen career.

As a part of my remarks, I include a news story from the Gettysburg Times concerning Miss Moul:

COUNTIAN WINS SCHOLARSHIP TO STUDY ABROAD

Miss Margaret Moul, of East Berlin, dramatic soprano, has been granted a scholarship by the United States Government under the Fulbright Act to study at the Academy of Music in Vienna, Austria.

Miss Moul submitted a recording of her voice to the National Selection Committee last October along with her application and an essay on her purpose in studying abroad. Her recording was one of many chosen and she was invited to sing an audition for the committee on January 4. Three weeks later she was informed that her application had received the endorsement of the National Selection Committee. This meant that vocally and scholastically she had been found worthy of a Fulbright scholarship; however, the final decision would be made by the Board of Foreign Scholarships in Washington, D. C.

STUDIED IN COUNTY

After a character and background investigation by the FBI her recording was sent to the European school of her choice for its opinion and consideration. She has been accepted as a graduate student at the academy and will major in opera. Miss Moul will be coached in lieder and roles with Herr Ferdinand Grossman, director of the famous Vienna Academy Choir.

The musical education of Miss Margaret Moul began at the age of 5, when she started taking piano lessons. Like so many children, these studies were dropped, and, although she furthered her pianist talents on her own intermittently, she was not encouraged to develop them toward a professional career until she began to study voice with Mildred Rogers Dunstan, of New Oxford, a contralto, who had in prior years sung with such leading companies as the Boston, San Francisco, Chicago, Philadelphia, and St. Louis municipal operas. Mrs. Dunstan acquired most of her training abroad and was a protege of Edward Johnson, former general manager of the Metropolitan Opera Co. Miss Moul's vocal progress under her guidance resulted in her winning the Pennsylvania State championship in the alto-solo division of the Forensic and Music League contest while in her senior year, 1947, at the high school in her hometown of East Berlin.

After 2 years of academic study at Gettysburg College, Miss Moul was accepted as a private voice pupil by Mme. Marion Szekely Freschl, then of Philadelphia, who is on the voice faculty of the Juilliard School of Music in New York City. During her 9 months of study in Philadelphia with Madame Freschl, she took classes in theory and studied piano at the Philadelphia Musical Academy. She also coached opera roles and studied techniques of acting with Mme. Rose Landver, of the Catherine Long School and Hunter College, New York City. Subsequently she auditioned and was accepted as a full-time scholarship student at the Juilliard School of Music, where she will complete her studies next month, when she will graduate with a bachelor of science degree.

GIVES RECITAL MAY 3

When Miss Moul auditioned for entrance and scholarship to the school in the spring of 1952, she was heard by the director of the opera theater, Frederick Cohen, who accepted her as a member of the Juilliard Opera Theater, which is a rarity for a first-year student. On March 7 of this year Miss Moul sang the lead in Ernst Toch's opera, The Princess and the Pea. She scored a tremendous success in the role of the Queen, as was evidenced by the compliments she received from the teachers in the school with whom she has studied.

During these years of study at Juilliard, Miss Moul has been in demand to sing recitals and oratorios. She has been invited to sing with the York Symphony Orchestra next season. However, because of her being granted a Fulbright scholarship, this concert will be postponed until her return from study in Europe.

On May 3 at 8:15 p. m., Miss Moul will present her graduation recital in the recital hall of the Juilliard School of Music. After her graduation, she plans to spend the summer with her family in East Berlin and prepare for departure for Vienna in September.

The Nickel Situation in the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, and complying with his request, I include a letter I received from the Honorable Sinclair Weeks, Secretary of Commerce. On several occasions I have placed information in the RECORD concerning the complex and aggravating problems respecting the nickel situation in the United States. The following letter of April 30, 1956, from Secretary Weeks explains in considerable detail some of the facets of the complex subject from his point of view:

THE SECRETARY OF COMMERCE,
Washington, April 30, 1956.

The Honorable JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. MCCORMACK: In response to your letter of April 10, I am glad to have the opportunity to comment on Mr. Willard F. Rockwell's letters to you of March 23 and April 2 regarding the current situation on the supply and distribution of nickel. Since we are receiving many requests for information on this subject, I hope you will publish this letter in the CONGRESSIONAL RECORD. I shall endeavor to explain the nickel situation in detail, and enumerate the actions the executive branch has taken and is taking to meet the problems arising out of an insufficient national supply of nickel to meet all of our domestic requirements. A complete disclosure of all pertinent facts, however, is somewhat limited by security considerations applying to the national strategic stockpile and consumption of nickel for defense purposes.

Government allocation of nickel in the civilian market was discontinued in November 1953. Since the passage of the Defense Production Act in 1950, priorities have been in effect on the delivery of nickel for military and atomic-energy production and construction programs. Suppliers of nickel are required to fulfill all defense-rated orders in accordance with existing regulations. The balance of the supply is distributed, by nickel producers, to consumers for nondefense purposes.

The fundamental problem that both Government and industry face with respect to nickel is very simply stated. There is not enough nickel available to the United States market to satisfy actual total demand for defense and nondefense purposes. The demand for nickel has exceeded the supply since 1951. Under authorizations granted in the Defense Production Act, the Government has taken direct action to expand supply from several sources, including the Government-owned nickel-producing facilities in Cuba. This Government-sponsored and private industry expansion of supply has not kept pace with the increases in requirements for military production purposes, the needs of the national strategic stockpile, and the supplying of the requirements of a growing industrial economy. To offset the increase in military requirements, which otherwise would have further reduced the supply available for nondefense uses, the Government, early in 1955, authorized the diversions of deliveries from the national stockpile for industrial consumption. Such diversions total 24.3 million pounds in 1955; 12.3 million and 19 million pounds for the first and second quarters of 1956, respectively. With these diversions, total domestic consumption of nickel for all purposes during 1955 amounted to 216 million pounds, including 6 million pounds from consumers' inventories. On the basis of current stockpile diversions, it is estimated that new nickel availability during 1956 will approximate 260 million pounds. Due to the uncertainty of the defense requirements for the full year 1956, we cannot predict if the increased total available new nickel during 1956 over 1955 will actually benefit consumers of nickel for nondefense purposes. It is, indeed, fortunate that the Government undertook several years ago to underwrite the expansion of production of nickel.

To achieve an expansion of supply, it was necessary for the Government to either pay or guarantee a price, for delivery to the Government, that would make it economically feasible to utilize low-grade ores and maintain high-cost mining operations. In the case of NICARO, the Government invested considerable funds in the expansion of production and processing facilities. The initial deferments from stockpile deliveries, including nickel oxide from NICARO, were sold to industry at established prices, later diversions involved premium price nickel. The civilian economy is currently paying 3 prices for available nickel, a so-called market price of about 60½ cents for sinter (nickel oxide); 64½ cents for electro or cathode (metallic) nickel; a price ranging from $1 to $1.30 for Government set-aside supplies (diverted from scheduled deliveries to the stockpile); and $2.50 to $3 a pound for open-market supplies. Most of the latter is composed of nickel recovered from nickel scrap and imports.

With reference to Mr. Rockwell's complaint that his April allotment was cut 15 percent, he fails to indicate that this refers only to his market price nickel. He will, in fact, receive a quantity of the Government set-aside premium price nickel which will make up for approximately the 15 percent deficit about which he complains. We may add that the amount of market price nickel available each month is becoming progressively less due to the continually increasing defense requirements which consume only market price nickel.

Mr. Rockwell refers extensively to the so-called gray market in nickel and indicates that this market is supplied by those who procure nickel for defense purposes, and sell it in the open market, and consumers who are able to buy in excess of their needs for nondefense purposes and place the excess in the open market. As to the first alleged source of supply in the open market, I want to describe the extent to which we have maintained surveillance of the validity of defense-rated orders.

The defense materials system, under which priority deliveries of nickel for defense purposes are regulated, is administered by this Department. I can assure you that we have been continually checking and investigating the validity of the rated orders for nickel placed upon nickel suppliers. We have constantly taken measures designed to prevent the illegal or unwarranted diversion or escape of material purchased on military ratings. In March and June of 1954 we amended BDSA Regulation 2 to require purchasers of rated nickel who found that it was no longer needed to fulfill military requirements to hold such nickel for other military uses or return it for the benefit of the nondefense segment of the economy. Significant quantities were salvaged through these amendments.

Individual cases have been investigated as indications of violations have come to our attention and suitable action has been taken, in some cases by reference to the Department of Justice for criminal prosecution. In November of 1955 letters (copy enclosed) were addressed to all of the principal suppliers of the plating industry calling pointed attention to the strict requirements of the priority rating system and urging their full cooperation. The result of this action was gratifying. On the heels of this action surveys were initiated of all purchases of rated nickel in all areas of consumption. By comparison of the rated purchases reported by nickel suppliers with the defense needs of their customers, it was possible to determine with reasonable accuracy where unauthorized or excessive purchasing was taking place. Where this was found, directives were issued to the suppliers prohibiting their acceptance on a priority basis of further rated orders from designated customers and requiring that future orders be referred to BDSA for validation. While it is impossible to state precisely how much nickel was saved by means of this procedure, we estimate that 50,000 to 100,000 pounds a month may have been so conserved. This is in the plating area alone. We have had occasion to investigate 46 cases in areas other than plating of which 10 remain under study. Action will be taken in these cases if warranted.

Recently, after careful study and with the full concurrence and cooperation of the Office of Defense Mobilization, Department of Defense, and Atomic Energy Commission, directives were issued to all further converters and primary producers of steel controlled materials, including all nickel-bearing steels, requiring identification of further converters' orders for military use with the special symbol "FC." While this was not strictly a compliance action, we believe it will have important consequences in preventing slippage on nickel-bearing steel obtained by further converters under their specially authorized set-asides for defense purposes.

We believe that the recital of the foregoing measures should demonstrate that there has been no lack of energy in our compliance and enforcement program. We believe we have reduced any such illegal diversion to an absolute minimum. It is our estimate that the quantity of nickel moving in violation of our DMS regulations amounts to less than one-half of 1 percent of the total nickel available to the industrial economy. As to sale of excess nickel by purchasers for nondefense uses, it may well be that this takes place. It certainly is not illegal for them to do so. However, the nickel suppliers endeavor to keep very close check, so far as this is possible, on their customers' requirements and use of nickel products. It certainly is not to the advantage of the suppliers for their customers to be reselling nickel at premium prices and I believe that these suppliers would make every effort not to supply their customers who practice such resale tactics. As a matter of fact, all of the complaints have to do with an insufficiency of supply to consumers.

Mr. Rockwell states that the management of the company which supplies him with alloy steel, which he says is the fourth largest in the country, has informed him that 75 percent of their requirements is purchased in the market at premium prices. Through a review of the order and shipping records of practically all of the alloy steel producers, we have not been able to confirm this statement. We find it very difficult to believe that what is evidently a large alloy steel producer would find it necessary to purchase this proportion of their nickel requirements at premium prices. As heretofore explained, however, there is a fair supply of nickel available from imports and from secondary sources such as nickel and nickel-alloy scrap. Nickel steel producers not only use their own scrap but purchase scrap from either dealers or the customers to whom they supply nickel steel products. Obviously some portion of the nickel consumed by steel mills in the manufacture of nickel-bearing steels may be at prices commensurate with the open quotations for imports and nickel obtained from secondary sources.

As to the prices paid for nickel diverted from shipment to the stockpile, I should say that the domestic industry is indeed fortunate to be able to purchase nickel at these prices. If the Government had not undertaken an expansion program, which I have mentioned heretofore, there would not have been this nickel available at any price. Generally the lowest price nickel is being consumed for defense purposes. This is of direct benefit to the taxpayer since it reduces the cost of military procurement. I might add that I believe it is commendable that the producers of nickel have maintained a stable price situation irrespective of the demand which would indicate that much higher prices could be obtained. I would call your attention and that of Mr. Rockwell to what has happened pricewise with respect to copper in recent months.

Mr. Rockwell raises a question as to why his company was not consulted in connection with our investigations of the distribution of nickel. It was not necessary to solicit information from all users of nickel since the information needed was available in the of-

fices of the producers and suppliers. In our investigation we were concerned with two basic matters: First, the validity of rated defense orders for nickel; and, second, the method by which producers and suppliers distributed nickel to consumers for nondefense purposes after the defense requirements had been met. We satisfied ourselves that the suppliers were keeping very close track of the needs of all of their customers and so far as possible adjusting their sales to meet changing conditions in the affairs of their individual customers.

I will not make any specific comment or express an opinion on Mr. Rockwell's observations with regard to the national strategic stockpile. I am a member of the Defense Mobilization Board which advises the Director of the Office of Defense Mobilization who has direct authority from the President to establish and maintain the strategic stockpile. I and other members of the Defense Mobilization Board are in accord with the current stockpile program.

In his letter to you Mr. Rockwell states, "We have absolute proof that some steel companies have sold nickel which they received in excess of their requirements for military orders." We are not sure just what Mr. Rockwell means by this statement. If a steel company was producing nickel-bearing steel only for military uses and so rated their orders, then any nickel sold in excess of their needs would be a violation of law. If this is the situation for which Mr. Rockwell has proof, it is his duty as a citizen to come forward with any information which would aid us in eliminating such illegal practices. We are going to request Mr. Rockwell to furnish us with information to support his statement.

If Mr. Rockwell refers to situations in which a steel company produces nickel-bearing steel for both defense and nondefense purposes, obviously the company would receive a total amount of nickel for both purposes in excess of its requirements for defense-rated orders. If such a company should have an excess of nickel for nondefense purposes, there is no law or regulation which prohibits the company from selling such nickel to other users. However, we seriously doubt that any nickel-steel producer is indulging in this practice. The requirements for nickel for military purposes have been on an upward trend for many months. These requirements reached a peak for the month of April this year. We do not expect a reduction for the next few months. In fact there may be an increase. If there is a substantial increase in the military requirements, it could result in a further reduction of the availability of nickel for nondefense purposes.

I apologize for the length of this letter but I felt that in view of the general interest of many industries in this subject I should try to explain the situation as fully as possible. Having been associated in the past with manufacturing companies which used nickel, I am fully aware of the problems faced by manufacturers in trying to conduct their operations in the face of an insufficient supply of a raw material. We in the executive branch have tried conscientiously to take every action which would benefit industry and at the same time not jeopardize our defense production and our long-run national security. It has been advocated by some that the Government should reimpose controls on the use and distribution of nickel for all purposes. I should be very reluctant indeed to undertake this since Government controls would not increase the total supply of nickel, and the Government would be placed in the position of interfering directly in the private affairs of a great many business firms. Furthermore, with Government controls, it would probably be necessary to restrict or prohibit the use of nickel for decorative or nonfunctional purposes. If this should be the case, the Government would be making the decision as to which private business establishments were more important than others to the national welfare, which is a function of Government quite contrary to our basic concepts of a private enterprise economy. Those who advocate Government controls in this particular case should examine their own particular situation since they might find that under Government controls they would not be permitted to consume nickel.

If there is any further information on this subject that you desire, please let me know.

Sincerely yours,

SINCLAIR WEEKS,
Secretary of Commerce.

DEPARTMENT OF COMMERCE,
BUSINESS AND DEFENSE
SERVICES ADMINISTRATION,
Washington, November 21, 1955.

GENTLEMEN: You have directed certain questions to this office concerning the acceptance by your company of orders for nickel which purport to carry a priority rating. In order to assist you in determining what orders may properly be regarded by you as entitled to priority we are advising you as follows:

The basic rules of the priorities system are set forth in BDSA (formerly NPA), regulation 2. Additional regulations relating to the use of priority ratings are DMS regulations 1 and 2. Marked copies of these regulations are enclosed. Under unusual circumstances ratings may be placed under certain other regulations but for all practical purposes you may expect that any lawful ratings will require certification under one of the three regulations designated above.

You will note that in addition to the requirement of inclusion of the appropriate program identification symbol there is a requirement that every rated order be certified and signed by the customer. The certification must be in the form "Certified under [here insert appropriate regulation]." Orders not carrying this formula are of questionable validity as rated orders. It is a futher requirement that rated orders specify a delivery date.

We understand that some of your customers have sought to identify their orders as rated orders without complying with the formalities required by the regulations. In our opinion this is an irregular practice and orders in this form should not be treated as entitled to priority. We point out that orders not properly rated are junior to rated orders. Properly rated orders must be filled first, irrespective of the degee of shortage.

We should like also to draw your attention to section 18 of BDSA (formerly NPA), regulation 2. Under this section, if you know or have reason to believe that the material which you are delivering will be accepted, redelivered, held, or used in volation of any regulation of this agency, you are neither required nor authorized to deliver on such order. It has come to our attention that in certain cases orders have been placed by customers who may, to your knowledge, not have facilities adequate to process or use the materials ordered by them on priority ratings. We regard this as a suspicious circumstance and as one which justifies withholding delivery until the validity of the purported rating has been established to your satisfaction or to that of this agency.

An additional circumstance which gives rise to question as to the authenticity of a rated order is purported certification under a nonexistent regulation such as CMP Regs. 1, 2 and 3. These regulations have long since been revoked and have not been in effect since the controlled materials plan was superseded by the Defense Materials System in 1953. Another suspicious circumstance is the use of nonexistent program identification symbols. The only symbols currently in effect are A through E followed by a single digit.

Because of the critical shortage of nickel an incentive exists to resort to illegal practices and subterfuges to obtain it. Nickel obtained by these practices at normal market prices can be resold in the "black" or "gray" market at exorbitant figures. The priorities accorded to military and AEC orders under the regulations of this agency are to all intents and purposes the equivalent of currency and must be safeguarded against counterfeiting or falsification just as currency is safeguarded. While experience has demonstrated that we can largely rely upon the good faith and integrity of the business public to assist us in protecting the priorities system against raids we are nevertheless prepared when necessary to take appropriate measures against willful violators.

You are in a position to make a significant contribution to the welfare of the Nation and of your industry by assisting in the prevention of violations. We urge you to insist upon strict observance on the part of your customers with the requirements of the system and to refrain from accepting or filling, on a priority basis, "rated" orders which are either irregular in form or of such doubtful validity as to create a reasonable doubt of the customer's authority to employ the rating. You are further requested to communicate the contents of this letter to all personnel in your organization who are charged with the soliciting of orders from customers and the processing of orders received from customers so that they may be fully apprised of your policy to insist upon adherence to the requirements of law.

Sincerely yours,

JONATHAN B. RINTELS,
Enforcement Attorney for Business and Defense Services Administration.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. BOGGS. Mr. Speaker, in the market place of public affairs good men and great men have influence far beyond their own knowledge. Most of the time they themselves are unaware of their own impact. Such a man died on Monday last, ALBEN W. BARKLEY.

I saw a great deal of Senator BARKLEY in the last 10 days of his life. For him I am certain that they were happy days as, I believe, were most of his days. Beginning on Saturday, April 21, I saw him and listened to him at the Democratic testimonial dinner for Woodrow Wilson. There he delivered, in his usual magnificent style, a moving tribute to a great American who had undoubtedly greatly influenced ALBEN W. BARKLEY himself.

On the following Monday I went to a luncheon in the Senate where he gave a report on the approaching meeting of the Interparliamentary Union in Bangkok, Thailand. I marvelled at his knowledge of world affairs, his approach to the problems of other peoples and other governments, and his sustaining interest in public affairs.

And then on Wednesday night of last week at the annual Press Club party for

the Members of the Congress he stole the show—his wit, his humor, his humility, his understanding brought him a standing ovation from members of the press and from his colleagues of both parties in both branches of the Congress.

On Saturday last, April 28, the National Broadcasting Co. was celebrating the 10th anniversary of its famous program, Meet the Press. The principal speaker was Senator BARKLEY. His attendance at that program was his last public appearance in the Capitol of the country that he loved and served so well. On that night he spoke of our basic freedoms of press and our right to information. He emphasized the importance of an informed electorate in a democracy. He told how the dictators, either of the left or of the right, invariably suppress information. And on that night he did something that I had seldom heard him do—he reminisced. Normally he looked to the future in discussing the problems of the present. But he talked about his years in Congress dating back to 1913—years of service which covered the rise to greatness of the United States of America.

And on Monday, fully in character, talking to young Americans he died saying, "I would rather be a servant in the house of the Lord than sit in the seat of the mighty." He wrote his own magnificent epitaph.

Mr. Speaker, this man shall live in the hearts of all Americans. His life portrayed the man—his sincerity of purpose, his humility—his love of party, his paramount love of country.

I believe those of us who serve in public office appreciate more than others sincerity of purpose. Unfortunately there are some who come to public office who, in pursuit of the senational, the headlines, and the acclaim of the moment, sacrifice sincerity and objectivity. Their colleagues get to know them and they cease to have any influence.

Yes, Mr. Speaker, Senator BARKLEY was the epitome of the American ideal of public service. He understood the greatness of America and the goodness of America, and because of him our country is stronger and better and happier.

The Bradley Report of the President's Commission on Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the National Tribune—the Stars and Stripes of Thursday, May 3, 1956, on the Bradley report of the President's Commission on Veterans' Pensions to the House Committee on Veterans' Affairs.

The article is as follows:

ABERNATHY BITTER OVER VETS' REPORT—SUGGESTS CONGRESS WILL NOT ACCEPT THE BRADLEY FINDINGS—QUESTIONS PRESIDENT'S MOTIVE

Immediately after Gen. Omar N. Bradley's presentation of the report of the President's Commission on Veterans' Pensions to the House Committee on Veterans' Affairs last week, John V. Abernathy, national commander of the Pacific War Veterans of America released the following statement to the National Tribune:

"The Bradley Commission's major recommendations were fully expected. Truly they embrace and exemplify a unique revolutionary, socialistic, and pauperistic philosophy under development for the past three decades by a self-perpetuating clique of Federal bureaucrats with the aid of sundry sociologists, psychologists, theorists, and assorted eggheads."

RECALLS ECONOMY ACT

"The report is a brazen attempt to wrest from the Congress the traditional overall prerogative of determining the national policy to be followed in treating with veterans and their survivors—a 180-year-old prerogative the Congress will never relinquish. Beginning about 100 years ago, the executive department has been generally hostile toward veterans' welfare. The most notable examples are President Cleveland's veto of the Civil War Service Pension Act; President Coolidge's veto of the World War I Soldiers' Bonus Act, and bills for payment of that bonus vetoed by Presidents Hoover and Franklin D. Roosevelt. In 1933, however, the executive department gained the upper hand and persuaded the Congress to accept the infamous "Economy Act." But that act was short-lived and, for the most part, the Congress restored the veterans and their survivors to their rightful place in our society. Having experienced the ramifications of that act, the Congress will never again impose such undeserved penalties upon our veteran population, regardless of the prestige of a popular President who may himself be a distinguished war veteran.

"Advocates of the Bradley report say that veterans' welfare is in no wise connected with our foreign aid programs. Foreign aid appropriations, we are told, are used to promote human welfare among foreigners in foreign countries. If there is no connection with the welfare of our own veterans, certainly there is a relation. The question, purely and simply, is, "Do we want to provide for the welfare of our own veteran citizens, or do we want to deprive them while helping foreigners, many of whom bore arms against us in several major wars?"

"The antiveteran crowd screams that our present policy toward veterans will eventually break the Treasury, but they will not agree that foreign aid is having any effect on the mounting public debt. Billions for foreigners, but pauperism for American war veterans."

CATCH PHRASES EMPTY

"In justification of the report, we are told that military service is an obligation of citizenship. That applies to every citizen; and until every citizen performs military service that catch phrase is as empty as the Confederate treasury. It just so happens that but a small percent of the total population has seen war service in our wars since the War of the Revolution, and a grateful Union has always provided for those "who shall have borne the battle and for his widow and his orphan," a truth which the Republicans might well repeat at each Lincoln Day dinner.

"The Commission subtly recommends that if any reductions or terminations in compensation and pensions are made by the Congress, they be deferred for 1 year. Could there be politics in that recommendation? Could it be that the Administration is seeking to prevent the report from being a political issue in a presidential election year? It is a political trap at which the experienced Member of Congress will take a long look before he nibbles at the trigger."

"Where does the President stand?", the Abernathy statement concludes. "The Bradley report is a report to the President. Has the President approved it? Are we to infer that General Bradley's presentation of the report on behalf of the Commission to a committee of the Congress assures us of Presidential approval? Let the President speak up. Is he for or against us? And, by the way, who pushed the President into this leaky boat?"

Iran Still Bars Baha'i Worship

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the religious ban imposed last May and still in effect against Baha'i worship in Iran, as evidenced by the following article in the New York Times of Sunday, April 29. It is certainly our hope that true freedom of worship, which is a foremost American principle, can soon be brought into being by Iran:

IRAN STILL BARS BAHA'I WORSHIP—MEMBERS ARE NOT ASKING FOR LIFTING OF BAN FOR FEAR OF INCURRING NEW TROUBLE

(By Sam Pope Brewer)

TEHERAN, IRAN, April 21.—Iran's largest religious minority, the Baha'i sect, still is outlawed and cannot hold services.

It was suppressed last May by order of the Minister of the Interior, Assadullah Alam, although the pressure of world opinion has kept Parliament from formally acting against it.

More than 500,000 Iranians thus are barred from publicly practicing their religion. Property worth millions of dollars, principally in temples, is in Government custody on the plea of protecting it against possible damage.

The 165-foot-high dome of the main temple, known as the Haziratulghodes, has been stripped of the glazed tile covering that ornamented it. Now it is covered with sheets of tin, and the building is used as the office of the Military Governor of Teheran.

Members of the sect are wary of discussing the situation. They are afraid they will bring new trouble on themselves. One of them said today: "Things are quiet at present, but we never know when there may be a new explosion."

Asked whether any formal action was being undertaken to get Government consent to resuming services in their temples, he said there was none. He explained that it was better to walk softly and hope for better times.

Baha'i adherents are afraid that any overt move might lead to a new outburst of fanaticism on the part of the Moslem mullahs, or teachers.

Meanwhile, they make no attempt to hold services. It is one of the rules of Bahaism never to resist the will of the government of whatever country one may be in. Members of the sect worship privately in their own homes in Iran at present.

Bahaism has been persecuted periodically in Iran ever since it was founded in the middle of the last century. Three other religious minorities are tolerated—the Christian, the Jewish and the Zoroastrian.

All of them were in existence before Islam was founded. All are regarded as religions "of the book," and they are not molested.

Bahaism, which emphasizes the spiritual unity of mankind and advocates universal peace, started as a heretical offshoot of Islam. It went through a process of evolution into a distinct religion. But the Moslems still look on it as a heretical sect.

About 20,000 members of the sect are reported to have been massacred in various outbreaks of violence during the 19th century.

The latest trouble was started last year by a mullah named Mohammed Taghi Falstafi. During the holy month of Ramadan, he broadcast a series of talks inciting the public to drive out the sect. He charged that they were planning to revolt and set up their own government in Iran in the spring of 1956.

Mullah Falstafi had first appealed to Shah Mohammed Riza Pahlevi to ban the sect and turn its temples into mosques. No action was taken, but the Government did not interfere with the violent hate campaign that the mullah then proceeded to carry out.

Baha'i believes and the Iranian authorities give different versions of what went on. Neutral observers, however, say that first Mullah Falstafi, going on the radio, stirred up the public, then other mullahs and minor Government officials encouraged the mob to violence.

There was rioting in places. It is extremely difficult to get accurate news in Iran of anything that does not happen within one's own sight. Still, there was no doubt of widespread violence.

At the height of the trouble, the military governor of Teheran, Brig. Gen. Timur Bakhtiar, stepped in. He seized the great Baha'i temple and ordered the bright tiles stripped from its dome.

Although the act might seem inconsequential to a Western mind, diplomatic sources in Teheran say that it was apparently the move that brought peace. When the work started, the riots subsided. At about the same time, the end of Ramadan brought an end to the harangues of the Mullah Falsafi.

This year he has not been allowed to deliver his Ramadan series on the radio.

Iranians were dumbfounded at the reaction abroad to persecution of the Baha'i sect.

Struggle for Polish Freedom

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. McDONOUGH. Mr. Speaker, on this May 3 people of Polish ancestry throughout the world join in spirit with the people of Poland in observing the anniversary of the Polish Constitution which was adopted in 1791, just 2 years after the adoption of our Constitution of the United States.

Poland gained freedom only through the valiant efforts of the Polish people who through the ages have struggled against tyranny and oppression. At the end of World War II they had high hopes that freedom would be reestablished, and that Poland might regain her rightful place in the family of free nations.

The infamous Yalta agreement dashed these hopes, and the people of Poland have been forced to remain subject to Russian enslavement.

We in the United States have tremendous admiration for the courage, the patience, and the fortitude the Polish people have displayed in their struggle to regain their independence.

As a nation dedicated to the principles of liberty and individual freedom, the United States maintains the right of the Polish nation to independence and will never be reconciled to Poland's subjugation by Russia.

On this Polish Constitution Day, we Americans join with the people of Poland and those of Polish ancestry in a prayer for Polish independence and the restoration of individual freedom for the citizens of Poland.

May the struggle of the Polish people against oppression triumph, and may their confidence and faith in the might of justice and the destiny of Poland culminate in the reestablishment of Poland as a free nation.

Pennsylvania Hurt Again by Excessive Taxation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. VAN ZANDT. Mr. Speaker, the following editorial appeared in the April 28, 1956, issue of the Tyrone (Pa.) Daily Herald and reveals what the intolerable taxation at every level is doing to the efforts of industrial development committees in the Keystone State to attract new industries.

The editorial speaks for itself.

PENNSYLVANIA HURT AGAIN BY EXCESSIVE TAXATION

Once more, the deplorably excessive tax situation in Pennsylvania has cost this State industrial expansion and, necessarily, the employment and general economic gain to be realized from that growth. A spokesman for Westinghouse Electric Corp. Wednesday announced it will erect a multimillion dollar plant near Bloomington, Ind., and said Pennsylvania had been by-passed because of "intolerable taxation" at every level. It's an old story, becoming more monotonously repetitious every day—but that hardly helps take out the sting.

In the case of the new Westinghouse plant, Pennsylvania will be hurt in more than the usual ways. Workers already here, and employed in East Pittsburgh, will be transferred to Bloomington. Fine thing.

A similar situation developed some 2 weeks ago, too, with the announcement that General Motors chose a site near Lordstown, Ohio, rather than in this Commonwealth for its proposed huge Chevrolet assembly plant. The Pittsburgh Post-Gazette, understandably riled, inquired editorially into the matter, and in first place among its three major reasons why Ohio won, the Post-Gazette put taxes.

"The situation in Ohio was far more favorable," it commented. "That State relies upon industry for only about 15 percent of its revenues, while Pennsylvania taxes business more heavily than any other State, getting more than 50 percent of its revenues from that source.

"The administration (of Governor Leader) is, apparently, more interested in courting organized labor than it is in obtaining new plants. And that, in the long run, is the greatest disservice it could do labor.

"For the fact is that labor can thrive only where there are job opportunities. Unhappily, the current climate in Pennsylvania is not conducive to the provision of new jobs."

Certainly, Ohio has served her own best interests by playing fair with industry. And this is continually proven at the polls whenever a real issue has arisen. Ohio voters elected and reelected Robert Taft and other candidates in the face of the stiffest sort of union-leader opposition. Last November, they defeated the CIO proposal to hike unemployment compensation benefits by a tremendous margin. The Cleveland Plain Dealer and other outstanding Buckeye State newspapers editorially fought the proposal because it could have penalized Ohio businesses, particularly small businesses, and that would have reduced Ohio's attraction for new industries and new expansion enterprises.

This line of reasoning apparently made sense to a lot of workers, for the majority of them voted against the compensation increases, although emotionally they might have been expected to endorse those payments at the highest possible level.

Granted, the tax question is not Ohio's only drawing card. The other two top reasons for its attraction given by the Post-Gazette—favorable locations and availability of land—are heaven-sent, of course. But in providing a good climate for business, Ohio has proceeded intelligently, and the workers, skilled or unskilled, union or nonunion, have made a good name for themselves for productivity and quality.

The story might have been different.

Hon. Victor Wickersham

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. LONG. Mr. Speaker, being a former Oklahoman and member of the House Committee on Veterans' Affairs, I would like to praise one of our Oklahoma colleagues and include an address honoring VICTOR WICKERSHAM, Member of Congress from Oklahoma.

At a special ceremony in the Armed Services Committee room of the United States House of Representatives at 9:45 a. m., May 1, 1956, the District of Columbia department, Veterans of Foreign Wars, made its annual Loyalty Day award to Congressman VICTOR WICKERSHAM, of Oklahoma.

A plaque was given to the Congressman for "exhibiting those qualities in private and public life that make for a greater America."

Rutherford Day, chairman of the department Loyalty Day committee, presented the award following an address in which he said that loyalty to one's country is best reflected in "the work we do and the manner in which we do it." He also said the annual award is made to a figure of national prominence who does his work not as a means of personal aggrandizement but in a way that reflects interest in the end to be sought and reached rather than for gain of fame, and that this is the highest test of reputation and meaning of loyalty.

Mr. Day's address follows:

ADDRESS BY RUTHERFORD DAY, LOYALTY DAY CHAIRMAN, DEPARTMENT OF THE DISTRICT OF COLUMBIA, VETERANS OF FOREIGN WARS, DELIVERED 9:45 A. M., TUESDAY, MAY 1, 1956, AT THE ARMED SERVICES COMMITTEE ROOM, UNITED STATES HOUSE OF REPRESENTATIVES

Today the Nation and the world is saddened to receive the news that we have lost a friend, Alben W. Barkley, a Senator of this Congress and former Vice President of the United States.

On this few acres of ground we call Capitol Hill are focused the eyes and fond remembranches of our countrymen.

Once more history's page turns and once more those who march across this small stretch of land take that march from reality to the ages. The line of the column often passes into the realm of our national tradition, seeming without pause, and the marching of shadows is joined from time to time to form a great company of those we have loved and watched and those farther shadows who we remember only by their works and for their very shadow-substance itself.

Clay, Webster, Pinckney, Taft, are names to us now, but are, for all that, realities today as they were in a different and current sense in earlier times.

So it is fitting that today we meet to honor one who labors in the busy and fruitful vinyards of our national life—that person is VICTOR WICKERSHAM.

The Veterans of Foreign Wars want to introduce a man, a friend, Congressman VICTOR WICKERSHAM, to some who may not have made his acquaintance—this is the purpose of our award.

Loyalty Day is a day we celebrate a rededication to the principles of America and our loyalty to our country.

Loyalty is shown in many ways and we feel that one of the most, if not the most important means of demonstrating loyalty to our country, is the work we do and the manner in which we do it.

Thus we feel an award should be made to one who does his work, not as a means of personal aggrandizement, but rather in a way that reflects interest and honesty in approach, with thought of the end to be sought and reached rather than for gain of fame.

This is the highest test of reputation and is in the highest sense, the meaning of loyalty.

Mr. Speaker, the ceremonies were recorded for broadcasting overseas by the Voice of America. Robert L. Redeen, special events officer, said the Voice was covering the nationwide celebration sponsored by the Veterans of Foreign Wars as a method of showing the world the work of national patriotic groups.

Omar B. Ketcham, national legislative director of the VFW, broadcast a talk on the meaning of Loyalty Day, pointing out that the VFW sponsored the celebration, which is held in every State in the Nation, as a means of gaining publicity for those who hold their loyalty to this country uppermost and as a means of balancing and counteracting the May Day celebrations of Communist groups which are traditionally held on this date.

Congressman WICKERSHAM, in reply to Mr. Day and Francis Wood, department commander, VFW, stated that he received the award not only for himself but also for the people of the State of Oklahoma in tribute to those from that State who served in the Armed Forces of the United States and are still so serving. He also stated that the VFW was doing a fine job in aiding the side of the United States in the battle for men's minds.

Some Words of Wisdom on United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the significant editorial, written by Mr. John S. Knight and carried in the editorial columns of the Chicago Daily News of Saturday, April 21, 1956:

SOME WORDS OF WISDOM ON UNITED STATES FOREIGN POLICY

A recent conference of 19 Scripps-Howard editors in Washington brought forth some impressive words of wisdom from foreign editor Ludwell Denny and his predecessor, William Philip Simms.

Because their thinking is so akin to my own, particularly with reference to the need for reappraising our policies, Mr. Denny's summary is offered for your consideration:

This global crisis cannot be cured by putting patches on the prewar world. New worlds are in the making.

Any speedy cure is quackery. The American idea that we can cure everything with a few billion aid dollars, a few Madison Avenue advertising stunts, a few divisions and bomber bases abroad—all without sacrifice of luxury living at home—is insane.

Our democracy is not exportable. Democracy is indigenous, or it is nothing. We can help others achieve it, but not by trying to make our brand fit divergent heritages and different conditions.

We cannot buy allies. Military aid should be concentrated on genuine allies—those determined to fight for their own freedom. Except for charity and the minor nuisance value of subsidies, economic aid should be limited to point 4 technical assistance and foreign financing should be left to the World Bank and the Export-Import Bank.

The world is not to blame for communism but for chaos. A united Europe and a healthy Middle East could not be endangered by Soviet infiltration, or a strong Asia by Chinese expansion.

Finally, in our long-overdue reappraisal of United States foreign policy, let us remember the simplest fact of all: America is not God. There is a limit to our capacity and our responsibilities. We cannot run the world. We cannot alone set it right.

The best we can do is to preserve our own strength in a weak world, sharing where our kind of help is wanted, preserve our sanity in a mad world which may profit by our successful example, preserve our faith in human decency in a dark world which needs that more than all our money, munitions, and manifestoes.

We can defeat ourselves by our fallacy of easy solutions and quick victory, by the delusion that we have all the answers—or could make others accept them if we had.

The world is in a chaotic transition from an old Western civilization to a new global nuclear age whose nature is unknown. We, in strength and in patience, must keep the faith and make the long, long fight.

JOHN S. KNIGHT.

Eyes on the Dollar

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by David Lawrence, entitled "Eyes on the Dollar," which appeared in the U. S. News & World Report, April 27, 1956:

EYES ON THE DOLLAR

(By David Lawrence)

From time immemorial the key to the economic future of any nation has been the stability of its monetary unit.

Adam Smith, in his famous work, the Wealth of Nations, published in 1776, emphasized the tendency of governments to repudiate their war debts. He said that almost all states, "ancient as well as modern," cheated the people by devaluing the currency.

Two world wars in the last half century have debased the currencies of Europe and Asia. Likewise, in that period the purchasing power of the American dollar has been cut by two-thirds.

We in America are at the crossroads now. We have a choice between further devaluation of the dollar and an upward rise in its purchasing power.

In the one direction lies more inflation—higher and higher prices, strikes for higher wages to meet rising costs of living, and hardship to persons with fixed incomes.

In the other direction lies stability and a greater opportunity for everybody to share in the benefits to be derived from the strong fiscal position of America.

A crucial decision will have to be made in the next few weeks on the course the dollar must take.

For, happily, the United States Treasury by June 30 next will show a budget surplus and a cash surplus—the first time in several years that this will have happened.

If, as now indicated, there's a budget surplus of about $2 billion—which is nearly 10 times as big as was forecast last January in the President's message to Congress—the political clamor for tax reduction will be heard from one end of the country to the other.

Politicians will be seeking to give away that surplus to those in the low-income brackets on the mistaken theory that this will be of real benefit to them. Yet this would be the very group hurt by inflation.

What would be of more benefit to more people would be to reduce the national debt by $2 billion.

As a result largely of World War II, the public debt went from around $40 billion

in 1939 to $276 billion today. Measured against the wealth and income of the country, this is not in itself precarious but it is too big a sum to go untouched year after year. A government that doesn't pay off any of its debt begins to look as untrustworthy as an individual who avoids payment of his current obligations. This would be a serious detriment to the financing of a third war if it should be thrust upon us.

If a people show no desire to reduce their debt, and if they keep on curtailing their own taxes while they let the debt remain high, this must inevitably be interpreted in the monetary markets of the world as a sign of weakness—as a symbol of repudiation.

Economic advisers to both the Democratic and Republican administrations in the past have argued that taxes should never be reduced when the Nation is prosperous and that tax relief should be reserved for those occasions when it is necessary to give a stimulus to the economy, as in time of depression.

Certainly in the present boom period there is no need for further incentives to spend or borrow. The Federal Reserve Board in the last few weeks has been taking steps to restrict borrowing by business. It has done this in order to keep the boom from becoming a runaway affair and to reverse the trend toward price inflation which has been under way since last June. A tax cut would be the last straw. It could point the way to a speculative era such as that which preceded the 1929 crash.

So the best thing to do with the $2 billion surplus is to cut that amount off the public debt. This isn't much of a reduction, but it will be regarded everywhere as of transcendent importance. For it will mean that America at last has made a start toward debt reduction. The principle is worth far more than the sum involved in any tax-reduction plan.

If the dollar—which now is at about 52 cents in purchasing power compared to 1939—is to rise gradually, it will be because of the sound monetary policies pursued by the Treasury.

A tax-reduction move would be inflationary. It could send prices up so high as to cause a buyer's strike. It could devalue the dollar. Certainly it could break down the best-laid plans of industry to spend money on plant expansion. If the prices that have been figured, for instance, on construction were swept away in another upward spiral, many such comments for spending in private enterprises would have to be revised, if not canceled.

It is dangerous to tinker with the dollar. The whole world would be benefited if the dollar were strengthened instead of weakened. Other nations can buy more and more goods and crops from us if our price level is stable.

Throughout the world all eyes will soon be turned on the American dollar. It must remain strong. This can be assured only by a policy of sound money.

Problems Encountered in the College Housing Program

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PHILLIPS. Mr. Speaker, yesterday, in San Francisco, Mr. John C. Hazeltine, Commissioner, Community Facilities Administration, of the Housing and Home Finance Agency, addressed the 18th annual meeting of the Western Association of College & University Business Officers. He discussed some of the problems his agency meets in the administration of the college housing program. Because the talk is interesting and enlightening. I have asked unanimous consent to extend my remarks and to include it in full. The address follows:

Friends of WACUBO, it is a great pleasure to be able to join your meeting today, especially here in beautiful San Francisco. I am particularly happy to see our chairman, Mr. Wahlstrom, in a more secure seat than the one he occupied only a few weeks ago. At that time I was startled to see his picture in one of our Washington newspapers after the plane in which he was riding had ditched in Puget Sound. Amazing, isn't it, what some people will do to get their picture in the paper. But seriously, we are indeed fortunate that Mr. Wahlstrom is with us today after surviving this tragic accident. The fact that he boarded the next available plane to continue his ill-fated trip East is sure proof of his courage and tenacity of purpose.

My subject today is the problems which we have encountered in the college housing program. I would like to think that we have faced them and will continue to face them with the same courage and tenacity which has been displayed by Mr. Wahlstrom and that no temporary setbacks will deter us from pursuing our long-range objectives.

The first problem encountered in any loan program is money. How much money? When will it be available? The deluge of applications for college housing which has poured in upon us starting last fall has required that we of the administration face up realistically to the demands upon us. I found my self attending conference after conference at the Bureau of the Budget and even at the White House attempting to explain your needs and to tell the story of the housing conditions at campus after campus where I have visited. As you are aware, it was finally decided that the entire balance of the $500 million authorization should be released. I wonder if you realize what a generous endorsement this was by any standard of measurement. In effect it released more funds to be available for this current year than had been released during the entire life of the program. This endorsement was further emphasized by President Eisenhower's budget message in January when he called for an additional $100 million for the program. So much for our first problem. The necessary funds have been made available.

The second problem concerns the fundamental nature of the program. Is it to be merely a program of continuing direct responsibility of the Federal Government alone with added annual increments to increase its borrowing authorities from United States Treasury? Or can this program be so conceived and administered that it can trigger a much larger program which will encourage private investment participation in college housing? The first concept strikes me as being very unimaginative, simply a check-writing operation against the beleaguered Federal Treasury; a concept that places quick immediate benefits above the long-range gains possible for higher education as a whole. The second concept envisages the Federal college housing program as a sort of catalyzing agent which can act to release many times the amount of the Federal authorization from the private investment resources of the Nation. This latter concept appears to me as a challenge to our initiative and resourcefulness and the kind of an enlightened self-interest with which we must approach our long-range problems.

Nearly all of you know my thinking on this subject. Last month I testified before the Senate Banking and Currency Committee concerning the administration's proposal to increase the authorization for the program and at the same time establish an interest rate formula which would be connected with the true financial values involved. This formula would produce a slightly higher interest rate, actually 3⅛ percent based on the average Treasury yield during February and March.

I can assure you that this suggested increase in inteerst rate was not dictated by any desire on the part of any of us to increase the income to the Federal Government at the expense of the educational institutions. Rather it was chosen as the lowest possible interest rate which would permit competitive bidding by any private investors. It is not nearly as high as the current market would seem to demand. Recent issues of tax-exempt revenue bonds for college housing have sold privately at about 3.4 percent but it is a rate that might make many of the bonds of our tax-supported institutions interesting either in part or in whole. Perhaps private investors would be itnerested in the first 15 to 25 years of the issue in which case the Government would take the longer maturities. By this kind of participation by this type of diversion, of some of the burden of the great college housing need, the staggering requirements over the next 10 years, may be met.

Previously our program for developing this necessary private participation had been making great strides. Four issues with maturity up to 40 years had been sold in their entirety to private investment houses after these issues were developed through original applications to the Agency. Other issues were split with the Government taking the longer maturities. This type of development most certainly has a great bearing on the long-range needs of the program but it was given a temporary setback by reason of the unnatural low interest rate which now prevails. I am confident that as the shape and form of the program becomes clear to all of you and to the Congress, we can again proceed toward our goal.

At this point I would like to square off and refute a rather insidious canard which has been given considerable circulation by one of the house organs which most of you receive. It is to the effect that we of the Community Facilities Administration are deliberately retarding the processing of applications pending the possible increase of the interest rate. To me this is hitting a little below the belt and I will tell you why I feel this way.

Many of you are aware that while the Housing amendments of 1955 increased the authorization for this program to $500 million and made retroactive to all uncompleted loans the lower interest rate, there was no increase in funds available for administering the program. We have been in the position of processing and reprocessing more applications and loans during this year than during the previous 5 years in the program and have been able only slightly to increase our staff. Although our processing rate is well above the previous years it is only natural that backlogs have developed. To couple these inevitable delays with an ulterior motive, even by inference, is unfair to the loyal and overburdened staffs, both in our regions and in Washington, who are sincerely endeavoring to carry the expanded load. In any event this criticism should now be completely dispelled in view of an amendment which I proposed to the Senate Banking and Currency Subcommittee at the hearings on March 20. The gist of that amendment was that the interest rate under

the proposed new formula would apply only to applications filed after that date. It semed only fair to me, and to all of us, that no application made in good faith before that time should be adversely affected by any natural and inevitable delays which might have occurred.

Incidentally, our rate of processing is moving up month by month; supplemental administrative funds have been made available by the Congress for the balance of this year, and the prospects are excellent that sufficient administrative funds will be available for next year. The overall picture is encouraging although we are faced with some serious problems in the immediate future.

There is another aspect of the administration of the college housing program which I wish to call to your attention. I hope that this aspect has never occurred to you for if it has not we have been successful thus far in coping with the various influences involved.

I refer to the inevitable tendency toward dictation of principles and policies, of Federal interference with the freedom of the applicant institutions.

We, all of us, who are entrusted with this great college housing problem stand solidly opposed to any thought of regimentation in the use of the available funds. I am sure all of you realize that such a policy is not an easy one to maintain. There are forces which inevitably tend, both in Government operations and in all other operations, toward establishment of mandatory standards both in objectives and in actual construction requirements. There is the tendency to establish codes and restrictions which might stamp all residence halls from the same mold. These forces would dictate that the supposedly superior wisdom and experience of a Federal office should establish the pattern which you are to use. Even should such dictation be disguised by the term "advice" you might feel obligated to conform if it came from the holder of the purse strings. I do not intend to infer that we will shirk our responsibilities in any way, always available to you will be our experience and assistance in your legal, financial, and engineering problems. As the boys from the country are so adept in doing, to sum it all up "we are here to hep but she's yore baby." In the college housing program we have tried at all times to keep squarely before us the principle that these buildings for which you are requesting loans are your buildings; that they are designed to serve your purposes; that the great strength of the American way of higher education is its individuality and its diversity. I am proud that Housing Administrator Albert Cole was able so sincerely to emphasize in an article in the Architectural Forum:

"The provision of housing for students and faculty on the campus of a university presents unique and challenging problems to the university officials and their architects. Here as in many other areas of American life, where its diversity is part of its brightest promise, it is difficult to generalize or to attempt to impose rigid, pre-conceived designs. • • • There appears to be no single or simple answer; on the contrary, the approaches which the colleges and universities have taken under the college housing program have all the variety which has characterized American higher education from its inception."

The point was further stressed in the same issue of the Architectural Forum by architects who had participated in the program. Their letters were unanimous in confirming the freedom which they had enjoyed in working with our people. I assure you that the respect for this individuality will continue to be a major policy of this agency.

We are using the same approach with regard to the new types of facilities which have become eligible as the result of the 1955 amendments. I have heard charges that the Agency was refusing, or in large measure discouraging, applications for student unions or that it was imposing impossible conditions in an effort to avoid the clear intent of the Congress. I believe that these charges arise from a misunderstanding regarding our objectives and I am glad to have an opportunity here to talk frankly to you about it.

When the amendments of 1955 broadened the program to permit inclusion of dining halls and cafeterias separate and independent from the dormitories, student unions and student centers, health facilities and other essential service facilities, we were confronted with yet another problem. With the very apparent insufficiency in total funds to satisfy the demands both for housing and other facilities we were forced to attempt some yardstick by which the relative needs could be measured. Both in their testimony before the committees and in conference with us the educational associations were unanimous that housing and dining facilities should take priority over any other type of construction. Recently, nearly a year later, Dr. Meck, of Dartmouth, repeated this point of view in his testimony before the Senate subcommittee that "the real problem is to feed and house the students. That is the first priority."

The legislation, as passed, placed a maximum limitation of $100 million on the amount of funds which could be used for facilities other than housing and feeding. These statements by the educators, and the limitation by the Congress, have thus become our guideposts in the administration of the program.

While giving full weight to the priority for the warm bed and the good meal we cannot but realize that there are many individual situations which would include social and recreational facilities as an essential part of the well rounded campus life. Applying our policy of attempting to provide in each individual case those requirements which the applicant feels most essential, and at the same time attempting to husband the funds at our disposal, we have come up with a procedure which we hope is best patterned to the problem. We are asking the cooperation of all institutions who desire student unions in lieu of, or in addition to, dormitory facilities in helping us work out reasonable projects. We feel that funds which are available to the institution from other sources should be applied where possible to those projects described as "other essential service facilities." We also feel that the other essential service facilities projects should be planned at the minimum; and we further feel that if a project such as a student union can be so operated as to be considerably more than self-liquidating the term of the Federal loan should be reduced accordingly. This, I believe, is only sound business practice. On a bank loan for a new plant I am sure that any good banker would apply the same policy. If the plan is unusually profitable then the indebtedness should be more quickly retired. We are careful, however, to take into consideration that the institutions will not be deprived of additional revenues which they were already enjoying from an operation which is later to be incorporated into the overall union project. I am sure that you cannot but agree with me on the soundness of our approach to the difficult and varying situations encountered and I can assure you that we will do our best to assist.

We have instructed our regional offices that each application be considered on its merits and forwarded to Washington after free and full discussion with the institution involved. Several applications for student unions have been approved and others are in process.

As concerns the 90-day limitation on the filing of the full application, after the preliminary approval and reservation of funds, I should like to enlarge on our policy in this respect. The original limitation was made for the purpose of attempting to assure orderly administrative procedure. We must be certain that the applicant who has obtained a reservation will, with due diligence, proceed toward the closing of a loan agreement. However, in this as in all other phases of the program we are not arbitrary. If circumstances beyond the reasonable control of the applicant require that further time be permitted and we are provided with a reasonable substantiation we will be pleased to grant additional time. You on your part should assist us by keeping the regional offices advised of your progress.

In closing I would like to repeat that we consider each loan under the college-housing program an individual financing and engineering project. We are attempting to apply the same good principles and practices that would be applied in any other legitimate business deal. If you as college and university business officers consider the proposition which you are putting to us to be fair, reasonable, and workable, and that you, were you in our position, would so consider it, I am sure that we both can always arrive at a mutually satisfactory agreement. We both must remain objective in our approaches, giving consideration not only to our own problems but to those of all the other educational institutions of the Nation who are involved in this great enterprise of enlightenment, and so conduct ourselves that the best good will inure to the greatest number. I would like to feel that a great area of mutual trust and understanding has been established between us, and that you think of us as backing you to the hilt not only by providing direct loans from Federal funds but by attempting to develop further for you the outside channels and support which you need to meet the vast housing problems which are facing your institutions now and in the future.

Thank you.

"One-Party Press" a Fallacious Theory, Fleming Explains—Sees Charge as Factor in 1956 Election

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. BEAMER. Mr. Speaker, the American Press in its April 1956 issue carried an editorial by a Hoosier that is worthy of being brought to the attention of the Members of Congress.

Under unanimous consent, I include this article in the Appendix of the RECORD, as follows:

"ONE-PARTY PRESS" A FALLACIOUS THEORY, FLEMING EXPLAINS—SEES CHARGE AS FACTOR IN 1956 ELECTION

Fed up with the charge that there is a one-party press in this country, Wray Fleming, attorney, and manager of the Hoosier State Press Association, recently wrote an interesting analysis of the situation headed, "One-Party Press Fallacy." His editorial on the subject follows:

In every national election since 1936, newspapers have been figuratively kicked around because the editorial policies and opinions of a majority of them did not coincide with the results registered by voters at the polls. The climax came in 1952 when it was charged that there is a one-party press in the United States. It appears now that

this will be a factor in the 1956 election campaign.

Whether newspapers should defend the charge or trust to luck that it will make no impression on the people is a question that ultimately must be settled. If they put up a defense it cannot be of the wishy-washy variety. If they lay off there is a grave possibility that the people will have again lost in the battle for a free press which newspapers have the obligation to preserve.

Assuming that conscientious newspaper leadership will choose to defend, it seems logical that the opening shot should be a repetitious campaign of educating the readers of newspapers on the meaning of freedom of the press. It should not be difficult to prove that no political party does control or ever has controlled the policies of a newspaper. That holds even for those newspapers which profess allegiance to a political party. The editor of a newspaper, like the voters at the polls, may subscribe to the fundamental principles of a political party and at the same time not agree with the diversions from those principles. This does not warrant the charge that those who fail to go along with the diversions are guilty of instituting a one-party press. That is as fallacious as to claim that because the top candidates of 1 political party carried all but 2 States in the 1936 election, the United States had become a 1-party nation.

RUGGED INDIVIDUALISTS

There is probably not a profession, industry, or business in which the leaders are more rugged individualists than can be found in the editors and publishers of newspapers. Each is a power unto himself in his thinking. It is therefore absurd to even assume there has been a concert of thinking or some sort of conspiracy that has caused a majority of editors to hold back from supporting what they do not believe is for the best interests of the American form of government. The one-party press critics would prefer that the people believe that. In its defense, the press might well point out that before there is a 1-party press there must be a 1-party system. It is not the fault of partisan political editors that principles of the two major political parties have changed to the extent that it is difficult to distinguish the difference between them. It is not the fault of the press that there has not been a well-defined difference between the platforms of the two parties at the national level in any election over a period of 20 years. That fault lies with the critics who now charge there is a one-party press.

Granted that many of our newspapers do not publish strongly worded editorials that once featured the political scene, there may be a reason. It is possible the editors are confused over supporting a party principle today that may become a dead duck tomorrow in this era of expediency in political maneuverings. There is still a 2-party press in the United States and will be if leadership of the 2 parties hold still long enough on vital principles that newspapers can square off and interpret the differences between the 2 parties.

Television for Isolated Communities

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. MAGNUSON. Mr. Speaker, today I have introduced a bill, H. R. 10944, which would direct the Federal Communications Commission to provide for the licensing of low-power television reflector facilities and VHF translator facilities to provide television reception to geographically isolated communities and individuals.

These automatic facilities are the cheapest and most satisfactory method yet devised to bring television programs into the homes of the people living in "shadow" areas behind hills and mountains where the rigid television signals do not reach. At least 70 reflector facilities or VHF translator facilities are known to be in operation throughout the country, and the number may be as high as 200. I have received reports of their use in the States of Arizona, California, Colorado, Idaho, Montana, New York, Oregon, South Dakota, Washington, and Wyoming. There undoubtedly are other States where reflectors have been used or contemplated.

Most of these facilities are constructed and maintained through spontaneous community action in the finest American tradition. They provide very satisfactory television reception at a very moderate cost. In no case that I know of does one of these facilities cause objectionable interference with anyone's reception of television or with any other use of radio-energy transmissions.

In spite of the obvious advantages of these facilities, the Federal Communications Commission consistently and obstinately has sought to shut them down. Within the past month at least one reflector facility in the State of Washington has stopped transmitting because of the issuance of a Commission cease-and-desist order. Another community, Bridgeport, Wash., has appealed from a Commission cease-and-desist order to the Court of Appeals for the District of Columbia, and that case is pending before the court. Cease-and-desist proceedings have been instituted against additional reflector facilities in the State of Washington. Reports I have received indicate that Commission representatives actively are engaged in starting cease-and-desist proceedings in other sections of the country.

The Commission's unwillingness to license or otherwise permit the operation of reflectors and VHF translators stems from its unwillingness to adopt flexible administrative procedures under which applications for the facilities can be considered on a case-by-case basis. The Commission prefers simply to deny hundreds of small communities throughout the country the benefits of television reception rather than face up to the task of finding a practicable method for fitting them into the national television system.

I am convinced that the Commission never will get around to licensing reflectors and VHF translators on its own initiative. I also believe that a favorable court decision in the pending case will not bring about a change of heart by the Commission, and that it still will attempt to proscribe these facilities, by one means or another. Consequently, I have been forced to the conclusion that only by the enactment of legislation such as that which I have introduced will the smaller isolated communities of this country be able to provide themselves with satisfactory television reception through the most practicable and inexpensive method yet developed.

Briefly, these facilities consist of a simple receiving antenna constructed on a hillside near the town where the signals of the originating station can be received, a small amplifier, and a simple transmitting antenna which retransmits the programs down into the valley. The residents of the community can receive the programs on ordinary television sets with the use of standard antennas. A reflector facility retransmits on the same channel as the originating station; a VHF translator retransmits a VHF signal on another VHF channel.

The facilities operate on a very low power. The one at Bridgeport, Wash., for example, has a power output of less than 1 watt. The usable signal from the facility extends over a cone-shaped area which in one case is as small as 2 miles long and 2 miles at its widest point. The facilities work automatically and require only occasional maintenance. Power can be supplied by an ordinary 110-volt line, by battery or by a gasoline-motor-driven generator. I have been told that for the facility in a small town in the Black Hills of South Dakota one of the townspeople goes up every afternoon and puts enough gasoline in the motor to keep the transmitter on the air until around midnight.

The cost of the facilities is very low. A typical installation in the State of Washington provides reception on two channels at a cost of $1,500. One battery-powered reflector was constructed for $500. I believe the costs vary up and down from these figures depending on the nature of the equipment, the strength of the original signal and the area sought to be covered.

In every instance that I know of, the facility has been constructed by a group of interested individuals in the community sought to be served. The money is raised by public subscription. In some instances the association has been very informal; in others, a nonprofit community corporation has been organized. Several owners of licensed television broadcast stations have indicated a willingness to construct reflector facilities in order to extend the service of the station to small valley communities.

To date, the Commission has come up with no practicable solution to the problem of providing the geographically isolated communities with satisfactory television service. Recently the Commission proposed rules and regulations under which certain UHF translators would be licensed. These UHF translators would retransmit the original signal over 1 of the UHF channels from channel 70 through channel 83.

I do not feel that these proposed UHF—ultra high frequency—translators are a practicable solution to the problem, and I feel they should be required only when the considerably less expensive and more satisfactory reflector facilities and VHF—very high frequency—translators cannot be employed.

There are a number of very serious objections to the UHF translators. First,

where a reflector can be built for $500 to $750, the UHF translator unit alone will cost $2,750, to which must be added the costs of the receiving and transmitting antennas and the power system. This cost is out of the question for many small communities. Moreover, each set owner in the community will have to spend $20 to $50 for a converter to enable his set to receive the UHF signals or buy a more expensive set, and also will have to install a more expensive rooftop antenna.

Second, the UHF picture is less clear and more subject to distortion than a VHF picture. The difficulties increase with the increase in the frequency of transmission. There are 13 of the lower VHF channels; there are 70 of the higher UHF channels. The Commission proposal is to compel the UHF translators, serving the small communities, to transmit on the top 14 channels. These are the least desirable channels.

Third, the UHF translator will not cover the same surface area which would be covered by a reflector or VHF translator. The higher the frequency, the more rigid the signal and the more unaccountable its behavior. It has been estimated, for example, that if one community in the State of Washington were to substitute a UHF translator for the reflector now in use, half the people of the community who now receive television from the reflector would be unable to pick up the translator programs. In such a case, the community would have to build one or more subsidiary UHF translators to retransmit the main translator signals.

Undoubtedly, television from a UHF translator is better than no television at all—where the community can afford the cost. However, I think it is obvious that the cheaper and eminently more satisfactory on-channel reflectors and VHF translators should be permitted where they can operate without interfering with any other use of the radio-energy spectrum. Since the Commission has demonstrated its determined refusal to allow reflectors and VHF translators to operate, the only remedy is enactment of a bill such as that which I have introduced.

There follows a section-by-section analysis of the bill:

Section 1 redefines the term "broadcasting" in the Communications Act to exclude transmissions by television reflector and VHF translator facilities. This will eliminate certain statutory requirements applicable to ordinary broadcasting stations and permit simplified procedures in granting licenses.

Section 2 defines "television reflector facilities" and "VHF translator facilities." The definition specifically limits the use of these facilities to those communities prevented by geographical barriers from receiving television reception, and provides they shall retransmit the original programs without significant alteration.

Section 3 directs the Federal Communications Commission to prescribe rules and regulations for the granting of licenses to reflector and VHF translator facilities where their use does not cause harmful interference with any form of licensed television or radio reception. It provides that such "rules and regulations shall be devised, and licenses shall be granted thereunder, so as to promote the extension of satisfactory television reception to the smaller communities and isolated individuals at a reasonable cost."

Section 4 eliminates the requirement of a prior construction permit for reflectors and VHF translators.

Section 5 provides that any reflector or VHF translator in operation on or before May 1, 1956, may continue in operation until the operator has had a reasonable time to comply with the licensing regulations. It directs the Commission to draft and publish the first set of proposed rules and regulations within 6 months of the effective date of the act.

Absent Presidents

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to call attention of the Congress to an editorial which was published in the Clay Center (Kans.) Dispatch under the date of April 27, 1956.

Recent comments in the press regarding the performance of Presidential duties led me to look back through the records to determine what pattern, if any, had been established by previous Presidents. While so engaged, my attention was directed to an editorial written by Mr. L. F. Valentine, veteran Kansas journalist and father of Mr. Harry Valentine, publisher of the newspaper in which the editorial appeared. Since his comment on the subject is derived from a full lifetime of active observation, I herewith submit it for consideration by all Members of Congress:

ABSENT PRESIDENTS

This writer's memory goes back to the time when Cleveland was President, recalling quite vividly the many, many newspaper articles read and the derogatory talk which went around, finding fault with Cleveland because, as the articles complained, he was always going on fishing trips, neglecting duties in Washington. He also recalls the many criticisms about Woodrow Wilson for the time he put in playing golf and the days he was away from his office. We can recall the first time a President made a trip outside continental United States. He can recall much criticism of different Presidents who were away from Washington for, as it was said, too much of the time. Most of such criticism seems to have been directed at Democratic Party Presidents. Now Democrats are directing such attacks at President Eisenhower.

The criticism is not well taken.

For two reasons. One is that it is old stuff, directed at many a President. The other is that the days spent away from Washington never did seem to do any damage to the Nation and is not doing any damage now.

The fact of the matter is that a man who can get away from close attention to his problems—fishing, playing golf, hunting, or what have you—is more apt to think things through clearly and arrive at a correct solution, than one who stays too closely to his desk or advisers.

"You can't see the woods for the trees." Neither can you get a good mental perspective without viewing problems from a distance and through quiet mediation.

Good for those Presidents who solved matters in the quiet of their own communion. Good for Ike, that he can get away once in a while and think things out for himself. Hurrah for the Nation that we have had and have such Presidents.

And fie on those politicians who try to make political hay out of the fact that a man, weighted with heavy questions needing correct solution, gets away from politics occasionally and communes with his innermost thoughts.

As Usual, the Administration Tries To Blame Congress

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, this morning the New York Herald Tribune carries a very important article by Marguerite Higgins, certainly one of the country's outstanding correspondents, saying that President Eisenhower is seriously thinking of asking Congress to approve a new plan for making available $80 million in foreign aid for distribution by the United Nations and challenging the Soviet Union to do the same.

The article makes the point that Burma recently turned down $30 million in American aid, because it did not want to be tied to any bloc. If aid were channeled through the U. N., it would be far more acceptable, it is felt.

The Congress of Industrial Organizations has been making the point for years that economic development must be accompanied by courageous and intelligent policies that will bring about abandonment of prejudices and archaic customs, adaptations of social and legal institutions, elimination of social and economic discriminations, and support for fair and adequate tax systems.

These complex and delicate matters require the introduction of reforms while maintaining full respect for the sovereignty of the underdeveloped countries. It is much easier to carry out such reforms through the U. N., which is in a good position to spare national susceptibilities, the CIO maintains.

Miss Higgins' article contains such phrases as "the sum of $80 million was tentatively arrived at in the draft plan given to the President, because it was believed such a sum would not upset Congress."

Also, "the plan is an important departure in recent foreign-aid thinking, and administration sources conceded that there may be considerable congressional resistance to voting money to be spent by an international agency."

That the major opposition to the development of this important program has come from the administration rather than the Congress is shown by a reply I received from the Department of State to a letter I sent the President on December 14, 1956.

This letter and the article by the brilliant reporter Marguerite Higgins are included here for the information of my colleagues:

DEPARTMENT OF STATE,
Washington, December 23, 1955.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: The Office of the President has called the Department's attention to your letter of December 14, 1955, expressing your support for the proposed Special United Nations Fund for Economic Development (SUNFED).

The Department of State shares your interest in assisting the less-developed countries of the world to better their economic lot. Even if the cold war did not exist, we in the United States could not view with unconcern the conditions of poverty and stagnation which serve as a breeding ground for political and social unrest in many parts of the world. The efforts now being made by the Soviet Union to exploit these conditions in order to attract the countries concerned into the Soviet orbit only serve to add another element of urgency.

The evidence of the United States interest in the progress of the less-developed countries is to be found in our contributions to the United Nations technical-assistance program, the loans being made by the Export-Import Bank to finance development projects abroad, the extensive grants and long-term loans repayable in local currency under the mutual security program to finance development projects not suitable for bank or private financing, and a variety of measures to promote the flow of private capital into productive investment overseas. This Government has given full support to the lending activities of the International Bank, to the constructive work of the Colombo Plan Organization, and we are seeking means of giving effect to the economic cooperation clauses of the Southeast Asian Defense Treaty. The President has proposed and Congress has enacted measures authorizing United States participation in the proposed new International Finance Corporation, which is designed to increase private investment in less developed countries by making capital available without Government guaranty. We are supporting the establishment of an International Atomic Energy Agency to make nuclear technology available in all its aspects and to allocate fissionable materials for peaceful uses. Our surplus agricultural commodities are being used abroad, not only to relieve suffering, but also to help finance economic development.

It is the firm resolve of this Government to continue to seek the most effective means of promoting the economic growth and vitality of the countries of the free world. In this connection we have given the most serious consideration to the proposal to establish a Special United Nations Fund for Economic Development (SUNFED). But our careful study of the proposals thus far advanced convinces us that SUNFED could not be an effective organization at this time. Until international disarmament frees resources for constructive use, SUNFED would have difficulty in attracting substantial contributions from the developed countries. On the other hand, even if we were prepared to ask our people to bear a hugely disproportionate share of the cost of SUNFED, this would in itself distort the very nature of the proposal. The size of the United States contribution to this, as to any other international organization, must bear some reasonable relation to the contributions of others, else the organization would be international in name only.

At the present time SUNFED could at best be only a token organization. A significant part of its resources would have to go into overhead and a major portion of its energies would be absorbed by efforts at coordination. The resources which SUNFED might now expect to command would not justify establishing a complex international apparatus which, because of its global responsibility, would be unable to concentrate on the most urgent and pressing problems but would have to spread itself thinly over many continents.

For the reasons cited above we have been unable to support the proposed creation of SUNFED at this time. We have, however, made clear our intent to join with others when sufficient progress has been made in internationally supervised worldwide disarmament, in devoting a portion of the savings thus derived to an international fund, within the framework of the United Nations, for development and reconstruction. We are now engaged in most earnest negotiations to prepare the way for effective international disarmament. If these efforts succeed, there will be good hope that a sound and effective organization can be set up to devote a portion of the savings to the promotion of the economic and social well-being in the countries of the free world.

Sincerely yours,

THRUSTON B. MORTON,
Assistant Secretary
(For the Secretary of State).

[From the New York Herald Tribune of Tuesday, May 1, 1956]

EISENHOWER WEIGHING FOREIGN AID VIA U. N.—UNITED STATES WOULD PUT EIGHTY MILLION IN FUND AND CHALLENGE RUSSIA TO DO SAME

(By Marguerite Higgins)

WASHINGTON, April 30.—President Eisenhower is seriously thinking of asking Congress to approve a new plan for making available $80 million in foreign aid for distribution by the United Nations and challenging the Soviet Union to do the same, administration sources said today.

According to present administration views, a Russian contribution would not be a prior condition to the creation of a new United Nations fund for foreign aid in which all nations with sufficient economic strength would be invited to join.

GOOD BEGINNING

The sum of $80 million was tentatively arrived at in the draft plan given to the President because it was believed such a sum would not upset Congress, being small as compared with the overall foreign-aid budget of $4,900,000,000, yet substantial enough to have real meaning in the establishment of a new U. N. fund for foreign aid. As one official said, "it is enough to make a good beginning. If the experiment is valuable we can do more."

Although there are technical-assistance groups in the U. N. there is no foreign-aid fund as such.

Meantime, Secretary of State John Foster Dulles told the Senate Foreign Relations Committee today that it was President Eisenhower's considered judgment that any appreciable reduction in the foreign-aid program would gravely endanger the security of the United States. Mr. Dulles talked with Mr. Eisenhower by telephone before going before the committee, where he appealed in his own right for the $4,900,000,000 program asked for the year starting July 1.

In talking over the U. N. plan with congressional leaders, the administration is expected to make these points in favor of putting more foreign aid, most of which is now bilateral, onto a multilateral basis:

The new world situation created by Soviet entry into the foreign-aid field makes it imperative for the United States to gain the maximum effectiveness for what it does. One of the biggest hindrances is suspicion in some parts of the world of United States motives.

Burma, for instance, recently turned down $30 million in American aid because it did not want to be "tied to any bloc." But if the aid were channeled through the U. N. it would be far more acceptable, administration sources argue.

Also, the establishment of a world fund would diminish at least some of the confusion caused by competition between the United States and Russia through foreign aid offers for the favor of underdeveloped countries.

Within the administration a strong proponent of the plan is Ambassador Henry Cabot Lodge, Jr., Chief American Delegate to the U. N., who believes that "multilateral aid offers a way to prevent the so-called auction which some are trying to promote between the United States and the USSR as to which will spend most in underdeveloped countries."

Although the point is not settled, the $80 million United States contribution toward setting up a U. N. fund would probably be a diversion of funds already requested for bilateral foreign aid.

SEE CONGRESS FIGHT

The plan is an important departure in recent foreign aid thinking, and administration sources conceded that there may be considerable congressional resistance to voting money to be spent by an international agency.

But they feel a case can be made that multilateral aid is the only answer in countries where pride or suspicion cause rejection of United States aid since these nations might otherwise rely increasingly on the Soviet bloc.

Important evidence of Asian thinking on this point was recently given by David Owen, head of the U. N. technical assistance board who after a tour of the world reported that "Asian leaders underlined over and over the importance of an international multilateral approach to the provision of technical aid."

MUST TAKE INITIATIVE

It is also the conviction of United States officials such as Ambassador Lodge that if America does not take the initiative in this matter it will certainly be taken by the Communist bloc.

From a psychological point of view, if the Russians accept the President's challenge it will lead to more orderly and responsible big-power action in the foreign field. If the Russians refuse, they will be shown up before the world to be insincere in expressing a desire to help underdeveloped countries, it is felt in Washington.

If a new "world fund for aid" is developed, the United States would also consider making available for distribution certain stores of food and other surpluses but only on the understanding that they would be distributed so as not to interfere with other nations' regular markets. It would be up to the U. N. fund to make this decision and thus the United States could not be accused of putting forward the proposal so as to dump surpluses abroad.

What Constitutes Effective Political Advertising?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address given by former United States Senator William Benton before the Advertising and Sales Executive Club, of Kansas City, Mo. Mr. Benton spoke on effective political advertising. His remarks follow:

KANSAS CITY, Mo., April 9.—Republicans are relying too heavily on Madison Avenue, the Advertising and Sales Executive Club was told here today (Monday) by a 1936 graduate of that legendary New York advertising thoroughfare.

William Benton, Connecticut Democrat, who retired from his own Madison Avenue agency 20 years ago, then won one campaign for the United States Senate and lost another, hailed President Harry Truman as "worth more in politics than all Madison Avenue rolled together." Benton had been invited to speak by Mr. Truman and was introduced at the club luncheon by the former President.

"If I were a candidate today, I would far rather have Harry Truman as an adviser than Batten, Barton, Durstine, and Osborne—plus, for that matter—my old firm of Benton and Bowles and the rest of the big six," the Connecticut publisher said.

Benton praised the contribution advertising has made to the United States standard of living and urged sales and ad executives to get into politics. Then he added:

"Because advertising sells goods and services so successfully many without long political experience overestimate its ability to sell political ideas and personalities. Voters don't want their political ideas in packages, like breakfast food. They will think far longer and harder about who should be President than about their choice of a toothpaste or cigarettes, and they will think for themselves. In politics they suspect the slick slogan, the oversimplified solution, and the overstated promise.

"Similarly, they suspect the smooth and glossy personality. They look for sincerity and integrity; when they recognize them in a Harry Truman they cast their votes for these qualities, despite what they read in their newspapers. They expect some human frailties; NIXON'S success with his little-dog TV show seems to illustrate this latter point.

"With Lux and Post Toasties the claims, the gimmicks, and the cutouts on the boxes, are expected and accepted. But the public neither expects nor accepts gadgets, with a President or a presidential candidate." (Mr. Benton invented the "cutouts" on cereal boxes while in the agency business.)

"Repetition and perpetual reiteration don't have the same impact in politics. Nor will the most skilfully televised TV show, complete with teleprompter, take the place of issues in campaigns. Franklin Roosevelt was said by his Republican opponents to be successful because of his golden voice. That's a fallacy, in my opinion. He had the good issues—he was on the right side, with the right issues at the right time."

Television will be increasingly important in politics, Benton said, but not by following the advertising pattern. "Indeed, it will become so important and so costly that equal time should be furnished free, and financed by the Federal Government, to major candidates of political parties. But the candidates will make a mistake if they fail to develop techniques to match their own personalities, and techniques which are appropriate to the issues under debate. In selling cigarettes, roughly the same TV techniques can be used effectively for any brand. That is not true in politics."

Reporting, at the request of the club, on his recent visit to the Soviet Union on behalf of Encyclopaedia Britannica, of which he is publisher, Senator Benton disclosed that the Russians are beginning to go in for advertising. They use it in four ways to promote state purposes: first, to encourage consumption of crops such as soy beans, which are easy to grow; second, to encourage savings in state banks, in order to divert money out of consumption and into heavy industry; third, to promote the sale of nonessentials, such as inexpensive beverages, which are easy to make and have a wide profit-margin and which take money that might create demand for boots or vacuum cleaners or any scarce commodity; and fourth, for the social and political aims of the state.

"The Russians use pictures of men rather than girls in their advertisements," Benton said. "For instance, one bank avertisement showed a young man leaning against an automobile, with the legend, 'Save your money to buy a car.' (This would require a lifetime's savings for most Russians.) One display I saw featuring a girl was for Russian champagne; and she was holding not a dainty wine goblet but a brimming tumblerful. That seemed enticing to me.

"Perhaps half of all Russian poster advertising can be called political—for example, posters welcoming the 20th Party Congress, or glorifying manual labor, or extolling peace. I am excluding the millions of statues and pictures of Lenin and Stalin; these classify as political propaganda rather than advertising as we would identify it. In a sense, all communication in the U. S. S. R. from Pravda to the circus, is political propaganda. There has been no such thing as straight news or pure entertainment in the Soviet state. Thus the 'commercials' on Russian TV are political plugs, and the entertainment is designed to build the audience for the propaganda.

"What is now emerging which is new is commercial advertising for economic purposes. I had many reports that Anastas Mikoyan, minister of commerce and a member of the party Presidium, and other leaders are increasingly alert to the great possibilities in advertising for the development of the Soviet economy."

"TVA Never Claimed To Be a Yardstick for Private Industry," Said Mr. Clapp

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. PHILLIPS. Mr. Speaker, one of the claims most frequently made by proponents of the Tennessee Valley Authority is that it was set up as a "yardstick" against which private utility rates and methods could be measured. There has of course been no justification for this claim, as TVA operates with benefits and subsidies which a private utility does not have.

It is interesting therefore, Mr. Speaker, to read the hearing on the Government corporations appropriation bill for fiscal year 1948—H. R. 3756—80th Congress, 1st session, at page 132. Mr. Clapp, the Chairman of the Board for the TVA, was being questioned by a member of the Senate committee. The question was asked, regarding TVA:

At one time, was it not supposed to be used as a yardstick for private industry?

To which Mr. Clapp replied:

Well, there have been claims made that the TVA power system would set up a yardstick. The TVA has not developed or elaborated on that or made that claim.

That, Mr. Speaker, should quiet that particular fallacy about the benefits of the Tennessee Valley Authority under the existing system.

New Soil Bank Bill in House

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. HOPE. Mr. Speaker, no one in the last 3 years has worked harder in the House for the general interests of agriculture than the gentleman from Illinois [Mr. SPRINGER].

Two years ago he was one of the sponsors of Public Law 480, more commonly known as the Surplus Agriculture Disposal Act of 1954. The purpose of this act was to make possible a larger sale of our surplus agricultural goods in foreign markets.

When I was chairman of the House Committee on Agriculture in the 83d Congress, the gentleman from Illinois was one of the first outspoken advocates of the soil-bank plan. He has worked continuously for the enactment of that legislation over the last 3 years.

I was happy to learn that one of his constituents has expressed it in an editorial. Mr. Speaker, I append herewith an editorial from the Moultrie County News of April 27, which I have received today, on the services of the gentleman from Illinois in behalf of agriculture:

NEW SOIL BANK BILL IN HOUSE

Congress can pass a soil-bank bill this year if it will compromise its partisan differences and start hearing soon on a bill introduced last week by WILLIAM L. SPRINGER, Representative from the 22d District, which includes the county of Moultrie. Mr. SPRINGER introduced the new bill, designated as H. R. 10608, on Thursday, the day after the vote to override the President's veto failed.

In introducing the bill Mr. SPRINGER told of the need to pass the soil-bank plan this year so that it can be fully effective in 1957. He pointed out, as did this newspaper last week, that it is virtually impossible for Congress to convene in January and have time enough to pass a farm bill the same year that can be put into full effect.

Mr. SPRINGER has been a strong supporter of the soil-bank plan for the last 3 years. In fact he was a supporter of such a plan before it was ever considered by Congress. Since he represents in Congress the agricultural district in Illinois where the soil-bank plan originated, it is most fitting and proper that he sponsor this new House bill.

It should also be recalled that Mr. SPRINGER was one of the authors of the Surplus Agricultural Disposal Act. This is a bill to help sell surpluses overseas, and the records show that it has succeeded remarkably well.

Mr. SPRINGER has the interests of agriculture at heart, and is working diligently at the task of getting legislation passed that will help the farmer.

Targets for the Enemy

EXTENSION OF REMARKS
OF
HON. S. J. CRUMPACKER, JR.
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. CRUMPACKER. Mr. Speaker, my colleagues who witnessed the impressive display of Navy might at Guatanamo Bay last month should ask themselves the question, "Why this show of American strength at sea?" Or, as one of the great leaders of World War II puts it, "Is the Navy building targets for an enemy?" For a supercarrier, with its satellites—cruisers, destroyers, submarines, and other auxiliaries—is certainly a vulnerable target in this air-atomic age. Modern radar being what it is, there can be no safe place for the supercarrier flotilla to hide from enemy aircraft; nor will speed save it, for the flotilla can move no faster than its slowest component vessel.

If the supercarrier and its satellites make good targets for enemy aircraft, they make equally good targets for enemy submarines. Russia is turning out modern submarines at the reported rate of 75 a year. Aircraft—land based or carrier based—can be used to fight submarines; but carrier based aircraft with their own base destroyed by the enemy, may find no place to land.

The most important question which the supercarrier raises, however, is a question of the economical use of the Nation's resources. We can achieve bankruptcy in building defense. Certainly we can do that very quickly—and achieve defeat as well—if we build weapons we don't need, and can't use effectively, while neglecting to build the very weapons—the long-range, land-based bombers—on which our survival as a Nation may well depend.

Mr. Speaker, with the consent of my colleagues I wish to insert in the RECORD some terse and impressive remarks on this subject made by that great air leader, Gen. Carl Spaatz, USAF, retired, former Chief of Staff of the United States Air Force. How the Navy has adjusted itself to the atomic age, if not to the realities of national defense in the atomic age, is the subject of General Spaatz' remarks in Newsweek magazine of April 16, 1956. The survival of our Nation or the survival of the United States Navy is the question, and General Spaatz gives his answer, as follows:

IS THE NAVY BUILDING TARGETS FOR AN ENEMY?

The array of 50 warships assembled by the United States Navy last month at Guantánamo Bay made an impressive show of American might at sea. It also was instructive as a preview of the Navy's adjustment to the atomic age. What it showed was that the new Navy is to be a collection of supercarriers, or floating air bases, each attended and guarded by a swarm of supporting surface craft.

The theory is that these bases can be moved rapidly to any part of the globe where air strength is needed for offensive operations and that they will be less vulnerable than fixed land bases on the defensive. This is a plausible enough theory but subject to question on several counts.

Obviously, the first question is whether the Navy, by placing so much reliance on supercarriers, isn't just building targets for the Soviet Union's submarine fleet. With Russia turning out submarines at the reported rate of 75 a year, it would appear that the United States Navy's most urgent task is to find an antidote for the weapon which plagued us in both the First and Second World Wars and is bound to be a serious threat to our survival in the third world war, if and when it comes.

While the supercarriers can be used to fight submarines, it is highly questionable, to say the least, whether it is the most efficient or the least costly instrument available for this purpose.

The second question raised by the supercarrier concerns its own ability to survive in an atomic world at war. The argument that its speed and maneuverability make it relatively invulnerable won't bear close examination. It must be remembered that a carrier is not just a carrier but the center of a swarm of ships—cruisers, destroyers, submarines, and other auxiliaries—and that it can be no faster than the slowest of its satellites.

Modern radar being what it is, enemy air reconnaisance of sea areas will be efficient in another war, day and night, regardless of weather. A few modern airplanes can patrol a tremendous area. There will be no safe place for the supercarrier and its supporting units to hide.

The third vital question about the supercarrier has to do with economical use of the Nation's resources. Modern weapons are all expensive, not just in terms of dollars but in resources—material and human. Unless our resources are used wisely and economically, we shall bankrupt ourselves in the long struggle ahead. The time has come for a very searching analysis to determine in what weapons and weapon carriers the national-defense dollar should be invested to get the greatest return.

Our very survival as a Nation depends upon the foresight we use in the maintenance of the proper forces in being, now and in the future, with a minimum expenditure of our resources. The taxpayers are entitled to a critical examination of the roles and missions assigned to the military forces. This examination should be nonpolitical and beyond the influence of service pressures in its conduct.

Loyalty Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. FLOOD. Mr. Speaker, the Veterans of Foreign Wars have served their country well in establishing Loyalty Day as an occasion on which every loyal citizen may "stand up and be counted." In place of the shrill whinings and rumbling threats of a few Communists and fellow travelers, following the red flag in a May Day parade, we have the full-throated shout of millions of citizens, united in their love of the flag of the United States of America. On this day we can show, to ourselves and to the world, the strength of a people devoted to freedom.

Almost 25 centuries ago Herodotus wrote:

While the Athenians were ruled by tyrants, they were no better in the things of war than any of those that dwelt round about them; but when they were rid of tyrants, they became the best by far. From this it is plain that while they were held under, they fought ill purposely, as men that work for a master, but when they were set free, each one was eager to accomplish somewhat for himself.

Through the centuries it has been true, and it is true today. The man who fights for freedom, and, in freedom, the man who fights for his neighbor and side by side with his neighbor, is the most formidable of warriors. This fierce love of freedom is no matter of oratory or easy platitude, but a strength that, unspoken, fills the very food we eat, the ground we walk on, and the air we breathe. The American hears it in every voice of nature, from birdsong to thunderbolt. It is good to take this occasion to let the world hear, from our 150 millions, the ringing slogan, "Loyalty means liberty."

Flammable Fabrics

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. CANFIELD. Mr. Speaker, while no further action has been taken in recent weeks by certain Japanese and American lobbyists to revive the campaign to amend and thereby weaken the Flammable Fabrics Act, we who were sponsors and supporters of this protective legislation must not interpret this as a sign that all is well, and allow our vigilance to be relaxed.

The danger of death and painful injury is too real and too present. We need go on farther than the neighboring city of Baltimore, where but for a quick-thinking clergyman and a woman worshipper, a little boy's life might have been lost. There can be no more impressive testimony to the need for unswerving resistance against any and all attempts to debilitate the effectiveness of the Flammable Fabrics Act, than the following Associated Press story that appeared in a recent issue of the Paterson (N. J.) Morning Call:

COAT AND HOLY WATER USED TO DOUSE FIRE ON ALTAR BOY'S GOWN

BALTIMORE.—The filmy dress of 9-year-old altar boy Albert Longmire caught fire as he was lighting candles yesterday during novena services at St. Edward's Catholic Church.

His cassock and surplice blazed up.

The Reverend John Kerr, conducting services, leaped from the pulpit, hurdled the altar rail, grabbed a woman's coat, wrapped it around the boy and beat out the flames. A woman helped put out the flames with holy water.

At Lutheran Hospital the youth was reported in serious condition with third-degree burns over the upper half of his body.

Soil Bank's Saga

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, now that the administration has tenderly clasped the soil bank to its political bosom it might be well to review a little of the idea's past history.

The Washington Post of April 29, 1956, carried an interesting account of the soil-bank idea. Included in the summary is the fact that my good friend and colleague the Honorable FRED MARSHALL, of Minnesota, revived the idea in the present era. Here is the Post's summary.

SOIL BANK'S SAGA

The administration's soil bank—now smack in the center of a bitter Democratic-GOP farm feud—had its beginning 2 years ago in an atmosphere of complete bipartisan harmony.

It was a Democrat—Representative FRED MARSHALL, of Minnesota—who first brought the notion to Washington. MARSHALL in turn got the idea from constituents. While visiting his district, he heard his farmers talking about a proposition they called "diverted acreage."

Some asked him if something could be done legislatively to reward farmers who were willing to take cropland out of production and plant it in cover crops.

When MARSHALL got back to Washington, he found some of his fellow Members thinking in much the same terms. He talked the idea over with his GOP colleague, Representative H. CARL ANDERSEN, of Minnesota. Both agreed to put in identical bills. Across the Capitol, Senator HUBERT HUMPHREY, Democrat, of Minnesota, put one in, too.

A few months later the American Farm Bureau Federation indorsed the same general notion, under the new and impressive title of soil bank. It was under this title that the administration later came out for it, with a few added wrinkles, after stoutly opposing the original plan.

In the battle for political credit which followed Mr. Eisenhower's veto of the farm bill, Democrats insisted Mr. Eisenhower already had authority to set up such a bank.

For their authority they went back to a law enacted 20 years ago, near the end of President Roosevelt's first term—the Soil Conservation and Domestic Allotment Act.

Last week Representative CLIFFORD R. HOPE, Republican, of Kansas, whose knowledge of farm problems has earned him the nickname of "Mr. Agriculture" at the Capitol, recalled the circumstances under which that first soil bank was born.

On January 6, 1936, the Supreme Court had voided the New Deal's AAA processing taxes. The Roosevelt farm program practically collapsed.

Overnight the Democrats had come up with a new plan to make payments directly to farmers in return for soil-conservation practices, which included taking cropland out of production.

HOPE revealed that the real authors of that original 1936 act were just a couple of very bright Washington newspapermen. They suggested the idea to AAA Administrator Chester Davis.

Their names: Felix Belair of the New York Times and James Russell Wiggins, Washington correspondent for the St. Paul Pioneer Press. Wiggins today is vice president and executive editor of the Washington Post and Times Herald.

The Last Word on Welfare Funds

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, there has been a great deal of talk about so-called abuses in the handling of employee welfare and pension funds. I would like to call your attention to the fact that a colleague from my State of Illinois, the senior Senator [Mr. DOUGLAS], has conducted an investigation and turned in a report that has been strongly endorsed by union leaders, including President George Meany, of the merged labor federation, the AFL–CIO.

It is not generally realized that the abuses in handling welfare and pension funds included improper practices by a few insurance companies, banks, and businessmen, as well as by a small number of faithless union officials.

It is not generally realized that the report turned in by Senator DOUGLAS said that even pension plans operated by employers alone should be subject to strict accounting and that the rights of employees under such plans should be safeguarded by acquainting them, annually, with the deferred pay they are promised in the form of pensions.

It is not generally recognized that while Mr. Meany has praised the work of the Douglas Senate subcommittee, and with minor reservations endorsed its demand for full disclosure of all details of all employee pension and welfare funds, the Senator has not yet received similar support from equally eminent spokesmen of the insurance and banking and businessmen communities.

Under permission to revise and extend my remarks, I offer an editorial from the St. Louis Post-Dispatch on the thorough and extensive report on welfare and pension funds issued by the Senate subcommittee headed by Senator DOUGLAS:

THE LAST WORD ON WELFARE FUNDS

The Douglas subcommittee in the Senate has just filed a 182,000-word report on employee welfare and pension funds. This ought to exhaust the subject, and the result of the group's long work and lengthy report is important to millions of Americans.

In sum, the bipartisan committee under Senator DOUGLAS, of Illinois, proposes Federal legislation requiring full financial disclosures from nearly all employee welfare and pension funds. The group suggests that some Federal agency be given power to compel honest disclosures.

Why is this important to the public? Because the subcommittee found that more than 75 million persons—employees and dependents—are covered in some measure by such protective funds. That is about half the Nation's population.

Moreover, between twenty and twenty-five billion dollars have been amassed under these programs to help provide for the risks and illnesses and old age of employees. Those promised such protection have an interest in knowing whether they are getting it.

Last year a New York State Insurance Department report showed that 62 of 135 union welfare funds under study had been mishandled. The AFL–CIO has already looked into such reports, and its president, George Meany, says he welcomes the Douglas report and agrees with it in general principles.

But the Senate group was interested in the whole broad field of welfare financing and not just union funds. And in their search the Senators found that while ignorance and extravagance had indeed caused a dissipation of some funds, many abuses involved certain insurance practices, such as excessive commissions and fees.

In consequence, the Douglas subcommittee's disclosure plan makes no distinction between funds operated by unions, management, or trustees. It makes no distinction between funds built entirely with employer's contributions and those to which the employees contribute. All such funds covering more than 25 employees would have to be registered, and all covering more than 100 employees would have to be reported in detail.

The Senators' reasoning here is that both Congress and the courts have held that employer contributions are in the nature of compensation for employees. Thus, employees have a right to know how the funds are administered. In addition, the sums involved are of such magnitude as to be a matter of consequence to the national economy. Hence, the Government has a right to know whether the money is in good hands.

Both the exhaustive work behind the Douglas subcommittee report and the logic of its conclusions ought to command the attention of Congress.

A Stark Warning

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I include an editorial entitled "A Stark Warning," which appeared in today's New York Herald Tribune:

It is indeed a stark warning which Gen. Curtis LeMay, chief of the United States Strategic Air Command, has just delivered. In his realistic testimony before the Senate subcommittee investigating this country's adequacy of air power as against the U. S. S. R., the general has made it very plain that we are losing ground. While he believes that for all the Soviet advances the United States now possesses "the capability of winning any war the Soviets might start," this victory would not be achieved without "receiving very serious damage." But he goes on to say: "Five years ago we could have won the war without the country receiving comparatively serious damage."

As for the future, General LeMay sketches a grim prospect. Asked about 1958–60, he

testified: "I can only conclude then that they will have a greater striking power than we will have in the time period under our present plans and programs." What is happening is that in the contest for long-range air superiority the Soviets are outproducing the United States. According to General LeMay, the U. S. S. R. is turning out its Bison and Bear jet bombers "at a combined rate substantially higher than we are producing B–52s." And unless there is a change in our plans and programs, it is perfectly obvious that the relative strength of the SAC can only be expected to decline. Coupled with General LeMay's criticisms last week of how combat effectiveness is additionally hampered by inability to retain and develop skilled manpower, the whole picture is most disturbing. In short, we need both more planes and more men.

The object of being strong is to maintain peace. Strength is the active deterrent against any potential aggressor. No other country is going to risk war when it thereby invites the certainty of instant retaliation and complete destruction. But neither can the United States afford anything less than the fullest measure of self-insurance for itself and the rest of the free world. We must continue to keep that margin of leadership in air power and atomic weapons which on this less than ideal globe remains the compulsive deterrent for peace. It will be costly, of course, but here there can be no real option. We must be strong—in arms, in morals, in selfless leadership—to preserve freedom and peace.

Even at the expense of balancing the budget.

Needed Postal Rate Increases

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Passaic (N. J.) Herald-News of April 30, 1956:

NEEDED POSTAL RATE INCREASES

The most successful business in the world at losing money appears to be the United States postal system. We are the only Nation, with the possible exception of Argentina, that does not run its postal agency on a break-even basis. In the last 10 years ours has lost an average of $460 million annually. On top of that the interest on the nearly half-billion postal debt costs us more than $100 million a year.

The reason is simple. The post office is paying present day prices for the things it buys and charging 1932 prices for what it sells. Of every dollar spent, 77 cents goes for wages which Congress sets, and 18 cents goes for transportation costs whose rates are fixed by either the Interstate Commerce Commission or the Civil Aeronautics Board. The 5 cents for other expenses is a slim area in which to expect any further economies in operation of the post office.

The average American's share of the postal deficit—paid out of general revenues—is about $11.50 a year. Yet 80 percent of the first-class mail and all the bulky second- and third-class mail comes from commercial firms. This is an unfair burden on individuals. Raising the rates so that those who use the mails would pay the cost would correct the imbalance.

Artificially low rates have been deceiving the taxpayers long enough. Four cents for regular letters, 7 cents for air mail, and other reasonable increases asked of Congress would put the expense burden where it belongs. The proposed rate boosts would still leave an annual deficit of some $63 million, but that would be a shining improvement over the present deficit.

Address by the Honorable Sinclair Weeks, Secretary of Commerce, Before the 44th Annual Meeting of the Chamber of Commerce of the United States, May 2, 1956

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. VAN ZANDT. Mr. Speaker, the following address was delivered by the Honorable Sinclair Weeks Secretary of Commerce, before the third general session, 44th annual meeting, Chamber of Commerce of the United States, Hotel Statler, Washington, D. C., May 2, 1956:

TEXT OF ADDRESS BY SECRETARY OF COMMERCE SINCLAIR WEEKS BEFORE THE THIRD GENERAL SESSION 44TH ANNUAL MEETING, CHAMBER OF COMMERCE OF THE UNITED STATES, PRESIDENTIAL ROOM, HOTEL STATLER, WASHINGTON, D. C., MAY 2, 1956

On the general theme of preserving private enterprise you have heard some very interesting discussions concerning the businessman's responsibilities in such fields as promoting economic understanding and informed governmental action at all levels. I am informed that my own contribution to this session will be most useful if I discuss the necessity for a close working relationship between businessmen and men in public office.

This is a difficult assignment, especially in an election year, when some people, in search of an issue, call it a mortal sin when close relationships between business and government are encouraged. Even without this added complication, the job of describing the importance—in fact, the utter necessity—of close relations is difficult.

As a former businessman and a present public official I've been on both sides of the fence—and sometimes in the middle. The experience is educational, even though occasionally painful. But nothing compares with the reward—a sense of participation in public service. And this is particularly true in an administration under such dedicated leadership as that of our truly great President, Dwight D. Eisenhower.

Because your policy committee has made its recommendation and because its passage means much to the program of President Eisenhower, may I divert for a moment to the bill (H. R. 5550) now pending before the Congress to authorize the President to accept United States membership in the Organization for Trade Cooperation (OTC).

Let me say first that reciprocal trade treatymaking is the settled policy of this Government. The process originated with a proposal of President McKinley—the motion was seconded by Theodore Roosevelt, William Howard Taft, Warren G. Harding, and many others. In my opinion it is a better method of tariff ratemaking than the process of log rolling historically in operation.

Obviously the job can be well done or badly done.

In connection with reciprocal trade agreements one hears from time to time of an outfit known as GATT. GATT objectives closely correspond to established principles of American commercial policy—principles which include the most favored nation treatment, for example, which the United States in its own interest has long urged upon other nations. Generally speaking, in my judgment, as far as GATT is concerned, it is better from every standpoint to have 35 nations join in 1 agreement than to have to go through the motions 35 separate times with 35 separate agreements finally arrived at.

The combination of such negotiations produces results not possible in a series of separate bilateral agreements and to my mind, certainly makes it possible for the United States to obtain greater trade benefits than could otherwise be achieved.

The Department of Commerce has an important interest in the Organization for Trade Cooperation (OTC) and because of this, I have carefully reviewed the proposal for it from every angle. Both as a member of the President's Cabinet and as a former manufacturer, I earnestly hope that the Congress will approve this vital legislation promptly.

I have personally examined very carefully the criticisms made against OTC which have led to honest doubts in the minds of some businessmen. I want to say that as far as I am concerned there is no foundation for these doubts.

The agreement for the OTC has been so drafted that United States interests are fully safeguarded. OTC would not be supranational. It could not change a single tariff rate. It could not impose new obligations on the United States without our consent.

So long as it is the policy of this Government to carry on foreign trade under the aegis of reciprocal trade agreements and to do it by the GATT process, I am convinced that the creation of the OTC will enable American industry and trade to derive additional and increased benefits from the GATT and the tariff concessions we have received.

Now to get on with my subject—let us first consider the impact of government on private industry.

When prosperity is rolling along on a high plateau—like today—some nearsighted businessmen may deceive themselves into assuming that, because our economic momentum is so strong, it makes little difference what signals are called in Washington.

In my judgment such an attitude is slightly shortsighted.

History clearly reveals that, from the industrial revolution to the present, rulers and parliaments have used their power both to help business up and to push business down. Governments have plagued business with red tape; burdened it with heavy taxes; strangled it with controls and—behind the Iron Curtain—have completely destroyed it.

If it makes scant difference to our economic system who sits at executive desks and in legislative chambers, why are so many left wingers trying to force so much anti-business legislation through the Congress?

Why are so many radical politicians bursting their lungs with tirades against business and businessmen in government?

Why are so many left wing groups planning campaigns to oust public officials from both parties who support sound economic principles?

We as a nation are not going to preserve private enterprise if local, State and national governments are run by people who misunderstand private enterprise, mistrust private enterprise, and mistreat private enterprise. You cannot raise sheep in a den of wolves.

Speaking as a member of the Eisenhower administration, I assure you that our mission in the economic field is to preserve private enterprise. Its record is proof of its value to all Americans. Look at this amazing record: Under private enterprise this Nation has advanced to history's highest standard of living.

A century ago 94 percent of all work was by human and animal muscle. Today only 6 percent is done by physical labor of man and beast—all the rest is by machine. A century ago the average worker toiled a full 70-hour week. Today the workweek is around 42 hours and most labor is easier.

Since 1900 our population has doubled but our per capita production has tripled. Even after allowances for price changes, our national income today is 7 times what it was at the start of the century. I think it is hardly any wonder, as a consequence, that we of this administration rely on free enterprice and the unchecked flow of its dynamic power to continue to bring material well-being to the American people.

From its very inception over 3 years ago, this administration's objective has been to let the free enterprise system run itself. Controls were dropped. The tax system was redesigned to raise taxes and not to change the social order. A policy of trying to get the Government out of business was instituted. The results I think speak for themselves, including the report the other day of the Council of Economic Advisers announcing the gross national product for the first quarter of 1956 at a new high—at an annual rate of $399 billion.

But ours is not a negative, hands-off approach. We recognize that the Federal Government in this century of giant industrialism and long-range guided missiles cannot shirk its responsibility in the economic field. Desertion could permit an eventual drift to inflation or depression. Both extremes would be bad for business, bad for defense, and bad for America.

We believe that the purpose of private enterprise is to create wide prosperity fairly shared. Else why is our economy so geared that competition continually drives the price down and down until the products of private enterprise—the only real wealth we have—are distributed to our people on an ever-widening scale.

We set barbed-wire fences beyond which Government should not go in the field of private industry. But we do not hesitate to use persuasion and the power of Government to do what needs to be done for the national welfare which the private factor of the economy cannot or will not do itself.

That policy is neither socialism nor standpatism.

It is dynamic conservatism.

It is economic commonsense.

In our desire to do what is best for 167 million Americans, we have brought to Government able talent of all kinds. We have picked some of the best from science, technology, agriculture, labor, finance, and industry—each person contributing his experience and brains in managing honest, forward-looking Government.

At first the individual business man in government undergoes a new bewildering, and frustrating experience—the strange gobbledygook language of bureaucracy—the duplication and the age-crusted redtape—the gigantic size and complexity of government.

Every conscientious executive wants to keep on top of his job—not only to manage properly but to think things out. There are never hours enough in the day to get things done.

One of the time-consuming jobs is the search for qualified top-rank executives for important posts in Government. Their skills are urgently needed. But, unless a prospect is independently well-off, the pay scale is often far too low to attract the cream of the crop.

The readjustments involved in scaling down personal finances, missing out on promotive priority, giving up established homes, and breaking into educational commitments are substantial hurdles.

Amongst business executives who come to Washington, the Nation has been fortunate to have the services of volunteer experts, called WOC's because they are loaned by private industry and serve without compensation. These men are helping to gear Government-industry participation in mobilization preparedness and in the current defense and atomic-energy programs—so that our military might will be a strong deterrent to war.

Surely these experts and technicians deserve well of this country. But what do they get from some circles?

It shocks anyone aware of the hazards of these times and anyone with a sense of fair play to find the chairman of a House investigating committee pouring out misrepresentations about WOC's and advocating a reckless course of action which could deprive the defense program of these urgently needed industrial specialists.

I don't believe the American people want the national defense effort made more difficult just to gratify the spite of those—in or out of Government—who hate private enterprise and who always are ready to smear any businessman anywhere in Government.

I think instead that the American people are everlastingly grateful to these able and honest businessmen who are serving their country in the cause of peace.

While I praise the contribution of businessmen to Government in this day and age, I would add that it is my sincere belief that this Nation needs something more from businessmen than aptitude in any particular field. It needs business statesmanship. It needs the positive leadership of businessmen in keeping our country on the right road.

The more I study modern conditions the more I am convinced that the way to preserve private enterprise is to preserve sound government. I doubt that we can keep government sound unless the champions of priate enterprise spend just as much time fighting for sound policies in government as they do in making and selling a product.

Businessmen are able to sell a product but they are infants in the task of selling an idea—and remember well that it is ideas, sound or otherwise, which have most to do in influencing the direction in which we as a nation shall travel.

But here comes the rub. Here's where a bit of human perversity enters the picture. Most of us businessmen—and I used to be one—are red-hot defenders of good government and free enterprise—in principle. Yet too often some businessmen want to make an exception in their own particular case.

Generally speaking, they're all for private enterprise—until their own ox is gored. At the first pinch of metal scarcity they want controls restored. They're for balanced budgets—but not if it requires them to pay at least the cost of special Government services indispensable to their operation.

Postal rates in large part have not increased in 24 years. Most business is willing, but some business fights tooth and nail to keep from paying its fair share of the cost of operating the Post Office Department. How many other costs of business have remained static in this quarter century period?

Let me make this point clear. We welcome hearing the views of businessmen on any subject that concerns their own business or the economy. That's our job: to listen, to advise—and where possible—to help. In fact, the bulk of our operation—at the Commerce Department—is a great service station for businesses of all sizes. And we pass along industry views to other areas of Government, including the Congress.

However, cooperation between business and Government should be a two-way street.

If we as a nation are to preserve private enterprise, we must preserve initiative and research and competition and free markets and sound money and credit policies of Government. Of course, it is natural for a businessman to exercise self-interest because if he did not pay attention to his own shop, he could not stay in business.

If we are to keep prosperity and foster long-range economic growth, however, businessmen also must be economic statesmen with a vision and a sense of duty that embraces the well-being of the entire Nation.

For if businessmen—of all people—neglect or fail to champion private enterprise and the Government policies that encourage private enterprise, how can private enterprise continue to survive The alternative to free enterprise is captive enterprise. It is the fall of conservatism and the rise to power of radicalism with its jargon of class warfare, its dangerous lideologies, and its chains for business.

This administration will continue to do what it can to preserve private enterprise by carrying forward sound programs to strengthen the economy—by fighting for the soil bank and other measures to give the farmers a better chance—by proposing to Congress new assistance, including certain loans, to enable communities with chronic unemployment to help themselves.

We shall continue to advance programs for economic growth, such as necessary aids to small business; inducements to home building; commercial atomic power; establishment of the Organization for Trade Cooperation to spur world commerce; additional air traffic control facilities for safer air travel; construction of the great national highway program, and other plans for building a prosperous future.

We welcome the vigorous cooperation of business in our fight to maintain a climate in which business will continue to flourish, employment will expand, and other fruits of healthy economic growth will be harvested by all of the American people.

Rocky Marciano

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Shirley Povich appearing in Sunday's Washington Post and Times Herald in response to my friend and neighbor, the world's heavyweight champion, Rocky Marciano.

The article is entitled "Marciano Comes Shining Through to the Last":

MARCIANO COMES SHINING THROUGH TO THE LAST

(By Shirley Povich)

BOSTON, April 28.—There were strong motives, of course, that spurred Rocky Marciano to toss his world heavyweight championship back to the mob and walk away from bigger money than he had reaped in 10 rugged years in the prize ring.

They were impelling reasons, but at the same time so simple and so honest that

Rocky could not quite succeed in communicating them to his whole audience, especially those uncomprehending folks known to infest the prize fight business. Rocky's desire to exalt his wife and family above the glamour and profits of the heavyweight title, couldn't quite ring a bell with them.

Even as The Rock took his leave of the title officially, by saying he was all through with fighting, "because that's what my family wants and that's what I want," the skeptics began looking under the bed for angles that would explain his move. Love of family couldn't be accepted, per se.

So they said that Rocky was doing this thing as a favor to the International Boxing Club, which is being sued by the Government as a monopoly, to show that the IBC doesn't control the heavyweight title. And they said he was just paving the way for an elimination series that would bring him back to fight the winner for a monster gate. The idea of a man quitting because he loves his wife and baby and mother had to be rejected.

Conceivably, a fellow giving up the title like Rocky did, could have been coached to do so by the IBC as a desperate move to beat a Government suit, but I have grave doubts that Mary Ann Marciano, age 3½, could be coached to say what she said last night.

Little Mary Ann apparently was answering all the phone calls at the Marciano household on this great day in the life of the Marcianos, and there were few preliminaries in her response, which went like this:

"Hello, you. My daddy does not going to fight nobody no more at all. My daddy does not going to fight nobody no more at all, goodby."

Back in Brockton these last 4 years since Rocky was defending his title, Mrs. Marciano was keeping a rigid box score. "He was home only 152 days in those 4 years. Never for more than 2 weeks at a time.

"I told Rocky it was embarrassing to have to reintroduce him to his own daughter every time he came home."

Rocky's place among the heavyweight champions may long be debated, and there are some who will contend that his skills were limited to two facets, his ability to absorb a punch and deal one out. But indisputable is the brightness of the record he takes into retirement with him: 49 fights, 49 victories, no draws, no defeats, no peers at the trade in his own time.

Just as he refused to be beguiled by the glamor of the business of being the heavyweight champ, Rocky remained the hometown boy in his final act as champ. While the big city reporters in New York were assembling at the press conference he had called, and wondering what the nature of his announcement might be, Rocky bethought himself of an old friend in Brockton.

Rocky telephoned Mrs. Marciano in midmorning saying he was keeping his pledge to her that he would retire before May 1. Then he said, "I'm announcing it at noon. But call Vic Dubois at the Enterprise and tell him he can have the story right now because I want him to have it first."

And so it was that Rocky, even on his busiest day, was remembering the home town sports editor who helped to launch him to fame, and so it was that Vic Dubois of the Brockton Enterprise had a clear beat on the big story.

I happen to know that the thought of retirement began to germinate with Rocky last summer when he went into training for the Archie Moore fight, and that it was greatly intensified the same night he knocked Moore out at Yankee Stadium.

At Grossinger's, Rocky didn't go in for much fight talk. The light of his day was the evening phone call to Brockton and his long conversation with first his wife and then with little Mary Ann. Talking to his daughter, he was at play. He was every wonderful little girl's fond daddy, and the fact that he was champion of the world was easy for him to forget.

That night he knocked out Moore in Yankee Stadium there was usual postfight celebration at the Hampshire House. Never did a winning fighter appear to be so unhappy. For his well-wishers, Rocky smiled only weakly. He was exulting not at all. His chagrin at the fact that Moore had dumped him on his pants in the first round was still showing, unobliterated by the fearful beating he finally dealt out to Moore.

"Barbara wants me to quit fighting," he said that night, "and it's about time maybe that I started listening. All the people in Brockton like me so much I don't ever want to lose a fight. Every time I fight I always hear them yelling, 'Attaboy Rocky,' and I can't let them down."

It was typical of Marciano's honesty that he named Archie Moore as the No. 1 contender for the title he vacated. Moore was the only fighter he had actively disliked. Archie's name-calling campaign before getting the title fight had hurt the sensitive Marciano, yet after he beat the man, he could still rate him best of the rest. As in all of his other tests, Marciano once more could come shining through.

The Smear Nixon Crowd Still at It

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. DAGUE. Mr. Speaker, it would seem that the smear attacks leveled at the Vice President are to continue with undiminished virulence despite his overwhelming endorsement by rank and file Republicans throughout the country and his complete acceptance by President Eisenhower as his running mate. Poor old Herblock keeps up his running fire against NIXON in his best smear technique, and inconspicuous columnists such as Fleeson—and Stokes—torture the Chotiner incident to make it virtually appear that NIXON'S one-time campaign manager has been using the Vice President's office as his headquarters. And the letters-to-the-editor columns still carry an occasional shot at him, although the writers conveniently neglect to specifiy just what they find wrong with him officially or privately.

As usual, it has taken fair-minded and objective David Lawrence to bring things into focus, which he does in his column appearing in yesterday's Evening Star. As Mr. Lawrence points out, these smear artists conveniently overlook the fact that Mr. Chotiner was also at one time the campaign manager for Chief Justice Warren and Senator KNOWLAND, and these two outstanding public officials are conveniently spared the guilt-by-association charges which come so readily to the tongue and pen of those so-called liberals who on other occasions have decried the smear technique when their New Deal pets were under attack. Mr. Lawrence's article, included herewith, deserves your perusal:

LIBERALS SMEAR NIXON—THEY WEEP OVER GUILT BY ASSOCIATION BUT DON'T LAMENT CHOTINER CASE

Guilt by association has caused many an outburst of indignation in recent years by so-called liberals and others who have said it is rank injustice to associate the name of an innocent man with someone either accused or suspected of wrongdoing.

But the pious organizations dedicated to the crusade against guilt by association seem to be weeping no tears and issuing no statements of lament at the smear job done in the last few days on Vice President NIXON by certain news dispatches and headlines. The American people read in the last few days such headlines as these: "NIXON'S Aid Gets Probe Subpena," "Probers Call NIXON'S 1952 Manager," "NIXON'S 1952 Manager Involved in Inquiry on Clothing Contracts," and "NIXON'S 1952 Manager Got Legal Fee in Fraud Case."

The headline writers themselves were certainly not at fault. They rightly based their headlines on what the news articles and dispatches conspicuously emphasized in the first few paragraphs. Not one of the articles in the various eastern newspapers which printed the above headlines told the people the whole truth, which is that Murray Chotiner was campaign manager not only for Mr. NIXON but also once for Earl Warren, now Chief Justice, when he was elected Governor of California. Nor did the news articles tell the reader that Mr. Chotiner was the campaign manager for Senator KNOWLAND when he ran in 1946 and also in the 1952 primary when he won both the Republican and Democratic Senatorial nominations. Nor did the articles state that Mr. Chotiner was campaign manager in southern California for Governor Dewey, of New York, when he ran for the Presidency in 1948.

None of this information was, of course, really pertinent to the story except that, if one man—NIXON—was mentioned, all others should, in fairness, have been included. The inference left with the reader was that Mr. NIXON was somehow implicated in an alleged wrongdoing on the part of Mr. Chotiner. There seems to be an overeagerness on the part of political opponents these days to smear the Vice President.

There was, indeed, no more reason for the headlines to speak of "NIXON'S aid" being in trouble than to call him "Chief Justice Warren's aid." Actually Mr. Chotiner today isn't the aid of Mr. NIXON, nor is he his campaign manager. He is not a member of Mr. NIXON'S staff or of Chief Justice Warren's or Senator KNOWLAND'S. He is a close friend of them all.

What the news articles didn't tell the reader is that Mr. Chotiner is perhaps the leading lawyer in criminal cases in southern California and that his law practice is confined to this type of activity while politics is with him an avocation.

A headline saying that a lawyer got a legal fee from a client involved in a fraud case would not have been news. It was the fact that the lawyer in question was once a manager for NIXON which seemingly made it news. Yet there was no evidence to back up such a plain case of "guilt by association."

The client of Mr. Chotiner named in the Senate inquiry got into trouble during the Truman administration when some Government contracts for clothing for the Army were allegedly obtained under fraudulent means. Since then the client in question was tried and convicted. It was in 1953 that the client employed Mr. Chotiner personally on legal questions growing out of the episode.

There isn't the slightest scintilla of evidence—nor will any ever be produced, because there is none—that Mr. NIXON knew even the fact that Mr. Chotiner had any such

client. The news articles, following the exposures by a Senate committee which insisted on summoning Mr. Chotiner for testimony, properly reported the committee action and that the Democrats were pressing it. But there has been nothing to indicate that Mr. Chotiner's relations with his client were anything but the normal relation of a lawyer practicing in criminal cases. Not so long ago the National Lawyers Guild, a radical organization, raised a fuss because some of its members were criticized for defending Communists. It was rightly argued here that no lawyer in good standing, and himself not implicated in the Communist conspiracy, should be condemned in the court of public opinion because he chooses to give any defendant the benefit of his counsel.

Certainly the news articles written about Mr. Chotiner imply that he did something wrong in defending a client who was involved in a criminal case. The effort to tie the Vice President into the whole business, moreover, by giving prominence in the press to his former relationship with the lawyer is an attempt to imply "guilt" by association"—a practice that merits condemnation when there is no evidence of guilt.

On the Right Road

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. WESTLAND. Mr. Speaker, in enacting the highway construction bill last week the House of Representatives took a long stride toward making the lives of many Americans safer and more enjoyable.

The prospect of having 80 million cars, a decade hence, jammed together on today's highways was unappealing and frightening. The program we have started will provide a network of improved roads from the interstate to the local level.

In my State of Washington, the Federal Government will be spending $35.1 million in 1957. Primary, secondary and urban roads will receive $11.7 million, which will be matched dollar for dollar by State funds. Highways 99 and 10, our two interstate arteries, will receive $23.4 million plus a 10 percent payment by the State. Highway experts estimate about 4,000 new jobs will be created in my State over a period of the next 13 years. In all, some $498 million will be spent in the State of Washington during the construction period.

I believe one of the salient features of this bill is its provision for more primary and secondary road funds. As the topography of our State and its highway development limit us presently to two interstate highways, much of the beneficial effect of this bill would have been lost without the changes in the State's role. Under the new bill, the States portion of interstate road construction is lowered and the consequent savings can be matched dollar for dollar by Federal money for those roads that our citizens use in traveling from farm to market, from town to home or from town to town.

Our State has done an outstanding job in developing its highway system under the stress of financial limitation prompted by the rapidly expanding need for roads and the slower expansion of the revenue base. We have the best roads, commensurate with construction funds available. Now the State can go ahead with plans for new roads for congested areas and restoration of roads which require expensive renovation projects.

It is my belief that the President's bond-financed program would have been a more sound, better financed, generally superior plan for solution of the highway problem. However, it was obvious that the leadership of the committees which considered this bill would not have brought out another bill had this one been rejected, thus it was this bill or none.

I am not in accord with all of the revenue-producing features of this bill, but I believe in the long run its ultimate benefits will outweigh the poor and in some ways inequitable taxation portions it contains. With this in mind, I joined in support of this measure and am in hope the Senate will see fit to complete early and favorable action on it so our program can be started soon.

The Farm Veto and Another Promise

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. THORNBERRY. Mr. Speaker, the Smithville Times, published in Smithville, Tex., by C. K. Mick, publisher and owner, is recognized as an outstanding weekly newspaper.

At the annual convention of the South Texas Press Association in San Antonio, Tex., April 20 and 21, the Smithville Times was awarded a first-place trophy for the best commercial printing in towns of less than 3,500 population and five certificates of award in newspaper contests conducted by the association.

The certificates of award were for first place in commercial printing, second place in newspaper photography, third place in best all-round newspaper, and honorable mention in column writing and editorials.

In addition, it has been the winner of the plaque for outstanding community service in 1947–48, 1950–51, and 1954–55.

An example of why this newspaper has received such splendid recognition is a very timely and excellent editorial on the problem presented by the President's veto of the farm bill, which appeared in the April 27 issue. The editorial the Farm Veto and Another Promise is one which all of us who realize the predicament faced by the farmers of the Nation will deeply appreciate.

The editorial is as follows:

It's happened again. The farmer, hopefully eyeing the prospects of an even break in national economy, has been left holding the bag—a bag lined with empty promises.

The Presidential veto of the farm bill adds another hole to the farmer's bare and threadworn pocketbook. And the chances of patching it are mighty slim.

Our farmers are left with only the promises made in an attempt to justify this unjust action. The administration proposes as a substitute, that the Congress pass a soil-bank program which, they claim, if passed right away could give the farmers up to half a billion dollars in aid this crop year.

The soil bank has been the administration's mainstay, their obsession, and their cure-all for the farmer's ills. This, of course, is not entirely true. It has definite benefits, but is certainly no miracle medicine to cure the low-price plague of our farmers. No single program could be expected to dispel the recent years of mounting farm depression.

The now-dead farm bill was one which was written by the farmers themselves. The Senate and House Agricultural Committees worked tirelessly with rural people all over the Nation laying groundwork for the legislation. The bill was not 100 percent perfect, but it would have at least given the farmers something to hold on to and would have stopped the price declines which are shoving farm economy steadily downward.

In the words of congressional leaders, there is no hope of passing another general farm bill this session. Administration claims of immediate price boosts on some commodities will be bogged down by laws now in effect, and the old farm enemy—the sliding parity scale—will likely stay with us.

Texas farmers are tired of promises. They haven't forgotten those made by the President at Waco during the last presidential campaign. The supports promised then were no more real than the economic boosts our farmers are now being promised.

Our agricultural population loses most through this tragic act. But in the long run, they won't suffer alone. Sound farm economy is essential to national well-being, and continued depression of agriculture is eventually sure to affect us all.

Postmaster General Summerfield and the Postal Rate Increase Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, permit me to call to the attention of our colleagues the following article by Mr. George Rothwell Brown on the postal rate increase bill which appeared in the New York Journal-American on April 20, 1956:

POSTAL RATE INCREASE BILL; DEMS WOULD GET THE BLAME

WASHINGTON.—The unusual spectacle of three members of the Cabinet plugging in unison for a bill which repeatedly in the past Congress has been most reluctant to pass, has been one of the main attractions in Washington this week.

Treasury Secretary Humphrey, and Sinclair Weeks, the Secretary of Commerce, have been backing up Postmaster General Summerfield in his effort to obtain the enactment of a postal rate increase bill that would add $400 million to the annual tax load of the American people.

So far as this writer can recall—and he has been around the Capitol a good many years—this is the first time that one member of the Cabinet ever enlisted the services of another in high pressuring Congress, and Mr. Summerfield has recruited two of them. He's a wonder.

"PUNCH LINE"

Mr. Weeks stated his "categorical conclusion" that the proposed new higher rates "will not impede or hinder business."

That was his "punch line," and the reason for his being before the House Post Office Committee. He brought to the support of this conclusion the fact that the National Association of Manufacturers, and the executive committee of the United States Chamber of Commerce, favor the administration's objective, which by the admission of Secretary Humphrey, is to balance the budget at the expense of the people who use the mails.

Secretary Humphrey indeed put it very bluntly, that failure to enact the Summerfield bill, which would increase postal revenues by $400 million a year, "would to all practical purposes eliminate the very thin $400 million surplus which the President's January budget envisioned for fiscal 1957."

That was letting a couple of cats out of the bag. It tagged the Summerfield bill as a tax bill, a definition which its supporters have been trying to avoid, and of course, it is a tax bill. For this reason the Senate Post Office Committee repeatedly has refused to consider similar proposed legislation prior to action by the House, in which constitutionally all tax legislation must originate.

So here we have a Republican Secretary of the Treasury seeking to induce a Democratic Congress, in a campaign year, to help balance the Eisenhower budget.

WHAT HE DIDN'T SAY

This would be an accomplishment that would be of immense political advantage to Republican candidates this year right down the line, while the Democrats would have to take the blame for raising taxes on everybody—including their friends the farmers.

It is quite true, as Secretary Weeks told the committee, that the executive committee of the chamber of commerce did endorse the rate proposals, back in 1953. What he neglected to say is that since then a special policy committee has been studying the whole postal problem, and has not yet stated the position of the chamber as of today.

Mr. Summerfield would be able to make a lot of political hay if he could go to the country next autumn with the proud boast that he was the first Postmaster General in history to put the postal service on a pay-as-you-go basis, and that he had made the balancing of the Eisenhower budget possible.

But where would be the political fodder in that for the Democrats?

Administration of Wildlife Refuge Lands

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1956

Mr. METCALF. Mr. Speaker, the following editorial from the April 18, 1956, issue of the Bakersfield Californian calls attention to the recent report in which the House Committee on Merchant Marine and Fisheries was highly critical of the administration of wildlife refuge lands by the Department of the Interior:

COMMITTEE REPORT SCATHING

Before President Eisenhower makes any appointment to succeed Douglas McKay as Secretary of the Interior he should study a report approved unanimously by the Members of the House of Representatives Committee on Merchant Marine and Fisheries. The report is the result of hearings held by the committee on the subject of the Department of the Interior's administration of the Nation's wildlife refuges, a type of administration that has compelled Congress to frame legislation to protect the refuges, although this protection legally and morally should be provided by the department itself.

President Eisenhower should read this report and others before committing himself to the appointment of Clarence Davis or any other policy-making official to the office of Secretary of the Department. Chances of confirmation of such an appointment are slight.

The committee reports that "the record of the hearings is a picture of extreme administration confusion. There has been absolutely no effective liaison and coordination between several of the bureaus in the Department of the Interior, between the Washington office and the field of the Fish and Wildlife Service, or even between the various branches within the Fish and Wildlife Service."

It will be recalled that many of the career men in this Service were forced out several years ago when the "new philosophy" was introduced into the Department. This "new philosophy" is responsible for allowing 274 oil and gas leases to be issued by the Department. This occurred when the Department was assertedly framing new regulation to "protect" the refuges, but news stories and special studies at the time revealed that peculiar instances of favoritism occurred and whatever protection the refuges needed came too late. Not since the day of Albert Fall has there been such a case.

The House committee report disclosed these and other facts that clearly call for a change in the manner in which the Fish and Wildlife Service is handled, and the elevation of the second in command to the top job is no way to do it.

It has been pointed out that most of the development, maintenance, and management of the Nation's wildlife refuges is paid for by the fees from duck stamps purchased by sportsmen, and these people are not happy at the misuse of the lands.

The handling of the wildlife refuges and the often surreptitious opening of these areas to lease to favored companies have excited the criticism of sportsmen and of all who believe that the Department of the Interior has a protective assignment rather than that to which it has been committed in the past few years.

The fact that the House committee report received unanimous concurrence and that it is receiving widespread attention in Congress shows promise at least some protection will be afforded our precious wildlife refuge system, if it has to be done by passing more legislation. The administration should take its cue.

When President Eisenhower makes his appointment of a new Secretary to replace Mr. McKay, he will have the opportunity to choose a man who will correct the conditions described in the committee report.

The St. Louis Post-Dispatch commented editorially on this opportunity in the issue of April 8, 1956. I commend this editorial also to the attention of my colleagues:

EISENHOWER'S OPPORTUNITY

President Eisenhower soon will be filling the sixth major vacancy in his Cabinet in a little more than 3 years. This vacancy is in the office of the Secretary of the Interior. It is one that presents the President with an opportunity, greater in some ways than any of the others that have come to him previously through Cabinet resignations.

The first top-level Cabinet change occurred in President Eisenhower's inaugural year when the late Martin P. Durkin, of Illinois, resigned as Secretary of Labor and was succeeded by James P. Mitchell, of New Jersey. The second change was the departure of Mrs. Oveta Culp Hobby, of Texas, from the new Department of Health, Education, and Welfare and her replacement by the able Marion B. Folsom, of New York.

Three major resignations have occurred in the Department of Defense, just below the level of Secretary Charles E. Wilson, of Michigan. The President's first choice as Secretary of the Army, Robert T. Stevens, of New Jersey, a central figure in the McCarthy battle, was succeeded by Wilber M. Brucker, of Michigan. Robert B. Anderson, of Texas, was succeeded as Secretary of the Navy by Charles S. Thomas, of California. Harold E. Talbott, of New York, who got tangled up in conflict-of-interest troubles, resigned as Secretary of the Air Force; his successor is the eminently qualified Donald A. Quarles, of New Jersey.

Now Secretary of the Interior Douglas McKay will be leaving the Cabinet in a few days to go home to Oregon to run against Senator WAYNE MORSE, who is the White House's No. 1 senatorial target this year. We hope the President chooses as well in selecting the McKay successor as he did in picking the successors to the Durkin and Hobby seats. For if he does he will raise the level of the Cabinet notably.

This would be good for both the country and for the Republican Party. The conservation and natural resource policies of the Federal Government under Secretary McKay have favored oil, waterpower, timber, and land exploiters. This record is so clear that it does not need to be reviewed here.

Why a constructive change from Secretary McKay would be so good for the Republican Party ought to be equally clear. But somehow it seems to have been forgotten. Three years ago the Post-Dispatch printed an editorial entitled, "A Record To Be Proud Of." It told how many advances in conservation had been made under Republican Presidents. Here are a few of the high spots:

Grant: Creation of Yellowstone National Park as first of the national parks.

Harrison: Creation of first national forests.

McKinley: Passage of organic law under which national forests were administered.

Theodore Roosevelt: Establishment of the United States Forest Service. Passage of the Reclamation Act.

Taft: Authorization for national forests in other parts of the country besides the West.

Coolidge: Establishment of Federal game refuges for migratory birds. Regulation of fisheries.

Hoover: Authorization of the first major public-power and multiple-purpose dam (Boulder, later renamed Hoover Dam).

It is a strange thing that the Republican Party which compiled this splendid record should go back on it under the first GOP administration in a quarter century. It is strange that the party has turned a deaf ear on the sound counsel of Republican Theodore Roosevelt, the first great conservationist in the White House. He said:

"In the administration of the forest reserves, it must be clearly borne in mind that all land is to be devoted to its most productive use for the most permanent good of the whole people, and not for the temporary benefit of individuals or companies.

"Where conflicting interests must be reconciled the question will always be decided

from the standpoint of the greatest good for the greatest number."

As we said May 7, 1953, these words apply to every other national treasure as much as they do to the forests. They apply to minerals, to waterways, to range. They apply to still other resources. They apply today in Hells Canyon.

The opportunity President Eisenhower has is to appoint a Secretary of the Interior who will be a watchdog for the interests of the American people. His opportunity is to find another Republican like Gifford Pinchot to battle for the public against the demands of predatory extractors and exploiters.

May he make the most of it.

Raymond Clapper Awards Voted by American Editors to Exposures of Inadequacies of Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, all of us are acquainted with the fact that this administration claims a unique virtue in the sense of being "clean as a hound's tooth." We are acquainted with the fact that it claims all virtue, honesty, and good judgment.

Is it not interesting that the Raymond Clapper Award for exceptional service in journalism went to a reporter, Clark Mollenhoff, of the Des Moines Register and Tribune, who exposed the bad judgment and wretchedly inadequate so-called security procedures of the administration?

Is it not interesting that American editors, through whom the Raymond Clapper Award is given, also voted honorable mention to another reporter, William H. Lawrence, of the New York Times, who exposed the conflict-of-interest activities of a former Eisenhower appointee as Secretary of the Air Force, who was given a commendation even as he was drummed out of office following the exposure?

And is it not interesting that President Eisenhower was "annoyed" when the editors made these awards in his presence?

Under permission to revise and extend my remarks, I include the following editorial on these subjects from the St. Louis Post-Dispatch:

IN THE PRESIDENT'S PRESENCE

The Raymond Clapper award of $500 for outstanding work in reporting the news of the National Capital in 1955 has gone to Clark R. Mollenhoff, of the Des Moines Register and Tribune for his series of articles on the high-handed dismissal on security risk charges of Wolf Ladejinsky, land reform expert then in the Department of Agriculture.

The presentation of this award took place under conditions both appropriate and embarrassing. The conditions were appropriate because the ceremony was at the annual dinner of the American Society of Newspaper Editors with Kenneth MacDonald, executive editor of the Des Moines paper presiding. The conditions also were embarrassing because President Eisenhower, who was the guest speaker, had to sit by and listen while Correspondent Mollenhoff was praised for being so persistent in his reporting that Agriculture Secretary Benson finally had to reverse himself. Secretary Benson fired Mr. Ladejinsky as a bad man to have around only to have the fired civil servant hired by Foreign Aid Administrator Stassen for sensitive work in Vietnam. This looked pretty crazy to Mr. Mollenhoff and he stayed with his story until Secretary Benson, doubtless under belated White House pressure, grudgingly yielded and cleared Mr. Ladejinsky.

Actually the President's embarrassment was compounded. Honorable mention went to the disclosures by William H. Lawrence of the New York Times that the Eisenhower administration's first choice as Air Force Secretary, Harold E. Talbott, had used his office and official stationery to assist his private company. All this forced Mr. Talbott to resign under fire. No wonder President Eisenhower did not join in the applause for enterprising, valuable Correspondents Mollenhoff and Lawrence. No wonder the President looked annoyed and drummed his fingers on the table and waited for it all to be over.

Continuing Egyptian Aggression

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, on April 10 and 11, 1956, Ambassador Abba Eban directed three letters to the Security Council detailing the extent and nature of Egyptian attacks upon Israel since April 9. The letters, which appear in the Israel Digest of April 31, 1956, are worthy of the attention of our colleagues:

TEXT OF LETTERS TO THE SECURITY COUNCIL LISTING EGYPTIAN ATTACKS

LETTER OF APRIL 10, 1956

I have the honor to refer to my letter of April 9, and to submit a further list of violations of the Egypt-Israel General Armistice Agreement committed by Egypt during the past 24 hours:

On April 9, 1956, at 13:15 hours, an Egyptian position opened automatic fire on a tractor near Nahal Oz. The driver was wounded.

During the afternoon of April 9, one member of an Egyptian murder gang was captured in the Lahish area.

At 21:00 hours, a waterpipe was blown up at Beit Reim.

At 21:30 hours, an Israel patrol north of Naharayim encountered an Egyptian armed band which was making its way toward Jordan. During the ensuing exchange of fire, the attackers managed to cross the Jordan border.

At 22:50 hours, fire was opened on a watchman of the Gilat settlement.

During the night, waterpipes were brown up near Tekuma, and a police car was attacked south of Beersheba. One policeman was wounded.

On April 10, 1956, at 04:00 hours, one member of an Egyptian murder gang was killed near Nehusha.

At 05:30 hours, one member of an Egyptian murder gang was killed at a point 20 kilometers distance from Beersheba. A second member who was seriously wounded, was captured.

At 06:20 hours, an Israel command car was blown up near Magen. Three of the passengers were wounded.

At 10:30 hours, an exchange of fire took place in the vicinity of Zikim, between an Israel patrol and an Egyptian gang.

I also wish to inform you that one of the victims of yesterday's attack on an Israel command car between Beeri and Beit Reim, which I reported in my letter of April 9, has since died of his wounds.

Investigations conducted by the Egypt-Israel Mixed Armistice Commission and interrogations carried out in the presence of United Nations observers of two members of an Egyptian murder gang captured on April 9, in the Lahish region, more than 30 kilometers from the Gaza strip, revealed the following facts:

Egyptian murder gangs were dispatched into Israel in the early hours of the evening of April 6. They crossed the lines near Beit Hanun, at the northern end of the Gaza strip, after receiving a briefing in Gaza from Capt. Mustafa Gamosh of the Egyptian Army. Members of five groups, who were about to cross the armistice line, were present at the briefing which was also attended by Col. Said Saga, commanding officer of the Fedayeen unit to which all those present at the briefing belonged. The orders given at the briefing included the following objectives: To blow up bridges; to kill people; to fire on vehicles and to mine roads and tracks. All the members of the gang to which the two captured belonged were armed with Carl Gustaf submachineguns, and were to make their way back to the Gaza strip. If for any reason this should prove to be too difficult, they were to advance in an easterly direction and to cross into Jordanian territory.

The interrogation of another member of one of the Egyptian murder gangs revealed that he had been sent into Israel territory by Maj. Mustafa Hafez, of the Egyptian Military Intelligence Headquarters at Gaza. In his testimony before a United Nations military observer, the man related that he had been ordered to penetrate deeply into Israel territory. He identified his personal arms which consisted of a Carl Gustaf submachine gun and of 330 bullets. He disclosed that he had been trained at a military camp in the vicinity of Cairo, but that arms had been issued to him at an army camp close to the railway station at Gaza. He had received his pay from Capt. Hamad Amin.

I have the honor to request that the contents of this letter be brought to the attention of the members of the Security Council.

LETTER OF APRIL 11, 1956

Further to my letter of April 10, 1956, I have the honor to bring to your attention the text of a broadcast by Radio Cairo, a government controlled station, made on April 10, 1956, at 06:45 hours.

"The Israelis believed that the Egyptian forces would not reach them and that penetration of any military forces into Israel would bring about intervention of the Great Powers. The operations carried out by the Fedayeen on Saturday last put an end to the quiet enjoyed by Israel. Egyptian Fedayeen reached the town of Migdal. This surprise paralyzed all possible Israeli action. The Fedayeen were able to open fire and to throw hand grenades in the center of the town and they left it ablaze. This event has extraordinary significance because the war is not now confined to firing or attacks along the border but has reached the heart of Israel and places which were believed to be safe from all danger. Following these incidents the whole of the Negev is in a state of tension, preparedness and panic. Inhabitants were ordered not to leave their houses after sunset. Indeed, the quiet reigning in the villages and towns remote from the armistice line has

turned to terror and fear. The recurring incidents proved to the Israelis that inside Israel territory there operate a large number of Fedayeen. Awe inspiring stories on Fedayeen activities circulate in Israel."

Commenting on the broadcast, an Israel foreign ministry spokesman stated on April 10, 1956, that it constituted clear evidence of Egyptian responsibility for the incursion into Israel of Egyptian armed murder and sabotage gangs, the so-called Egyptian Fedayeen.

The spokesman declared that the broadcast boasting of acts of aggression against Israel civilians followed an urgent appeal by Major-General E. L. M. Burns to Colonel Nasser to ensure the cessation of all acts of hostility. He noted that the broadcast was an open declaration of Egypt's aggressive designs. Major-General Burns, he added, had stated that Egyptian responsibility for these acts would place her in the position of an aggressor.

In conclusion, the spokesman drew attention to the fact that while Cairo was making this broadcast, a new wave of aggression was launched against Israel's territory. Acts of sabotage and murder were again renewed in many parts of the southern area of Israel.

I have the honor to request that the contents of this letter be brought to the attention of the members of the Security Council.

LETTER OF APRIL 11, 1956

I have the honor to refer to my letter of April 10 and to inform you of the latest violations of the Egypt-Israel General Armistice Agreement committed by Egypt in Israel territory.

On April 10, 1956, at 16:55 hours, an Israel military command car was mined near Kissufim. Three soldiers were wounded.

This brings the total number of casualties suffered by Israel as a result of the operations of Egyptian murder gangs in Israel territory during the period April 7–10, 1956, to 9 persons killed and 18 wounded. Two of the killed and seven of the wounded were soldiers.

The relative period of quiet which had prevailed since the afternoon of April 10 was broken on April 11 at 17:30 hours when two workers were attacked by hand grenades in an orange grove between Hatzor and Gan Yavne.

At 17:30 hours, an Israel position spotted a group of 15 Egyptian soldiers who had crossed into Israel territory about 2 kilometers west of Erez and opened fire at them. The Egyptian soldiers retreated under cover of strong rifle and submachinegun fire from two Egyptian positions. The exchange of fire lasted for about 30 minutes.

At 19:00 hours, a crowded civilian bus and a civilian truck were fired on while traveling on the main road between Beit Dagon and Sarafand. Six of the bus passengers were wounded.

At approximately 20:30 hours, an Egyptian murder gang entered the Agricultural Boarding School for Boys at Shafrir. They fired on a goup of 12 boys who were in the synagogue saying their evening prayers with their teacher. Three of the boys were killed on the spot. Four other boys were wounded, three of them critically.

This fiendish butchery of young children at the sacred moment of prayer was committed in the heart of Israel territory more than 50 kilometers north of the Gaza strip and only 7 kilometers away from Tel Aviv.

At 21:30 hours, an Israel policeman was shot and wounded near Lod.

At 21:35 hours, hand grenades were thrown into two buildings in Ahiezer about 9 kilometers southeast of Tel Aviv. A man, his wife, and their 18-month-old baby were wounded.

On April 12, mines were found near the water installations at Azikam and at Shafrim.

On April 12, at 12:15 hours, rifle fire was opened by an Egyptian outpost on an Israel outpost near Erez. The fire was returned and the exchange of fire lasted for 20 minutes.

At 12:16 hours, Israel planes intercepted four Egyptian planes flying over Israel territory in the heart of the Negev. Two of the Egyptian planes were piston-engine aircraft and two were Vampire jets. In the ensuing battle one Egyptian Vampire was hit and crashed in flames at Avdat, 10 kilometers south of S'de Boker and about 30 kilometers east of the border. The pilot was wounded and taken prisoner.

The inescapable conclusion from this new series of outrages is that Egypt has dispatched new forces to engage in murder and sabotage inside Israel despite the fact that during the past 24 hours the Secretary-General of the United Nations has been in Cairo, together with Maj. Gen. E. L. M. Burns, trying to persuade Egypt to honor her obligations under the armistice agreement and to refrain from all acts of hostility. The intensified series of hostilities against Israel which has reached its peak in the last 24 hours, seems to be Egypt's answer to these appeals.

I have the honor to request that the contents of this letter be brought to the attention of the members of the Security Council.

Economic NATO No Giveaway

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the May 1 edition of the Washington Evening Star by David Lawrence entitled "Economic NATO No Giveaway":

ECONOMIC NATO NO GIVEAWAY—DULLES' NEW PROPOSAL IS INTERPRETED AS BASED ON DIRECT INTEREST TO UNITED STATES

For several months now there has been a steady propaganda designed to influence American public opinion to give away lots and lots of money to Asia and Europe "with no strings attached."

Many Americans have been duped by the propaganda, and even some Senators are openly saying that America must give away her money through the United Nations or some other group because this would be giving it away "without any strings."

The propaganda is astonishing because it ignores completely that the President and the Secretary of State are going to have a hard time getting Congress to agree to the foreign aid program already proposed, even though most of the money is earmarked specifically for an American purpose—defense.

The "giveaway" folks inside and outside Congress are few in number, but they manage to wield quite a lot of influence. The amazing thing about it all is that they lately have suggested the United Nations as a sort of vehicle for giving away American money to "underdeveloped" countries—but again without America even getting the slightest credit for helping those countries that need it.

It is a curious paradox—the very persons here and abroad who are advocating that America give away her money "without strings" are laying down specific conditions by telling the American taxpayer he must grant funds and expect nothing in return. Uncle Sam has been called "Uncle Sap" in congressional debate many times heretofore, but nobody ever has assumed that the United States Government, under any administration, would be so foolish as to offer billions of dollars—with no questions asked—to nations whose rulers are openly unfriendly to the United States.

Some indication of the peculiar atmosphere that prevails in certain quarters here and in Europe can be observed from the reaction given to the speech of Secretary of State Dulles the other day. He mentioned vaguely that the time had come to expand the North Atlantic Treaty Organization. So obsessed have many observers been with the idea that only money given freely to Europe and Asia can solve all current problems that they immediately jumped to the conclusion that Dulles had capitulated and was getting ready to ask Congress for more money for an "economic" NATO.

The truth is the Secretary of State puts first things first. Unless there is a broadening of NATO on a political basis so that Europe will be able to become more integrated, there isn't much sense of thinking in terms of more economic aid. Even the present program may be jeopardized—and this involves $4.6 billion—unless some way can be found to interrelate security in the Middle East with the security of Western Europe. That's the real objective of broadening NATO. It's basically military.

Dulles wisely put the issue up to Congress on a basis of direct interest to this country. The United States will not engage in any group programs except in relatively small amounts or in any giveaway schemes with no strings attached. Money doesn't grow on trees in the United States, and no other nation is throwing money around without having some assurance of what it is going to achieve by its appropriations. The sooner the rest of the world begins to understand this simple proposition, the sooner will there be a realistic approach to the problems of helping underdeveloped countries, and the sooner also perhaps will the so-called uncommitted countries begin to realize that they can't ride the high horse of indifference to the American taxpayer or pursue neutralism indefinitely.

Dulles, in his testimony before the Senate Foreign Relations Committee, said the President, the Joint Chiefs of Staff and he, himself, are all convinced that this expenditure is necessary for the security of the United States.

Dulles sketched the military situations in Korea, Formosa, Vietnam, Japan, the Philippines, and Thailand. He spoke of the alliance of America with Turkey and Pakistan. He said southeast Asia required about $1.8 billion and the Middle East aid of about $800 million. Then he described the needs of NATO in Europe, and estimated that would cost about $1 billion.

Finally, the Secretary said Asia, Europe, the Middle East, and Latin America would require about 83 percent of the mutual-security program for next year. Only 17 percent of the program, however, or about $700 million, is earmarked for use in areas which are threatened by Communist subversion and which contain people, resources, and strategic locations which in our own interests, as well as theirs, should be secure from hostile domination.

Thus does Dulles put the direct interests of the United States plainly before Congress. He will have a hard time getting the money even that way. As for the fuzzy-minded who think there are plenty of billions more available for abstract purposes of prestige or anonymous generosity, they have another guess coming as to when, if ever, any such policy will materialize.

This Nation Under God

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD the address given by Father C. J. Steiner, president, University of Detroit, to the Washington pilgrimage on April 29.

Father Steiner spoke at the National Archives Building and it was my pleasure to be among those present to hear this great educator and American:

How appropriate is this setting for the consideration of our theme, This Nation Under God. Through the windows of the historic documents of these Archives we view our past. The stately and majestic monuments of the city itself towering toward the skies proclaim our present position of world leadership with its responsibilities and opportunities.

What does America, its past and its present, mean not only to me but to all mankind? The land so spacious, various, and beautiful excites wonder and admiration. The struggle with frontiers carried on from generation to generation, the spread of plenty and well-being over so vast an area, the unprecedented opportunities afforded young and old for education, philanthropy on a scale never practiced before inspire a sense of confidence and hope. Even more important than land, and schools and material things is man's view of man, the opportunity for man to prove that he can govern himself, the ideal and fact of unity in spite of wide diversity; the confidence that man can be trusted with freedom: freedom of speech, freedom of religion, freedom to develop his God-given talents without government dictation.

How are we to account for this exciting and dramatic success story of America's past and present? The theme of the Washington pilgrimage suggests the answer: This Nation under God.

In 1776, hundreds of years of Christianity had come and gone. Only in one land, America, in 1776 did men have the courage and vision to translate the truths of the Judeo-Christian tradition into a political philosophy and way of life. Our leadership of the Western World, our material progress and spiritual vitality, our freedom of opportunity under God as individuals, and as a Nation, are undoubtedly the fruits of our substantial loyalty to the political philosophy which is uniquely ours.

Our Nation is truly a religious Nation. Faith in God, the God of the Old and New Testament and faith in freemen as His responsible creatures have inspired our lives and history from the earliest days of the Nation. This faith is embodied in our laws, documents, and in our institutions. How fortunate our Nation has been from the beginning and throughout its history in having as leaders men who were keenly aware of the religious foundations of American democracy and the imperative need of divine providence in the conduct of the affairs of state and men. We are familiar with the Presidential Thanksgiving proclamation of our first President, George Washington: "Whereas it is the duty of our Nation to acknowledge the providence of Almighty God, to obey His will, to be grateful for His benefits and humbly implore His protection and favor, etc." We are all familiar, too, with Washington's Farewell Address of 1796. I quote these lines: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. * * * Let us with caution indulge the supposition that morality can be maintained without religion * * * reason and experience both forbid us to expect that national morality can prevail in the exclusion of religious principles."

President Dwight D. Eisenhower began his inaugural ceremony with a prayer and frequently throughout his administration has expressed the conviction that we will never begin to understand our Nation and our precious freedom unless and until we realize that our roots are deeply embedded in religious truths.

I pause here to consider the religion that has been at once the inspiration, motivation and source of strength of our Nation. Religion in the traditional American sense does not mean the worship of nature or man or science; nor the totality of human values. By religion is understood the sum of man's duties to himself, to his fellow men, to God, his Creator and Father as far as these duties are made known by reason and divine revelation.

Why and how is religion important in our world of today? It is a naive but common oversimplification to hold that the one big challenge of our day is communism. The economic, political and international conflicts which threaten our very existence are in a large measure due to a moral breakdown. This moral crisis, however, is only the expression of a deeper spiritual crisis. Mores, or ways of life, the requirements of binding obligations are bound up with accepted views of the nature of man and of the world. Over a large part of Europe and Asia binding convictions are lacking and there is confusion, bewilderment and discord. The whole complex of traditional belief, habit and sentiment on which convictions are founded has collapsed. The old gods are dethroned and none have taken their place. The real issue, I am convinced, which confronts us today is not communism, or socialism or totalitarianism, but the nature and dignity and ultimate destiny of the human person. Unless we understand what man is, whose he is, and why he is here on earth, we cannot know what is good and what is bad for him, what is right and what is wrong, what is true and what is false; nor can we know what kind of government or society is to be preferred as far as the real good of man is concerned, and we cannot know the complete answers to these questions about man without the aid of religion.

Since the 17th century man has been experimenting with the possibility of freeing himself from divine revelation. Divorcing himself from faith, rejecting the belief that man is dependent upon God, he has progressively put his faith in human reason and human will. For a time man sought to preserve the Christian ethics while at the same time rejecting the Christian religion. This experiment has borne fruit in the 20th century in the repudiation of reason, in the deterioration of the Christian conscience as freedom has rapidly degenerated into license. Where in former times men looked to God for help in the problems of their personal and national life, they now looked to science and technology. Paradise on earth was substituted for eternal salvation, and this paradise was to be achieved solely by the proper execution of a plan to be discovered in the truths and with the methods of the material sciences. The results of such a concept of man and life are vividly recorded in modern history and in our own times.

I knew a Germany, in fact I lived there, when there was not a Nazi in the land. I was a witness to Adolf Hitler's rise to power. I was still in Europe when Hitler's philosophy prevailed. You know what that philosophy was: "Der staat ist alles, du bist nichts." "The state is everything, the individual is nothing." Good and bad, right and wrong, truth and falsehood, freedom and everything were determined and measured by the good of the state alone. And the good of the state in the Nazi philosophy was prestige and power. "Deutschland uber alles" was more than the words of a song. The Nazi salute was substituted for the sign of the cross. Pictures of Hitler instead of Christ and the saints hung on the walls of civic buildings and homes. The world will never forget man's inhumanity toward man that marked that era of the world's history. Germany itself will always regret the scars left upon its land and people because the true God was denied, and the true nature of man and his destiny forgotten or distorted.

Twin of the Nazi philosophy of life is that of Soviet Russia today. To Soviet Russia the individual person is nothing, has no rights, no freedoms, no destiny except that of an atom of mass to be merged with other atoms to become the massman. Temporarily, the state is important, but only until such a time as when the ultimate objective of communism is achieved, an impossible, fantastic earthly paradise, utopia. The way to this utopia is through conflict. The present status of human persons is slavery, degradation, and terror. The root cause of what is happening in Russia is a wrong concept of man, his nature, and his destiny; and the explanation of this wrong concept is the shutting out of the land the one source of light that is adequate to give us a clear and certain understanding of human life. That source of light is, of course, religion.

We will do well to learn from the present and from the past, to be humble enough and wise enough too, to look to religion, to Divine revelation to give us an adequate and right view of the nature of man and the meaning of life. Religion is necessary to obtain a complete view of life for religion deals with ideas, facts, things, words; it runs through all of life. It is life itself. A fact is a fact whether it be discovered in a biological laboratory or revealed by God. In a city of man from which God is banned, man's view of life will be forever incomplete. Philosophy and science of their very natures give only partial answers to the world riddle. How can history be understood unless the part played by Christ the Son of God be shown. He is the central figure of history, the Son of God, and not as the positivists, naturalists, and humanists would have it, merely a wandering Galilean carpenter deserving a place in the friezing of history along with Aristotle, Pluto, Socrates, Marcus Aurelius.

A psychology that refuses to face the facts of revelation concerning the nature and destiny of the human soul is, by so much, a truncated and untrue psychology. Indeed, greater knowledge and appreciation of our human nature can conceivably be gained by taking into due consideration the facts of sin, the incarnation and redemption of the human race, than can be secured by 10,000 brass instrument experiments in a psychological laboratory. In regard to the role of religion in political science, a science with which we must daily occupy ourselves as American citizens, I quote here John Hollowall, professor of political science at Duke University: "The way in which we conceive of the end of the state depends upon what we conceive to be the end of man. Before we can decide whether a policy is a good one, whether it will promote the best interests of human beings we must first ask ourselves: What is man? What is his essential nature and ultimate destiny? And in seeking the answers to these questions we may well ask an additional question, namely, who is man? It is not indeed the function of political science to answer these questions, but political science cannot adequately fulfill the tasks peculiar to it until it sought the answers to these questions and sought them

from the disciplines most competent to answer them.

"The political scientist cannot know whether the means he prescribes are appropriate, adequate, and possible unless he knows the nature of man and the end for which he is destined. For knowledge concerning the nature of man and that which is good for him as a human being, political science must, of necessity, look outside of itself to other disciplines. It must look to psychology, to philosophy, and especially to ethics and religion."

I wish to take a moment here to say a word about freedom in the traditional American sense and its relationship to our religious heritage. The traditional American concept of freedom is built on the conviction that there are truths, objective truths, that always were and always will be. Some of these truths are self-evident, others can be known from reason, still others are revealed by God. To hold that there is a changeless truth is in no way in conflict with the freedom that should characterize an intelligent citizenry. Actually, objective truth is a prerequisite to freedom. Academic freedom, for example, means the right of a competent professor to teach his class without any control except that of his own conscience. This is a definition which I feel confident would find favor with any member of the teaching profession. What does it mean? First, it certainly does not mean the right of a teacher to instruct as he personally pleases, irrespective of truth. Freedom implies not only that we are free from external coercion, or pressure, but also that we are free for something. That something is the acquisition, preservation, and communication of truth.

Our Founding Fathers did not shake off their chains and then ramble around in irresponsible liberty. That would have been not freedom but mere license. The historical fact is that our Founding Fathers created a democratic charter that expressed positive goals toward which America would direct its energies.

Freedom implies, too, moral responsibility, and in the case of academic freedom the responsibility to teach the truth, the whole truth, and nothing but the truth. I am aware that there are Americans today who hold that a teacher must not be dismissed even if he is a thousand times wrong. Why? The basic reason must be that the university authorities are not sure of any truth. They do not believe that objective truth exists. To them, all truth is relative. Hence, assent to any proposition is necessarily hesitating and provisional. They are reluctant to condemn obvious error for fear that it may become truth tomorrow.

I hold that this position is not only absurd but that it is a tragic abdication of our responsibility to youth. It is also a source of the feeling of uncertainty and insecurity so prevalent today. If we are dedicated to truth we must be the relentless, unremitting enemy of error. It is commendable to create and maintain an atmosphere of free inquiry and bold experiment, but after all these are only means to an end, and the end is the attainment of truth. A person more interested in free discussion than in truth itself is like a quarterback who is more interested in talking of plays than in making touchdowns.

In conclusion I wish to make the following statement with all the emphasis and sincerity of which I am capable. A whole world of peoples, if not governments, looks to us for light and strength and ultimate security. Military strength is imperative; highways and skyways with cars and planes, houses and schools and all the material things that the most advanced technology makes possible are desirable and even necessary. More important, however, is the soul of America drawing its light and strength from our religious heritage. It is the preserving and strengthening of this soul of America that we and all Americans should dedicate ourselves not only during these days of special pilgrimage and ceremony but always. This dedication will mean peace and truth and prosperity not only to us but to all mankind.

American Committee on Italian Migration

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. KEATING. Mr. Speaker, it is certainly fitting that the American Committee on Italian Migration, which is a member agency of the National Catholic Resettlement Council, receive credit for the many worthy services it has rendered. During his recent visit to this country, President Gronchi of Italy paid some richly deserved compliments to the work of the committee. He pointed out that the committee has done a splendid job of implementing the Refugee Relief Act of 1953 and also paid tribute to President Eisenhower's initiative in calling for more liberal immigration laws.

At a conference held recently in Rochester, N. Y., it was pointed out that the resettlement committee in that city ranks ninth in the country in sponsoring refugees. Under the chairmanship of the Honorable Charles P. Lambiase, the Rochester chapter of ACIM has compiled a remarkable record of resettling refugees and immigrants.

Under leave to extend my remarks, I include the text of President Gronchi's remarks before a group of ACIM leaders in New York City, and an article telling of the conference of upper New York State chairmen and officers of the American Committee on Italian Migration, held in Rochester on April 8. Both pieces appeared in the April issue of the American Committee on Italian Migration Dispatch:

REMARKS OF PRESIDENT GRONCHI

It is indeed a great pleasure for me on this occasion of a meeting with the leaders of the American Committee on Italian Migration to express to your President, Dwight D. Eisenhower, the appreciation of my people for his interest in the need for Italian migration. Through his state of the Union message and subsequently through his special message to Congress, the Chief Executive of the United States has outlined a sympathetic program designed to modify existing legislation on migration.

This program is most vital. The Watkins bill (Refugee Relief Act of 1953) under the provisions of which 28,000 Italians per year have been able to emigrate to the United States, is due to expire at the end of 1956. We Italians greatly appreciate that it contributed toward solving the problem of our surplus manpower but we feel that after its expiration, the reversion to the permanent quota of some 5,000 Italian immigrants per year would be both incomprehensible and unrealistic.

I am certain that both Congress and the people of the United States will understand the spirit that motivated President Eisenhower to make certain recommendations which are of extreme importance to our country.

I am also certain that the American Committee on Italian Migration (ACIM) which has been a vital factor in the successful implementation of the Refugee Relief Act will continue to be of invaluable assistance in the work of disseminating to the American public the urgency of new and even more generous provisions and legislation that will aid Italian migration.

My heartiest compliments to the American Committee on Italian Migration for the good work it has done and my best wishes for the success of their future efforts which have been given impetus by the initiative of the President of the United States in the interest of an ever-growing friendship and cooperation between our two countries.

ROCHESTER HOLDS UP-STATE ACIM CONFERENCE—BISHOP KEARNEY PRESIDES AND ADDRESSES DELEGATES

A conference of upper New York State chairmen and officers of the American Committee on Italian Migration at which the Most Reverend James E. Kearney, D. D., presided and served as honorary chairman, was held at the Manger Rochester Hotel in Rochester on Sunday, April 8, under the auspices of the Rochester ACIM chapter.

Bishop Kearney welcomed the delegates and addressed them on the importance of the work, emphasizing that "the objectives of ACIM are founded upon the virtue of Christian charity" and that ACIM's work, "is American, for this country has always given help to immigrants." He concluded with a word of congratulations for what has been accomplished and with a blessing for continued success in the future.

Following a luncheon, the meeting was opened by the Honorable Charles P. Lambiase, chairman of the Rochester ACIM chapter who introduced the Honorable Joseph Farbo, vice mayor of the city. Mr. Farbo extended an official welcome to all the delegates and pledged the wholehearted cooperation of the city administration to the ACIM program. Credit for the outstanding success of the meeting goes to Judge Lambiase and the Reverend Albert L. Simonetti, priest consultant of the Rochester ACIM chapter. Others from Rochester who participated in the conference are: Rt. Rev. Msgr. Arthur E. Ratigan, Rochester resettlement director; Dr. P. Frederic Metildi, conference vice chairman; Mr. Louis A. Valenza, arrangements chairman; Mr. Joseph A. Anzalone, arrangements cochairman; Miss Marlene J. De Mattia, field liaison, Rochester resettlement committee; Mr. Antonio D'Agostino, conference secretary; Attorney Thomas Laverne, publicity; Dr. Frank J. Gianforti, reception chairman, and Miss Alma Pavia, recording secretary.

Judge Marchisio and the Reverend Caesar Donanzan were present to take part in the proceedings as were chapter chairmen and officers from Niagara Falls, Buffalo, Syracuse, Utica, Amsterdam, and other upstate cities.

Father Donanzan complimented the assistance of Rt. Rev. Msgr. A. E. Ratigan, who as director of the resettlement committee of Rochester, has appointed Miss Marlene De Mattia, field liaison, Rochester resettlement committee, to the work of resettling the refugees and immigrants. Monsignor Ratigan stated that from February 1956, Rochester had processed 732 assurances, mostly for Italians, which would permit the issuance of more than 2,000 visas. He and Miss De Mattia guaranteed another 200 assurances within the next few weeks. He was proud to state that Rochester ranks ninth in the country for sponsoring refugees.

Judge Marchisio, in his speech, recapitulated the accomplishments of ACIM which

through its more than 90 chapters and in conjunction with the National Catholic Resettlement Council, have made the Refugee Relief Act of 1953 a complete success as far as the Italian phase of the program guaranteeing 60,000 visas for Italians is concerned.

Testimony of Former Senator William Benton on Shortage of Scientific and Engineering Manpower

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 27, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include the testimony of William Benton, publisher, Encyclopedia Britannica, and former Member of the United States Senate from Connecticut, before the Subcommittee on Research and Development of the Joint Committee on Atomic Energy:

Mr. Chairman, I do not know how to begin my testimony better than by quoting your own words. In the preface to your committee's new report—Engineering and Scientific Manpower in the United States, Western Europe, and Soviet Russia—your opening lines are these:

"It should be no secret that the United States is in desperate danger of falling behind the Soviet world in a critical field of competition—the life-and-death field of competition in the education and training of adequate numbers of scientists, engineers, and technicians. But although it is not a secret, the facts have not sunk into the public mind."

In these two sentences you went straight to the heart of the matter. If we Americans are to meet a radical challenge with a radical answer our first need is to focus the gaze of the Congress and the public on the gauntlet that has been flung at us. Our first need is to arouse our people and our legislative representatives from their sleepwalking, to arouse them to the accelerating danger. Our second requirement is to hammer out the solutions.

Among those who have sought the facts, there is little disagreement about them. I cannot recall a post-Korean issue coming to the Congress where the facts, as distinct from policy, have been clearer. If there is disagreement about the facts, it is only as to whether they are alarming or catastrophic. Your committees' report seems to put Dean John Dunning, of the Columbia University Engineering School, in the latter camp. He said:

"As it stands, nothing can be done to prevent the Russians from gaining on us in scientific and technical manpower at a ratio of 2 to 1. Already we have lost the battle of engineering manpower—at least in numbers."

I have read British studies on Soviet professional manpower, and I have reviewed the impressive 400-page study by Dr. Nicholas DeWitt, of Harvard, which forms the basis of your committee's summary. In my judgment, and on the basis of my interviews with leaders of Soviet education, Dr. DeWitt is too conservative in his recital of Soviet achievements. I do not believe he gives sufficient weight to the mounting momentum of Soviet educational growth. The Soviet decision to make compulsory its basic 10-year school—to make this compulsory for all boys and girls from 7 to 17, thus adding 3 years to the former minimum—was decreed only in 1951. It is to be achieved by 1960. I was told in Moscow and Kiev that it is already 70 percent realized, with the full 10-year program now effective in all cities. There seemed to be little doubt that this will be 100 percent by the end of the current 5-year plan. This in itself will constitute an enormous spurt forward in the training of Soviet manpower.

Dr. DeWitt tells us the Soviets sometimes withhold figures, and sometimes change the statistical base unexpectedly, but that in this area at least, they never practice outright fraud. The figure I was given for enrollment in higher institutions—1,825,000—was about 100,000 higher than his. My figure on enrollment in the tekhnikums—2,500,000—exceeds his by about 800,000. My figures are somewhat more recent. They may indicate the accelerating momentum.

Questions of judgment enter here. Mr. Khrushchev announced in February that all tuition fees in the Soviet Union are to be abolished this fall. Is not this a still further indication of the Soviet drive to develop and exploit the full potentialities of its manpower? How far will such a drive succeed, and how rapidly? My judgment is that both the chance and the speed of success are higher than statistical tables could possibly reveal.

We want our statisticians, our experts, to be cautious, to provide the qualifications and the footnotes, and to point up the exceptions. The task of statesmanship, the task of this committee, is to see the larger meaning, to interpret and propose and persuade, and to look ahead and guess the future and prepare the American people for it.

Your report shows that the number of trained engineers in the U. S. S. R. increased from 41,000 in 1929 to 541,000 in 1954—an increase of 500,000 in 25 years—or 1,300 percent. In the United States our increase was from 215,00 to 500,000 in approximately the same period—about 225 percent. Your report shows that the number of engineers graduating from Soviet higher institutes increased from 28,000 in 1950 to 63,000 in 1955. In the same period the number of engineering graduates in the United States plummeted from 52,000 down to 23,000. There is reason to believe the trend is being reversed in the United States. But there is no reason to believe it is being reversed in the U. S. S. R. Let us remember Mr. Khrushchev's exclamation to the people of India last December: "We shall see who has more engineers, the United States or the Soviet Union."

Soviet gains in the production of scientists, especially research scientists, are equally startling, though by comparison less dismaying.

How can these trends be dramatized so that we can produce the actions the crisis demands? Surely not merely through the tables of figures in the smallest type of the Government Printing Office. The GPO could make Patrick Henry sound about as inflammatory as a tired dishrag.

Let us first ask, what accounts for public and congressional apathy? Why have the facts "not sunk into the public mind?" In part this may be because the administration keeps talking about the defeats it has inflicted on the Soviet Union. Mr. Dulles even hinted last year that the Soviets are on the verge of collapse. But there is a deeper reason. It is our American folklore. Our folklore says that Russians are either moody philosophers or crafty peasants. They don't know what to do with machines. Our folklore says that Americans are the world's greatest inventors and the world's best mechanics and gadgeteers; we subscribe to the belief that God gave us extraordinary talent for "know-how." How can anyone learn to make or handle machines better than we Americans do; and especially, how can the Russians?

Everyone who has had to deal with public opinion knows it's easier to utilize folklores, and the cliches of folklore, than to change them. In this case we must change them. Only last month came a story from Moscow which gave me wry amusement, a kind of man-bites-dog story. A Texas corporation, no less, was granted the right to manufacture a Soviet turbodrill, no less. This drill was developed by the Soviet petroleum industry for diggings wells through hard rock. The New York Times said it was "10 times as fast as our conventional rotary drill." Detroit engineers report report automation matching our best. Each day and week there is a new story of Soviet technological advances.

When I was Assistant Secretary of State 10 years ago the Soviets were entering a particularly chauvinistic phase. They were laying claim in their world propaganda to one great invention after another, most notably radio. We wondered when they would claim credit for baseball. I wrote to my editor in chief of Britannica, Mr. Walter Yust, a good Taft Republican who reads the Chicago Tribune every morning, and asked, What about these claims? He replied, in effect, let's not discount them without examination. He reminded me of the scientific tradition of 19th century Russia. He reminded me that in the first decade of the 20th century more world patents were applied for by Russian inventors than by the inventors of any other nation. The Russian economy wasn't then capable of developing the inventions, so the Russians tended not to get the credit. Gentlemen, there's no doubt that the Russian economy today, which is expanding at a much more rapid rate than our own, is capable of developing its own—and other people's—inventions.

Further, some people have liked to delude themselves by explaining away Soviet advances in nuclear explosives and nuclear energy, and in the development of guided missiles and in other fields, as the achievements of captured German scientists, or as due to espionage. Others have deluded themselves by placing too great weight on the deadening effect of political dogmas or interference on scientific thought. The degree to which the scientists and engineers have been imposed on by the politicians has in my view been greatly exaggerated. Many Soviet engineers and scientists are not members of the party. The Marxist-Leninist dialectic does not impinge itself on the physical and mathematical sciences—at least to any degree that bothers a creative scientist. The most spectacular example of such interference in biology, the Lysenko theory in genetics, now seems headed for the ashcan.

Finally, some people may like to console themselves with the thought that the quality of Soviet scientific and technical education (training is perhaps a better word) is inferior to ours. The curriculum of the Soviet 10-year school should explode that myth—if we can get our people to listen: 5 years of physics, 5 years of biology, and 4 of chemistry compulsory for all students; 10 years of mathematics, up through trigonometry, and 1 of astronomy, compulsory for all.

I saw at firsthand something of the rigor and discipline of the Soviet school system—the long hours, the 6 days a week and 10 months a year at school, the vacations which included compulsory work in factory or on farm, the frequent and searching examinations.

The contrast with our own primary-secondary-school curriculum is startling. Lewis Strauss, chairman of the Atomic Energy Commission, recently told the Thomas Alva Edison Foundation: "I can learn of no public high school in our country where a student obtains so thorough a preparation in science and mathematics, even if he seeks it—even if he should be a potential Einstein, Edison,

Fermi or Bell." What Admiral Strauss is saying amounts to this: Every youngster in the Soviet Union gets a better scientific grounding than any youngster in the United States. As an aside, I point out to the committee that, with our long summer vacations, dating back to the days when the young people were needed for work on the farms, and with our light schedules of academic work, we keep the youngsters in public school for 12 years and achieve far less than the Russians and other Europeans do in 10. (A quick way to relieve the teacher shortage would be to squeeze 2 needless years out of our system; and this, with a 10-month school year, would make it very easy greatly to raise the salaries of competent teachers, even on present budgets.)

At the level of higher training in the U. S. S. R. we have Dean Dunning's statement that "on the master's and doctorial levels they (the Soviets) appear to have been giving degrees to probably 3 or 4 times as many as we have."

Out of the 67 members of the Council of Ministers of the U. S. S. R., 39—more than half—have had a scientific or technical education. Mr. Yelutin, the Minister of Higher Education, whose ministry controls the 33 Soviet universities and shares control of the 800 or more technical institutes, is a metallurgist.

Let me now add a new dimension to the urgency of the problem posed for us by the new Soviet threat—a dimension you would scarcely deduce from studying the mere statistics. Manifestly we are worried because technology can change the balance of military power. That is worry enough. Further, we are worried because technology, through its impact on heavy industry, can change the world balance of economic power.

The problem, however, is wider and deeper than both these concerns suggest. These two apprehensions, though they are real enough, do not sufficiently take into account the new Soviet tactics of "competitive coexistence." I have seen no comment—other than my own cries of distress—about what the rise of Soviet science and technology is doing and can do to the "psychological power balance." I am not fearful that the Soviets will outdo us in the export of automobiles, or tractors, or business machines; these earn for us not only money but envy. I am upset about the Soviet talent and capacity for exporting ideas. They are today producing almost three times as many new engineers as we are, yet their own industrial capacity is still only half the size of ours. What will happen to this growing crop of trained men? Bulganin at the 20th Soviet Congress in February said that under the new 5-year plan, 4 million graduate technicians would pour out of Soviet institutions, as many as under the last two 5-year plans put together. Where will they go? Most assuredly a substantial block will be exported. Every graduate, as at West Point and Annapolis, is, for the first 3 years, under orders from the state, which paid for his education. The Soviet scientists, engineers, and technicians can be sent anywhere in the world, just as though they were frontline troops. The countries of Asia, Africa, and Latin America are hungering for the knowledge and know-how these men command.

The new propaganda of the Kremlin, emphasizing economic, political, and ideological competition, clearly reveals the long-range Soviet plan—a plan so potent as to make military maneuvering seem by comparison tactical and even diversionary. Central to it is this schooling for export of scores of thousands of indoctrinated and capable engineers, scientists, schoolmasters, and technicians of all kinds. These are being trained to help convert the world to communism. In Burma last December Khrushchev and Bulganin offered to build and staff a technological institute in Rangoon, "a gift to the people of Burma from the people of the Soviet Union," as they put it. An advance guard of technicians is now in India, in connection with the steel mill the Soviets are building for India. A technical institute has also been offered to India, and enticing inducements have been advanced to Egypt, Afghanistan, and Latin America.

Did you notice that 6 years of foreign-language study is compulsory for every Russian boy and girl in his first 10 years of schooling, and that further foreign-language study is required in higher education? I was astonished in Moscow to learn that there are some schools where all the teaching is conducted in a foreign language. Thus, my son, John, age 13, visited a school in Moscow where everything except Russian literature is taught in English. The name of this school is Moscow School No. 1. English, by the way, is the favorite foreign language. It is the new language of science, and gives access, with Russian, to the world's scientific literature.

I have a suggestion to you this morning on how you can begin to convey some sense of the urgency of this new problem—at least to your colleagues here on the Hill. You aren't likely to do it with statistics. Even though I had spent weeks preparing for my trip of last fall, including 2 weeks in London, I was aroused myself only by my first-hand exposure to what is going on.

On my first day in the Soviet Union I toured the huge Lenin Library in Leningrad. I gathered that I was the second American since the war to visit it. Its director claims it houses 12 million volumes. Every desk and chair in the great reading rooms adjacent to the scientific stacks was occupied; the silence was absolute; the concentrated zeal of hundreds upon hundreds of earnest-looking students was to me a bit breathtaking. I said to my librarian guide, "Are these students from the university?" "Oh, no," he replied, "the university has its own library; these are workers from the night shifts of the factories, and by night our reading rooms are crowded with those from the day shifts. We operate day and night. This is how the workers prepare for examinations for advance training in the universities and the institutes."

One sees youngsters in their mid-teens, and young Russian married couples, in the bookstores browsing at the sections featuring scientific works; they buy books on nuclear physics in preference to novels or handbooks on interior decoration. This is how to get ahead in Soviet society today.

In Moscow I spent several hours with the pro-rector of the University of Moscow, Professor Vovchenko, a chemist. The unversity, which enrolls 23,000 students, dominates the city. Its gleaming new 33-story central tower is dedicated to the sciences. The recent investment of 3 billion rubles for this new building, completed in 1953, is astonishing by our standards. It is equivalent to at least $150 million, figuring the ruble as 5 cents, the lowest estimate of its value given anywhere. Thus this building cost more than has been spent for the complete physical plant of all but a very few American universities. It contains 1,900 laboratory rooms. It symbolizes to all Russia what lies ahead in the fulfillment of Soviet ambitions for youth. Here work most of the 2,000 professors of the University of Moscow who teach students. Here, too, are the 500 scholars dedicated to research, from whom no teaching is expected. All 2,500 must seek to make their own individual scientific contributions in the laboratories. If they don't they are fired. Those who succeed receive the highly prized doctorate, a top or super degree for which we have no equivalent. The impact of that structure, which can be seen from everywhere in Moscow, and the busy life within it, can convey the sense of urgency far more vividly than most statistics.

In Kiev I visited a tekhnikum. Dr. De Witt estimates there are some 3,700 tehknikums in the U. S. S. R. They are a unique Soviet institution—a kind of vocational college producing "middle-trained" specialists. For example, a tehnikum maintained by the Ministry of Health will produce "feldshers," graduates about halfway between the level of a nurse and a doctor. The tekhnikums give 4-year courses for those who have finished 7 primary and secondary grades, or 2 or 2½ year courses for those who have completed the 10-year school. Soon all tekhnikum sudents will be 10-year graduates.

My Kiev tekhnikum is 1 of 50 maintained throughout the Soviet Union by the Ministry of Coal and Coke. It is a sprawling brick building, not very different in appearance from a large city high school in the United States. As with too many of our own big city schools, the overall effect of the exterior is dingy.

The director told us that his tekhnikum, of which he was immensely proud, taught courses in four special fields of coal mining: the construction of coal mines, the construction of coal mine buildings, roadbuilding for coal mines, and the construction and use of communications equipment in coal mining. Eleven years ago his school had only 255 students. Now it has 2,500 and a faculty of 88.

He bustled us down a hall and into a laboratory. Here the machines began and the shabbiness ended. The laboratory was stocked with expensive machinery and electric models of coal-mining equipment. Some of the models, the director said, were made by his students. The more elaborate ones had been built to order at factories, with parts of the operating mechanism visible through openings in the sides.

The department head had been warned of our coming, and was eager to show us how each of his models worked. Oozing confidence and enthusiasm, he led us to laboratory after laboratory. The variety and excellence of the equipment astonished me. Surely few, if any, of our own technical schools can match such equipment. Manifestly it was worth hundreds of thousands of rubles, and the director went so far as to place the value at "millions." I think he was right.

In another laboratory, there was a large and detailed model of the entire transportation system of a modern mine, including a complete electric train. Another showed a mine's complete electrical system, and still another showed a telephone system, switchboard and all. There was a 50-foot long "coal combine," a huge machine that eats its way right into the face of the coal, picks it up, cuts it in chunks, and carries it away. One room, more than 50 feet long, had 40 or 50 big machines lined up along the walls, something like pictures on the walls of a museum, many equipped with elaborate dials and meters. Again, the department head wanted to push all the buttons for us.

The problem of getting students to apply "voluntary" for a coal-mining tekhnikum interested me because I don't believe that coal mining, even at the technician level, is exactly popular as a career in the United States. The director intimated that this problem is solved by propaganda and promises. As he put it, the graduates of the 10-year schools are "guided" into specific tekhnikums by what he called the process of popularization. This is a fine Soviet propaganda phrase designed to obscure the fact that the students have far less choice of fields than they may think. By incentives and scholarships, as well as "popularization" in the form of the propaganda of the various ministries which operate the tekhnikums, the students are siphoned into aeronautical engineering, let us say, instead of into history (where scholarships are rare).

The director of the Kiev tekhnikum told us that the graduates of his school would be sent to the coal mines, perhaps in the Donetz Basin of the Ukraine, where an alumnus might work as a foreman or in any number of supervisory positions. We had an appointment with the mayor of Kiev, but our tekhnikum director was gladly prepared to make us late for it. Again and again he delayed our departure, insisting that we see "just one more room, just one more laboratory." Even when we finally made the break, explaining that we had only 4 minutes in which to drive across the city to meet the mayor, the director was still saying, "just one more."

That episode left me with more sense of urgency than most statistics possibly can.

So here is my proposal: I urge the entire membership of this subcommittee to go to the Soviet Union and see for yourselves. Let us apply for visas which put to the test "the spirit of Geneva," the new Soviet propaganda slogan which was being hammered in all media when I was in Russia. Apply for the visas now, so that you will be sure to have them by the time Congress is ready to adjourn. Take some key members of the Appropriations Committees along with you. Visit the Ministries of Education and of Higher Education, and the various government ministries which finance the technological institutes and the tekhnikums. Visit the universities, and the technical institutes, and the 10-year schools. Talk to the students, and watch them at work. You will come back prepared to convey that sense of urgency which is so urgently necessary. You will also come back with some very good speeches, perhaps even some campaign issues.

Ten years ago, as Assistant Secretary of State, back in the days when there were only a few Assistant Secretaries and we thought we amounted to something, I was trying to create our Nation's first peacetime program of international information. I faced the same kind of apathy—indeed the same kind of folklore: "propaganda" was a horrid word, and Americans didn't practice it. Further, after the 1946 election of the 80th Congress, my operation became a party issue. I was told that I didn't have the basic legislative authorization. And I didn't have the understanding attention of the Appropriations Committees. So I went from office to office up here on the Hill, arguing that the committees involved should go abroad and appraise the problem, and appraise for themselves the need for our operation. They did so, and I believe that is the chief reason the Smith-Mundt Act was passed. At the time I was told that my efforts blazed the path for the subsequent and widespread practice by committees of the House and Senate of making study-trips abroad. With the aid of a few friendly editorial writers, I helped kill the journalistic idea that such trips were junkets. The word stayed dead until the ill-fated Cohn and Schine.

What should you then seek to do, once the acuteness of the problem has broken through into congressional and public consciousness? I have a few suggestions which I do not pretend are comprehensive or adequate, but which are at least a very good beginning.

We cannot duplicate in this country the full array of pressures and incentives the Soviet Union is able to bring to bear on its young people—and we wouldn't want to duplicate it if we could. Theirs is a highly centralized, push-button system. The curriculum is standardized throughout the Soviet Union right up to what we would call the graduate-school level, with only one basic choice open to the student, the seeming choice of a career which he makes at the end of the 10-year school. If he's bright enough and is well advised, he will aim at maximum training which brings not only rich rewards but also draft exemption.

To the usual incentives of patriotism and of pride in national progress, Communist leaders have added most tangible allures to prospective scientists and engineers. They have made the life of science among the most satisfying in the Soviet Union.

A typical Soviet professor gets 6,000 rubles a month, 10 times the average workman's 600 to 700 rubles. An outstanding Soviet engineer or research scientist can earn up to 40,000 rubles a month, when his outside consulting fees are included. In comparative standard of living, this would put him in the class of big-time American corporation presidents. Indeed, how many corporation presidents earn 70 or 80 times as much as their file clerks? The contrast has been so extreme in the Soviet Union that a dispatch in the New York Times last week reported that the big pay and prerequisites are going to be reduced. But we can be sure they will still provide plenty of incentive to the scientists and engineers.

Mr. Chairman, I want to quote once more from your own preface:

"I recognize (you say) that the question of general Federal aid to schools is a controversial subject.* * * I suggest we could reach agreement that, since it is a constituted Federal function to provide for the common defense, Federal spending is proper to provide enough well-trained engineers and scientists to sustain our security in an age of great scientific breakthroughs."

Mr. Chairman, no one who has looked into this momentous problem can quarrel with that proposition.

I have mentioned the developing Soviet program to use its engineers to outmatch our technical assistance program—our point 4. Yet, according to my information, the United States is finding it increasingly difficult to persuade qualified people to go abroad on our technical-aid missions. And indeed, why shouldn't a young engineer prefer to build his career in Bridgeport or Topeka, rather than in Kabul or Jakarta? Why indeed? If your son were an engineer and he were choosing between Pratt & Whitney in Connecticut or the Irrawaddy River of Burma—which choice would you advise if you wanted him healthy and wealthy?

I suggested one answer to this national problem at the memorial luncheon this year for former Secretary of War Patterson, known to many of you. That is the creation by the United States Government of Technical Assistance Academies, comparable to the United States Military, Naval, and Air Force Academies, but designed to produce foreign-aid specialists. In the Journal of the Foreign Service Association I read recently of a proposal for a career service in technical assistance. Of this I am doubtful, but my proposed academies should require 3 years' service overseas from the graduates, in return for their free education, and from such beginnings I agree that a career service could develop. These technical academies or institutes should be operated in conjunction with existing high-level institutions such as MIT and the California Institute of Technology. The entire student body should be fully supported while in school, and be given a special status under the draft such as reserve commissions on graduation.

These "West Points of point 4" should teach not only engineering and technical subjects adapted to the needs of underdeveloped nations. They should include emphasis on the recognition of human values, including the use of educational techniques, and they should insist on a thorough grounding in liberal arts designed to help graduates to become symbols and spokesmen abroad of our concepts of freedom and justice.

West Point was founded, and was sustained in its early years, not only to provide an officer corps for our Army but to train the engineers needed for the development of the West. Wasn't it our first engineering school? Would we even have had it when we did without the crying need of the West for engineers?

I concede that a chain of such academies would serve only a limited function, measured against the problem posed by the Soviet threat. Further, I concede that the institutes would take time to build and that we must promote a program at once.

What we require today, and at once, as Chairman PRICE says, is a "crash program." How can this be launched, and at once? It seems to me that the beginning of such a "crash program" must consist of Federal scholarships on a dramatic scale.

Last month in Chicago, before the Association for Higher Education, I proposed a national competitive scholarship program beginning with 20,000 scholarships a year, each covering 4 years of college. I further proposed that this number should be increased as rapidly as the administration of the program and the absorptive capacity of the colleges and universities permit—to a level of 100,000 scholarships a year. To these should be added 20,000 or more graduate fellowships. Trained manpower, I said, is like money in the bank for the United States. It is our most important national resource. Premier Bulganin referred to Soviet trained manpower as "our (Soviet) gold reserve."

Our United States high schools abound with talent worthy of such scholarships. Secretary Folsom recently cited an estimate that "each year about 60,000 students of high ability drop out of high school before graduation * * * and half of the students in the upper one-fourth of their high school classes do not go on to college." Dr. Dael Wolfle tells us that 150,000 pupils from each yearly age and class who could enter the important specialties fail to go to college. About half fail to go on because of the cost, another half because of lack of incentive. Both conditions are curable. All who look into the matter agree that for every student in an American college, we have another of equal ability who doesn't get in. Of the top 20 percent of our high school youngsters, two-thirds don't finish college. In my judgment, the main reason is economic.

We would be perfectly justified, in view of the emergency we have been discussing, in earmarking a proportion of any proposed Federal scholarship program for science or engineering, or indeed even of initiating the far larger program with scholarships and fellowships limited to the areas we are discussing.

When I mention priorities for scientists and engineers I don't for a moment mean to suggest that more scientists and more engineers will solve our problems. For our national defense, and our national well-being, we need better educated citizens in many fields—political scientists, historians, and psychologists, for example—and we need them as much as or possibly even more than we need engineers. I am willing to give engineering, physics, and chemistry a short-run priority because there is an emergency shortage in these fields. But I fear the dangers in a lop-sided program of Federal aid, one which is geared too heavily to the sciences. I have just seen figures on the first 359 boys who have won the newly established national merit scholarships. The boys were chosen without regard to career choice. They rate for the moment as our "brightest boys." They won the philanthropic jackpot comparable to the $64,000 question. Sixty-three percent of them now choose engineering and scientific research as their future careers. Let us not ignore the danger that too high a proportion of our best young talent can be funneled into science and engineering. They are needed elsewhere at least as much.

I realize there are many complications in my Federal scholarship proposal. Who should administer the scholarships? One of the most significant steps taken by the Congress in this area in recent years has been the establishment of the National Science Foundation. Its budget, however, is far too small. It is today supporting about 2 percent of all graduate students in science, mathematics and engineering. Whether it should attempt to administer a huge program at the undergraduate level I cannot say.

I have a further immediate suggestion. I heard recently that only 125 new teachers of physics were available last year for the 28,000 high schools of the United States. The reasons are several, but I believe a partial cure could be achieved by paying substantially higher salaries to high school teachers of mathematics and the natural sciences. If mathematics and the sciences are harder to learn, and harder to teach, why shouldn't the teachers in those fields get higher salaries? And should they not be exempted or deferred by Selective Service? If a young man is more likely to secure exemption or deferment as a physics teacher than as an English teacher, or than as an employee of General Electric, will we not secure more high-school physics teachers?

My comment here is subject to the same qualification I made about scholarships. I believe we must come in the long run to Federal assistance of teachers in many fields.

Mr. Chairman, many other proposals could be made. I happen to be chairman of a company that makes classroom motion pictures, Encyclopaedia Britannica Films. You would be dismayed to see how slowly the educational world adapts itself to advances in the technology of education itself. And as Mr. Philip Coombs, research director of the fund for the advancement of education, told you in testimony last week—the possibilities in bringing technology to the classroom are "wonderful to contemplate."

Another grave problem is the control exercised by teachers' colleges, which some call monopolistic. An honor graduate in physics from Yale cannot teach physics in the public schools of my home State of Connecticut until he has earned a certificate from a State teachers college. Neither can a Princeton physics cum laude, in New Jersey. These are problems you no doubt regard as outside your power or purview.

Let me conclude with this thought: Education is one area where we in America most surely have nothing to lose if we accept Soviet claims and the Soviet challenge. Intercontinental competition in education need be no challenge to an arms race or a war. If the Russians goad us to do a better educational job ourselves, then we shall only do what our own best tradition calls for—what we should be doing even if the Soviet Union were to sink suddenly into the sea. But if we are complacent about our educational efforts and system, if we allow ourselves to fall behind the Russians, we may find ourselves outwitted, outmaneuvered, outthought, and outbuilt throughout the world.

The Small-Business Man

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. MULTER. Mr. Speaker, I wish to direct to the attention of our colleagues the following letter, forwarded to me on April 28, 1956, by Mr. Daniel F. Caldemeyer, president of the National Furniture Manufacturing Co., Inc., of Evansville, Ind. I am in complete accord with Mr. Caldemeyer's view that action must be taken to relieve the Federal income-tax burden on small business.

NATIONAL FURNITURE MANUFACTURING CO., INC.,
Evansville, Ind., April 28, 1956.

Hon. Representative ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR SIR: Being a small-business man and having a small business located in the Farm Belt of Kansas, we are directly affected by the farmer and his ability to buy.

In my opinion, we small-business men and individual farmers would be far better off throwing out all the subsidies and getting out from a paternalistic, controlling-type government. If we could all be put on our own again whereby we could set up reserves if we have a good year and use those reserves when we have a bad year, our problems would be far less. As it is, the Federal Government takes tremendous sums from us in the good years and gives none back to us in the bad years; thus, small-business men, farmers, lawyers, doctors, and others of us who must make our living in the ups and downs of market places, and the ups and downs of farming such as weather, et cetera, would be better off.

For instance, in 1954 the income of the average furniture manufacturer dropped 50 percent. 1955 was a good year but Uncle Sam took most of it away from the manufacturers through heavy taxes. I cannot help but feel the same is true of farmers. Unfortunately, they have not had even a good year in the last 3 years. However, I do believe that if they were put on their own, they like a marketing report I just received, would do the following:

Better profit ratios don't just happen, even in good times. They must be earned and this is the job of we as individuals. I believe our income-tax structure is the most serious problem facing American today causing undue mergers, unwarranted tax-free manipulations and the taking out from our society men in the bracket of 45 on up who can take the earnings they have and invest them in tax-free Government bonds, get a small job on the side, and still make more money than they could operating a good, sound business enterprise. In my opinion, we are in a very sad state of affairs.

Sincerely yours,

DANIEL F. CALDEMEYER,
President.

Communist Activities in Hong Kong

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a letter which I have just received from the Mencius Educational Foundation in Hong Kong. The writer of the letter, Dr. Frank S. Wong, also includes a statement concerning the growth of anti-Communist sentiment in Red China, and he also has something to say about Communist activities in Hong Kong. I believe that Dr. Wong's correspondence will be of interest to the Members of Congress. The letter and statement follow:

MENCIUS EDUCATIONAL FOUNDATION,
Kowloon, Hong Kong, April 25, 1956.

Hon. ROBERT C. BYRD,
Member of Congress,
New House Office Building,
Washington, D. C., U. S. A.

DEAR MR. BYRD: I have received with many thanks your letter of April 13 and am very pleased to note that the material I sent you is intended for insertion in the CONGRESSIONAL RECORD. If there is not too much trouble, I would like to have a copy of the RECORD containing such matter.

In a separate paper enclosed I am giving an account of the latest developments in Red China and suggest roughly what the United States Government should do to cope with the new offensive. I shall be glad to answer any specific questions that you or your colleagues would raise, so that we all may fight for the same cause more effectively.

At present, world communism seems to be gaining ground. We should not only check its growth but push it over the precipice. In particular the Communists are becoming more active in Hong Kong, the listening post and anti-Communist center. There is much that can be done only if the United States authorities would take the initiative, otherwise the Reds would take over culturally at least by default.

I shall be very glad to hear from you again.

With best wishes,

Sincerely yours,

FRANK S. WONG.

ANTI-COMMUNIST SENTIMENT RISES IN RED CHINA

The Communists have allowed unrestricted entry of Chinese from Hong Kong to Red China. Over 130,000 have visited their native homes between November and April. Their general conclusion is that the economic situation has gone from bad to worse and that the people are very bitterly against the Reds to a point of vocal disapproval. If there were external support, uprising would flare up here and there. The harassed people are anxiously scanning the skies for liberation, but what they see is only a few patches of cloud.

CHINA AS SEEN BY HONG KONG CHINESE

What Hong Kong Chinese saw and heard in Kwangtung province, south China is this: The people in Canton and other places in Kwangtung are hungry and in rags. Their earnings are used to buy food and yet they are half starved, leaving nothing for clothing and other amenities of life. The visitors from Hong Kong, mostly domestic servants, planned to stay a fortnight but found the conditions so distressing that they came back here after a few days. The visitors returned with swollen eyes, having wept at seeing the miserable conditions of their relatives.

One servant gave her rationed rice to her relatives when leaving them after 4 days on a scheduled stay of 2 weeks. Then they had a little more rice to make up the long standing deficiency, so they had a full stomach but the cadres or party workers found out the departure of the Hong Kong resident and deducted the amount of rice obtained on the basis of their ration card. After fairly full meals, the poor relatives are now more hungry, as they are given less rice after the deduction.

An elderly servant went back to her village to witness the wedding of her son. She cried for 3 days on seeing the pitiable conditions and stopped on the fourth day when the wedding ceremony took place. Then the bride arrived. The mother then resumed crying because she found that her son and his bride had to work for the Communists on the side without pay. They had to work immediately after the wedding. Their regular employment did not bring sufficient remuneration.

The so-called agrarian reform in 1953 brought havoc to many farmers, who without means of livelihood went to the city to look for work. Now the Reds in Canton want to repatriate 300,000 people to the country where they will not be able to find any work and will be starved. The Communist authorities are sending away those without jobs, those partly employed and those who arrived in Canton only recently. Others are to be sent to the semi-barren northwest, and this is dreaded by all.

Many people committed suicide by jumping down the streets rather than to be sent back to the country and to the dreaded northwest. On the persons of such victims were found orders of "back to the land to produce."

When Hong Kong visitors left their village or Canton, they left behind their handkerchiefs, towels, underclothing, socks, tooth brushes, and toothpaste for their relatives, who are in dire need of them. Many went to the mainland with more personal effects than needed, intending to give them away. This shows the shortage of consumer's goods.

Visitors also carried foodstuffs to Red China to relieve their hungry kinsmen. In Hong Kong travelers even bought canned food from Swatow and Shanghai, as it is much cheaper here than in the interior for the same stuff. This is due to the dumping of all kinds of Chinese goods into Hong Kong and elsewhere in the free world in order to obtain the much needed foreign exchange.

Thus the people in Red China are badly in want of the bare necessities of life. Then there is the persecution for counter-revolutionary activities. Those who can find employment and receive pay sufficient to buy food for 1 person are considered fortunate but they have to work 10 or 11 hours a day and spend 3 or 4 hours at night to attend meetings and indoctrination lectures. Hence life is most difficult and trying.

The Peiping regime is furthering the exploitation of the people by confiscating their factories, enterprises and farms in the name of "state-private joint operations" and "collectivization." While the people are dead against such robbery, agricultural output and production of manufactured goods have fallen low. The people have no incentive to work long hours at meager pay and are virtually slaves of the Red masters.

WHY RED CHINA UNDERSELLS ABROAD

But the Communists are scraping the barrel bottoms to provide for the exports to different places in Southeast Asia. The objectives are (1) to obtain foreign exchange, (2) to impress on overseas Chinese and others that Red China is abounding with much resources and production, and (3) to show that Red China is not afraid of embargo.

As exports from Red China are marked down for competition, the profits are very small. The sufferers are the 400 million Chinese who work hard as slaves, have their property confiscated, and eke out a difficult living.

Peiping is also in a difficult position. The 5-year plan is way behind schedule owing to the lack of enthusiasm of the exploited workers. Economic deterioration is seen everywhere. Furthermore, the anti-Stalin move embarrasses Mao Tse-tung and encourages other Reds to clamor for collective leadership.

Observers generally agree that now is the time to exert stronger pressure on Peiping.

COMMUNIST ACTIVITIES IN HONG KONG

In Hong Kong Communist agents are making every effort to make a good impression on the 2½ million Chinese in the hope of turning them into neutralists. Hongkong Chinese are overwhelmingly anti-Communist, because they know what is actually going on behind the Bamboo Curtain and have had, by personal experience or reliable information, a bitter taste of communism. Now the Reds want to win them over by luring them to visit Canton and Peiping. They are promised free trips to Peiping to celebrate May 1.

Efforts are made to cultivate newspapermen, writers, stage and screen personalities, professors, et al. They are promised facilities, money, and jobs. The whole idea is to neutralize Hong Hong Chinese, to whom the 14 million overseas Chinese look for guidance and inspiration. Hong Kong is at the moment the cultural hub of Free China.

The United States Information Service or other United States agency should be strengthened to combat communism, since Taiwan has no money or other means to do so. Unfortunately, the USIS is charged with cultural work elsewhere in southeast Asia and takes Hong Kong for granted as anti-Communist point. This assumption does not hold water now, since the Reds are sparing no efforts to convert the people here to their cause.

A part of the United States aid to Asian countries may well be used to back up scholars, professors, writers, newspapermen, stage and screen people, who could be utilized to fight communism other than by force. If this were not done, sooner or later they would be forced to go over to the other side of the fence. Many cultural and educated people, who are hopelessly underpaid, would be happy to do some extra work to earn additional money to support their families. They could be utilized to serve the cause of freedom and democracy by writing, lecturing, and acting.—F. S. W.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Morals of Law

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Monday, April 30, 1956

Mr. STENNIS. Mr. President, because it is an inspiring challenge to young law students, and because it will be well for all Members of the Congress and the entire Nation to heed the timely remarks of this fine lawyer and great American, I ask unanimous consent to have printed in the Appendix of the RECORD the heart of a speech delivered on April 14, 1956, by the Honorable Loyd Wright on Law Day at the University of California School of Law, Los Angeles.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

The ethical obligations of the lawyer encompass more than complete honesty, truthfulness, and fidelity to the courts, clients, and fellow members of the bar. Just 100 years ago Judge Sharswood, of Pennsylvania, first published his lectures on Professional Ethics, the first American study of the subject. Judge Sharswood divided his work into two main branches. The second branch he headed those duties owed by the lawyer to his professional brethren and his clients. The place of first importance he reserved for the topic he called Those Duties Which the Lawyer Owes to the Public or Commonwealth. This first obligation in legal ethics, the duty of public service, finds an obvious source in the monopoly we enjoy as members of the bar of the rights of rendering legal services, giving legal advice, and appearing before the courts on behalf of others. But the duty of service to the Commonwealth is not simply a quid pro quo exacted by the State as consideration for privileges conferred. Rather, the obligation finds its roots in our training and our abilities in the arts of government. As the only group in society devoted to the practice of the techniques of legal control, we inevitably bear the burden of using these capacities in the interests of the community at large. We must, accordingly, be prepared to serve in public office when called upon to do so, to advise the electorate on the legal aspects of public questions, and to advance and foster the reforms necessary to keep the law and its administration in touch with the demands of the times. Some of these public responsibilities can be discharged by the individual lawyer, but many of the public tasks which naturally fall to the legal profession can only be performed by lawyers collectively. It is here, of course, that the organized bar and the bar associations find their function. Matters such as law revision and reform, improvement of the administration of justice, and the maintenance of professional standards can ordinarily be achieved through no other agency. The faithful discharge of your professional obligation will therefore require your active participation in the organized reports of the bar. As the thought was put by Theodore Roosevelt, "Every man owes some time to the upbuilding of his profession."

As perhaps you already realize, bar association activities provide the lawyer with opportunities both for perfecting his technical competence through lectures, conferences, and continuing education programs, and for enriching his professional life through increased contacts with his fellow lawyers. But you may not appreciate that only an insignificant share of the efforts of the bar organizations are directed toward the selfish interests of the profession; the major concern of a bar association, and its reason for being, is and must be the fulfillment of the profession's public obligations.

The national organization has adopted as indicative of its present efforts the slogan the Era of Service. Our constitution sets forth the following purposes: "To uphold and defend the Constitution of the United States and maintain representative government; to advance the science of jurisprudence; to promote the administration of justice, and the uniformity of legislation and of judicial decisions throughout the Nation; to uphold the honor of the profession of law; to apply its knowledge and experience in the field of the law to the promotion of the public good; to encourage cordial intercourse among the members of the American bar; and to correlate and promote such activities of the bar organizations in the Nation and in the respective States as are within these object, in the interests of the legal profession and of the public." This obviously can only be accomplished by an association of lawyers and to fully accomplish them it is necessary to be active at all levels.

There is one more thing you ought to think about while you still have time to think. That is the matter of developing your personal philosophy of law. Perhaps this sounds like a formidable job. But what I mean is simply that you should, at this stage of your legal career, give some time to serious reflection upon the nature of this thing called law to which you will devote the rest of your active life. Without some understanding of our legal system and an appreciation of its inherent purpose, you will miss the sense of direction that offers the highest kind of human satisfaction.

Probably 30 or 40 years ago it would never have occurred to anyone to suggest to law students that the time to think about these things was while they were in law school. The development of a philosophy about law could wait until the lawyer had seen enough of practice to make mature judgments concerning the legal system. But 40 odd years ago, when I finished law school, the practice of law was a different sort of animal from the practice which awaits you upon graduation. Then the young lawyer could supply himself with a set of codes, a few volumes of statutes and a set of official State reports, and he was pretty well prepared to handle anything that might come his way. And, typically, the lawyer of that day did handle whatever came along. Torts, corporate and business matters, taxation, criminal law, divorce, real estate, and probate were all within the competence of the general practitioner, and by working with law in these varied manifestations the typical lawyer gained an understanding of the processes of the law and became a sort of legal philosopher. His was a philosophy of modest pretensions, of course, but he ordinarily had a feeling for the whole fabric of the law, and a sense of how and why the law had developed as it had, and of where it ought to lead.

Today, however, none of us can hope to master more than a small corner of the law. In the past 40 years, 3 hot wars and several cold ones, a major economic collapse and desperate rehabilitation measures, changed political philosophies, and accelerated business and industrial expansion have brought a rain of laws, regulations, rulings, and opinions from State and Federal courts, legislatures, agencies, boards, bureaus, and commissions. Specialization in the legal profession has become inevitable, and today's graduate must expect to immerse himself in some relative narrow field of law, never again to encounter the subjects of much of his law school work. Of necessity the advantages of specialization involve a cost in the sacrifice of breadth of judgment. An expert who devotes his time exclusively to income tax problems can hardly be expected to grasp the full sweep of the law or to see the patterns and purposes which such a viewpoint alone can reveal. For most of you, law school will mark your broadest acquaintance with the whole of our legal system, although not of course your deepest understanding of any part of it. Now, then, is the time to start thinking about what law is all about.

To set the wheels in motion, you might ask yourself several questions. What is the purpose of law? What are the human values served by the processes of the law? What are the morals of the legal system as we know it?

The analogy is sometimes drawn that a legal system is only a box of tools that can be used for any desired purpose. But even a tool has limitations of purpose. A saw is not much of a tool for driving a nail, and a hammer is hardly effective if the purpose is to bore a hole. Legal processes, like tools, are not means to any desired end; the processes contain within themselves a quality of purpose, of what they can be used to accomplish. And conversely, it is meaningless to talk about values and goals without considering the means of accomplishing them. The right without a remedy is a familiar example of the futility of an end without a means. This interrelation of legal processes and values or morals can perhaps best be brought home by a rhetorical question: could Communist-Russia exist if they depended upon the Anglo-American system of law as we know and practice it?

If, as I believe, the processes of the law as we think of it do have purposes, moral elements, or values, it seems fair to expect the lawyers who devote their lives to the law to make an effort to know them. It is this appreciation of purpose that I call a philosophy of law. Like a wife, a philosophy is worth having only if you have made the discovery and choice yourself.

Any discussion of philosophy of law, or morals of law, must encompass Judge Sharswood's "duties which the lawyer owes to the public or commonwealth." To properly explore this vital field of our professional obligations would consume much more time than I can with good grace here employ. It is true also that in this area personal experience,

convictions, education, and environment tend to create honest and deep differences of opinion. Upon this premise and only because I have recently had an unusual opportunity to exchange ideas with the members of the legal profession in all parts of the country, I wish to discuss a few random thoughts that I believe have a first call on your consideration of any philosophy of law you may develop.

You are compelled to examine the record against the background of the American concept of the lawyers' public responsibilities, and of the bar as the guardian of individual liberty and as the protector of limited constitutional government to determine if your predecessors in recent years have fully met the challenge. Perhaps a little historical review will help you take your bearings.

Recall, please, that the great guaranties against the coercive force of government that today are commonplace were largely forged in this land. When a permanent English settlement was first established on this continent at Jamestown in 1607, the common law was in its formative stages, and English lawyers were too preoccupied with conveyancing and feudal tenures to concern themselves with the place of the individual in relation to his government and his fellow men. Magna Carta was four centuries old, but it had not yet been transmuted by the magnificent hand of Lord Coke from an agreement between the King and his barons into a bulwark confining the powers of government over the lives of men and subjecting the sovereign to God and the law. By modern standards, the Government of England was still an autocracy at the time of our American beginnings.

In early colonial history, the place of the lawyer in man's struggle to be free remained unrecognized. In those days the work of the courts was often at the mercies of untrained laymen on the bench and ignorant pettifoggers at the bar. Professional lawyers were regarded with suspicion, and attorneys were roughly handled in the colonial legislatures. In Georgia, for instance, lawyers, along with rum, were outlawed. In New York, the provincial council in 1677 resolved that pleading attorneys should no longer be allowed to practice, and the fundamental constitutions of Carolina drawn up for the English proprietors contained this unrealistic provision: "It shall be a base and vile thing to plead for money or reward; nor shall anyone * * * be permitted to plead another man's cause, till, before the judge in open court, he hath taken an oath, that he doth not plead for money or reward."

But these attempts at government of laws without lawyers to administer the laws were inevitably doomed to fail. It was soon evident that trained lawyers alone could provide the kind of law free men demand, and the professional bar assumed its rightful place of leadership in the struggle for liberty. By the year of John Marshall's birth 2 centuries ago, the Colonies had seen the rise of the lawyer to a place of eminence he has seldom since attained.

The colonists' first attempt to govern themselves after independence had been won proved to be a failure. The States in league under the Articles of the Confederation lacked a central authority adequate to bring the conflicting interests of the weak and quarreling Colonies into accord and to meet the needs of the new and growing nation. Once more it fell to the lawyers to recognize and to correct the shortcomings, and of the 55 wise men who gathered in Philadelphia in the summer of 1787 to frame a new basis of government, more than half, or 31, were lawyers. The document they produced, and its significance in the history of human striving for freedom under law, needs no elaboration here. In the familiar words of Gladstone, "the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man."

But we would be misled to believe that the founders of this Nation, in a flash of invention, extracted their lasting principles from thin air. Like all enduring human institutions, the Constitution of the United States was solidly grounded in human experience. The lawyers who rebelled against the tyrannies of the Crown and who laid the framework of this Government did not seek to experiment or to innovate. Their aim was rather to restore the ancient and natural rights of free men denied by a newer form of oppression. These are the words of Jefferson, the lawyer who drew the document by which our freedom was proclaimed, "this was the object of the Declaration of Independence. Not to find new principles, or new arguments, never before thought of, not merely to say things which had never been said before; but to place before mankind the commonsense of the subject, in terms so plain and firm as to command their assent * * * it was intended to be an expression of the American mind."

In setting up the institutions and processes of Government by which these ancient liberties were to be preserved, these lawyers of the constitutional convention were tendered a choice unequalled in political history. As they observed, "We have opportunity to form with some deliberation, with free choice, with good advantages for knowledge; we have opportunity to observe what has been right, and what wrong, in other States, and to profit by them." As we well know today, they made good use of this chance to pick and choose. They could and did study every form of government known to man to the present day, from the absolute monarchies of Europe to the theoretical communism tried and found wanting in several of the early colonial settlements. They drew from the Hebraic law of the Bible and from the Koran, from the model of the Greek city states and from the Roman Empire.

But, true to the lawyer's learning, they drew most heavily upon the tried and tested principles evolved in their own experience in the colonial struggle for limited self-government and individual freedom. We are often inclined to forget this period in our national development, and to date our history from 1787. It may be worthwhile to recall, then, that our experience under the Constitution is still today exceeded by our experience in self-government in the Colonies. Between the formation of the first representative body empowered to make laws in America, in 1619 in Virginia, and the ordination of the Constitution in 1788 lay 169 years of striving for justice and liberty under law; the age of Government under the Constitution is still short of that figure by 2 years. Nearly every clause of the Constitution finds a clear antecedent in this colonial history of resistance to bureaucratic controls vested in authorities insulated either by distance or by the lack of responsibility to the electorate from the will of those who were governed.

After these monumental milestones in the story of the lawyer-citizen came a period that shines no less brilliantly with the names of men of the law. John Marshall, Daniel Webster, and Henry Clay were among the olympian figures who, during the next half century, breathed life into the paper of the Constitution and made practical working rules of government of the vision and ideals of their predecessors. Their labors contributed to our glorious heritage as surely and as enduringly as those of the Founding Fathers.

Despite the challenges of the levelling trends of the age of Jackson, the concept of the lawyer as a citizen responsible to the public for maintaining liberty through law stood firm and strong through the Civil War, where it found a new dimension in the person of a man called Lincoln, a lawyer who reminded us that that government is best that governs least, and who taught us once more that "you cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves."

These are the bold bright threads in the fabric of our heritage as American lawyers, the clear, abiding landmarks of the path our fathers marked out for us. These are some of the segments that make up our history of "morals of law." For no apparent reason, since the turn of the century, and I believe as a companion to the ever-widening encroachment of the industrial revolution our people have become restive and too many of us have turned our backs to the ancient landmarks. We have drifted down the path of paternalism, looking more and more to security, wherever or however it may be found, and abandoning the good old American traits of thrift, dignity in work, independence and price of accomplishment, and the joy of succeeding by overcoming all obstacles.

The pattern of the decline is clear. On every hand our people are alining themselves into opposing factions and pressure groups based upon economic interests, national origins, religious beliefs, and geographic divisions, each organized for the avowed purpose of currying special favor at the hands of Government and at the expense of the rest of society. The farmer, the labor union, the veteran, and industry and business are seeking protection from the necessity of proving their worth at the market place. Some of our people and too many of our legislators, have apparently come to believe that every human want and need should be satisfied through the use of the coercive forces of Government.

Every hyphenated American, who puts loyalty to his economic, geographic, religious or political affiliation above his duty and loyalty to the interests of the public at large adds momentum to the drift from the principles upon which our form of government is premised. It matters not what the source of the hyphen may be; the effect upon our future course as a Nation is the same.

We have traveled a vast distance along the road to the ordered state since 1916, when that great statesman Elihu Root served as president of the American Bar Association. But I think we can still listen with profit to what he had to say on the subject of ethics in his annual address:

"The people of the United States need in one important respect, a change of the individual attitude toward their Government. Too many of us have been trying to get something out of the country and too few of us have been trying to serve it. Officers, appropriations, personal and class benefits have been too generally the motive power that has kept the wheels of Government moving. Too many of us have forgotten that a government which is to preserve liberty and do justice must have the heart and soul of the people behind it—not mere indifference. Too many of us have forgotten that not only eternal vigilance but eternal effort is the price of liberty. Our minds have been filled with the assertion of our rights and we have thought little of our duties.

"The second general truth is that national strength requires the spirit of solidarity among the people of the Nation. Sectional or class misunderstanding and hatred or dislike are elements of vital weakness. National wealth and prosperity are made up of the wealth and prosperity of individuals, and

we cannot pull down each other without suffering as a people."

Listen to his philosophy of law. He states: "There is no body of citizens to whom this duty should appeal more strongly than to the lawyers, because the subject vitally affects the relations between the individual and the State regulated by law and the fundamental conceptions upon which our system of government is based."

Thus, you see, a vast area of activity must be yours as a lawyer. Yours will be the responsibility to forthrightly serve the Nation. Such questions as arise for instance as that of obtaining qualified judges, is peculiarly within your province; insisting that judges be judges and not philosophers, is another of your task. Our courts have all too often forgotten that the cornerstone of our Anglo-Saxon system of jurisprudence is "precedent." Our predecessors who gave their all to help fashion our form of government would, if they could read some of our recent decisions, miss the guiding beacon of legal precedent—the controlling case on "all four corners" has been too frequently replaced by the round peg decisions based upon individual ideologies bereft of the sobering restraints of fundamentals found in precedent. These decisions, mushrooming as they are, become law by judicial fiat and belong only in those unhappy jurisdictions that are ruled by men as contrasted to rule by law. Fundamental principles do not change, and expediency and passing fancy are poor substitutes for principle.

We, of my generation, have indeed failed and we must look to you to be articulate in all phases of professional ethics if this glorious country of ours is to retain a theory of government of delegated powers only. A Government subservient to the will of the people and under which the dignity of the individual is supreme. As officers of the court, as lawyers, yours is the responsibility to see that the erosions of our system of jurisprudence and of our form of government shall cease. We, all of us, inherited our blessings of freedom and if we fail to pass them on to posterity unimpaired, we will have failed our trust.

I have full confidence you will not fail, for you are better prepared than were your predecessors and there is ample evidence throughout the land that there is a determination among the younger members of the profession to justify your professional inheritance.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. ROONEY. Mr. Speaker, I was profoundly shocked this morning when I heard of the tragic passing of Senator ALBEN W. BARKLEY, of Kentucky.

He was one of the finest men I ever knew, and I am sure that his place in the hearts of many of us will never be filled. When he suddenly fell near the end of a speech at Washington and Lee University's mock Democratic Convention, he apparently died almost instantly. It is fitting to note that his pasing occurred in an atmosphere he loved best—the political forum. He always enjoyed and liked young people, and he was idolized and deeply admired by them as they saw in him the personification of those qualities we have always sought in our national leaders.

In September of 1948 it was my great privilege to accompany Senator BARKLEY to Europe to attend an Interparliamentary Union Conference in Rome. We visited Madrid, Paris, and Berlin, and I can well recall the trip as one of the highlights of my life.

The Senator was a man whose courtly manners and gallantry added much to the happiness and public life of our country. He was a real southern gentleman, and his penetrating intellect, wit, and wisdom endeared him in the hearts of the American people. His passing is not only a great loss to the Nation but also to the entire civilized world. His distinguished career as a Congressman, Senator, and a great Vice President has never been surpassed.

I join with my colleagues in mourning this lovable and outstanding public servant and extend to his widow, children, and grandchildren, my deepest sympathy in their hour of bereavement.

Choice in Transit

EXTENSION OF REMARKS
OF
HON. JOHN. J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the Washington evening Star on Wednesday, May 2, 1956, and which deals with the pending transit legislation which is soon to be considered by the House of Representatives.

As a member of the subcommittee which considered this legislation over a period of many weeks, I feel that the editorial writer for the Washington Star has correctly stated that which took place. This subcommittee truly and in fact gave Washington's involved transit problem the most careful and dispassionate consideration possible. No member of this subcommittee held any brief for or against any interest or group.

The sole purpose which this subcommittee had in mind was and is to bring out a piece of legislation which will give adequate, safe, convenient and necessary transit service to the residents of the Washington area at the lowest possible cost to those who ride the transit system and to the taxpayers alike.

The editorial, as it appeared in the Washington Star, follows:

CHOICE IN TRANSIT

The House Commerce Committee, under its subcommittee headed by Representative OREN HARRIS, gave Washington's involved transit problem the most careful and dispassionate consideration hitherto received from any source.

This detached approach was possible because the committee had no political axes to grind, was not concerned with saving anybody's face, it was not preoccupied with the enticing mysteries of public ownership at the expense of the taxpayers, nor with the idea of punishing Mr. Wolfson for his alleged sins. In brief, the committee made an honest effort to decide what is best for the public under existing circumstances.

Its resulting legislation, expected to come before the House within the next few days, restores the franchise to the Capital Transit Co., making possible continued operation after next August 14. It gives to the transit company substantially the same concessions that would have been available to any other qualified operator, had one been found. It is the immediately sensible solution. We hope the House will support its committee and pass the bill.

If the same intelligent appraisal of realities displayed by the House Commerce Committee had been forthcoming from the Public Utilities Commission in the 6 months preceding last summer's strike, there would have been no strike. There would have been none of the political shenanigans which the strike produced. There would have been no empty promises, by people who did not know what they were talking about, of a rush by private investors to establish a new transit system.

That, however, is water over the dam. The choice now is between continuing private operation of the transit system, or destroying the company in order to embark on a highly dangerous form of public operation. For the form of public operation proposed as the alternative to restoring the franchise is a face-saver, inviting endless public expense and inefficient operation. It lacks the virtues of such transit authority plans as those adopted in Cleveland and Chicago, originally recommended by the Commissioners. It is a politicians' bill, inviting all of the evils and costs of public ownership exemplified in New York and Boston. A really sound transit authority measure, with protection against political pressures and wasteful practices, could still command respect. But no such measure is now pending in Congress.

If the House acts in the public interest, it will restore the transit company franchise, under conditions that are reasonable, by passing the bill proposed by the Commerce Committee.

The Late Honorable Alben Barkley

SPEECH
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. ZABLOCKI. Mr. Speaker, the news of the sudden passing away of Senator ALBEN BARKLEY brought deep and sincere sorrow not only to his colleagues, and to the people of the State of Kentucky, but to our entire Nation.

In the turbulent decades of our recent history, the name of ALBEN BARKLEY became known in every household across the land. ALBEN BARKLEY—whose entire life was devoted to public service—became the personification of the wise and benevolent statesman that boys dream of becoming, and that men strive to emulate. His dedication to the public interest; his gracious manner; and his inimitable art of story telling endeared him to the hearts of the American people.

In the death of our beloved Veep, we have lost more than a distinguished public servant. We have lost a part of Americana that may never be duplicated again. We have lost a man, a leader

who came from the best tradition of the past but who looked to the future and who strove with all the energy at his disposal to fashion a better Nation and a better world for all of us to enjoy.

We are aggrieved by his death, but proud that we have lived in the same age with him and known him. His name shall go down in history for he has served his country well.

I wish to extend my deepest sympathy to his widow and his family in their bereavement. May they be consoled in their loss in the thought that the good Lord has chosen him to be among His very own.

The Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mrs. HARDEN. Mr. Speaker, there has been a great deal of editorial comment in the Nation's newspapers on the President's veto of the catch-all farm bill last month. Last week I inserted several editorials from papers in the Sixth Indiana Congressional District, all of them commending the President's courage in vetoing a bill which he felt unworkable and unfair. Today I am happy to insert another fine editorial expression which I clipped from the April 26 issue of the Rockville (Ind.) Republican. The author, William B. Hargrave, is a close personal friend and one for whom I have great respect. He is, moreover, a lifetime resident of Parke County, Ind., and knows the problems of Parke County farmers. I know his views represent those held by hundreds of his farmer-readers in the Sixth Indiana District and I commend the editorial to each Member of this House:

THE FARM BILL VETO
(By W. B. Hargrave)

Most people thought President Eisenhower would commit political suicide if he vetoed the farm bill and many leaders of the Republican Party and his loyal supporters urged, even demanded, that he sign it.

To have signed it would have been a shabby act of political expediency. The President has never made a decision which was influenced by its mere political expediency. And I think he never will—he's just not that kind of a person. What a refreshing contrast to our last two Presidents—both master politicians in the worst implications of the term.

What has happened? During the days between the passage of the bill and its veto, the market did slump, but right after the announcement of the veto and the new parity figures, the market prices started up and as of now the farm picture is brighter than it has been in over 2 years.

As I see it, the leaders in the Democratic Congress rigged that bill so that whether he signed it or vetoed it, their party would have benefited next November. In fact, I don't think they believed he would dare veto it. It should be obvious that had he signed the bill he would have rejected the principles he enumerated in his original request for a farm bill. Then they would have had him.

When the Democratic leaders foolishly forced a vote to override the veto, they quickly found out the Nation's reaction to the Presidential veto—even members of their own party, as well as some weak-kneed Republican Congressmen, who originally voted for the bill, changed their votes.

Congresswoman CECIL HARDEN voted against the bill and her reasons for doing so, and her analysis of the bill, were so sound that her article was placed on the front page last week, so readers of the Republican would not miss it.

The one who is really taking a beating in this hassle is the Secretary of Agriculture, Ezra Taft Benson. I think if more people knew more about the man, it would take off the sharp edge of criticism that is directed against him.

In the first place, he is a farmer with a capital F. He was 1 of 11 children born in the same farmhouse in Utah. From the age of 4 he had his work to do and as he grew older he did all the farmwork and chores any farm boy does. He attended three colleges and got a masters degree in agricultural economics. All his life has been devoted to farming and church activity, being since 1943 a member of the Council of Twelve, the governing body of the Mormon Church. He and his brother operated a farm in Idaho and declined to accept Government payments for soil-conservation work, because they did not believe they should be paid for work they should be doing anyway. He is a grassroots person and knows what farmers are thinking. Above all, the best interests of the farmers and farming are his sole guides in all his decisions.

It will take much more than the farm problem to defeat the Republican Party next November.

The Interposition Resolution

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. ABBITT. Mr. Speaker, the question of State sovereignty and individual liberties is constantly before the country at this time. Whether or not we shall have State sovereignty and individual liberties as guaranteed by the Constitution of the United States of America is rapidly approaching a decision. This question is of vital importance to every man, woman, and child in America.

Many of our people fail to see the significance or the importance of this to us. Many are sitting idly by while branches and agencies of the Federal Government continue to whittle away the rights and privileges of not only the States but the people themselves. If we are to continue to maintain our way of life, if we are to stop the octopuslike growth of a despotic Federal Government, if we are to stop an arrogant Supreme Court of the United States which has arrogated unto themselves powers never given them by the people of the States of this country, we must assert ourselves as freedom-loving individuals regardless of the sacrifices necessary to save our very way of life. The Judges are determined to set up the Court as an all-powerful arm of the Federal Government with the intent and purpose of changing the mores, habits, and customs of our people, which have meant so much to us down through the years, to coincide with the social and political philosophy of the members of the Court, regardless of the plain language of the Constitution that was handed down to us by our forefathers.

Now is the time of great decision. Now is the time for men and women of determination, men and women who love this country, who respect the rights of the people as well as the sovereignty of our States to rise up and demand that the rights of the majority be respected and that our way of life be preserved.

There appeared an editorial in the Farmville Herald on Tuesday, May 1, 1956, written by Mr. J. B. Wall, owner and publisher of that great paper. Mr. Wall knows and realizes the problem confronting our people as well as any living person. He has dedicated his life to the preservation of constitutional government as well as the preservation of individual dignity and is rendering a real service in pointing out the grave danger that is now confronting our people. I commend him for the great work that he has done, is doing, and will continue to do in the future.

Under leave to extend my remarks in the RECORD, I desire to include therewith the above-mentioned editorial:

THE INTERPOSITION RESOLUTION

When the Virginia General Assembly with only two dissenting votes passed the resolution "interposing the sovereignty of Virginia against the encroachment upon the reserved powers of this State, and appealing to sister States to resolve a question of contested power," it was taken at face value. (See the resolution printed in full in another column.) South Carolina, Georgia, Alabama, Mississippi, States in which legislatures were then in session, supported the Virginia resolution, several in even stronger terms.

Members of Congress understood that these States, through this action had taken a stand to challenge the usurpation of power by Federal agencies, in this case the United States Supreme Court. A manifesto supported by 101 Congressmen strongly supported the States in their position.

Listen to these resolves:

"That the General Assembly of Virginia expresses its firm resolution to maintain and defend the Constitution of the United States, and constitution of this State against every attempt * * * to undermine the dual structure of this Union and to destroy those fundamental principles embodied in our basic law, by which the delegated powers of the respective States have long been protected and assured. * * * That the State of Virginia did not agree in ratifying the 14th amendment, * * * that the power to operate racially separate schools was to be prohibited to them thereby * * *. That this declaration (May 17, 1954 decision) upon the part of the Supreme Court of the United States constitutes a deliberate, palpable, and dangerous attempt by the Court itself to usurp the amendatory power that lies solely with not fewer than three-fourths of the States * * *. Virginia is duty bound to interpose against these most serious consequences * * * now appeals to her sister States for that decision which only they are qualified under our mutual compact to make, and respectfully requests them to join her in taking appropriate steps, pursuant to article V of the Constitution, by which an amendment, designed to settle the issue of contested power here asserted, may be proposed by all the States * * * that until the question here asserted by the State of Virginia be settled by clear constitutional amendment,

we pledge our firm intention to take all appropriate measures honorably, legally and constitutionally * * * to resist this illegal encroachment upon sovereign powers."

Having taken this action the Virginia Assembly changed no Virginia laws regarding public schools. Until this "issue of contested power" has been "settled by clear constitutional amendment," we do not believe Virginia can, in honesty and good conscience, do anything.

It would appear to us that Governor Stanley and the State Board of Public Education would be proper in proclaiming a policy for segregated schools for the coming year, thereby stabilizing the public school system and allowing the governing boards of the counties to complete a budget according to law. In the meantime it is to be hoped that this "issue of contested power" may be resolved. Until this has been accomplished there is no move to be made except to enforce the provisions of the Virginia constitution.

A great and important constitutional principle is involved far beyond the importance of the issue of schools, as important as that is.

If we believe that the compact of States, from which the Federal Government derives its power, is no more, then we must accede to the dictates of the Federal Government—the executive, or the judicial branches. If we believe the principles set forth in the resolution of the Virginia General Assembly and joined in by other legislative bodies of sister States, then it would be impossible to move in any direction, until "the issue of contested power" has been definitely settled.

Prince Edward County, and its people are law-abiding lovers of freedom with a long history in the resistance of tyranny. The history of the county shows no unwarranted acts of defiance, and the people intend no such action now, but they have simply a determination rightfully to maintain self-government and liberty.

We believe the general assembly represented the sentiment and had the support of the thinking people when it passed almost unanimously the interposition resolution.

Singing Rockets, Student Choir, Rich Township High School, Park Forest, Ill.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. McVEY. Mr. Speaker, it will be my pleasure tomorrow to welcome to our Capital City a fine group of students from the Rich Township High School in Park Forest, Ill., which is located in the Fourth Congressional District that I represent. Rich Township High School serves the 30,000 residents of Matteson, Olympia Fields, Park Forest, Richton Park, and adjoining rural areas. About three-fourths of the student body comes from the new city of Park Forest, which is located 30 miles south of Chicago's Loop. While Park Forest is only about 7 years old, it has a population of about 25,000 people. It has been recognized as a model, new community and recently received the National All-American City Award.

This group of approximately 70 boys and girls has been selected from 350 students in regular vocal training at Rich High, and are known as the Singing Rockets. It is my hope that some of you will have the opportunity to hear them when they sing on the steps of the Capitol at 12:30 tomorrow afternoon.

They are the only choral group in their class to receive superior ratings in all competitive categories in the Illinois State music contests. Singing in seven foreign languages, performing equally well spirituals and religious numbers, popular music, and ballads, the Singing Rockets are in wide demand at local and State meetings and conferences, as well as at national conventions.

Gov. William G. Stratton, of Illinois, has designated the Singing Rockets to be the official State representative on the Ed Sullivan Show commemorating National Music Week on Sunday, May 6, 1956. I feel confident that should you, my colleagues, see their performance on the Ed Sullivan Show, you will feel that my pride in calling them to your attention is highly justified.

Seniors and juniors are included in the Singing Rockets, and there are about an equal number of boys and girls. Their annual tours are financed through fundraising projects which are entirely student directed. This year they have raised $7,000 for their trip to Washington and New York by doing odd jobs, babysitting, and benefit performances. Their annual tour last year included performances in three States—Illinois, Indiana, and Michigan. Their choral work is done in addition to their regular class work. Meeting but 2 hours a week in rehearsal, they are recognized by well-known choral experts as one of the truly great teen-age student choirs in the Nation.

America, the greatest Nation in the world, has little to fear that juvenile delinquency will break down the moral fiber of our country, when it can proudly present such fine young citizens.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. KEARNEY. Mr. Speaker, the self-termed "collective leadership" of the Soviet Union have good reason to fear the date of May 3. The 3d day of May is the Polish Constitution Day, the day of unity of though and action for all Poles worth of the Polish heritage of freedom.

Press dispatches on April 20 brought out that Poland's Communist regime had fired or demoted the Minister of State farms, the prosecutor general, and the chief military prosecutor general.

Press dispatches of April 21 announced the dismissal of the minister of justice and the downgrading of the minister of culture by Poland's Communist regime.

Press dispatches on April 22 pointed to the freeing of 30,000 Poles and the reduction of prison sentences to 70,000 others by Poland's Communist regime.

What is the meaning of this shift in command among Poland's servile Communist leaders?

In my opinion, Shakespeare best expressed the meaning of this readjustment when he wrote in Macbeth, "It is a tale told by an idiot, full of sound and fury, signifying nothing."

Tools of the Stalin Commnist faction in Poland have merely been replaced by tools of the Communist collective leadership faction. It is highly probable, also, that those who have been released from prison by the alleged amnesty are either Communists or true Poles, so broken in mind and body, that they are no longer considered a threat to their Communist oppressors.

Buried deep in the news dispatch of April 22 is the real cause of the feverish activity among Communists in Poland.

Reuters quotes the Communist Polish radio as saying:

> Emigre criminals will be pardoned if they return to Poland before July 22, Polish National Day.

July 22 is the day the Communists of Poland want to impose on the Polish people as their day. It is no true Polish holiday.

May 3—Polish Constitution Day, the day Communists fear—is the day all true Poles honor.

The Polish Constitution of May 3, 1791, was inspired by the awakened consciousness of human rights, the same awakening which led to the adoption of the French Declaration of Rights and the Constitution of the United States.

The May 3 constitution of Poland was adopted in an hour of utmost national peril. Even as the men who formed it were deliberating, the absolute powers of Russia, Prussia, and Austria were preparing for the final partition of Poland. In spite of the success of absolutism over freedom, the May 3 constitution remained, with its lofty ideals of liberty and national and individual integrity, as a beacon for guidance—a living testament for future generations of Poles that it was their God-given right to be free.

After the rebirth of Poland in 1918, a new, a more modern constitution was enacted. Nevertheless, May 3—the day of the 1791 constitution—was proclaimed as the national holiday. It remained the national holiday throughout World War II. It was abolished as such only when the Communist regime gained complete control over Poland in 1945.

We of the United States have been aware that Poland has been under Communist domination since 1945. We are, also, aware that any attempts at active resistance by the unarmed Polish people would be instantly and brutally crushed by their Communist oppressors. But, we are also strongly aware that, although overt resistance is impractical, passive resistance continues with uninterrupted force.

The Catholic Church—free under the May 3 constitution—is a glowing lamp of liberty.

The Catholic Church and its adherents, representing 95 percent of the total present-day population of Poland—has always been identified with Polish patriotism and with Poland's unrelenting fight for independence.

What has been the Communist attitude toward the Catholic Church in Poland?

Communist propaganda maintains that there is freedom of religion in Poland.

The truth is that there have been frontal attacks against the Catholic Church by the Communists since 1945. Both Stalinist and collectivist Communist leaders have tried in vain to impose thought control in religious matters upon the Polish people. When they failed to sway the Polish people from their deep-rooted beliefs, they began to systematically persecute the church leaders. Cardinal Wyszynski was imprisoned. Prison gates clanged behind Bishop Adamski, and his brother bishops, Bieniek, Bednorz, Kaczmarek, Baraniak, and Bernacki. Hundreds of minor parish priests met the same fate. Still more hundreds were deprived of their right to carry out church duties.

What has been the end result of this planned campaign to paganize Poland?

Today, churches are overcrowded. There has been no material drop in the percentage of communicants in the Catholic Church in Poland. In fact, because the Communists oppose the Catholic Church, church attendance is one sure way for the true Pole to assert his anti-Communist feelings.

The May 3 constitution allowed free Polish to cross the boundaries of their nation at will.

In 1956, the Communist oppressors have to watch the frontiers. Guarding these frontiers are long stretches of barbed wire, mine fields, police-dog patrols, searchlights, and thousands of soldiers. These warlike preparations are not designed to protect Poland from outsiders. Rather, they are created to prevent Poles from leaving their native land for the free West.

Have these police-state methods succeeded?

The answer is a resounding, "No." Notwithstanding these elaborate precautions, flights from Poland take place every day. Those who seek and find sanctuary in the free West represent every strata of Polish population. There are university professors among them. Government officials, soldiers, peasants, workers, and students daily risk their lives in the pursuit of liberty.

Polish seamen are specially eager to be free. The number who have run the Communist gantlet runs into hundreds, even thousands. Only a few weeks ago, a group of Americans of Polish ancestry financed and equipped a ship whose crew, for the most part, is composed of seamen who have jumped ship from vessels of the Communist Polish merchant marine.

This ship is named *Wolna Polska*—meaning free Poland.

The May 3 constitution firmly established the right of the Polish peasant to own land.

The Communist regime in Poland has tried to introduce the system of agriculture prevailing in the Soviet Union—to deprive the peasants of their land, to coerce them into joining collectives. The favored peasants who still keep their land must pay taxes approximating half of their income. In addition to this tax, the peasants are forced to turn over to their Communist oppressors staggering quotas of grain, milk, livestock, and potatoes. Quite recently, the Communists have admitted that peasants are often forced to buy grain on the free market in order to meet this compulsory quota. What is more, the peasants have to pay four times the official price for this free-market grain.

In spite of this fierce pressure, the Polish peasants still resist collectivism. So strong has been this resistance that the Communist regime has only succeeded in collectivizing 9 percent of the arable land.

The Polish peasant does not want to be a farmhand on a collective farm. He wants to be free to work his own land—his by right of inheritance, his by the letter and spirit of the May 3 constitution.

The May 3 constitution encouraged self-expression among Polish musicians, artists, and writers.

The Communist regime halted all intellectual progress. Art, and particularly literature, has been under strict supervision from the outset of the Communist occupation. It has been under the restriction of the principles of the so-called socialistic realism since 1949. This Communist doctrine orders all creative artists, in their productions, to carefully avoid showing the true picture of life as they see it. Instead, they are ordered to produce a distorted picture of life, designed solely for use by the Communists for propaganda purposes. Directly due to these restrictions during the 11 years of Communist occupation, there has been a steady decline of original and worthwhile Polish art.

The creative artist had one choice to make. He had to chose between the Communist line and starving to death. Some abandoned their art entirely. Others created only to survive.

Resentment grew in the minds and hearts of these Polish creative artists. Finally, during the March 1956 meeting of the Art and Culture Council, which controls all art in Poland, this resentment came to a head. After a bitter debate, these artists surmounted their fear of reprisal by the Communist regime and condemned the unnatural principles of socialistic realism.

The creative artists of Poland had reverted to the freedom spelled out in the constitution of May 3, 1791.

The Communist oppressors of Poland well know the anti-Communist feeling of Polish peasants, workers, priests, and professional people.

As a result, they have falsified election results, outlawed free political parties, suppressed the opposition press, and denied the Polish people access to news of the outside world.

More than anything else, however, they have tried to stamp out the memory of the May 3 constitution. May 3 was, and is, the rallying point of all free Poles. They are even willing to bribe Poles who have fled their Communist oppressors with false liberty, provided they return by July 22. They hope that July 22 will erase May 3.

It never will.

The people of Poland cannot celebrate May 3 in the open in 1956.

Let us in the United States, we who are free, honor that day for them. Let us honor our own Constitution as we honor that of the people of Poland. Without our Constitution we could never have attained true freedom. With our Constitution, true freedom can never be lost.

Let us bow our heads and think of Poland on May 3.

Reds Step Up Activity Below Mason-Dixon Line

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article by Victor Riesel, published in a number of newspapers over the country:

REDS STEP UP ACTIVITY BELOW MASON-DIXON LINE

(EDITOR'S NOTE.—This column has been prepared by Victor Riesel's staff after a conference with the injured columnist.)

There's a new line paralleling Mason-Dixon—a Commie line aimed at colonizing key southern communities and unions and infiltrating political clubs. It is a directive which is stripping highly trained agents from their current assignments in the North and transplanting them South for future action.

Already the party has reached into its cadres in the teamsters, butchers, furniture workers, paper workers, woodworkers, packinghouse workers, hotel and restaurant employees, textile workers, and garment workers unions and assigned them to special posts in the embattled Southland.

The comrades are set to duplicate the tactic that enabled them to capture scores of key posts in the old CIO when John L. Lewis first set it in motion back in 1936. The gimmick is to have specially briefed people on the scene ready and willing to do the "dirty work" necessary for important political campaigning or mass unionizing drives.

John L. fell for this line, and it took the anti-Communist CIO leadership 15 years to wipe out the pockets of subversion that had been created. It is the same strategy that gave a readymade apparatus to Harry Bridges when he tried to capture control of Hollywood studio unions—and almost succeeded—in the mid-forties.

Latest directive from the Soviet's secret agents in charge of post-Stalin activity here calls for intensifying propaganda on the community level as well as inside labor. It tells party members that:

"It is clear that the organizing drive in the South, to succeed, must be a political and social movement, as well as an economic movement."

The comrades were also told to "develop legislative action through whatever channels available. * * *" This call for infiltration of non-Communist groups is coupled with specific directives to enroll in Democratic clubs in all areas. In the South this could

pay particular dividends if the regular Democrats there bolt the Chicago nominating convention. Control of the formal machinery of the Southern Democratic Party will then be up for grabs and the Kremlin's "carpetgrabbers" will be reaching fast—and perhaps first.

The party is also dispatching trusted personnel to work in church groups, YMCA's and YWCA's, Lions Clubs, Elks Clubs, and NAACP, on southern campuses and in other civic and labor organizations. Much of this phase will be directed by ostensible representatives of front groups such as the Commie-controlled Sobell Defense Committee which recently opened offices in six Southern cities to spark a drive for the release of the convicted atomic spy now in Alcatraz.

The Communists also have been ordered to step up their special schooling for future agents in the southern infiltration operation. The propaganda chiefs decided that "to grapple with such questions in a mature and sure-handed way, the masses of our members must achieve mastery of the theoretical and tactical principles which underlie the program of our party. This means study—systematic study.

"Such study and discussion must come to be the lifeblood of every club, section, and regional committee. There must be increased self-study by individual comrades. And there must specially be fuller use of * * * the Jefferson School of Social Science."

Here then is the specific implementation of the new line in the South. But, while they are concentrating on work among the Negroes at the moment for political purposes, the party leaders have their eyes on future unionizing drives in the South.

They are aware of the rapid industrialization. They know that sooner or later the AFL-CIO will have to launch huge campaigns for new members.

When that time comes, they will be there with their "sleepers" on the scene, ready and willing to do the dirty work again.

Helping a Competitor

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the RECORD an editorial from the St. Louis Globe-Democrat of March 14, 1956, which presents an interesting discussion of the problems existing between various kinds of transportation services—rail, airlines, barge, and truck. St. Louis, Mo., is a great center of various transportation media including rail, air, barge, and truck:

HELPING A COMPETITOR

Now that our great new airport has been dedicated, and praise has been heaped on all who had a part in it, we want to speak a special word of one group whose participation has, until now, been perhaps unnoticed and unhonored—the railroads.

This is quite a contradiction in terms, for the railroads and the airlines are competitors. The railroads, however, have contributed substantially to the construction of the airport through the taxes which they pay to the city and the Federal Government.

While the railroads have been subsidizing their competitors, the airlines on the other hand have been receiving a whacking subsidy from the Federal Government, in spite of the fact that the airlines, in 1955, had the biggest year in their history, making tremendous alltime high profits.

Subsidies for airlines unquestionably made good sense in the late twenties and early thirties, when the resources of the Federal Government were necessary to establish the fledgling airline industry. They make absolutely no sense today when the airlines are able to stand on their feet, and subsidies are simply an added burden to the much harassed taxpayer.

The trouble with subsidies is that once they get on, they almost never come off. In this session, when the Congress is considering legislation reducing subsidy payments to farmers, it might well eliminate the airline subsidies which simply make a rich enterprise richer at the expense of the taxpayer.

While on the subject of reducing subsidies, we hasten to mention daily newspapers. Last year the Post Office Department subsidized daily newspapers to the extent of $60,559,000, which represents the loss on daily newspaper second-class mail.

Most of the newspapers in the United States are in reasonably healthy financial condition, certainly healthy enough to pay the cost of moving their own papers. This newspaper, and we think most right-thinking newspapers in the country, does not want a subsidy in any form from the Federal Government or anyone else.

The Globe-Democrat is in favor of raising the rates of second-class mail to a point sufficiently high to make this service of the Post Office Department self-supporting.

Getting back to the plight of the railroads, we believe they have unfair competition, not only in the subsidies which they helped to pay for the airlines but also in the toll-free operation of canals and other inland waterways at a cost of hundreds of millions of dollars. We see no reason why barges and other users of inland waterways should not pay tolls, at least sufficient to pay the cost of locks and other maintenance operations of the waterways such as buoys and devices necessary to water traffic.

The truckers, too, pay less than a fair share for use of the road. Other taxpayers must in effect subsidize these carriers for their share of the maintenance and construction of new highways.

Even the much-buffeted transit companies now pay a use tax for city streets which, by all accounts, is less than the actual damage done to the streets by the transit vehicles. Any tax which is less than the cost of ure inevitably results in a subsidy by all other taxpayers.

As a final blow, the railroads have been prohibited by the Interstate Commerce Commission from fixing rates which would make them competitive with either the barge carriers or the truckers. This inevitably forces some business to the other carriers which might more properly be a rail shipment.

With alternate choices of carriers available in most instances, the case for governmental control is a weak one at best.

We hold no brief for the railroads. Certainly this newspaper has criticized them when we have felt that criticism was merited. We do feel, however, that the railroad alone, among common carriers, pay a large share to subsidize their competitors in that railroads must buy and maintain their own rights-of-way and still pay city, State, and Federal taxes which, in some part at least, become a subsidy for others.

In the interest of fair play, the Government should either subsidize all domestic carriers of people and goods or none at all. A realistic reappraisal of taxation with regard to common carriers is much in order, and certainly long past due.

Address of Deputy Attorney General Rogers Before the District of Columbia Chapter of the Federal Bar Association

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Deputy Attorney General William P. Rogers which he delivered on April 25, 1956, before the District of Columbia Chapter of the Federal Bar Association:

Most of us here today are lawyers. We have professionally and personally dedicated our lives to the prompt and effective administration of justice. Here are a few basic facts concerning our Federal judicial system.

Do you know how much of the budget is allocated to the administration of the court system? About one-twentieth of 1 percent—little more than the cost of 1 destroyer or 1 light cruiser.

How many persons would you estimate are employed in our judicial system? There are about 300 judges and 4,000 employees. This constitutes the entire manpower of 1 of the 3 branches of Government. Over 40 times this many people are employed in the administration of veteran affairs. The entire Federal judiciary, including the Administrative Office, is operated on a budget half as large as that used in the administration of the Bureau of Indian Affairs.

I use these illustrations, not to suggest that some special significance should be attached to them but rather to show that speaking relatively the size and cost of the courts are insignificant in terms of service rendered.

In nearly every year since 1942 the civil cases commenced have exceeded those terminated. The continuous yearly increase in the pending caseload is illustrated by the fact that the 1955 caseload is nearly 150 percent greater than the 1941 figure. This, like many other problems of the courts is a continuing one. With the growth and progress of our society, and changes in legislation and economic conditions, the courts are constantly presented with new problems and requirements.

We Americans pride ourselves in our independent and impartial judiciary. We believe in the rule of law and look to the courts to safeguard our rights and to preserve our institutions of freedom. Yet how long does a person have to wait to have his case tried? In many districts litigants must wait from 1 to 4 years to have a case tried. By means of extraordinary effort, the district courts in the Southern District of New York, in Washington, and elsewhere have made valiant strides in decreasing the backlog during the past year. However, in most jurisdictions the problem continues to be most serious. The unfortunate fact is that very few persons know this except the judges, lawyers, and the litigants involved.

The solution of this problem will not be found in one panacea or magical formula. I am convinced, however, that solutions would soon be forthcoming if the spotlight of public opinion, so much a part of our democratic system, were focused on the judicial branch so that both its accomplishments and its operational difficulties and its weaknesses would be matters of public knowledge. Once

the facts and the problems are generally known, I believe corrective action would follow.

As one of the three coequal branches of Government, the judiciary needs a strong and effective spokesman. It must be provided with a voice to make known to the Congress and to the people of the United States its needs and requirements—its accomplishments and its failures. It is my sincere conviction that great value would attend a report by the Chief Justice to each Congress on the condition of the courts.

I publicly recommended such a proposal in 1954 and the response was almost unanimously favorable. Judges, leading members of the bar, Members of Congress, and others agreed that it was essential that the courts be provided with an effective spokesman to make known objectively and persuasively, their problems, needs, and plans for more effective performance of their vital functions in our society.

Judge Parker of the Fourth Circuit, in an address to the American Bar Association meeting in Philadelphia last year, said:

"Last year, at the Judicial Conference of the Fourth Circuit, Deputy Attorney General W. P. Rogers made a proposal that the Chief Justice be invited * * * to address the two Houses of Congress in joint session as to the needs of the judiciary. His proposal has received the unanimous indorsement of that conference; and, in my opinion, it is one of the most important proposals affecting the judiciary to be made since the foundation of our Government.

"Congress must provide funds and pass the laws necessary for the proper administration of justice. It is important that it be correctly advised as to what funds and what laws are necessary for that purpose; and there can be no better way for this to be done than for the Chief Justice, who as Chairman of the Judicial Conference of the United States, knows better than anyone else the needs of the judiciary, to lay these before Congress in joint session. In this way, not only will all Members of Congress be fully advised of the needs but the public presentation by the Chief Justice will attract the attention of the citizenship at large to the work that the judiciary is doing and the importance of giving it adequate support."

Legislation was introduced in Congress and hearings were held in February 1955. I think you would be interested in some of the testimony.

Lloyd Wright, then president of the American Bar Association, testified in complete support of the proposal, stating in part:

"The American Bar Association has long felt that there has been a shocking lack of understanding as to the Federal judiciary of the United States. * * * The judiciary was removed, as it should have been, from political influence, and hence it has had no one to constantly champion in the legislative halls its needs and requirements in order to fully meet the obligations of service imposed upon it by our form of government."

The late Judge Stephens, for many years the chief judge of our circuit court here and of whom it has been said that he gave his life by his continuous activities in promoting the cause of justice, also testified in favor of the proposal. He stated:

"I do not have in mind some dramatic, actor-like pressure or presentation by the Chief Justice of the United States. What I have in mind in suporting this resolution is that the Chief Justice could in a dignified manner, once each session or once each Congress, in the first place, tell the whole Congress and, therefore, tell the whole people of the importance of the Federal judiciary and what it means to freedom, what it means to our liberties, and what it means to the peaceable settlement of our controversies between man and man and between man and his government in the Federal courts."

Judge Biggs, chief judge of the third circuit, observed that in 33 years that circuit had never been up to date in its work. The late John W. Davis telegraphed his approval of the proposal "provided that it would not prove an undue tax upon his [the Chief Justice's] time and energy." The Chief Justice, in response to an inquiry from the subcommittee, wrote: "If the Congress should be of the opinion that it, and through it, the public might become better informed on the subject through a statement of current conditions and recommendations of the Chief Justice, I would be happy to cooperate."

Despite overwhelming support, a few objections were made to the proopsal. First, it was suggested that the plan might be embarrassing to the judiciary by tending to impair its independence and impartially. Second, it was questioned whether the Chief Justice could have anything of sufficient importance to say to justify an address before a Join Session of Congress. Finally, it was said that it had never been done and therefore should not be done. I would like to address myself to these contentions.

The suggestion that a factual report on the conditions of the courts by the Chief Justice might somehow be inappropriate or impair the independence of the judiciary seems to me without foundation.

No one has ever suggested that the doctrine of separation of powers requires that there be watertight compartments with no right of interchange of information. Progress can hardly be accomplished in a vacuum.

In his capacity as head of the Judicial Conference of the United States, the Chief Justice is already required by statute to submit an annual report to Congress. This report by the Chief Justice has nothing to do with the merits of cases or to the judicial as distinguished from the administrative aspects of the courts. The proposal that the Chief Justice personally present factual data to a joint session of Congress does not contemplate any change in this respect. To permit him to present orally to Congress every other year information of immense importance to the conduct of judicial affairs so that proper emphasis could be placed upon those aspects deserving particular attention is only commonsense. It would substitute an effective way to present these views for the present ineffective way.

The contention that the Chief Justice would have nothing of sufficient importance to say to warrant an address before a joint session of Congress strikes me as being equally without merit. One of the statutory functions of the Judicial Conference of the United States is to make recommendations to the Congress. Undoubtedly this program directly affecting the administration of justice would receive favorable and widespread consideration if it were personally presented by the Chief Justice of the United States who is Chairman of the Conference. Certainly Congress should be apprised, for example, of the backlog situation, its causes, its effects, and possible remedies for it. In the interests of economy and efficiency, Congress should also be fully informed at regular intervals of all fiscal and administrative problems of the courts.

Does information relating to the judicial branch effectively reach Congress? Compared to the executive branch which, as you know, has the benefit of the President's state of the Union message, special messages, testimony of Cabinet, and other top-level officials, and which is otherwise constantly in touch with Congressmen, it does not.

Prior to 1939, the Attorney General spoke for the courts. While this procedure provided the courts with a spokesman, it had one substantial drawback. It tended to make the judicial branch appear subservient to the executive branch; it was also dependent upon its chief litigant to present its case for appropriations to Congress, to fix the salaries of its employees and to approve its expenditures for books and travel. This was hardly consonant with our traditional view, as well as constitutional provision, for the complete equality of position between the three branches of Government.

Since 1939, the responsibility for the management of the fiscal and administrative affairs of the courts has been lodged in the courts themselves, the judicial conferences, and the administrative office of the courts. This system has not been too effective because their recommendations do not receive adequate attention.

Each year, as you may know, there is a judicial conference in each circuit where local problems are discussed and assessed and recommendations are made. The chief judge of the circuit presents the recommendations of his circuit to the Judicial Conference of the United States. At the Conference material compiled by the administrative office on the status of the courts is presented and discussed.

The result of this process is a printed report which is probably read by very few Members of Congress. No Member of Congress, however diligent, can possibly read all material presented to Congress. After hearings of the Judiciary Committees of the House and Senate, at which court administrative officials and district and circuit judges testify, the subcommittee reports to the committee, the committee reports to the Congress, and Congress considers the recommendations. Because of lack of attention worthwhile recommendations are often pigeonholed.

Over the years failure of Congress to respond to the pressing needs of the courts is a recurring problem. Of the 57 judgeships created between 1945 and 1954 only 6 were created during the year in which the recommendations were first made. Twelve were not created until 3 years later and three were not created until 5 years later.

There are presently pending in both Houses of Congress omnibus judgeship bills which propose to carry out the current recommendations of the judiciary conference. If enacted, it would create one additional circuit judgeship and 20 additional district judgeships. The Department of Justice has strongly urged the enactment of this legislation and it is hoped that favorable congressional action will be forthcoming shortly.

The final objection which has been made to the proposal is that it would result in a break in tradition—that because no Chief Justice of the United States has ever appeared before Congress in person, such as innovation should not be instituted now. Customs and traditions should be continued only so long as they serve a useful purpose. When it can be demonstrated that adherence to obsolete procedures is not productive, it is time to search for new and more effective measures which will bring about sound and desired results. In a matter so important and vital as the preservation of the strength and vitality of our judicial system, the choice is an obvious one. We cannot permit the legitimate needs of the judiciary to go unattended because they are presented in such form and manner that they miss the mark.

Regrettably, a Congress, or to emphasize a point, a subcommittee of a committee, despite the support of the chairman and the ranking minority leader, took no action on the proposal in 1955. I am firmly convinced that eventually Congress will approve this proposal which has such general and widespread support. An invitation to the Chief Justice of the United States to address Congress on the conditions of the Courts would provide an important stepping stone in the drive to bring justice up to date. I believe that the idea is one which deserves the wholehearted support of the Federal Bar Association.

The Meaning of Alger Hiss

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend by remarks, I enclose a speech by Willard Edwards, Washington bureau, Chicago Tribune, delivered at Princeton University on April 25, 1956, before the Aquinas Foundation. The meeting was held at McCosh Hall and attended by over 600 students with thousands turned away. Mr. Edwards was invited to Princeton by Fr. Hugh Halton, Roman Catholic chaplain of the university and founder of the Aquinas Foundation, so that the students might have the truth about Hiss, who had previously been invited to address the Whig Cliosophic Debating Society on April 26. Mr. Edwards' talk was received with enthusiasm and won for him a standing ovation by the students. As one who attended the meeting I can attest to the success of Mr. Edwards' patriotic endeavor. At this same meeting both Father Halton and myself were booed. The next day Hiss the faithless was cheered. Mr. Edwards' speech follows:

THE MEANING OF ALGER HISS

(Speech by Willard Edwards, Washington bureau, Chicago Tribune, at Princeton University, April 25, 1956, before the Aquinas Foundation)

I come here as a reporter of facts gathered from official records. It is my assignment to appraise, in the light of those facts and my own observations over a period of years, the credibility of Alger Hiss who comes to Princeton tomorrow night to discuss The Meaning of Geneva.

Those who have sponsored this meeting think it proper that the opinions of Hiss be considered in the reflection of his background and character. They believe that the context should be set for his remarks so that listeners may judge his qualifications as an unbiased and truthful expert on American foreign policy.

Since Hiss plans, I understand, to compare the Geneva meeting of 1955 with the Yalta Conference of 1945, in which he was a participant, I shall also discuss his role at that parley in the Crimea, presenting some recent evidence on that subject which may be new to you.

At the end, I shall propose a series of questions to Hiss which I think he should answer before he seeks to instruct the American public on matters affecting national security. I hope he does not choose to ignore them.

I do not intend to enter into the controversy over whether Hiss should have been invited here. The invitation was issued; it was accepted. President Dodds and the board of trustees, while disapproving, have decided it would be unwise to overrule the inviting society. The question remains: Is Hiss a truthtelling, honest, and trustworthy witness on foreign affairs whose views may guide us on a safe course in a troubled world?

Some of your alumni, including the new Ambassador to Canada, Mr. Merchant, who has been Assistant Secretary of State for European Affairs and who knew Hiss as a fellow State Department official, have protested that his appearance will do lasting damage to the university. He did not say, as he might have, that Hiss had damaged the prestige of the State Department as no other man in history.

I have a suspicion that the original invitation was prompted not entirely by the fact that the views of Hiss would be "of general interest to the faculty and student body." I sense a pardonable curiosity to see and hear in person the central figure in two of the most famous spy trials of the century. The same curiosity attracts great crowds to a movie star's wedding and has made the sideshow a consistent source of profit in the American entertainment field.

I think this review of Alger Hiss' career and a study of his moral attitudes is important. It has been proposed that I confine my discussion to the Yalta Conference and ignore an analysis of the Hiss record with which, it is implied, everyone is familiar. I could not agree to that restriction. When Hiss appears to present his views on foreign policy in a public forum, there should be recalled not only the fact that he is a convicted perjurer but a man of infinite guile—a perilously plausible advocate who has proved to the satisfaction of many supporters to this day that black was white.

I assure those of you who will see Hiss in action tomorrow night that he will give a dramatic performance. You will be observing as brilliant, as adroit, as charming a personality as I have witnessed in more than 30 years of newspaper experience. He will fascinate you. He will be plausible and seemingly sincere. Although he is now 51 years of age, he retains a certain boyish appeal of which he is not unconscious. He is the very picture of the all-American boy grown up. You will find it difficult to believe that you are listening to a man convinced by a jury of willful perjury under oath to conceal his role as a traitor and a spy.

I will never forget an interview I had with a woman juror after the first Hiss trial ended in a deadlocked jury, 8 to 4 for conviction. The presiding judge in that case had given the jurors no instructions against talking to the press. They were eager to explain why they remained hopelessly split after 29 hours of debate in a locked juryroom.

This woman was one of the minority of four who believed Hiss innocent. I asked her on what she based her verdict. She was a mature woman of middle age, the embodiment of commonsense. But she breathed like a schoolgirl as she said:

"From the moment I set eyes upon that fine boy (he was then 44) I knew that anyone so charming and with such a good face could not possibly have stooped to anything so low as spying."

Six weeks of evidence, both documentary and verbal, had not changed the good lady's opinion.

The lean good looks of Alger Hiss, coupled with a winsome personality and a pleasing voice, have been among his most valuable assets in a career which led him to high places before his downfall.

He was, and is, a man of great talents. It is interesting to speculate on what his public stature might be today if he had not been exposed in 1948. He might have become a Secretary of State or a Governor or a Senator. He had all the surface qualifications for gaining national respect as a great American statesman.

He has been something of an undergraduate prodigy at Johns Hopkins University—president of the dramatic society, editor of the college daily, Phi Beta Kappa, in his junior year. The senior class gave him the supreme accolade—they voted him "best handshaker" in the school.

When he moved into a somewhat tougher league at Harvard Law School, he proved that he was no morning-glory. He was elected an editor of the Law Review, one of the school's highest honors, and he became a star of the highly exclusive seminar conducted by Prof. Felix Frankfurter. After he graduated cum laude, he was given, upon the recommendation of the professor, one of the most coveted posts open to a man leaving law school—secretary to the celebrated Supreme Court Justice Oliver Wendell Holmes. Just as he was later to win the friendship and loyalty of a very host of Government officials, Hiss gained the affection of the great jurist.

Alger Hiss and I came to Washington about the same time in the early 30's. We did not move in the same circles. He was one of the brightest of the bright young men imported into the Government on the recommendation of Professor Frankfurther who himself joined Washington society as a Supreme Court Justice in 1939.

Neither I nor any other newspaperman knew that in 1939 another man came to Washington—a fugitive from the dark underworld of Soviet espionage. This was Whittaker Chambers who had revolted a year earlier from service as a spy for the Russian secret police.

Chambers came to the Capital to unburden his conscience. He tried to see the President but was shunted off by a White House secretary to Assistant Secretary of State A. A. Berle, then in charge of State Department security. To the astounded Berle, Chambers gave his story of communism in the Government. He named names and one of those names was that of Alger Hiss.

Berle did not know whether to believe Chambers but he thought that the charges should certainly be investigated. But influential friends of Hiss rallied to his defense, as they again rallied many years later, and joined in enthusiastic endorsements of the rising young diplomat. An unbelieving President, who thought Communists were something you saw under the bed at night, scoffed at Berle's report.

As the first Government official to raise a question about the probity of Hiss, Berle was a marked man from then on. Eventually, he was forced out of the State Department, the victim, as he has testified, of what he called the "pro-Russian" group headed by Dean Acheson and Alger Hiss.

Chambers went back to New York where he eventually gained a reputation and financial success as a magazine writer. Sometimes he brooded over the silence which had greeted his efforts to expose a plot against the security of the Nation but he kept his peace for 9 years.

Nothing can really be kept secret in Washington for long and inevitably rumors about Hiss were whispered in the years that followed. But nothing disturbed his rise to power. Dumbarton Oaks, Yalta, San Francisco—Hiss pursued his smiling career. He became principal adviser to the American delegation at the United Nations. Then, in 1947, he resigned to become president of the Carnegie Endowment for International Peace, a position carrying great prestige and a $20,000 salary.

Eighteen months later, the storm broke over his head. The House Committee on Un-American Activities stumbled accidentally upon the existence of Chambers and summoned him to testify, utterly unaware of the bombshell he carried with its 9-year-old sputtering fuse. Wearily, knowing that he was destroying his own career, Chambers repeated his charges against Hiss, this time in public before a congressional committee where no Government censorship could apply.

It was my duty in the next 3 years to cover the Hiss affair in all its dramatic ramifications. I have calculated that I spent more than 500 hours in that period, watching Hiss in action, listening to him testify at hearings and court trials.

I watched him as he made an impressive first appearance before the House committee, evoking almost unanimous sympathy as he

indignantly denied the Chambers allegations. I never witnessed a more convincing display of righteous wrath as he swore that he had never laid eyes upon Whittaker Chambers. He blinked at a photograph of Chambers in utter amazement. He did not know such a man. The whole story was a monstrous fabrication.

Less than a month later, Hiss, confronted with Chambers himself, was to confess that he had indeed known the man and known him intimately. He had entertained him a number of times as an overnight guest in his home and had given him an automobile.

But where another man would have been covered with confusion, near a breakdown, Hiss was unembarrassed, the picture of injured innocence, profuse in explanations of why he had failed to recall a man whose appearance was exactly that of the man in the photograph shown him. His retreat was a masterpiece of strategy. He had known Chambers under another name, that of George Crosley, and it had never occurred to him to think that the committee might be talking about Crosley. He had known Crosley as a "dead-beat" newspaperman, he said, and of course he had not known him as a Communist.

It was at this point that I began to realize that Alger Hiss was a dangerous man. Despite this devastating exposure of his own prevarications, his protests were plausible enough to keep many persons convinced that the Chambers charges were false.

That is why I think these details are highly important. You might remember that Hiss is a convicted perjurer as he talks to you tomorrow night but your memory should also be refreshed about the many lies he told before he was finally brought before the bar of justice. The denial that he knew Chambers was the first big lie in the frantic campaign of Hiss to avoid exposure. It set the pattern for what was to follow.

When Hiss tells you tomorrow night, as he will tell you on the basis of his published writings, that the Russians, not the Western Powers, made concessions at the Yalta Conference; that we gained a great diplomatic triumph instead of suffering a disastrous defeat, let his first denial that he ever laid eyes upon Whittaker Chambers be remembered.

I think most of us have forgotten the twists and turns, the evasions, and distortions and falsities uttered by Hiss in his first days under public examination. It should be remembered that the original charge of Chambers against his former friend was not espionage but Communist affiliations only—and affiliations dating back more than 10 years. Chambers has said that he did not make the more serious charge because he hoped that Hiss, given time to reflect, would admit the allegation of past Communist connections and thereby avoid more serious consequences.

If this highly placed diplomat had confessed at that time that he, like too many others in the Government in the thirties, had indeed toyed with Communist doctrines for a time, he would have been quickly absolved of blame in the Washington climate of that era. He would have continued to receive the overwhelming support of officialdom, perhaps could have remained in his post as president of the Carnegie Endowment. The persistent loyalty of his friends was well expressed by Secretary of State Acheson, who told a congressional committee on the very day that Hiss was sentenced to prison that he would never turn his back on Alger Hiss. How quickly his legion of supporters would have rushed to his defense if he had admitted a temporary enthrallment with the Communist philosophy.

Chambers had no evidence to offer after the year 1938, when he himself broke with the party. He could not know whether Hiss was still in bondage to the Soviet cause 10 years later or had long since, like Chambers himself, severed all connections. It was only after weeks of watching Hiss squirm and listening to his frenzied invective that Chambers realized, as he has written, that Hiss had never parted company with his Soviet masters.

It was not in Hiss, however, to admit that he had ever strayed so slightly from the path. This brings me to another trait of this complex character which is displayed only when he is dealing with those whom he considers his inferiors. I am sure that you will not see it tomorrow night. In his contacts with Members of Congress and with Government attorneys at his court trials there was always a distinct arrogance in the Hiss attitude.

This arrogance was not lessened when the President of the United States declared that the charges against Hiss and others were a "red herring" designed to distract attention from the misdeeds of the "do-nothing" 80th Congress.

Hiss poked fun at the chairman of the House committee, Representative MUNDT, of South Dakota, now Senator. He remarked slyly that the photograph of Chambers looked more like MUNDT than anyone else he knew. During his perjury trial, he snickered openly when the big red-faced Government prosecutor, Tom Murphy, made a mistake in grammar.

It was apparently this conviction that little men could not drag him down from his lofty position that led Hiss into a series of little lies at the congressional hearings, even after he had been forced to admit that he had indeed known Whittaker Chambers, the man he had originally sworn he had never laid eyes upon.

These lies were exposed, one by one, under the relentless questioning of another Congressman, RICHARD NIXON of California, now Vice President of the United States, and the committee's chief investigator, Robert E. Stripling.

Hiss was shown by official records to have lied from start to finish about the automobile which he said he gave to Chambers. A petty detail but it illustrates a propensity against truth. An analysis of the hearings shows Hiss, the skilled lawyer, actually denying that he had said in previous sessions what the record showed him to have said. I suggest again that there is a pattern in these largely forgotten hearings worthy of study today when Hiss seeks to explain the Yalta conference to the American people.

He was also a master at diversionary tactics. He hauled in the names of a very galaxy of prominent Americans who, he said, would testify to his good character. He called the roll of his friends—three former Secretaries of State; 3 Under Secretaries; the widow of President Roosevelt; ambassadors, Supreme Court Justices, eminent lawyers, admirals, and generals.

Nor was he exaggerating his claims. Many of these individuals, including two of the Supreme Court Justices and a governor of Illinois now seeking the presidency for the second time, offered testimony to his reputation for truth and veracity at his first trial. That imposing parade presumably helped the first jury to split on a verdict.

Hiss proved himself also to be a bold gambler. In a calculated bluff, which well might have proved successful, he challenged Chambers to repeat, outside the immunity of the committee room, the charges he had made. If this was done, there would be a suit for libel and slander, he said, which would forever clear his record.

Unfortunately for him, Chambers called the bluff and promptly repeated his charges on a radio program. There followed a period of 4 weeks during which Hiss took no action. Editorial murmurs began to arise, even among the pro-Hiss newspapers. Where, they asked, was the libel suit? Finally, a $75,000 action was filed in Baltimore.

Up to this point, Chambers had testified only that he knew Hiss as a Communist. He had never mentioned espionage. Now, faced with possible loss of his property and savings, Chambers dug out of a dusty hiding place 65 typewritten pages of secret State Department documents and 3 rolls of microfilm, laid away 10 years earlier against just such a contingency.

The typewritten copies, according to evidence later at the trial, were proved to have come from a typewriter in the Hiss home. Chambers also produced four memoranda in Hiss' handwriting, conceded as such by the defense when they were placed before a jury.

The typewritten pages were produced by Chambers at a pretrial hearing of the libel suit which promptly began to wither away. He hid the microfilm temporarily in a pumpkin on his farm, producing it later for the House committee amid a national uproar.

Now, for the first time, Chambers revealed that Alger Hiss was not only a Communist but a spy. This was his story:

He had come to Washington in 1934, at the commands of the Russian secret police, to set up a new espionage group. He found Alger Hiss, he said, already a member of the Communist cell in the Agriculture Adjustment Administration who was about to be loaned to a Senate munitions investigating committee. The two men became close and intimate friends.

Chambers says Hiss agreed without question to procure Government documents which could be photographed by Chambers with a Leica camera and then returned to the files. Hiss used his position with the Senate committee to obtain secret State Department papers, presumably for use by the committee. The photographing was done in the Hiss home.

The spying apparatus swung into 24-hour operation in 1936 when Hiss transferred to the State Department. Hiss went to New York City and was interviewed by Col. Boris Bykov, head of Soviet intelligence in the United States, and arrangements were made for Hiss to steal documents and get them into the hands of the Russians.

As outlined by Chambers, here is how Hiss operated: About once a week he would bring home a briefcase containing State Department documents. Chambers would visit the Hiss home in the early evening, take the documents, drive 40 miles to Baltimore, where the papers would be photographed in a workshop set up for that purpose, and then drive back to Washington, returning the documents to Hiss late at night or early in the morning. Hiss would return them to the files when he went back to his office that morning. It was a simple, safe, and efficient system.

The microfilmed copies of the documents were delivered by Chambers to Bykov in New York.

Later, Bykov insisted upon a greater flow of material. Hiss was instructed to bring home a briefcase of papers each night, make typewritten copies of the material, and save them for the pickup by Chambers. When Chambers arrived, he would be given these typewritten copies, as well as the original documents brought home that night.

Sometimes also, important documents would pass through Hiss' hands at his office but he would be able to keep them only for a short time. He took to making penciled copies of such papers or notes on their main points. These he also turned over to Chambers.

Chambers was supposed to destroy the typewritten copies after they had been photographed. But when he broke with the party in 1938, he kept a number of these typed documents, some of the penciled memos by Hiss, and several rolls of film of original documents. It was this evidence which he dug out of hiding to protect himself against the Hiss libel suit.

Hiss was only one of a half-dozen Government officials who were feeding Government secrets to the Russians. Why did he and these other highly educated Americans engage in espionage? Did they never suffer qualms of conscience? Chambers says the Communist mind is such that they regard any government that is not Communist, including their own, merely as the political machine of a class whose power they have organized expressly to overthrow by all means, including violence. The problem of conscience had been settled long before when they accepted the program and discipline of the Communist Party.

In the face of thes revelations, the powerful corps of believers in Hiss could no longer help him stave off the inevitable outcome. Some 15 months and two trials later, in January, 1950, he heard a jury pronounce him guilty.

There is no need to review here the exciting developments at those two trials. They constitute an absorbing chapter in the history of espionage in the United States.

But the behavior of the defendant in the courtroom is again worthy of discussion as we now examine his qualifications to speak out on matters of public policy, affecting the welfare of the United States.

Hiss was consistently contemptuous of the evidence against him. He had the best lawyers in the land and a defense fund reported at $40,000 contributed by secret donors. He had, at the first trial, a jurist who was openly hostile to the federal prosecutor and his witnesses. When the jury deadlocked, he was calmly confident that his innocence would soon be established.

As the evidence piled up against him at the second trial, presided over by a veteran jurist of utter impartiality, Hiss remained smiling and assured. Confronted in cross-examination by discrepancies in his own testimony, he was the urbane man of charm, flashing his smile at the jury as explained away annoying contradictions.

There was much testimony at the trial about the "psychopathic personality" of Chambers, a man the Hiss experts said, with an irresistible tendency to make false accusations. The typewritten documents, the typwriter itself, the handwritten notes, the microfilmed evidence—all could be ignored. Chambers somehow had forged them.

The Government called no psychiatrists. But surely, one of these experts after questioning and observing Hiss, would have come up with a verdict that he was a man of passionate and almost pathological convictions of his own rectitude regardless of overwhelming evidence of guilt.

After he had been sentenced, he stood up and announced in loud, clear tones, tinged with scorn: "I am confident that in the future the full facts of how Whittaker Chambers was able to carry out forgery by typewriter will be disclosed." He was still making that claim when discharged from prison 17 months ago.

YALTA

I do not know what Hiss will have to say about Geneva but there is no mystery about his view on Yalta. He has written a lengthy article, published in pocketbook form last October, entitled "Yalta—Modern American Myth."

The theme of this work is that the American people have been deluded for 10 years about the Yalta Conference. Instead of doleful conclusions that the decisions of Yalta paved the way to the Soviet conquest of China and Eastern Europe, there should be jubilation, Hiss says. It was a famous victory.

Just as Hiss lightly dismissed the weighty evidence at his trial as psychopathic in origin and forged in content, he now pictures this Nation as the victim of a grand hallucination about the deal at Yalta.

When Mr. Roosevelt made vast concessions to Stalin to secure Russia's entry into the war against Japan, at the price of a betrayal of our ally, in China, it was in reality, Hiss tells us, a shining diplomatic victory.

Incredible? I assure you that all this will be made to seem very plausible tomorrow night.

What did we give and what did we receive at Yalta? In the Far East, Russia was given the south half of Sakhalin Island, the Kuriles, restoration of the Soviet lease on Port Arthur, a joint share in the Chinese Eastern and South Manchurian railroads, and the internationalized port of Dairen.

Germany was to be dismembered and jointly occupied by the victorious powers, a decision from which we are suffering deeply to this day. Poland was carved up and the Soviet-sponsored Lublin government, already installed in the ruins of Warsaw, was endorsed. Plans for the founding of the United Nations were laid and the United States agreed that the Soviet Union should have 3 votes to its 1.

In return for all this, Russia agreed to enter the war against Japan at some vague future date, fixed as within 2 or 3 months after Germany surrendered. As we know, Russia belatedly rushed into the Pacific war to fight the last 6 days of a conflict that lasted 1,347 days. That was the service it rendered for one of the great bribes of history.

The main argument in behalf of this bribe, coupled as it was with the sellout of China, was that military leaders at the conference believed that the war against Japan would last another 18 months and that Soviet participation was absolutely essential.

If this was true, was the bribe necessary? The record now discloses that Stalin, 2 years earlier at the Moscow Conference of 1943, had promised Secretary of State Hull that he would join the war against Japan when Germany was defeated. Even Stalin, keenly aware as he was of American gullibility, did not think at that time of exacting a price for this pledge of support to a nation which had helped save Russia from the German hordes with a tremendous outpouring of arms and materials. He repeated this pledge, again without naming a price, in October 1944, 4 months before Yalta.

No one reminded him of those pledges at Yalta and it can be imagined with what secret amusement Stalin placed his services on the auction block and listened to the bidders. The Kremlin must have rocked with laughter when Stalin gave his reasons for demanding concessions. Gravely, the great dictator told Roosevelt and Churchill that it would be hard to persuade the Russian people to war against Japan.

Thus, Stalin was given the gains, which enabled the spread of Soviet dictatorship to one-third of the human race, in return for a pledge already freely given—and never necessary.

There is much talk now—and you may hear it from Hiss tomorrow night—about all this being hindsight. Critics of the Yalta agreements, we hear, are Monday morning quarterbacks. But there were some Saturday afternoon quarterbacks on the scene back in 1945 who were not even allowed to coach from the sidelines.

Almost forgotten now is a 1945 intelligence report put into the record of the MacArthur hearings in 1951 which warned that the entry of Russia into the Pacific war was unnecessary and would have disastrous effects.

A group of intelligence officers joined in drafting this report which was ignored and buried in the files.

"The entry of Soviet Russia into the Asiatic war would destroy America's position in Asia as effectively as our position is now destroyed in Europe east of the Elbe and beyond the Adriatic," they wrote.

"If Russia enters the Asiatic war, China will certainly lose her independence to become the Poland of Asia; Korea the Asiatic Rumania; Manchukuo the Soviet Bulgaria."

Moreover, Russian entry into the war, they warned, would betray China and be an act of treachery that would make the Atlantic Charter and our hopes for world peace a tragic farce.

The Yalta agreements, of course, were a complete abandonment of the aims of the Atlantic Charter, signed by Roosevelt and Churchill, and endorsed by Soviet Russia in 1942. That charter declared that the Allies sought no territorial gains and would assent to no territorial changes unless the peoples concerned desired them. It pledged restoration of sovereign rights and self-government to subjugated countries and acknowledged the right of all peoples to choose the form of government under which they would live.

Hiss now makes the astounding contention that Nationalist China's interests were furthered at Yalta because a basis was laid there for a Chinese-Soviet treaty that Chiang Kai-shek greatly desired for the enhanced domestic and international prestige that it gave him.

It is hard to understand why, if Chiang was to be transfixed with delight by the Yalta agreements, that it was thought best to keep those agreements secret from him, with Mr. Roosevelt engaging to persuade him eventually of their desirability.

It was, indeed, thought best to keep the world unaware of the Far East decisions. On March 1, 1945, Mr. Roosevelt, addressing a joint session of Congress, after his return from Yalta, said:

"Quite naturally, this conference concerned itself only with the European war and with the political problems of Europe and not with the Pacific war."

Senator KNOWLAND, in what I regard as a magnificent understandment, recently labeled this statement as "nearly a false official report" to Congress.

Why the dark secrecy which enveloped the Far East agreements at Yalta for so long? If it was a superb triumph of diplomacy, as Hiss contends, why was the full text of the agreement withheld for 2 years, long after the shooting had stopped, and why were the details of the negotiations themselves withheld for 10 years?

As I read the statements of Hiss about Yalta, I thought back to the many scenes in courtrooms and committee rooms in which I heard him defend himself against charges of treason. There is a reminiscent flavor about his present writings. Just as he fumed about psychopathic accusers then, charging them with grotesque and lurid tales, he now writes than the American public has been "lured to confusion and panic by fanciful dark tales of duplicity and greed" at Yalta.

The pattern is consistent. The evidence at his own trial was forged and the product of diseased minds. The evidence at Yalta has been twisted and distorted into a myth and delusion. In Hiss's mind, the Crimean folly was a magnificent effort at a sound postwar peace. American statesmen bamboozled Stalin into entering a war against his own convictions. Black is white. War is peace. Freedom is slavery. Ignorance is strength. The slogans of Orwell's totalitarian world of 1984 are coming upon us.

The whole truth about Yalta is yet to be told. Last October, an attempt was made to forcibly retire two State Department historians—men of the highest standing in their field. One of them, Prof. Donald M. Dozer, is still fighting to retain his post. The Civil Service Commission ordered him reinstated but he was again fired and is arguing his second appeal. The other historian was Bryton Barron, a State Department veteran

of 30 years, who eventually accepted retirement on a pension.

In fighting for vindication, Dr. Dozer filed sworn affidavits with the Civil Service Commission in which he revealed that important documents were suppressed when the Yalta papers were finally published by a reluctant State Department in March 1955.

Dr. Dozer charged that he and Barron had been penalized because they fought "a partial and distorted compilation" of the Yalta records. He said that State Department officials who took office under the Roosevelt and Truman administrations eliminated data which might have been embarrassing to those administrations.

The professional competence of Dr. Dozer is unquestioned. He has been known in historical circles for a quarter-century. He taught history at Harvard and three other universities and is the author of numerous articles on historical subjects and foreign policy. He has been in the State Department since 1941.

Among the documents suppressed, Dr. Dozer said, was one showing that Mr. Roosevelt insisted upon taking Alger Hiss with him to the Yalta Conference. The late Secretary of State Stettinius was quoted in this paper as stating that Mr. Roosevelt demanded that Hiss go along.

Omission of this record helped play down the part that Hiss played at Yalta. It has been said that Hiss was just a "technician" who was a very minor figure. The record, incomplete, as it is, does not support that contention. Hiss, himself, has not been humble about his participation. When the charges of communism exploded around him in 1948, he was asked if he had drafted, or participated in drafting parts of the Yalta agreements. His answer:

"I think it is accurate and not an immodest statement to say that I did to some extent; yes."

And at his second trial, he testified that he advised President Roosevelt on all matters pertaining to the proposed United Nations and "handled all of Mr. Stettinius' communications and drafted replies to them." Stettinius, in his memoirs, revealed that Hiss was indeed his right-hand man.

But the gravest and most significant charge concerning suppressed documents of the Yalta Conference concerns the notes taken by Hiss himself. Sworn testimony by a State Department official has revealed that there were several folders of these notes. But when the supposedly complete Yalta record was published last year, the contents of only a single Hiss folder were made public. These disclosed little of his role. They were confined to a single subject—the Roosevelt commitment to give Russia three votes in the United Nations.

A Senate investigation has been promised of these allegations that the Yalta papers were censored—that history has been doctored to protect the reputations of men in high places. My own investigation of these charges, based upon interviews with the two State Department historians and sworn statements, indicates that many thousand words of pertinent data were deleted.

I suggest that Hiss would contribute to the enlightenment of the American people if he, tomorrow night, before discussing the meaning of Yalta and Geneva, would answer the following questions:

1. Is it true that copious notes made by you at Yalta have been held back from the official record of the conference?

2. Do those notes show your interest in the subject of reparations to be assessed by Russia against Germany, a subject outside the scope of your duties as you have yourself outlined them?

3. Were original documents from Russian sources included in your file holders?

And finally, I would like Hiss to explain the testimony given in February 1952 by Nathaniel Weyl, a Washington writer and former Government employee.

Hiss and his supporters have always stressed the fact that only one witness, Whittaker Chambers, testified to personal knowledge of Hiss' activities in the Communist underworld. Chambers, they insisted, was a pathological liar and it was strange that no other witness, who knew Hiss as a Communist, came forward during the congressional hearings or at the two trials.

Weyl testified that, while in Government employ in 1934, he and Alger Hiss were members of the same Communist cell. He had kept back that fact when summoned before the House committee in 1943. He said he protected Hiss at that time because he had no way of knowing whether Hiss had followed his own example in leaving the Communist Party many years earlier.

Four years have passed since Weyl delivered that testimony under oath. Hiss, to my knowledge, has never commented upon it. Is Weyl another psychopath with an irresistible urge to make false accusations against Hiss?

Is Weyl another man upon whom Hiss has never laid eyes? I think the public, which is now urged to weigh the interpretation of foreign policy advanced by Hiss, is entitled to an answer from him on this testimony.

Hiss comes here tomorrow as a guest of a Princeton society. He is entitled to courteous attention. He has an unquestioned and constitutional right to air his opinions wherever and whenever he is invited to expound them.

But he has no right to demand acceptance of those opinions without conisderation of his conviction as a perjurer. Law and public morals recognize this limitation on felons after they have served their prison terms. Hiss, for example, has lost the right to vote. He has been disbarred from legal practice in the Federal and State courts. He may never again, except through presidential pardon, hold Governemnt office.

I believe that the controversy and dispute which have arisen over this affair have done much to alleviate the danger that Hiss' statements will be swallowed unthinkingly and without consideration of his past record and present motives. I hope this meeting and this review of his past career will complete the job of removing that danger.

It may be said that he has paid the price for his crime and should be listened to in a spirit of forgiveness. I am completely sympathetic with the efforts of Hiss to make a living and to rehabilitate himself in society. I could wish, however, that some expression of repentence for the crime of which he has been convicted would accompany those efforts.

But there is a stipulation attached to the earning capacity of a man who has served in prison for a crime. A bank may be considered uncharitable but most reasonable men will agree it is practical when it refuses to hire a convicted safecracker. A convicted rapist would scarcely be entrusted with a post at a young ladies' finishing school.

So I do not think it unfair or heartless to utter a warning of caution when a man convicted of lying to conceal complicity in Soviet espionage chooses a career in which he seeks to instruct the American people in the meaning of our relations with the Soviet Union.

And I hope that a precedent is not established here for university lectures by men with prison records. A number of Communist Party leaders have just been released after serving terms in prison for conspiring to teach and advocate the overthrow of the United States Government.

These are all men eager to speak in public upon any occasion. But I think little profit would be gained by students from an address by Eugene V. Dennis, general secretary of the Communist Party of the United States, on, let us say, "the meaning of the fifth amendment." Or by John Gates, editor of the Daily Worker, on "the meaning of press freedom."

In this country, when a man takes the platform to advise us on matters affecting our national security, we give that amount of respect to his words which he has earned by his deeds. Surely, it is not inhuman to suggest that Alger Hiss be judged by this standard.

The Cure of Delinquency and the Making of Good Citizens

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HIESTAND. Mr. Speaker, the ever-increasing problem of juvenile delinquency challenges some form of solution by responsible citizens. One who has taken the lead in the solution of this major problem is one of our first and finest citizens, an eminent and elder statesman, the Honorable Herbert Hoover, who has served as chairman of the board of directors of the Boys' Clubs of America for the past 20 years, and who has devoted practically all of his life to public service and good government.

For that reason, Mr. Speaker, and in order that responsible citizens may have the benefit of his thinking on the subject, I request unanimous consent to include in the CONGRESSIONAL RECORD an address by this great statesman and former President of the United States, at the cornerstone laying of the new building of the Columbia Park Boys' Club, San Francisco, Calif. His message is most inspiring and is a direct approach to the solution of this cancerous problem, which is mushrooming up and about us all over the Nation. It is a plague to our local and national enforcement officers. We have an effective weapon in combatting juvenile delinquency through the medium of the Boys' Clubs in every area of the United States. Let us give our wholehearted support to the work of these clubs as one of our most effective and immediate means of fighting for the welfare of our youth:

THE CURE OF DELINQUENCY AND THE MAKING OF GOOD CITIZENS

It is an honor to participate here in the laying of the cornerstone for a new building of the Columbia Park Boys' Club. This was one of the earliest boys' clubs established in the United States. It was due to that great San Francisco spirit, Maj. Sidney Peixotto, and it has shed blessing on this city now for 61 years. Among its good deeds was the start in life of Mr. John Costello, who is today the chairman of the board of directors and A. J. Shragge, cochairman of the building committee, both eminent Californians, who were members of the club as boys.

Major Peixotto was one of the founders of the national organization of the Boys Clubs of America. I have been on this team for only 20 years as chairman of the national board. In my time alone I have witnessed the number of clubs double—from 200 to

about 400. I have seen them established in 300 towns and cities. This is no paper organization. To build and equip a club like this costs from $300,000 to $500,000. We have in this 20 years had the satisfaction of the growth of a nationwide investment in these clubs from $20 million to over $120 million.

The clubs have become one of the great character building institutions of our country. They turn out every year thousands of assured loyal and patriotic citizens. And every club is a voluntary institution supported by the generosity of the citizens of their city. There is no governmental hand in them.

Our country is greatly agitated over the growth of teen-age delinquency. There are a multitude of proposed remedies. Most of them gyrate around ideas of how mothers and fathers and teachers can do a better job. Most of these remedies ignore four primary forces insofar as our congested districts are concerned.

First. These boys are endowed with dynamic energy. The world is new and must be fully explored. They have an impelling desire for adventure, discovery, and great undertakings. They have competition and combat in their bones. Their primary instinct is to hunt in a pack in search for adventure and joy.

Second. We have laid pavements and cement over most of their out-of-door space in our congested city districts.

Third. These boys can no longer find outlets for their energies in the woods or on the streams and the animals to be captured.

Fourth. We send these youngsters to school for 6 or 8 hours during the day and we leave them to the paved streets for the evenings and Saturdays and Sundays.

Do you wonder that with these innate qualities and the surroundings that these boys conspire by gangs to engage in destructive joy and the excitement of battle?

This is where the boys clubs come in. Here we provide a place where the gang spirit and competition expend themselves in organized games. If the youngsters need to do combat, they are given the gloves and operate under rules of sportsmanship. Here in these clubs they expand their creative spirits through the mysteries of woodworking, machine tools, books, and musical instruments. Here they find their bent for future life. Here they conduct their own government and their own discipline. Here they receive constant sympathetic friendliness and guidance from a trained staff of devoted men and women. When they are in these rooms, mother has no anxieties and father broods over no homecoming chastisement.

These clubs are the greatest cure for delinquency in our country. I could prove it to you by the statistics from 300 cities. In one Chicago district alone, the number of boys in the hands of the police every year decreased from 80 percent to only 12 percent.

There are facts which cannot be ignored. The boy members of these clubs cannot afford streetcar or bus fares. Their walking distance is about 1 mile. Thus the clubs become a bright spot of decency within a 2-mile radius or a little more. And there are 3 million pavement boys in the United States. The Nation needs, and San Francisco needs, more of these clubs.

Two years ago I had the pleasure of participating in the dedication of the new San Francisco boys' club on Page Street. Today is the day of the Columbia Park Boys Club. Its chairman, Mr. Costello, its board of directors of leading citizens, and its director, Mr. Julian Hargrove have undertaken to erect this modern building and equip it at a cost of about $500,000. Their support has come from generous citizens of San Francisco, the contribution of materials from many manufacturers and contractors. And especially among these contributions has been the free labor from the labor unions. The club needs more support to complete its new building and its operation. That support costs less than police, the courts, and the reformatories for here is a white spot in delinquency, a stimulant and a training and creation of good citizens. This will be a better city because of it.

My admiration goes out to all who have a part in it.

Worthy of Midwest Support

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an editorial from the Marshalltown Times-Republican, published in Marshalltown, Iowa, in support of the Fryingpan-Arkansas water diversion project in Colorado. This editorial indicates the interest in this project in the Midwest. The writer of the editorial, I am sure, expresses the sentiments of a large number of residents of that area, who would like to see this project authorized and constructed. The importance of the project is recognized, not alone to Colorado but to the entire country.

I wish to emphasize, as mentioned in the editorial, that this project will not bring any new land into cultivation, but merely provides supplemental water for some 322,000 acres of land now under cultivation in the Arkansas Valley, Colo. This water will also be used for domestic purposes, and is urgently needed by cities and towns in this area.

The editorial follows:

WORTHY OF MIDWEST SUPPORT

Here in the Midwest, where the farm surplus problem is most acutely felt, any Federal reclamation project that may put more land in cultivation is likely to meet bitter opposition—and with good reason. It doesn't make sense to pay farmers for not producing crops, on the one hand, and, at the same time, bring more wasteland under cultivation.

That is why far western irrigation projects with Federal aid are likely to meet midwestern opposition on general principles, but occasionally such a project may have indirect benefits to the Midwest itself.

One project that appears to fit this category is the so-called Fryingpan-Arkansas water diversion development for southeastern Colorado that is soon to be given committee hearings in Congress.

Briefly, the Fryingpan-Arkansas project is a self-contained reclamation project for the collection and transmountain diversion of 69,200-acre feet of surplus water from the Fryingpan and other tributaries of the Roaring Fork River in western Colorado to the Arkansas River in eastern Colorado.

This water that is now quite largely wasted will be utilized as supplemental water for irrigation, for municipal use, electric power, flood control, sedimentation control, protection of fish and game resources, and preservation of tourist attractions.

The project represents an investment of $156 million, but $136 million is expected to be paid back eventually through the sale of irrigation water to farmers, sale of water to municipalities and industries, sale of power, etc. Only about 18 million for flood control and $1,800,000 for fish and wildlife conservation will be the final Federal cost.

Where this project may actually aid the Midwest farmer, its supporters claim, is in the development of that area's livestock feeding business to the extent that more Midwest corn may have to be imported for feed.

Wheat is grown on nonirrigated land and the only corn now grown in that area is used for ensilage and feed, so it is not a project that will add to the presnt farm surpluses, its supporters assert.

Furthermore, the Fryingpan project will not bring any new acreage into cultivation. The project will supplement the water supply of presently irrigated land to assure the farmer of sufficient water to irrigate his crops during the last weeks of the growing season.

With that explanation we see no reason why the Fryingpan project, filed in the House under H. R. 412, and in the Senate as Senate file 300 should not receive Midwestern support.

Polish-American Congress Promotes Freedom

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News on Monday, April 30, 1956, which calls attention to the outstanding contributions made over the past 12 years by the Polish-American Congress:

POLISH-AMERICAN CONGRESS PROMOTES FREEDOM'S CAUSE

The visit of Attorney Charles Rozmarek, national president of the Polish-American Congress, to Wilkes-Barre tonight to install officers of the northeastern Pennsylvania division at a dinner meeting in Hotel Sterling is a reminder of the tremendous contribution this organization has made to the cause of freedom since it was founded in 1944.

The Polish-American Congress was the first American organization to warn America and the world of the Communist threat. Attorney Rozmarek and other leaders saw the danger of appeasement of the Soviet Union on the grounds of wartime expediency. The sacrifice of Poland at Yalta brought a vigorous protest from the Polish-American Congress which pointed out the need for a free and independent Poland as a cornerstone of European stability. If the advice of Attorney Rozmarek and his associates had been taken in its entirety a dozen years ago, the world might have been spared most of the headaches and heartaches that plagued it subsequently.

The purposes and objectives of the Polish-American Congress, as stated at the time it was founded, were, briefly, to support the United States Government to win a just and lasting peace, to inform the American public of Poland's historic role, to organize the 6 million Americans of Polish ancestry for unity in support of American democratic principles, to combat the growth of communism at home and abroad and to work for the restoration of a free and democratic Poland.

While Poland is still enslaved, the Polish-American Congress has accomplished a great deal in alerting the world to the menace it faces. The congress has exposed un-Ameri-

can elements, countered alien propaganda, enlisted labor, religious, and other groups in the fight for democracy and a durable peace, helped in the solution of the displaced person problem and lent its facilities to the Government to carry on the fight against aggression. These, of course, are just some of the highlights; the details would fill a page of this newspaper if they were enumerated.

Nowhere has the Polish-American Congress been more loyally supported than in our own community. This not only is a personal tribute to Attorney Rozmarek, a former local resident, now living in Chicago, but an expression of the community's concern over conditions in Europe, especially in Poland, where so many Luzerne County families have their roots.

It is indeed inspiring to note the perseverance of these people who have dedicated themselves to liberty and to peace with justice, not only for Poland, but for all nations. They realize that no country in the world, the United States included, is safe, so long as one is under the oppressor's heel.

The Claims of Former Polish Prisoners of War Now Residing in the United States

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. RODINO. Mr. Speaker, May 3 is the anniversary of Poland's Constitution Day, and this time of year therefore seems appropriate to call attention to the plight of Polish former prisoners of war now living in the United States.

These soldiers were members of the Polish armed forces and fought with the Allies against the enemy in various theaters of operation. During the course of the war, some of these soldiers were captured by the Nazis. Now, according to the provisions of the Geneva Convention of 1929, to which Nazi Germany was a party, prisoners of war are entitled to certain benefits as well as good treatment. Article 34 of the convention provides that upon their release prisoners of war shall receive both their unpaid military pay and wages for labor while they were prisoners. The convention also provides that prisoners who are forced to live in unsanitary conditions and who are not provided with food equal in quality and quantity to that provided by the country to its own soldiers, shall receive compensation. The Polish exprisoners claim that Naxi Germany violated all these provisions.

The normal procedure for adjusting claims for violations of the Geneva Convention is for the country of which the prisoners of war are citizens to handle it. For example, in the United States, claims by Americans who were prisoners were adjusted through the War Claims Act of 1948. The fund established by this act was made up of confiscated assets of Germany and Japan, and money from this fund was used to pay American citizens who filed legitimate claims.

Unfortunately, these Polish former prisoners, now residing in the United States, found themselves in an unusual position after the war. Since Poland had been occupied by the Communists, they refused to return to their homeland, and the Communists therefore ignored their claims against Germany.

To add to their predicament, the German authorities insisted that any claims against the German state or its legal successor could not be made by an individual alien citizen, but only by his government. They also stated that these Poles should have collected their claims through the reparation fund established for Poland at the Potsdam Conference and controlled by Poland's Communist government. The Polish exprisoners have therefore been unable to collect their just claims.

Many of these Polish ex-prisoners now living in the United States have just claims and have been denied them largely as a result of their refusal to return to Communist Poland. We have met the similar claims of our own former prisoners of war out of the captured German assets that were put into the war claims fund, and it seems to me there is a case for adding to the list of those eligible to compensation from that fund these Poles who are now living in the United States. In the spirit of justice and equity, then, I would like to urge the Department of State, to whom these Polish former prisoners of war have presented their case, to give every consideration to their pleas and to arrange some way of satisfying the legitimate claims of Polish ex-prisoners now living in the United States from the war claims fund established to meet the similar claims of Amercan citizens.

Dr. Flemming's Comments on the Nickel Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a letter I received from Dr. Arthur S. Flemming, Director of the Office of Defense Mobilization. The letter from Dr. Flemming is a reply to my letter of January 11, 1956, in which I propounded 11 questions concerning the nickel situation.

The letter follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., April 30, 1956.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: This has further reference to your letter of January 11 in which you raise a number of questions with regard to the nickel situation. In accordance with your letter of April 26, 1956, the memorandum furnished you on April 24 has been modified to an unclassified form.

The questions in the body of your letter and our replies thereto are listed below in the order of your presentation.

A. What are the quantities and sources of high-price nickel being sold in the United States market?

It is the opinion of the Business and Defense Services Administration that the 4 million pounds of high-priced nickel, which it is estimated may have been sold in the domestic market in 1955, came from the following sources:

	Pounds
France	1,200,000
Japan	70,000
Germany	152,000–200,000
Recovery of secondary nickel	balance

B. Can ODM, BDSA, or the suppliers cope with a situation where according to reports scrap dealers supply mills with certain materials and receive nickel in return?

The BDSA has received reports that such transactions occur but it cannot verify them since no specific information as to possible participants has been furnished. In any case the Government is not in a position to take action about them other than in those cases involving nickel obtained through rated orders for defense production, since controls over the distribution and use of nickel were terminated on November 1, 1953.

With regard to possible action by suppliers, primary nickel sold in the United States is for the most part sold under terms and conditions which forbid resale or remelting for resale. This makes it possible for producers to cut off shipments where transactions of this kind are uncovered.

C. Is 75 percent of the released stockpile nickel used for defense purposes; if so, should not all stockpile diversions be earmarked for commercial users in order to break the high price market?

Your information that 75 percent of the nickel diverted from the stockpile is used for defense purposes is not exactly descriptive, although in effect it approximates the situation.

Most of the nickel diverted to industry served to replace nickel withdrawn from the market for defense production through rated orders. If 75 percent of the diverted nickel did in fact go for defense production, the effect thereof was to free a comparable amount for industry which in the absence of the diversion would have gone to defense.

In such circumstances even if assurance were obtained that all diverted nickel were to be used by nondefense consumers it would not affect the current deficit, since any portion of the diverted nickel redirected from defense orders for civilian consumption would be replaced by an equivalent drawdown on the balance of the civilian supply through the application of priority orders for defense.

Below are listed the replies to the numbered questions on page 2 of your letter:

1. How have the stockpile objectives been set? By whom? When last reviewed? And what consideration was given to the fact that the source being principally from Canada is virtually domestic and free from being cut off?

(a) Stockpile objectives are set as follows: First, estimates are made of supplies and requirements for military and essential civilian purposes during a mobilization period. The supply figures are then discounted for strategic and other factors based on advice from the Joint Chiefs of Staff and other agencies. The difference between the requirements and the factored supply results in the estimated wartime deficit, provision for which is made by a number of means, the principal one being that of stockpiling. From the above factors a minimum stockpile objective is established.

In arriving at the long-term stockpile objective, all foreign sources of supply are

completely discounted except for those nearby sources which are believed to be secure and readily accessible.

(b) Prior to June 12, 1953, when Reorganization Plan No. 3 became effective, stockpile objectives had been set by the Munitions Board of the Department of Defense. Since that date, such determinations have been made by the Director of the Office of Defense Mobilization. In carrying out stockpiling responsibilities, the ODM depends on its various delegate agencies to provide basic data through several interdepartmental commodity committees. Proposed actions resulting from the data received from such committees are submitted to the Interdepartmental Materials Advisory Committee (a committee of assistant secretary level) on which are represented the Departments of Agriculture, Commerce, Defense, the Interior, State and Labor and the General Services Administration. In the light of the recommendations of the foregoing, the Director of the Office of Defense Mobilization establishes or modifies stockpile objectives.

(c) The nickel stockpile objective was last reviewed on January 26, 1955, and revised on February 7, 1955.

(d) Full consideration was given to the availability of nickel from Canada in time of war.

2. Please verify your statement regarding the date of the establishment of the allocation base and advise if it should be brought up-to-date in view of industry changes, new businesses, etc.

(a) We note that information you have received does not confirm the statement in our December 19, 1955, letter with regard to the methods used by the producers for developing nickel distribution patterns for nondefense purposes. We have been assured by the BDSA, which has a detailed knowledge of the matter, that our previous general statement is descriptive of the method used by the International Nickel Co. to determine quotas for individual nondefense consumers and that our reference to the basic historical periods of pre-Korea and late 1953 is correct. We have also been assured that the method is up-to-date and takes into account the restrictions on end uses during the Korean emergency, and makes provision for new businesses. It is the opinion of BDSA that the distribution system so devised has proven to be generally fair and equitable.

3. What are the historical figures showing the allocations between defense and nondefense purposes since 1949?

(a) The historical figures on defense and nondefense consumption of nickel, 1949–56, cannot publicly be revealed since they involve classified information.

4. Does authority exist in ODM, BDSA, or any other agency to take such action as may be needed to insure fair and equitable distribution of nickel to commercial users?

The Office of Defense Mobilization has authority to direct an agency such as the Department of Commerce to allocate materials where necessary to promote national defense. Also, if the requirements of the national defense for nickel create a significant dislocation of the normal distribution of such material in the civilian market in such a manner as to create appreciable hardship, the Office of Defense Mobilization has authority to direct that steps be taken to control the general distribution of the material.

In November 1953 we decided to stop controlling the distribution of nickel in the civilian market. Our reasons for such action were reflected in a memorandum that we filed with the Joint Committee on Defense Production. This memorandum is quoted herewith in full:

"OCTOBER 5, 1953.

"MEMORANDUM FOR THE FILES

"SUBJECT: NICKEL DECONTROL

"The Department of Commerce, on July 29, 1953, proposed the removal of controls on nickel distribution and use in the civilian economy. The proposal specifically reserves for continued operation the controls necessary to meet military and stockpile requirements. It is the purpose of this memorandum to review considerations which have led me to approve the proposal of the Department of Commerce, including the facts as known and the applicable law, the advice of informed groups and the understandings reached as to future operations both within and without the Government.

"Existing controls on the distribution and use of nickel are extensive. Under NPA Order M–80 and related schedules, the use of nickel is controlled quantitatively and qualitatively; the industrial user is limited in the amount of the material which he may process and in the use to which he may put that limited amount. Cigarette lighters, hair curlers, letterboxes, and doorknobs, for example, may not be nickel plated. Except for users of very small quantities, application must be made to the Government for permission to deliver or accept delivery of primary nickel.

"The basic justification for such detailed controls as those presently existing needs to be stated. In time of full mobilization the national economy is substantially reoriented to production for war, and under such circumstances the Government must take responsibility for providing a substitute for the normal operation of what are called the economic laws. At the present time there is no such disruption of markets and supplies as occurs in time of war. The reasons for controlling nickel during the last several months have been special and specific. They originated with the necessity for assuring supplies of nickel to the current military program, Atomic Energy Commission program, and stockpiling program. Provision of these national defense requirements has left a balance of supply substantially less than the balance of demand. The Federal Government was obliged to provide for the national defense and in doing so it created a shortage of nickel for which it had to accept responsibility. To the extent that Government action may relieve or assuage the hardships and dislocation resulting from such a shortage, the Government has a duty to act.

"This concept of governmental responsibility in time of limited emergency is well expressed in the Defense Production Act as most recently amended. In section 101 the President is authorized to require preference in the performance of contracts and to allocate materials where necessary to promote the national defense. On this authority there is imposed the restriction that 'the powers granted in this section shall not be used to control the general distribution of any material in the civilian market unless the President finds (1) that such material is a scarce and critical material essential to the national defense, and (2) that the requirements of the national defense for such material cannot otherwise be met without creating a significant dislocation of the normal distribution of such material in the civilian market to such a degree as to create appreciable hardship.'

"A justification for the decontrol of a shortage material must, of course, speak in these same terms. It is not anticipated that the supply of nickel will be adequate to meet total demands for many months. It is not argued that the shortage will fail to cause dislocation and hardship. There is dislocation and hardship under the present allocation and use controls, and the essential premise of decontrol is that the continuance of the controls will not serve to relieve or assuage that dislocation and hardship. In other words, at times like this it is not enough, to justify continuing controls, that national defense requirements create a shortage; it must also be true that the difficulties which flow from the shortage will somehow be eased by the continuance of the controls.

"There is the obvious danger in undertaking decontrol that dislocation and hardship will be increased. It is to that possibility that our attention is first drawn by the decontrol proposal. The less apparent but more serious danger is that the Government's first responsibility, the national defense, will not be adequately provided for. Both of these possibilities must be covered in the decision here being made.

"Compelling among the considerations favoring decontrol is the fact that competition in a free market is a major factor in the maintenance of a strong and dynamic economy. We have ample evidence that a controlled economy, with the best of intentions and the highest of skills, is not likely to prosper. In an emergency controls can save an economy, but if long continued they are almost certain to stifle and warp it. There is, therefore, a burden of proof upon the proponent of continuing controls to establish clearly and persuasively that distribution of the shortage material in a free market, under present circumstances, will be less effective or less equitable or less orderly than Government distribution to a degree that will aggravate existing dislocations and hardships.

"The steel industry in the United States consumes nearly one-half of our total nickel supply. It is therefore particularly significant that the task group of the Steel Products Industry Advisory Committee in its second supplement to Report and Recommendations on Decontrol recommended that all controls on the distribution and use of nickel in the civilian economy be discontinued on September 1, 1953, and that national defense programs be supported and protected by preference ratings and production directives.

"There is also evidence that industry comprising the second largest class of nickel users, the makers of nonferrous nickel alloys, favor a similar decontrol.

"The nickel-plating industry is on record, through its advisory committees, as favoring the discontinuance of end use restrictions, and at least some elements of the industry have recommended the discontinuance of all allocation other than for national-defense contracts.

"The Small Business Administration has advised the Department of Commerce by letter that it believes the present restrictions on end use are subjecting many small concerns to serious handicaps. The administration states it to be 'unfair to our own business community to continue controls while their foreign competitors are free to sell in our markets the articles our companies are forbidden to manufacture.'

"The International Nickel Co., which supplies 80 percent of the nickel consumed in the United States, has advised the Secretary of Commerce that 'after taking care preferentially of the military and AEC requirements the balance of our nickel as reported quarterly will be distributed to the civilian economy in a fair and equitable manner.' Further in response to the Secretarys' concern over possible price increases resulting from unrestricted civilian demand, the company advised that 'as far as our own prices are concerned, the record speaks for itself.'

That record, over the last 25 years, shows a gradual increase from 35 cents per pound in 1929 to 60 cents per pound in 1953, a rise of 71 percent. During the same period the Bureau of Labor Statistics index of nonferrous metals generally rose 70 percent.

"Generally, it can be said that the elements of American industry most directly concerned, or their representatives, have expressed the feeling that under present circumstances the continuance of Government distribution controls will not result in a distribution more effective, more equitable, or more orderly than can be accomplished in the open market.

"It is not illogical to expect that supplies of nickel made available to the United States will increase upon the removal of end-use restrictions. This country has long used over two-thirds of the free world's supply and as the producing industry's best customer its demands can be expected to find willing attention. While it is not possible to insure a continuing or increasing supply at reasonable prices, the probability is not less than that upon which businessmen daily rely in making forward commitments.

"With respect to military and Atomic Energy Commission requirements, the International Nickel Co., as above noted, has indicated that it will give such requirements preferential consideration. This commitment, plus the authority conferred on the executive branch under the Defense Production Act, assures our ability to take care of the military and AEC needs.

"In a classified supplement to this memorandum there is a table showing minimum stockpile acquisitions which must be made in the future. The Government has agreed on a program of regular purchases that will assure our meeting the schedules. This agreement will be adhered to even though it may be necessary to make slight reductions in the present availability to the civilian economy, although reductions in military requirements and increases in supply will probably make this unnecessary.

"Notice of this decision may be released publicly and appropriate amendments to Order M-80 and Defense Production Order I, shall be made effective on the earliest date practicable.

ARTHUR S. FLEMMING."

We do not believe that the controls that were taken off in November 1953 should be reimposed at this time. We believe that if they were reimposed, it would be necessary to control the end use of the nickel. This could have an unfavorable effect on the civilian economy generally. Also, it could lead to a situation where nickel would be in a competitively disadvantageous position as compared with another material. This could very well lead to a situation where it would be necessary to control other materials in order to preserve an equitable relationship between materials.

While all of this was going on, we would still face the basic fact that the demand for nickel is considerably in excess of the supply. Therefore we feel that the only way in which to provide a fundamental solution to the problem is to do everything that can be done to accelerate the bringing into production of additional sources of supply. Within a few weeks we intend to announce a program designed to provide incentives for achieving expansion additional to that already underway.

5. What is the legal relationship between ODM and BDSA so far as the allocation of nickel to commercial users is concerned?

The legal relationship between ODM and BDSA, so far as the allocation of nickel is concerned, stems from the authority of the Defense Production Act of 1950, as amended, and the delegations of authority which have been made thereunder. However, the Government removed controls on nickel on November 1, 1953, except to the extent necessary to assure the availability of adequate supplies for defense and AEC orders. As of that date it relinquished its responsibility for the allocation of nickel to commercial users. Thus, ODM's legal responsibility, in cooperation with BDSA, is to be prepared to take whatever action may be necessary if it is found that the material defense requirements for nickel are such as warrant the exercise of controls authority.

6. How are the stockpile releases geared into INCO's allocations to insure fair and equitable distribution? Also other producers—Falconbridge, Sherritt Gordon, Nicaro, Hanna, etc.?

ODM does not exercise control over nickel diverted from deliveries to the stockpile. Any effort to do so would represent a partial imposition of controls. We believe that the distribution of nickel in the civilian economy should either be completely under Government control or completely out from under control. We do not believe the Government should attempt to occupy a middle ground. When the diversions are authorized and appropriate contractual arrangements are made, the Government, in effect, releases the producer from his obligation to deliver nickel to the stockpile or DPA inventory and permits the producer to sell the nickel directly to industrial customers. However, the producers are requested to use their best efforts to sell the diverted nickel in an equitable manner. It should be noted, also, that when nickel has been diverted it has been with an agreement that it would be made available to United States industry. Furthermore, arrangements are made to avoid windfall profits for producers when the material is sold to industry.

7. How frequently does BDSA audit the producers' books? When was the last audit? What recommendations were made? Were they accepted or rejected?

The BDSA reports that producers' books are audited every month and that the last audit was for the month of April 1956. Major shippers have voluntarily allowed BDSA personnel to conduct these audits to be sure that consumers do not place duplicate orders with different suppliers. BDSA did not make any recommendations.

8. Is ODM satisfied with the system of audits? And does it consider that there is fair and equitable allocation to the nondefense users?

The Department of Commerce through the Business and Defense Services Administration has maintained close cooperative liaison with the suppliers of primary nickel to assist them in making an equitable distribution of nickel to all of the normal consumers. The Department of Commerce, in a statement furnished the Office of Defense Mobilization, states that, in its judgment, the periodic surveys and audits of the distribution system by the BDSA, with the cooperation and voluntary permission of the suppliers, have indicated that there has been an equitable distribution of nickel since decontrol. The only way in which the Government could be sure that there was an equitable distribution of nickel would be to impose controls. Our reasons for not taking such a step are set forth in our answer to question No. 4.

9. At what price is stockpile nickel from the various sources furnished to industry?

Nickel diversions to industry in general have been sold by producers at the cost price to the Government plus allowances for selling, packaging, and special administrative expenses in connection with the diversion. In other words, the producers made no more profit from selling to the market than they would have made by selling to the Government. As indicated to you in our letter of December 19, by far the greater portion of diverted nickel was sold at market price in 1955. Of 23,950,000 pounds specifically diverted during the year, 2,200,000 pounds represented premium price nickel, of which 1 million pounds came from the Hanna Nickel Smelting Co. and 1,200,000 pounds from the International Nickel Co.

10. What right of appeal is afforded businessmen who feel that the present allocation system is not fair and equitable?

BDSA advises us that businessmen may appeal to their source of supply if they feel the distribution system is not fair and equitable. In the event they bring their appeal to the Government, the BDSA will investigate. Where inequities are observed the Department of Commerce calls this to the attention of the supplier who decides of his own volition whether or not to make such adjustments as may be necessary to correct such inequities. During 1955 only 1 case out of 350 claims audited by the Department of Commerce was found to warrant adjustment.

With regard to Dr. Townsend's nickel survey, the report, as you know, was prepared for use in reaching decisions in the executive branch on future actions and programs. It involves data of a highly classified nature as well as restricted data furnished by the Atomic Energy Commission.

In testimony before the Joint Committee on Defense Production I made the following statement relative to this report:

"In his report, Dr. Townsend recommended that the Government pursue a vigorous policy of encouraging and, if necessary, assisting private industry to expand sources of supply for nickel. He stated that he felt that a policy of this kind was entitled to a higher priority than our policy of stockpiling nickel.

"In line with Dr. Townsend's recommendations, I have requested the appropriate agencies of the Government to present to me a proposed plan of action for accelerating current industrial programs or encouraging the development of new programs for increasing the sources of supply of nickel. I expect that the Government will be in a position to announce such a plan of action within a short period of time."

Sincerely yours,

ARTHUR S. FLEMMING,
Director.

Liberation Day—Ethiopia

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. POWELL. Mr. Speaker, I wish to send greetings to the Ethiopian people, His Imperial Majesty Haile Selassie I, Emperor of Ethiopia, and His Excellency Yilma Deressa, Ambassador of Ethiopia, on the occasion of the celebration of the 15th anniversary of Liberation Day, May 5, 1956.

Ethiopia has been an independent sovereign state from time immemorial. Ethiopia was a great power when recorded history began. With the march of tyranny and totalitarianism across Europe in the years immediately preceding World War I, the Government of Ethiopia was forced to take refuge outside its own territory. Ethiopia, as well as the United States, never recognized Italian sovereignty over Ethiopian soil.

When in 1935 Ethiopia tested the League of Nations on the principle of collective security very little comfort was

given her. Emperor Selassie was one of the few men of courage who read correctly the signs of those turbulent times. He cautioned the free world to resist the advance of totalitarianism and pled with the world to rally its forces to stop unwarranted agrression. Emperor Selassie voiced the cry not only for Ethiopia but for liberty-loving people everywhere. While the free world slept, appeased, or turned its attention away from Africa, the forces of nazism and fascism pursued their deadly course.

Ethiopia virtually stood alone against a towering enemy. The people of Ethiopia fought valiantly for the life of their nation. After a series of military reverses, the enemy destroyed the independence of Ethiopia for the first time in 3,000 years. Emperor Haile Selassie I took his cause to the League of Nations. When that organization failed to respond to his plea for the principle of collective security he was forced into exile.

On May 5, 1941, exactly 5 years after occupation forces had taken over Addis Ababa, His Imperial Majesty reentered Addis Ababa at the head of his resistance forces and with British troops which had fought their way into Ethiopia from the Sudan. One of his first official acts was to call upon his people to follow Christian principles and forego acts of revenge against the tens of thousands of Italians who had been trapped by the liberation forces.

In the years since liberation, Ethiopia has tenaciously bent her energies toward the reestablishment of the country and the continuation of forward-looking projects which had been interrupted by the invasion and occupation. On July 16, 1931, less than a year after he assumed leadership of his country, Emperor Selassie had given the people their first written constitution. Through this act the Emperor demonstrated his adherence to the basic principles of democracy. The constitution, in effect, transferred part of the Emperor's authority to a parliament and a judicial system and provided for administrative departments. Another integral part of Haile Selassie's preoccupation program consisted of efforts at modernization of the country. Special attention was given to the development of health services and a broader system of education, the opening of hospitals and schools, and the recruitment of doctors and teachers. It will be remembered that the occupation authorities, as a matter of policy, suppressed all educational activities between the invasion and the liberation. As a part of the nation's reconstruction program a program was launched which took advantage of every instructional facility offered the nation from abroad. Ethiopia appropriated a large portion of the nation's budget for educational purposes.

Ethiopia and the United States have passed the midcentury mark in the history of their diplomatic relations. Friendly and cooperative relations with the United States in full support of the principle of collective security are the bases of Ethiopia's foreign policy. Ethiopia was one of the first countries to come to the support of the United Nations when the General Assembly condemned Communist aggression in Korea and asked member nations to assist in halting hostilities. Ethiopia reports that:

Ethiopia's Kagnew Battalion, integrated into the United States 7th Division, served until the Korean truce was arranged and established a unique record for troops in that conflict. None of its members were captured, although the battalion suffered casualties as great as those of other units around it. When positions held by Kagnew soldiers were overrun by the enemy, all Ethiopian troops died at their posts. None surrendered.

Ethiopia can look with pride upon its record. I salute this nation of stalwart people and pray for them continued peace and prosperity as they go forward into a new year of national life.

Expanded NATO: An Urgent Need

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, Secretary Dulles' recent statements regarding the need for expanding NATO have been a very encouraging development. For some months it has seemed to me that the urgent need to provide NATO with new vitality was very apparent. Indeed, I feel that a step in this direction is long overdue. But the statement which Secretary Dulles made before the Associated Press was very broad in nature.

I would like, therefore, to call the attention of the Congress to my resolution, House Concurrent Resolution 216, introduced in February, which outlined four specific nonmilitary activities which NATO could undertake. This resolution was sent to the State Department by the Foreign Affairs Committee in mid-March, for the Department's comments. I regret that we have not yet received a report from the Department, but I am hopeful that the Secretary's recent expressions on this subject will now permit the Department to recommend specific kinds of functions, which would give NATO new life.

In this connection, I would like to call attention to an excellent editorial which appeared in the Christian Science Monitor:

NEW SCOPE FOR NATO

For the Western World this is a very big moment.

At least half a dozen front-page stories are saying so—if you put them all together. But the moment is even bigger than the headlines.

Looking back on these last few days of mid-April 1956, future historians may well say either (1) that they marked a turning point in world affairs away from war and nuclear menace toward an infinitely more abundant, more orderly way of life for all free peoples; or (2) simply that these days offered an opportunity which statesmen, politicians, and people missed.

Surely if we could see this opportunity in terms of the forest instead of the trees we should all be impelled to grasp at it even at the cost of some dislocation of our routines, at some pain to our prejudices, at some risk to our pocketbooks.

For consider what has been happening.

WASHINGTON MOVES

At Washington the President of the United States puts American foreign policy on a new tack, perhaps belatedly but with a sweep that should help to make up for lost time. The partnership which he had earlier urged as an attitude for the American people toward their allies is now to be a touchstone for official action. It will aim not simply at military defense of the NATO countries but at the development of their internal economic and social strength.

As President Eisenhower put it: "Within the free community we must be a helpful partner in creating conditions where freedom will flourish."

That is the promise, at least. And it is timely. Today the future of NATO, even just as an alliance on which America's world position partly rests, depends more and more on this sort of effort. The promise has been immediately underwritten by the American Secretary of State. Mr. Dulles has now moved to reinspire the North Atlantic Treaty Organization with some of its originally stated but as yet undeveloped purposes.

He has stated that the American aim is an expanded NATO, to be discussed at a Paris meeting of the North Atlantic Council next week. It could bring NATO to the fore as the major free-world agent for aiding underdeveloped nations. It may help NATO to work through peaceable means for a relaxation of fetters on satellite nations, fetters which may be becoming obsolete even from Moscow's point of view. It would support many other purposes on which NATO governments can cooperate toward peaceful strength.

THE PICTURE'S OTHER SIDE

Striking as are the implications of the administration's moves during the last few days, they do not, however, as yet make up the bigger part of the challenge emerging on the world scene. Against them we must set two accomplished facts:

The Soviet Union is forcing the pace on the development of nuclear weapons, the latest evidence being Russian possession of a hydrogen-headed guided missile. The Soviet Union has broken out of "containment." It has moved with disturbing effectiveness into the Middle East, Western oil reservoir and strategic bridge for Britain and other free-world nations. And not only that, but its diplomacy now moves with increasing influence over most of Asia and even into Africa.

There has been indeed no diminution of the Soviet Union's global pressure on the free world since the passing of Stalin. It has changed form, that is all. And so the problem of Western leadership has become more complex than in the days when arms alone might spell the difference between a Soviet advance and retreat.

The apparent military pressure on NATO countries has lessened; likewise the will of NATO peoples to bear the burdens of armaments. Some such development was at the outset foreseen by the architects of NATO. That is why they inserted article II in its charter providing for civilian projects.

NATO members have hoped this would mean provision for increased trade, for joint financing of common peacetime projects, and so forth, which would underpin the new European prosperity and make whatever arms are needed easier to pay for. Disappointed in these hopes, they have lost their initial enthusiasm for what was to become a great North Atlantic community and not just another military alliance.

NATO AS FREE WORLD UNITY

Yet some Europeans are keenly aware that things have been going the wrong way. A Netherlands Socialist leader stated this view forcibly at an important Strasbourg gathering last week. Pointing out that Moscow still aims to damage Western unity, he said:

"What we need more than ever now is a pledge by all the NATO powers that they will never hold talks with the Soviet Union independently and on their own, but that at all times they will form a joint political front. What we need more than ever now is a general staff for the cold war on which the highest representatives and the best experts of the NATO powers should take seats."

To move on this front alone would engage the sympathies only of the best-informed elements of the Western nations. It would spread new alarm among the neutral nations. This move is needed. But it must be embodied in a broader effort.

MATCHING THE MOMENT'S NEED

Had the Soviet military threat to Western Europe never existed, NATO probably would not have come into being even as a military organization. Had the new military-political-economic threat of the post-Stalin Soviet Union never developed its present peaceable aspects, it is possible that NATO would have remained chiefly military and perhaps withered, as military alliances do.

It could do this even in the face of the new Soviet strategy unless freemen recognize the great need of the times. This is to readapt their defenses to meet changing pressures along a vast military, economic, and social front.

The importance of this moment lies in the fact that free-world leadership has recognized this need. The importance of the moment lies also in the question whether free peoples will likewise recognize it and support their leaders with imagination and a compelling sense of both crisis and opportunity.

Petition Opposing Alcoholic-Beverage Advertising in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, it is my pleasure to submit herewith for the RECORD a petition which I have received from the members of the WCTU, First Methodist Church, in my district:

To Our Senators and Representatives in Congress:

We the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic-beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of States under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic, there should be no encouragement to increase the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

Mrs. John H. Moncrief, Mrs. G. W. Canterbury, Mrs. J. N. Harbin, Mrs. Flora Mae Pike, Mrs. B. L. Hinkle, Mrs. G. C. Boner, Mrs. C. G. Thomason, Mrs. J. H. Coburn, Mrs. W. L. Gibb, Mrs. L. M. Kelley, Mrs. G. T. Faust, Mrs. T. M. Tharp, Mrs. J. R. Thompson, Mrs. O. M. Golden, Mrs. George V. Kilgore, Mrs. Fred L. Allen, Mrs. L. E. Foster, Mrs. Susie S. Tindall, Mrs. M .A. Geno, Mrs. J. F. Brady, Mrs. F. E. Hearn, Mrs. G. D. Shubert, Mrs. M. C. Ledbetter, Mrs. Walter E. Barnes, Mrs. M. Oakley, Mrs. B. F. Mason, Mrs. V. Pennington, Mrs. P. A. Morgan, Mrs. R. L. Summers, Mrs. Roy Smith, Mrs. John Chadbourne, all of Alabama.

A Freedom Manifesto

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "A Freedom Manifesto," by Senator Nelson S. Dilworth, delivered before the California Society of the Sons of the American Revolution, April 16, 1955:

A FREEDOM MANIFESTO

(Address of Senator Nelson S. Dilworth delivered April 16, 1955, in San Francisco before the California Society of the Sons of the American Revolution)

Mr. President, members of the California Society of the Sons of the American Revolution, and guests, we are meeting here at the conclusion of a year's distinguished service by the California Society to the people of our Republic. It is also the occasion of the commencement of another year of, we shall hope, even more effective leadership in defending and strengthening the institutions of freedom which our honored forebears so wisely established.

As we look forward to the momentous and stormy days ahead, we must choose a wise course. To do so we must determine where the hidden rocks lie that menace the safety of our ship of state which is laden with every treasured liberty that has been our privilege and enjoyment for the last 170 years. Five generations of fathers and sons, sometimes 6 or 7, have taken as a matter of course these new freedoms and given little heed to their preservation.

The idle years of security have gone with the new technique of cold war waged by secret fifth columns. We live in the days of the incandescent mushrooms billowing up 20 miles in the sky. Apathy at such a time can only be the prelude to swift enslavement, to a bitter servitude of mind and body bound by the chains of fear and torture by totalitarian police state executioners.

It is only prudence to consider the fate that has befallen other free governments. The czars of Russia, in the evolution of time and progress finally granted the people a parliament, a Duma, in the year 1905. Progressively the elected representatives of the people accomplished faltering but well directed steps toward freedom. In the debacle of 1917 with military disaster a harsh reality, the Duma set up a republic to be rid of the incompetent hereditary rulers. Political freedoms were declared and political prisoners released from jail and dungeon. As the new republican leaders rallied their armies to defend their native homeland they allowed opposition parties to organize and even to arm themselves in the name of liberty. In a few months, as the republic's leaders and soldiers faced the foreign invader ill-armed and with paltry munitions, they were stabbed in the back at Petrograd by the party of Nicolai Lenin. A regiment of revolutionary conspirators rushed the Duma and made prisoners of the elected representatives of the Russian people. Arsenals were raided and before the armies at the fighting front could move, the homeland had fallen into the bloody hands of Lenin's well-disciplined party. And what party was it? It was the Socialist Party. Lenin was a Socialist. As a Socialist he came to power, but to force his socialism on an unwilling people he had to have a secret police organized under a released bank robber from the Caucasus. The socialism of Lenin was but a high sounding name to screen a tyranny and oppression never realized under the worst of the czars. And it all happened so quickly, so unexpectedly. It happened in days, even in hours. The trip from freedom to slavery is quick, like passing through a door. The return trip from slavery to freedom takes whole generations, yes, centuries of sacrificial struggle by the noblest and best youth of the land. All the accomplishments of the Russian people in a hundred years of struggle for freedom were swept away in minutes as Lenin's regiment of rifle-bearing revolutionaries rushed into the Duma and made prisoners of the elected representatives of the Russian people. Nothing remained to stop Stalin from displacing Lenin and setting up rule by violence.

A thousand miles and more to the west and south of Petrograd, Lenin and Stalin were copied. A conspiracy was organized within a country enjoying constitutional freedom under the nominal leadership of an indulgent and popular king. Benito Mussolini was allowed to organize to use force by the tolerant government. He marched on Rome and rather than shed blood the government allowed him to take over. And who was he? He was the leader of the Socialist Party. It is true that he copied the emblem of the Caesars, the bundle of sticks and battleax called fasces, and became known as a Fascist, but he built his organization out of the Socialist Party on socialist theories.

Faced with popular dissent and reluctance, he too turned to secret police and bathed Italy in the blood of her sons and daughters. The indolent Italian citizen content to leave the government to others paid a thousandfold in labor, blood, and tears under the dictatorship for his apathy during the years of his freedom. Yes, and in the loss of his sons in rash military adventures the Italian father's aged head was brought low to an unhappy and lonely grave. All because they neglected to make the sacrifice of time and effort to preserve their free institutions when they had them.

Freedom will not operate itself. It is but a chance to achieve liberty for ourselves. We must accept the responsibility and labor to operate our popular Government or become slaves. For evil men to succeed it is only necessary that good men do nothing.

By the time the people of Italy were ground under Mussolini's iron heel, Stalin had long since drugged and eliminated Lenin. The mantle of Lenin dead was more useful to Stalin than his annoying and restraining presence. Power-mad dictators want no interference with their absolutism.

Next a man with a cropped mustache reached for the leadership of the Socialist Party in Germany. With inflamatory speeches and promised glories for Germany he bound to his will the Socialist organization. The German Republic was tolerant. The leaders were hesitant, their currency valueless. Adolf Hitler was allowed to organize with military methods.

As a Socialist he came to power by election. To carry out his Socialist decrees he, too, had to organize a gestapo and secret police, yes, and huge crematories and charnel houses to liquidate and dispose of millions of his countrymen. By the chance of history this Socialist dictator came into political com-

mand of the German general staff, the world's greatest war machine, and plunged the whole world into the mass carnage of World War II.

And what shall I say to the Germans who neglected to keep their constitutional republic and voluntarily chose a Fuhrer. In exchange for their freedom they got poverty, destruction of homes and loss of livelihood, wounds without number, death and a national and racial condemnation and dishonor on the unchangeable pages of history. All because they would not accept the friendly duties and responsibilities of free government.

Freedom is but an opportunity, I repeat. We must grasp it and use it or become slaves.

So I say to you tonight that we must save our American economic institutions from socialism whether it be attempted by the Government or by political conspiracy. Our political fredoms have so released the energies and ambitions of American men and women that they have produced here the highest standard of living ever known in any land. It is this freedom to produce competitively and to keep a large measure of their production that has made our American life a delight and a joy to be proud of the world over. Also, we must testify to our young people about the benefits of the competition we face all around us. Business success is attained by securing public favor and demand in the face of competition. The public is the umpire and the banker is the scorekeeper. Every time you buy a Packard automobile, you make that manufacturing corporation bigger. Every time you buy Texaco gas you promote the growth of the Texas Co. You have your choice. You may buy Union or Richfield gas. That manufacturer will grow. You may buy General Motors cars, Chrysler, Ford, Studebaker, or Nash. You choose. Competition gives you your choice. Competition lets you, the people, decide what you want. Competition is another word for freedom. It is an indispensable part of American liberty. Competition has made America the wonderland of the world.

Competition is natural in this world. It exists all around us in the world of nature, between the grasses in our lawn and the trees in our forest, between wild animal life for survival, yes, even among our bird life for life itself.

Competition and freedom to produce can only be maintained under political freedom. Again, political freedom can only exist where there is competition for control of the Government. A choice must always be given the people at intervals to choose from competing candidates the representatives they want in their Congress and legislatures, and executive authority. I repeat that competition is another word for freedom for the people.

It is this competition that socialism destroys. By means of regulative decrees, by excessive taxation, by the paralyzing hand of political management, business withers and fades. This is followed by forced labor, secret police terrorism, and military campaigns, with the population reaping the results in misery, want, and degradation, daring not to protest and living every night in terror of the heavy footsteps coming to claim a victim.

The days when citizens can revolt are gone. Rifles can no longer wage war. What can citizens do to stop enemy bombers? Military campaigns are mechanized and only large governments can equip themselves with weapons that are affective. The days of popular revolt are gone in the mechanized nations.

Another thing we must protect from the deadening hand of socialism is the education of our youth.

Standards and goals of learning must be set. Rewards must be offered. Recognition of achievement must never fail. Competition properly supervised on the athletic field is good sport. It is thrilling. It builds strong bodies and teaches never-ending lessons of fair conduct and striving to do one's level best. It inspires to great endeavor for school and team. But let me ask you, if you had no goalposts and no one was allowed to keep score, what sort of a football game would you have? What would the players learn in either skill or good sportsmanship? And who would care to watch?

Competition in the classroom can be supervised to be as beneficial and as thrilling as on the athletic field. It will build strong minds, alert and capable of exploring new fields of knowledge and advancing the progress of mankind. But superior effort must be recognized and rewarded with recognition. Goals must be set and scores must be kept, at least for those that excel and make the varsity team. Our youth can be taught to compete successfully and fairly, to be good sportsmen in the classroom as well as on the athletic field. Yes, they can be taught to try as hard to excel in learning as in football and their whole lives will be immensely enriched in accomplishment and their ability to serve their community and Nation multiplied.

We live in a competitive world for survival of nations, survival of political parties, survival of public officials as officials, survival of customs and ways of life, survival of businesses and industries. You, the people, are the judges. By your choice you decide.

Our students should receive a clear explanation of these realities. They must not spend their formative years in a false and misleading school of uniformity and play. They should be prepared for life as it is and allowed to strive, encouraged to excel, and inspired to achieve great things. Yes, our education must be saved from infiltration by socialism in practice and also in text. We have strict laws on the selection of textbooks. They must be observed in spirit and to the letter. Books that glorify socialistic schemes and projects are books of propaganda and unsuited as school texts. We must not allow our textbooks to condition the minds of our youth to accept communism later on.

Textbooks can be thrilling in their exposition of the achievements of the American people. We have little to learn from the old world in business and economics. America is pioneering a new fields of accomplishment and in the achievement of comfort, security, and culture. The blight of socialism has nothing to add, only discouragement, oppressive taxation, and scarcity.

Not only must our educational methods be patterned on American freedoms, our texts vibrant with the recitation of the facts of American liberties and accomplishments, but we must seek as teachers for our youth loyal leaders who are deeply in love with American freedoms. Behind the closed doors of the classroom without parental check or control, the character and ideals of the future citizens of America are being formed and developed. There is room in no classroom for microphones in America, and no child should feel obliged to report on his teacher. The relationship of teacher and student should be one of complete trust and cooperation. Any person unworthy of such trust is unacceptable as a teacher.

We entrust our property to employees. We commit our earnings to bankers for safekeeping. We depend on physicians for our health. But for the development of the highest ideals of character in our children, for their training and competence in the affairs of this life, we depend on the teacher. There is no greater earthly trust, no higher responsibility.

Has not your heart ever thrilled to the sight of a herd of cattle gathering in a circle around their calves when a band of strange dogs cross their pasture. Do we as human beings care less for our children than dumb cattle for their young?

Purveyors of strange ideologies are enemies indeed who would cripple our children in mind and pervert their honor and understanding.

We cannot safely allow teachers of the public schools merely to teach about communism. Some teachers, so disposed, could teach communism. The responsible officials of the schools cannot listen to every class. Teachers and texts must emphasize the obvious evils of communism.

Teachers much approach this ideological area from a positive point of view. They must emphasize what is good and great and fine about our country. America is 90 percent all right, and the remainder is under construction.

If children are thoroughly grounded in the ideals and accomplishments of America and in the thrilling history of how our people struggled to build this freedom, few will ever listen to Communist deceit.

The abundant opportunities in America to our young people to choose their work, to strive to excel, to rise in their profession, to succeed in life and establish a home with security in financial rewards have always inspired American youth to valiant endeavor and superior service to their community.

This should continue to be the prime objective of all school systems. To employ a Communist as a teacher or one of Communist sympathy or influence, or a teacher uncertain and confused is to obstruct the main purpose of public education and to wreck the moral and social growth of the child who has the tragic misfortune to be compelled to sit in the classes of such a teacher.

Children can be made mental cripples and moral misfits for life by Communist ideology in the classroom. To face life with perverted ideas on economies and political institutions cripples a youth more destructively than automobile collisions or polio diseases. Certainly the State must not employ teachers who cripple minds and morals.

We cannot as Americans be loyal to all the magnificent achievements of our compatriots and those who have gone before us, and sit apathetic amidst a revival of the Yalta spirit and weakly surrender our youth to the brain washing and slavery of Communist indoctrination and deceit.

There can be no Republic in America operating in constitutional liberty to express the will of the people unless we have citizens and leaders who are devoted to the Republic and who have been well taught in their youth all the methods and means of preserving freedom.

I come now to an even more serious part of my message. There is a group of people that we must save in order to save our freedoms. What nation would expect to win a war if every young man who volunteered to fight for the nation was ridiculed, attacked, and slandered. Our soldiers must be supported and equipped. In equal necessity we must save and protect those in public office who dare to speak out against socialism and the power behind the Socialist drive, the organized Communist conspiracy. Speaking out against communism is good but not enough. Action must be resolute and forthright.

To emphasize its importance, I repeat that, "For evil men to succeed it is only necessary that good men do nothing." For Communists to take over and enslave Americans it is only necessary that freedom-loving Americans do nothing. I am speaking now of freedom-loving Americans in public office and responsibility. They must resist the Socialist front of the Communist conspiracy or it will take over. The freedom-loving President of Czechoslovakia was not removed when the Communists seized the republic. The freedom-loving majority in Parliament was not immediately replaced. They were just intimidated into doing

nothing to hinder the Communist organization at work.

The last step in Czechoslovakia that sealed the doom of freedom and the end of the Republic was when the newspapers refused to continue printing the facts developed by the parliamentary commissions exposing the organizational methods of the Communist conspiracy. In ignorance of the truth the people allowed themselves to be the pawns of the organized conspiracy. The Communists boasted that they would make the non-Communists destroy the Republic, and they did. The long sharp blade that drew the life blood of freedom from the heart of Czechoslovakia was the non-Communists stupidly participating in organizations directed and controlled by the concealed Communists. The Communist Party was only the handle of the blade and the rough hand on the handle was that of the Politburo in the Kremlin.

I remember years ago Congressman Costello of the Dies committee defeated by Communist propaganda attack in the Democratic primary in Los Angeles. I remember Congressman Starnes also of the Dies committee defeated in the Democratic primary in Alabama. I have not forgotten Congressman McDowell, stalwart supporter and coworker with the chairman of the Dies committee, defeated by the same methods in the Republican primary in Pennsylvania.

Some years ago there was a courageous and intelligent Committee on Un-American Activities appointed by the legislature of the State of Washington. They published two revealing and powerful reports on Communist activity. I attended one of their hearings in Seattle and they commanded my admiration and respect both for the committee membership and for the investigators. At the first following election five were defeated by the people.

The list is too long for me to go through it 1 by 1. Let me remind you, that this ominous list is growing at each election. In November last, three of the most outstanding champions of freedom who had courageously exposed communism in our midst were defeated by the people. We lost from Congress Buseby of Illinois, Clardy of Michigan, and Kersten of Wisconsin. You know of others. The list is long and growing rapidly longer.

Today in our Republic it is political suicide for a public representative to really expose people who carry the message of the known Communist press such as the dailies they publish and the periodicals. With virtual immunity sympathizers of the party convert its program into action on platform and in official position. Communist philosophy and propaganda has infected popular thinking so deeply in some areas that people destroy the public officials that are sacrificially trying to defend them from the international Communist conspiracy. A large majority of our people still dislike communism, but for some reason they also disapprove and defeat public officials who effectively identify and expose the Communist conspirators. No man active in exposing Communists and communism when I entered public life has escaped being driven from office.

What must we do to save our freedoms? I ask you. Must we not save the men who are working to save our freedoms? Must we not root for the home team and not for the enemy?

But you say they make mistakes. Are you surprised Is it not human to err? Do Communists make no mistakes?

When the quarterback on your football team calls the wrong signal, do you start rooting for the opponents just because your quarterback made a mistake?

Our courageous anti-Communist officials are on our team trying to preserve our freedoms. They are trying to do the necessary things to rescue us from our own apathy. To save our freedom we must keep them on the job.

Behind the Iron Curtain are they so gentle and considerate of accused persons? Do they observe the fifth amendment? I could quote you a hundred documents that prove that every Communist is required to be an informer to the police on his friends and acquaintances every day of his life. You will be required to be an informer on your friends if the Communists ever succeed in this country.

Communists in this country are no different from Communists in China, Poland or Indochina. They study the same textbooks. They are under the same discipline. They will commit the same horrible cruelties here if they get the power.

As long as anti-Communists are promptly driven from office, conditions in our country will worsen. A way must be found to uphold the hands of those brave men who dare to act against the agents of the Communist conspiracy.

Another thing we must do to save our freedoms is to deal forcefully and effectively with treason. Occasionally a Communist is punished for contempt of court. A few have been convicted of perjury. But of treason only 2 or 3. Somehow our people must wake up to the fact that the cold war is a real war. Czechoslovakia, taken by cold war, has less liberty and more cruelty than Poland taken by the marching Red Army. We just have not begun to fight communism in earnest in our country.

There is one more vital thing that we must do to protect our freedom. We must not permit the organized Communist conspiracy, or any organized group to prepare to use force or violence for any purpose in our country. Ultimately, and in the decisive hour, communism is only established by organized groups using force and violence. In a free country where the government is controlled by the people there can be no lawful excuse for organized preparation to use force. The very freedoms we cherish and seek to preserve are being used to prepare to destroy all freedom. We cannot claim to be doing a realistic job of fighting communism in America until we destroy and disband any organization based on the use of force or unlawful means.

Also, in our efforts to save our freedoms we must save the mechanics of the freedoms, our political restrictions on governemnt to protect the individual. Even though these very legal safeguards may be used by Communists to shield them in their destructive attacks on our Governemnt and society we still must save the procedures of freedom.

While we are protecting these humane and necessary safeguards there is no need for us to be foolish and unrealistic. The use of the fifth amendment by the Communists to escape questioning about their conspiratorial activity is a case in point. We should preserve the fifth amendment, and are preserving it. It was never more in use than today. The phrase in question reads, "No person shall * * * be compelled in any criminal case to be a witness against himself." This is wise law. However, just because a person escapes exposure of his crime by pleading the fifth amendment does not mean that he is a safe occupant of public office or qualified to teach children in their impressionable years. Until proven guilty they should be allowed their freedom to seek their livelihood, but refusing to testify because to answer the questions would tend to incriminate the witness certainly disqualifies such a person from holding any office or position of public trust or responsibility in government, whether policeman, teacher or administrator.

Our American Constitution is not a suicide pact. Freedom provided by our Constitution does not include freedom to conspire to destroy the Constitution.

There is yet another priceless heritage that we must preserve, cost what it may, to safeguard our freedom. I speak now of our national independence. We cannot go into governmental partnership with the gangster despots of the Iron Curtain world.

Wherever a large city in one of our States falls into the clutches of a corrupt political boss, he in turn corrupts the State government. It was not an idle thought of the framers of our Constitution that they placed therein the authority, the responsibility upon the National Government to guarantee, to reestablish in any State if lost, a republican form of government. Certainly, if one or more of the States became dictatorships they would corrupt the National Government and freedom itself. Of equal force is the warning that we cannot share our governmental power with despots, oriental or otherwise. As a forum for debate, consultation and cooperation the United Nations is valuable. As government, as a military and taxing power over us it would end every vestige of freedom.

Liberty, wherever it has blossomed has been the child of nationalism, of near fanatical patriotism. Whether it be ancient Greece, Rome in its early days of the republic, in England or America, freedom has been achieved by the struggle and sacrifice of the patriots resisting the powers of their own government and succeeding in establishing firm limits on bureaucratic officials. The supremacy of the executive power over the legislators of the people is tyranny. The supremacy of the people's legislators, each elected from separate districts with equal power, over the executive government is freedom. A people must be protected from their own government by their legislators and their courts.

Our enemies are all aware of this truth. Every Communist advocates world government, in fact, that is what the Union of Soviet Socialist Republics is, a plan of world dictatorship absorbing new lands at every opportunity. The Iron Curtain world is governed from the Kremlin.

To save our freedom we must save our own independent Army, Navy, and Air Force and keep them strong for our defense. This hour calls for a new declaration of independence from all this one world Communist conspiracy.

People ask me why don't you tell us who the Communists are. It is most difficult. For many years now no written records of party membership of any kind have been kept in this country. There are no card-carrying Communists now, and have not been for years. Only the rank-and-file Communists ever had cards. There have always been the higher leaders who were never endangered by any tangible connection with the party itself yet were decisive in determining its policies and startegy.

But you ask, how are we to know who the Communists are. The answer is not easy. When you step on a dog's tail and his mouth bites, you know there is a connection between the tail and the mouth. When you or we expose a petty Communist, fifth-amendment variety, or a more active agitator, and a great national organization instantly springs to attack us in the performance of our official duty and another wealthy national organization musters money and lawyers to defend the exposed Communist, we know there is a connection. The same blood flows in the dog's tail as in his mouth. The same ideology energizes the Communist as motivates the defending organization and the purveyors of brutal calumny that attack the official who has done his duty.

Do you ask me again to tell you who the concealed Communists are? Again I say it is most difficult and only a legislative committee with the power of subpena can reveal the truth and then often only partially.

There is every shade and degree of subjection to Communist domination. Beside the disciplined party members there are recruits in training, there are many more fellow travelers who go along without joining, then there is every degree of acceptance of communism from the completely dominated reader of the Communist press to the careless imitator who thinks it intellectual to be a liberal and smart to be a crititic of our present imperfect society. Yes, it is imperfect because it is human. But its imperfection and improvement mean that it is closely akin to our imperfect human ways and desires.

But, you insist again, how do we spot a Communist. Well, first, every concealed Communist denies he is a Communist, indignantly and with a show of outraged innocence. Second, Communists say and advocate the same things that the Communist press and Communist text books say and advocate. This is important for actual party membership is of little consequence if the individual is a propagandist for the party program. He may be even more dangerous outside the party and able to deny membership under oath. In fact, we think that some of the most effective agents of the Kremlin are deliberately put outside the party to continue subversion without the hazard of identification and exposure.

Again, concealed Communists usually either defend any exposed Communist or indignantly condemn the public official who has exposed a Communist. In fact, their most effective activity to date has been to attack and destroy loyal public officials who have done their duty to inform the American people who their enemies are.

Sometimes people with no connection with communism do these same things for reasons known but to them. In doing so they render greater service to the Communist conspiracy than the Communist Party's own members can render to it.

The American people are willing to fight Communist attacks on freemen overseas, but have not begun to defend those courageous men who protect American freedoms in public position here at home from wholly obvious Communist-inspired attack. Our most dangerous enemies are not marching under foreign flags but infiltrating here in our own homeland. Of what avail is it that our brave sons win costly victories on bloody foreign battlefields if the people allow followers of the same enemy ideology to continue in classroom or Government office at home. For that matter, the Communist conspiracy prefers for public office in the infiltration stage, just common cowards who will do their bidding rather than face opposition and abuse.

I hope that you now see clearly that the Kremlin wages the cold war by the printed page and by the word of mouth to weaken, deceive, and divide prospective victims. For block-busting bombs they use ideas. Catch phrases are their machinegun fire. For deadly land mines they use appeals to our American generosity for the support of front organizations and foundations.

Communist rule is established under the familiar language of freedom. They announce the liberation of the people of any country they conquer. They proclaim the new dictatorships to be people's democracies. They call their despotisms republics.

Communists have stolen the language of freedom and successfully perverted it to serve their own methods of conquest and subjection. They use our most precious words to enslave unsuspecting peoples.

Yes, this is a war of speech and pen for the control of the minds of all mankind. We must meet it now while there remains the right to speak.

The people now under the dictatorship of the proletariat would not let the Communists again deceive them and seize their liberties a second time but they have no second chance. Communism is something you cannot try and discard. Communism is permanent. Like arsenic and cyanide to the body, communism is fatal to freedom. In these days of airpower and panzer divisions, the people cannot revolt.

So today is our last chance. We will have no other. The cold war is real. It is not easy to fight communism. Your antagonists deny loudly they are Communists and in resisting them you feel utterly alone. Your friends do not see behind the mask and they will tell you bitterly that you are wrong.

In fighting communism one of the first things you have to learn, says the hero President of Guatemala, is that few of your friends will stand beside you. Most of them will mock you, with taunts of "what communism" and "it only exists in your imagination." Yes, the cold war is real. Battles are raging.

There is still another thing we must do to preserve our freedoms. We must preserve our faith as a people and as a Nation in Almighty God. No other defense against communism is as powerful and as universal in its effect.

It will not be enough that a few people retain their belief in God. It must be a national and popular trust in God.

No nation or people in the entire history of mankind has ever contributed anything constructive and helpful to the advancement of the human race unless they believed in a Creator and a future judgment. And so today I appeal to you to strengthen the churches of your choice by worship with them and participation in their activities. Other organizations beside the American Legion could well join in a national rededication of our lives to faith in our Creator.

Our distinguished forebears who established our free institutions, lived with God's Holy Bible under their arm as they walked by day. It was beside their pillow at night and open on their knee with their children about them. So today our Nation can well renew our interest in the word of God.

Probably a hundred billion people have lived on this earth, but not 1 billion has ever known freedom as we have enjoyed it in America.

Freedom has not been the natural state of human society. It is an achievement. Only by the willing sacrifices of life and blood by the noblest and best of our youth in every generation has our freedom been established. The American and European peoples have cradled liberty and fostered freedom always at the cost of never-ending sacrifices of life and treasure. Few peoples of the world can or will keep freedom if it is bestowed upon them. There are ready despots to seize power in every race or nation.

Freedom is a fragile thing like some unusual and exotic flower growing almost hidden in the shade of a glen, easily trampled by the rough heels of ruthless men. Once trampled it will be long years before it blooms again. When the free cities of the ancient world were opened and the destroying armies marched in, it was 1,500 years of oppression and misrule before a measure of political liberty was again obtained by the people of those lands, 15 centuries, 50 generations of fathers and sons before the air of constitutional liberty once again wafted its refreshing breezes through their hills and valleys. Freedom comes but once in the history of a nation and people.

Freedom is not static, it cannot be built into marble and bronze. Freedom is a living, moving thing, constantly growing with the movement and development of a nation. It is necessary that laws constantly change and that their provisions be promptly adapted to the progress of civilization and science. Liberty cannot be frozen in ice for preservation or it will die. Neither can it be locked in a vault for safekeeping. Freedom is a manner of living, a way of life of a people, only possible in a nation strong enough to defend itself from all foreign enemies and resolute enough to deal firmly with traitors at home. Only the brave can long be free, because freedom is so valuable and precious that those who enjoy its privileges must be ever ready to fight to protect and preserve their liberty. Freedom only exists in those favored lands where the bravest and best young men have always thought it better to die than to lose their freedom.

As the breath of pure mountain air on the mountain top is to the stag as he goes forth to feed in sunset shadows, so is liberty to this soul of ours.

As necessary as the morning sunshine is to the life of the brilliant California wild flowers, as vital as the gentle soaking rain, so necessary and so universal must freedom be to assure contentment in the heart of the American patriot.

On clear and sunny days have you not often gazed into the great blue yonder at the dazzling vapor trails, made by our daring youth in combat planes? Do you consider how much it matters to each of us, whether the vapor trails shimmering high in our California skies are made by the sons of free men, or by the slaves of foreign dictators?

Yes; it matters much. It matters everything to us. Age has become the dependent of youth for protection.

Some months ago a fine robust youth of my acquaintance was taken into the Army. He was sent to infantry training. Being in the vicinity I visited him in camp on a day when friends were invited to the post.

This young man of more than average physique had been placed with other young men selected for perfect bodies without physical defect of any kind for advanced infantry combat training. Their daily companions were the grenade and bayonet. In absolute darkness they were trained to grapple with an enemy and silently disable or kill him with their hands. Oh yes, a heavy price may yet be paid in young life and blood to defend us in hot war from the dictatorship in the Kremlin, paid in the blood of our finest and best youth. Is their sacrifice to be in vain? Shall we not also train to win the cold war? Shall there not also be trained battalions to meet the enemy in the cold war? Certainly battalions must be trained in expressed loyalty of word and deed to America.

The picked troops for the deadly hand-to-hand in fighting of the cold war of ideology are gray heads and shoulders weighted with the many years of experience. It is from our elder citizens that we must expect the elite shock troops of defense for America in the decisive battles of this new cold war. Will you join me in saying that I would rather live a short time on my feet a free man than a long time on my knees under Communist police?

As I look about this distinguished audience I am convinced that no finer group of men for the coming combat exists in America today. I challenge you to engage the enemy, be he a member of your lodge, your church or your club. Speak out for freedom and America. Hide not your faith in meaningless platitudes or cultured phrases. Courageously denounce the enemies of freedom. Know the truth of the ideological greatness of our free republic and meet the enemy in forum and auditorium. As many of you responded to the call for volunteers in your youth to follow the flag in battle, tonight I sound a greater call for more urgently needed volunteers with even stouter hearts in a more decisive battle for the native land we love. I call for volunteers to speak in defense of American liberty. I call for volunteers for the duration of the cold war, or until death.

Radioactive Fallout and Radioactive Strontium

EXTENSION OF REMARKS
OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled, "Radioactive Fallout and Radioactive Strontium," by Dr. W. F. Libby, member of the United States Atomic Energy Commission, and himself an eminent scientist. This article appeared in the magazine Science, issue of April 20, 1956, and is based on a speech given by Dr. Libby earlier at Northwestern University:

The radioactivity that falls out of the atmosphere after the explosion of a nuclear weapon is called the radioactive fallout. In the ordinary atomic bomb, for example, for each 20,000 tons of TNT equivalent of explosive energy, about 2 pounds of radioactive materials are produced. In these 2 pounds are some 90 different radioactive species varying in lifetime from a fraction of a second to many years. This mixture of radioactivity decreases in radioactivity in such a way that for every sevenfold increase in age, the total radioactivity is decreased tenfold. Thus the radioactivity by 7 hours after the explosion has decreased to one-tenth the radioactivity of 1 hour, and in 49 hours to one-hundredth, in 2 weeks to one-thousandth, in 3 months to one ten-thousandth, and so forth.

The conditions of fallout are largely determined by the amount and type of material vaporized into the fireball of the bomb itself. A bomb fired in the air contributes such a relatively small amount of matter to the cloud that the particles formed after dissipation of the enormous energy released are of necessity very tiny and therefore very slow in settling. The result is that most of the radioactivities are expended in the air and the area over which the fallout occurs is rendered very large, indeed, extending to the ends of the earth in minute although detectable amounts.

A bomb fired on the surface of the earth, however, may have an appreciable portion of its radioactivity reprecipitated within relatively short distances, while bombs fired beneath the surface of the earth may place essentially no fallout radioactivity in the atmosphere. Therefore, the question of the area of contamination to be expected from nuclear weapons cannot be answered categorically without specifying the degree of contact of the fireball with the surface of the earth and probably also specifying the characteristics of this surface. Obviously water would differ considerably from soil in its ability to precipitate radioactive fallout. The coral in the southern Pacific islands that are used for the larger United States weapons tests will under the great heat decompose to form calcium oxide, which will then dehydrate to form calcium hydroxide. which in turn will absorb carbon dioxide to form a crust of calcium carbonate. Obviously such a complicated series of chemical reactions will make the fallout particles from the great tests at Eniwetok differ from what would be observed if the same weapons had been fired over ordinary sand or granite. We cannot imagine all of the details in which the nature of the soil will affect the local fallout, but it is clear that the effects will be substantial.

In the weapon test operations, great care is taken to insure that no danger results from fallout. Criteria are used that are meant to insure that this is so. However, it is will to note that it is from the test operations that we have learned what we do know about the problem of civilian defense against fallout. We must speak of test experience, for it is the only source of experimental information about the phenomena of radioactive fallout.

The radioactivities resulting from the burst of a nuclear weapon can be classified as follows: (i) radioactivities induced in the environment and (ii) products dependent directly on the nature of the weapon. The environment can be made radioactive only by neutrons, but all nuclear weapons involve large numbers of neutrons, some of which are certain to escape into the surroundings.

RADIOACTIVITIES INDUCED IN THE ENVIRONMENT

Taking air bursts first, our problem is: What do neutrons do to air? The answer is simple. They made radioactive carbon, C^{14}, which has a half-life of 5,600 years. Fortunately, this radioactivity is essentially safe because of its long lifetime and the enormous amount of diluting carbon dioxide in the atmosphere. The cosmic rays themselves make neutrons, which, of course, make radiocarbon. In fact, the earth has on its surface a total of 80 tons of radiocarbon from the cosmic radiation. Now, since each neutron forms one C^{14} atom of mass 14 times the neutron's mass, this corresponds to 5.2 tons of neutrons, and we see that this enormous number of neutrons would have to be produced and escape in order that nuclear weapons would just double the feeble natural radioactivity of living matter due to radiocarbon. Such an increase would have no significance from the standpoint of health. The atmosphere itself contains only 1.5 percent of the total carbon with which the cosmic-ray-produced radiocarbon is mixed, the main part being dissolved in the sea, so we expect that nuclear weapons could produce a short-range rise in the radiocarbon content of the carbon dioxide in the atmosphere, which later would decrease as the atmospheric carbon dioxide mixed with the sea. Therefore, only 1.5 percent as many neutrons would be required to double the natural radiocarbon content of atmospheric carbon dioxide for this time before mixing with the sea could occur, or about 78 kilograms or 170 pounds of neutrons. To orient ourselves, the 20,000-tons-of-TNT-equivalent atomic weapon involves the fission of 1 kilogram of uranium or plutonium and the liberation of about 10 grams of neutrons. If all these neutrons escaped into the atmosphere, it would obviously require 7,800 such weapons to double the radiocarbon content of the atmospheric carbon dioxide even with no mixing with the sea, and about 520,000 with complete mixing. These, correspond to explosive energies of 156 and 10,400 megatons of TNT, respectively, if all neutrons formed escaped. A reasonable escape figure might be 15 percent, so we can expect that nearly 1,000 megatons of fission would be necessary just to double the atmospheric radiocarbon content, and that about 66,000 megatons would be necessary for the same effect on a long-term basis.

The interchange between the atmosphere and the sea water, which is constantly taking place, would deplete and remove the excess radioactive carbon dioxide. Now it is known from measurements of the radioactive hydrogen, tritium—which is also made in the atmosphere by the cosmic rays—that this interchange is slow. In fact, we learn that the radioactive water that is formed by the burning of the tritium made by the cosmic rays is not diluted by more than the top 100 meters or so of sea water in its lifetime of about 18 years. The carbon dioxide dissolved in this water is about equal to the total in the air. In other words, a dilution by more than the twofold that corresponds to the dissolved carbon dioxide in the top 100 meters of ocean water would take longer than 18 years. However, the dilution by this factor of 2 would occur essentially immediately within a matter of weeks or months. Therefore, we would have to double our estimates for even the short time scale activation of the atmosphere to reach the enormous figure of 2,000 megatons of fission required. Thermonuclear weapons, of course, also involve neutrons. For a given energy release, they produce somewhat more neutrons than fission weapons; however, the order of magnitude of atmospheric activation would not be greatly different. So our estimates apply to all nuclear weapons. The essential point is that the atmosphere is difficult to activate and the activities produced are safe. In addition to carbon-14, there are a few others produced in low yield; they include tritium and very short-lived products, but none is produced in sufficient amounts to be hazardous.

For weapons fired on the surface, the activation of the surface materials is a possibility, but in general it appears that most of the neutrons form stable isotopes and that the amount of radioactivity produced, at least with ordinary surface materials, is relatively small. The principal radioactivities produced by nuclear weapons are produced in the weapons themselves, and not in the environment.

RADIOACTIVITIES PRODUCED IN WEAPONS

Turning now to the radioactivities naturally produced in nuclear weapons themselves, probably the most important is radioactive strontium, which has a half-life of 28 years. The first reason this is so important is that strontium is chemically similar to calcium, which is one of the main mineral constituents of the body. Bone consists principally of calcium phosphate, and for this reason radiostrontium, like calcium, is deposited in the bone. The amounts of ordinary nonradioactive strontium naturally present are so small that the radioactive strontium will follow ordinary calcium into the body. The second reason that radioactive strontium, Sr^{90}, is an important fallout radioactivity is that it has a long but finite lifetime—28 years half-life, 40 years average life—and thus has a persistent effect. Third, because of its bone seeking property, it stays in the body a long time. Fourth, the probabilities of body ingestion can be high. Finally, the fifth reason for its importance is that strontium-90 is produced in high yield in the fission reaction—about 4 or 5 percent of all fissioning atoms yield this isotope.

In order to orient ourselves about this, let us consider the maximum permissible concentration recommended by the National Committee on Radiation Protection for AEC workers for radiostrontium—1 microcurie for the standard man, whose body is taken to contain 1,000 grams of calcium in total. The maximum permissible concentration is of course well below any level at which one would expect any damaging effects to appear. On the basis of experiments with animals, statistically observable increases in the number of bone tumors should not be expected to appear at less than 10 times this level. As we go above this figure, the chance for bone tumors occurring increases rapidly so that the likelihood of bone cancer with 30 to 40 times that figure is appreciable.

INTAKE OF STRONTIUM-90

Let us consider in some detail the mechanism by which this most important fallout radioactivity produced in nuclear weapons might be expected to enter the human body. The first point is that from the point of view of fallout there are essentially two classes of nuclear weapons—the high-yield megaton

weapons and the lower-yield kiloton weapons. All nuclear weapons produce atomic clouds that rise to heights dependent on the energy released, and the clouds from the megaton class of weapons rise rapidly up through the tropopause and pass into the top layer of the atmosphere, which we know as the stratosphere. This part of the atmospere is essentially isolated from the lower layer in which we live, the troposphere, and where all of our normal winds, storms, and so forth, occur. Therefore, radioactivity produced in megaton weapons is placed largely immediately in the stratosphere, while the smaller kiloton weapons produce clouds that in general do not reach into the stratosphere, but stop near the tropopause—the imaginary boundary between the stratosphere and troposphere—and have the bulk of their radioactivity left in the troposphere.

In the troposphere where rain occurs, any particulate matter will be washed down in a period of days or weeks. It is easy to show, for example, that one-tenth inch of ordinary rainfall will probably remove essentially completely all particulate matter except for that which is so mall as to be almost of molecular dimensions. In other words, for one-tenth inch of rainfall one can be quite certain that the air between the layer in which the rain originates and the ground is washed clean of fallout activity, except for the minute fraction that may be so small that it moves with the air out of the way of the falling raindrops as they make their way toward the earth; and even this tiniest fallout material is likely to be precipitated also, for it will migrate rapidly by molecular-type motion and in this manner is likely to absorb itself on other particulate material and so be rained out. For these reasons, tropospheric radioactive fallout does not stay in the atmosphere for more than a matter of weeks. It may make 2 or 3 trips around the earth in a given latitude before being entirely removed, but its lifetime in the atmosphere will be a matter of weeks.

This is in very sharp contrast to the material that is placed in the stratosphere by megaton weapons; this material appears to stay there for a matter of years. Perhaps 10 years is a good average, at least for the weapons fired to date. It is well to bear in mind that this conclusion may be dependent on the nature of the material carried up in the cloud, but our present experience indicates that the fallout from megaton weapons that does not occur essentially in the first few hours or days, and is therefore deposited mainly locally, is deposited only at a very slow rate corresponding to an average time in the stratosphere of about 10 years. As a result of this long residence time in the highest layers of the atmosphere, the winds mix and distribute the radioactive material broadly over the earth and one finds, when the fallout does finally find its way down into the troposphere where the rain and snow wash it out, that the rates of precipitation are relatively uniform over the entire earth's surface.

Returning now to radiostrontium, at the rate of 1 kilogram of fission for 20 kilotons of TNT equivalent, 2 megatons of fission energy would be equivalent to very nearly 1 millicurie of strontium-90 per square mile of the earth's surface, or about 79 disintegrations per minute, per square foot of the earths' surface. The average soil of the earth has about 20 grams of calcium that is in a form available for plant metabolism in the top 2.5 inches for each square foot of area. Now, recalling the maximum permissible concentration level of 1 microcurie per standard man and noting, as will be shown later, that in order that this concentration not be exceeded, the topsoil of the earth should not contain any more radiostrontium than would correspond to 10 times the concentration in the human body that is just permissible—that is, 1 microcurie per 1,000 grams of calcium, or 2,200 disintegrations per minute, per gram of calcium—we find that 11,000 megatons of fission energy would produce this average level of radioactivity. Actually, as I will indicate, there can be a concentration of strontium-90 in the soil about 10 times greater than the recommended maximum permissible concentration before one would expect a man living in such an environment to accumulate a maximum permission concentration. The afore-mentioned 11,000 megatons of fission energy would yield a strontium-90 content in human beings just equal to the maximum permissible concentration (MPC); at less than 10 times this value, or below 110,000 megatons energy equivalent, statistically observable incidence of bone tumor should not appear; but at 30 to 40 times the MPC, or 330,000 to 440,000 megatons, the likelihood of untoward effects would be appreciable. Even the lowest of these figures is very far in excess of the total energy released to date.

KINDS OF FALLOUT

High-yield weapons fired near the surface have a portion of their activity deposited in and on particles large enough to fall out in the first few hours or days. Thus, we have three kinds of fallout from high-yield weapons.

1. The first, or local, is due mainly to large-sized particles. This may cover a considerable area depending mainly on winds. In the February 15, 1955, release of the Atomic Energy Commission that described the experience in the Marshall Islands in the Castle test series in the spring of 1954, some 7,000 square miles were described as being contaminated by this type of fallout.

2. The second fallout from the high-yield weapons is that portion which resides on the small particles, but which never reaches the stratosphere and thus stays in the troposphere until it is carried down by rainfall or settles out. There is thus a band of fallout in the same general latitude as the test site; the material may circle the earth two or three times before it is precipitated, but it does fall out within the first few weeks.

3. However, a large part—half or more depending on firing conditions—of the radioactive yield from high-yield weapons resides in the third category, which is the fallout that occurs from the stratosphere itself. Of course, some of the large local fallout may form particles which were lifted into the stratosphere, but which were so large and so bulky that they fell out rapidly anyhow. The finely divided material that reaches the stratosphere apparently stays there for years in the main. A slow leakage through the tropopause into the troposphere occurs—apparently something like 10 percent per year descends. Measurements of the strontium-90 content of soils, rain and snow, and biological materials on a worldwide basis have all shown that strontium-90 fallout occurs all over the world at rates that are not very dissimilar from one another, except that there is a tendency in the middle latitudes in which the tests are conducted for an extra fallout, presumably of the aforementioned tropospheric variety. Since the completion of the Castle series of tests 2 years ago, this worldwide rate of fallout has approximated 1.5 millicuries of radiostrontium per square mile, per year. We thus see that radioactive fallout from the stratosphere is a very slow process. This is very fortunate indeed, since the high-yield weapons thus have a major part of their radioactivity dissipated in the atmosphere in a harmless way if they are fired in the air or on the surface.

The fallout apparently occurs in the final step by a washing down of the tropospheric air by rain together with direct falling. The radiostrontium descends from the stratosphere into the troposphere by the processes of diffusion and falling, and is then caught up by the tropospheric weather and in a matter of a few days is deposited. Reasonable estimates for the middle latitudes indicate that the average life in the troposphere is about 1 week.

DEPOSITION OF STRONTIUM-90

The radiostrontium comes down mainly in raindrops although fine morning mists and fogs may be particularly effective in this regard also, as well as surface contact and direct falling. It descends on the foliage and on the soil. That fraction of it which falls on plant leaves has a good chance of being absorbed directly into the plant—much in the way that most modern leaf fertilizers operate. The Eniwetok tests were conducted on coral islands and as a result their fallout may be largely water soluble. In any case, direct measurements of the radiostrontium content of alfalfa and other crops showed them to be appreciably higher in radioactivity than the soils on which they grew, strongly indicating that a leaf assimilation mechanism is important. The rain falls and carries radioactivity, but when it runs off to the rivers and the seas it is nearly pure because of the action of the soil in absorbing the fallout, so that rivers are essentially free from radiostrontium. Lakes and reservoirs have a content that corresponds approximately to their surface areas only. The radiostrontium is absorbed in the top 2 or 3 inches of soil and held there very tenaciously. Plowing, of course, buries it more deeply, but it appears that in unplowed soil the radiostrontium does not move in a matter of 2 or 3 years.

The researches on radiostrontium conducted by the Atomic Energy Commission have been extensive. The AEC has sampled soils on a worldwide basis and submitted the sample for analysis of radiostrontium content to the Health and Safety Laboratory of the New York Operations Office of the Atomic Energy Commission, the Lamont Geological Observatory of Columbia University, and the Enrico Fermi Institute for Nuclear Studies at the University of Chicago. Direct fallout collected on gummed papers, milk and cheese, alfalfa, animal meat and bone, and even human bodies has been extensively studied. On the basis of the information so obtained, it is possible to say unequivocally that nuclear weapons tests as carried out at the present time do not constitute a health hazard to the human population insofar as radiostrontium is concerned, and it is believed with good reason that radiostrontium is likely to be the most important of the radioactivities produced. It is well to note that since radiostrontium is assimilated in the bones it constitutes essentially no genetic hazard, for its radiations do not reach the reproductive organs.

The milk and cheese radiostrontium content is not as high, relative to that of the grass which the cows eat, as one might expect. There appears to be a discrimination against the fallout material such that the calcium in milk and cheese is roughly one-fifth to one-tenth as radioactive with radiostrontium as the grass that the animals eat. There are various possible physiological explanations of this, and the conclusion itself may not be completely certain, but the data available to date indicate this to be true. In addition, the plant uptake of radiostrontium from soil does discriminate somewhat against radiostrontium as compared with calcium. The calcium taken up from the soil into the plant has in general about one-half the radiostrontium content that the soil calcium has. These two results protect the human population against ingestion of radiostrontium, since milk and cheese are the principal sources of calcium in the human diet. We find, therefore, that the radiostrontium content of human bodies is the lowest of all animals measured and is lower than the average soil and the average

foliage by tenfold. The Sr^{90}-to-calcium ratio in young people—whose bones are still forming—corresponds to about one-thousandth of the maximum permissible concentration recommended for adults—1 microcurie per standard man containing 1,000 grams of calcium. The average soil in the United States contains about 10 times more, whereas abroad the radiostrontium content in other areas of the world not subject to the local test fallout is about one-third of that for the United States.

The surface air itself contains radiostrontium due to the fallout from the stratosphere and corresponding to the average time between rainstorms in which it can collect. Filtration of air at sea level discloses radiostrontium on filters if the filters are fine enough, even in periods when bombs are not being tested; thus the only fallout is from the stratosphere reservoir from the high-yield weapons. Measurements in the antarctic on snow samples collected there show that the fallout rate in January and February 1955 was comparable with that observed in the middle latitudes.

CONCLUSION

Finally athough the main part of the radioactivity from high-yield weapons fortunately dissipates in the stratosphere, the small but very significant part that falls out within a few hundred miles of the site of the explosion for weapons fired on the surface constitutes a very real hazard and nothing I have said should be interpreted otherwise. The weapons tests are conducted with great attention to this and the other dangers and every effort made to protect against misadventure. What we have learned from the studies I have described—which by the way have been conducted under the name Project Sunshine—is that these local precautions should be entirely adequate and the worldwide health hazards from the present rate of testing are insignificant.

The Cordell Hull Award

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, on April 18, the Committee on Foreign Trade Education presented its annual Cordell Hull award to Paul Hoffman, former Administrator of the Economic Cooperation Administration, and present chairman of the Studebaker-Packard Corp.

This award by a bipartisan group doing important work in the field of increased public awareness of the significance of international trade is a well-deserved tribute for Mr. Hoffman's splendid contribution to our foreign economic policy. I had the privilege of participating in the program at which the award was presented and was impressed by the speech which Mr. Hoffman delivered. I think it is particularly timely in its theme and I would like to call it to the attention of the Congress. Under leave to extend my remarks, I would also like to insert the complete text of the Cordell Hull Award, which was delivered by the Honorable Jacob K. Javits, attorney general of the State of New York:

TEXT OF CORDELL HULL AWARD

In recognition of his national leadership and the great tradition of public service he established in a career of more than half a century as Secretary of State and as a Member of both the United States Senate and House of Representatives, and in appreciation of his historic sponsorship of the reciprocal trade agreements program, the Committee on Foreign Trade Education, Inc., honors the memory of Cordell Hull, and in tribute makes the second annual presentation of the Cordell Hull Award for leadership in building United States foreign economic policy.

The 1955–56 award is made to Mr. Paul G. Hoffman.

Mr. Hoffman has throughout his career in business and public affairs advocated an effective, modern tariff-trade policy in accordance with the goals first set by Cordell Hull. Mr. Hoffman, as the first Administrator of the Economic Cooperation Administration, succeeded brilliantly in reviving international commerce and industry and, as a consequence, in stiffening war-ravaged Europe to meet the threat of communism. Mr. Hoffman has also made a historically important contribution to the development of United States foreign economic policy by means of the leadership he has exerted in the United States business community, having, through the formation of the Committee on Economic Development during World War II, and in the years that have followed, made many of the most important segments of American business fully aware of the economic and political danger to which the nation is exposed by the retention of out-of-date protectionist sentiment.

Award made this 18th day of April 1956 for the Committee on Foreign Trade Education, Inc.

JACOB K. JAVITS,
Attorney General, New York.

UNITED STATES SURVIVAL AND THE RUSSIAN ECONOMIC OFFENSIVE

(Remarks of Hon. Paul G. Hoffman, chairman of the Studebaker-Packard Corp., in receiving the annual Cordell Hull award for leadership in building United States foreign economic policy, New York, N. Y., April 18, 1956)

Mr. Chairman, Attorney General Javits, Congressman WILLIAMS, distinguished guests, members and friends of the Committee on Foreign Trade Education, thank you very much. I am deeply honored to receive the Cordell Hull award and to join with you this evening in tribute to the man who pointed the way to a realistic and modern foreign economic policy.

It is also a pleasure to note the progress this bipartisan committee of volunteers has made during the past 2½ years in promoting throughout the country an interest in foreign economic policy, a subject about which too many Americans have for too long been quite unconcerned.

I am delighted that the Young Republican Club has joined you this evening in co-sponsoring the Cordell Hull award ceremony and also that so many representatives of the Young Democratic Clubs are present.

This bipartisan tribute to Cordell Hull, whom I had the great privilege of knowing, is very fitting. He was one of the outstanding leaders in the Democratic Party, but he was, first of all, a great American statesman. He was the first of our 20th century leaders to recognize the intimate relationship between foreign economic policy and the highest political goals. He was convinced even before World War I that "unhampered trade dovetails with peace; high tariffs, trade barriers, and unfair economic competition, with war," and that "liberal commercial policies • • • constitute an essential foundation of any peace structure the civilized nations might erect."

There is a new element in the world situation which makes an effective and enlightened foreign economic policy even more imperative, and that is the new Communist economic offensive. Despite the startling repudiation of Stalin on the part of Russia's new leaders, Khrushchev and Bulganin, the basic goal of the Kremlin is unchanged. It is world conquest. But whereas Stalin placed great emphasis on periphery military action and threats of military action to make progress toward that goal, the new leaders put their stress upon trade offers and offers of economic aid. Perhaps the most graphic statement of the crisis confronting us as the result of this new Communist economic offensive was made by our Nation's delegation to the United Nations. They stated:

"The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom • • • The Soviet Union • • • (is) using economic and social collaboration as a means for jumping military as well as political barriers • • •. We are in (an economic) contest • • • which is bitterly competitive."

The United States delegation to the U. N., with the Presidents' specific endorsement, added that, "We could lose this economic contest unless the country as a whole wakes up to all its implications."

What are these implications? One is that the Russians are using trade to win friends and influence people. Communist trade boss Mikoyan's trip last month through Southeast Asia shows the design. He had, for example, a brilliant success in Pakistan. Although Russia's diplomatic and political relations with that stanch ally of the West are just about as bad as they can be, Mikoyan has told the Pakistanis that, all politics to the side, Russia wants trade. Pakistan, of course, desperately needs industrial equipment and also sorely needs an outlet for their hides, jute, cotton, and other agricultural products. Mikoyan has appealed to the pride of these newly independent people by assuring them that he is interested in a straight commercial proposition—trade as between equals—as opposed to aid with strings on it. As a result of major Soviet-Pakistan trade parley began in Karachi just this last Monday.

What comes next can be easily appreciated from these comments Pravda made on Mr. Mikoyan's visit to Pakistan: "The foreign policy principles which naturally follow from Pakistan's almost total orientation of her trade to the capitalistic countries of the West harmfully affect Pakistan's financial stability and the living level of her people. Thus," Pravda continues, "it is completely understandable that Pakistan society all the more often talks of the development of normal economic and trade relations with all countries of the West and the East. Business and trade circles of Pakistan understand that the U. S. S. R., the Chinese People's Republic and the countries of the Peoples Democracies may serve to stabilize the market for many Pakistan products and, in turn, assist in providing Pakistan's needs for the industrialization of her industry and trade." And Pravda blandly looks to the future with: "In these days it can be seen that the visit of A. I. Mikoyan has aroused a new wave of genuine interest in the Soviet Union and a massive desire to improve basic economic, trade, cultural, and friendly connections between the peoples of the U. S. S. R. and Pakistan."

Another of the implications of Russia's new economic offensive is that they are using trade to create dissension among the free nations and particularly to build up the resentment of all nations against the United States. Last February Mr. Khrushchev told the 20th Congress of the Communist Party that, "altogether they (the free nations) have more than enough grounds to be displeased with the United States which is dis-

organizing the world market by carrying on unilateral trade, fencing off its markets from foreign imports, * * * and other measures hitting hard at other countries."

Even more effective than this generalized propaganda of the Communists against us are their campaigns within the individual countries when the United States has made some unpopular trade move. I still recall vividly the campaign the Communists and fellow travelers staged against us in Denmark when we barred Danish cheese, and the criticism by Aneurin Bevan when we raised the import duties on bicycles. What the Communists will do to us in Japan if we bar Japanese textile products is something I don't like to think about.

While the Russians are carrying on their new trade offensive, what are we doing? Well, right at the moment a vicious attack has been leveled by the high protectionists against the President's recommendation that the United States join the Organization for Trade Cooperation. As you all know, a bill is now before Congress which would authorize our so doing. That organization, of which 35 nations will become members, is to be set up to administer the General Agreement on Tariffs and Trade. OTC, by the creation of an Assembly, an Executive Committee (on which the United States will have a permanent seat) and a Secretariat, will give a continuing administration to the General Agreement. We have, of course, been a contracting party to the agreement since its inception, and have participated with the other nations in stabilizing or reducing approximately 60,000 tariffs and lessening other trade barriers, all of which have had a very positive effect on United States prosperity.

United States membership in OTC is a simple, commonsense plan, providing permanent administrative machinery to perfect the operation of GATT. By means of OTC there will be a forum in which most of the free nations will be able to negotiate a continuing expansion of international trade. It will give us a quick and effective means to see that the other nations hew the line on their trade agreements with us. This sort of organized consultation is effective, as I know from my own Marshall plan experience.

Failure to authorize United States membership in OTC will, I am sure, confuse and depress the international trade situation and seriously compromise United States world leadership.

The authority for OTC is inherent in Secretary Hull's Reciprocal Trade Agreement Act. The high tariff people have, however, made wild attacks claiming that OTC threatens the "constitutional prerogatives" of the Congress in setting tariff policy. Charges like these are just plain nonsense and those who make them know it. OTC will not in any sense enlarge our tariff concessions or expand the President's authority. As a forum, and in making the general agreement more effective by permanent consultative machinery, however, it will be a welcome advance in our trade policy.

GATT, which OTC will administer, has already provided a very real value to the United States. Thanks to that agreement, 14 Western European countries between 1953 and 1955 lifted quota restrictions on more than 60 percent of their dollar imports. These concessions which we won through the machinery of the general agreement signaled a major increase in United States exports to Western Europe in 1955. While Western Europe's imports increased generally by 18 percent during 1955, its imports from the United States rose by more than 24 percent, a percentage increase worth hundreds of millions of dollars to United States exporters and the 4,500,000 American families whose income is directly dependent on export trade.

But, believe it or not, that's the sort of dollars and cents advantage for the United States which the high tariff people are so bitterly fighting.

Somehow or other we've got to persuade the protectionists to take the broad, long look instead of the narrow, short look on this question of trade. If they do, they will support the legislation authorizing OTC. The plain fact is that without expanding world trade we face disaster. We are living in an interdependent world and we are becoming increasingly dependent on that world for our economic survival. We cannot close ourselves off from the rest of the world except at a very great risk to ourselves. We need goods from the outside world if we are to have a prosperous and expanding economy here. And other nations need our goods in ever increasing amounts if they are to grow in strength.

Great Britain has known for well over a century that she must trade or die. She therefore adopted trade policies that helped expand world trade. We are rapidly coming to the point where our economic survival and strength, like that of Great Britain's, is dependent on world trade. We must face up to this reality and adjust our thinking and attitudes as the British did many years ago.

There are numerous examples of the stark reality of our need to import. We take justifiable pride, for instance, in our extensive use of steel. It is the backbone of our economic life. To produce 1 ton of steel requires 13 pounds of manganese. Of these 13 pounds, we produce in this country less than 2. There are other examples. We import 43 percent of our lead, 50 percent of our tungsten, 97 percent of our nickel, and all of our tin and natural rubber. As our economy expands and as we use up our own supplies of these basic materials we will need to import even more for the economical operation of our vast industrial machine.

There are also numerous examples of our need to maintain and develop export markets for the products of our farms and factories. You all know the extent to which agriculture is dependent on export markets for its prosperity. Our farmers sell abroad about 20 percent of their lard, almost 50 percent of their production of dry whole milk, 25 percent of their wheat, over 50 percent of their rice, a third of their dried fruit, a third of their cotton, and one-quarter of their tobacco.

There are any number of our United States businesses that literally must sell between 10 and 25 percent of their production for export in order to stay in a healthy and sound condition. I do not wish to take too much of your time by droning further statistics to you. So I will restrict myself to 2 important examples: 10 percent of our coal must go abroad; 20 percent of our textile machinery is for the export market. These levels cannot be maintained and expanded unless we as a nation are willing to let trade expand.

There is another hard fact about trade that I want to emphasize: any restriction that is placed on an import is in fact a restriction on our exports. Other free nations, if they are to have dollars to buy our goods, must have a chance to earn these dollars. Even if we should save jobs in one industry by raising the tariff on competitive imports, we will do so only at the expense of a loss of jobs in some other industry. For example, our textile industries are understandably concerned about the fact that during the first three quarters of 1955 the Japanese sold us $19 million worth of finished cotton goods. But we shouldn't forget that in that same period they bought from us $95 million worth of raw cotton. Those dollars that other nations cannot earn because of our import restrictions are dollars that American industry will not be able to earn through exports. This should be so obvious that it should not need stating. But almost every advocate of protection tries to give the impression that there is a net saving of jobs through such protection. This is just not true, but unless it is adequately challenged the people may think it is true.

The Nation must realize the tremendous importance of trade. It is part and parcel of our expanding prosperity and an all-important factor to our political survival. Despite these clear facts, self-seeking lobbies, well financed and fast talking, continue to exert a major influence on the thinking of the people and of the Congress. We must clear the air with truth—the Nation's future depends on it. That's why the task you members of the Committee on Foreign Trade Education have undertaken is of such primary national importance. Your efforts to spread the truth must be intensified.

May I close with the words that President Eisenhower used in his message to Congress urging the passage of the reciprocal trades bill: "If we fail in our trade policy, we may fail in all."

O'Brien's Talk an Oasis in Congressional Record

EXTENSION OF REMARKS
OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. BOLAND. Mr. Speaker, on April 17, the gentleman from New York, Mr. O'BRIEN, presented to this House a plan for the forging of an effective weapon in the new economic phase of the cold war, a plan which calls for recruitment of more of our bright young people in what might be described as a division for peace.

I should like to associate myself with the idea of bringing Main Street into our Foreign Service by enabling our Government to compete with private business for the services and talents of our young people. I believe it would enhance our prestige abroad and persuade the American people to associate themselves more intimately with our foreign policy.

We should not lose an economic war. But we have lost the opening skirmishes. We need more manpower in the battle, more economic troops. They are all about us if we in Congress, and the White House, will face the problem boldly and swiftly.

The Knickerbocker News, of Albany, a distinguished newspaper published in the capital city of New York, suggested in a recent editorial that the plan advanced by the Albany Congressman was designed to get the Foreign Service "out of the drawing room and into the market place." I, too, subscribe to the theory that modern diplomacy should be as much at home in a business suit as in a top hat and tails.

Mr. Speaker, I should like to insert in the RECORD the following editorial from the Knickerbocker News:

O'BRIEN'S TALK AN OASIS IN CONGRESSIONAL RECORD

Our Congressman, LEO W. O'BRIEN, seems to have some ideas about the State Department.

He wants it to get out of the drawing room and into the marketplace to find budding young diplomats.

He'd like it to pass up Phi Beta Kappas for some rough, tough halfbacks from the University of Michigan. (At times they've considered a glee club singer from there—named Dewey—but maybe that's not pertinent.)

And he'd like a new Division of Economic Cooperation staffed with footloose young men who can teach others about our way of life without giving away money. He'd also like them to keep an eye out for places where American business can invest money.

He said most of this on the floor the other day; immediately drew the interest of the State Department, which seems to like some of his ideas. (Amid so many it ought to find something it liked.)

Personally we approve going into Main Street and hiring diplomats. We think the State Department tends to get too many college youths straight out of convertibles; youths who may have been sheltered from a big segment of America that they will have to represent.

Whether they should be Phi Beta Kappas or football players, we wouldn't know. Personally we're all for three-letter valedictorians—but they probably all go with the telephone company. Offhand, we're not worried about our diplomats having too many brains.

As for his proposed "sales force," the idea of America "investing" rather than "giving away" money has terrific appeal. So long as the "investing" goes on without exploitation—and we think it can—this in itself teaches others more about America than a regiment of diplomats can.

If, after they know about America, they want to borrow our ideology, that's fine. But as in "Teahouse of the August Moon," if they still prefer to build a "teahouse" instead of a "pentagon-shaped school," we'd better just let them.

Meanwhile, it's nice to bask in the unctuous luxury of having a Congressman with a few ideas.

Problems of the Small-Business Man

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert one of the most disturbing letters I have received in the 11 years I have been a Member of the Congress.

The independent businessman, sometimes called the small-business man, is one of the basic and most important segments of our political and economic democracy along with the executives of larger business, the service trades, industrial labor, our farmers, and the professions. If our country is to continue to prosper, each of these elements must share in the prosperity.

Of them all, however, the small or independent businessman best typifies the American ideal, because in most cases, and in most communities, he is the self-made man whose hard work has built up a personal equity in his own local business, whose community leadership is respected rather than feared, and whose business independence is matched by his political independence. No one can tell him how to run his business, and no one can tell him how to vote.

There is increasing evidence that today the small-business man is steadily being pushed to the wall. The competitive advantages of big business such as superior buying power, more capital available for expansion, and control of many market outlets are making it impossible for many small businesses to survive.

The letter to which I have referred was written by a small-business man who is now seeking to sell out the business which he has built up through the years and to invest his equity in the stocks of his larger competitors. The facts and figures he quotes speak far more eloquently than any words that I might utter. I am placing his letter in the RECORD so that the members of the House committees which formulate tax, banking, and small-business legislation may have the benefit of his experience. Something must be done to work out laws in these fields which will better enable small business to meet the crisis it is facing, if it is to continue to maintain the important position it has held in the past in our American way of life:

MARCH 23, 1956.

The Honorable J. VAUGHAN GARY,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR VAUGHAN: We are continuing to hear politicians talk about helping the small-business man; and since this wonderful help is forcing me and thousands like me to offer our businesses for sale daily to big business firms who can raise capital, I thought I would take the time to tell you of our plight, not that I expect anything to be done, but I will at least get it off my chest before I retire from business. It makes me sick to think that I have worked for 35 years to build from scratch to a nice business only to be forced to sell it because Government regulations do not allow enough profit to remain in business. The small corporations cannot hope to continue to survive unless they can get some tax relief where incomes are under $100,000 before dividends and taxes.

I will be more specific. I am being forced to sell my business for the lack of capital. We are being forced to compete against Ford, General Motors, Chrysler, Standard Oil, Goodyear Tire & Rubber, not to mention large co-ops who pay no taxes at all. Our resale prices are established by them, as they have a tremendous price advantage due to buying power, and there isn't anything we can do except to try to compete with them. These firms can float long-term loans or sell stocks and bonds when necessary to increase capital; but I ask you who is interested in stock in any small corporation. We are not large enough to get an insurance loan, and the bank is only interested in short-term loans. This leaves us without funds in order to compete with every other growing business.

Our company has paid from $30,000 to $50,000 in taxes annually for the past 4 or 5 years; and without paying dividends to stockholders, we are still going down at the rate of from $15,000 to $25,000. You might ask why our corporation shows a net income of $50,000 to $60,000 before taxes but cannot get enough cash to carry on our business. The answer is simple. No company can stand still, and after taxes we do not have enough cash left to handle an increase of 5 percent in sales. A 5 percent increase in sales would be $125,000 which would require a $31,000 increase in capital. This is $2,000 more than our net after taxes remembering that we are not even considering dividends; and when we have a normal increase, which is considered 10 percent, we go from $25,000 to $40,000 in the hole. During the past 2 years we have had a net income in excess of $125,000, and after paying between $60,000 and $70,000 in taxes, it has been necessary to borrow $60,000 from the bank. If we have a 10-percent increase this year, our indebtedness will go to at least $90,000. The only thing I can ask as a small-business man is why I should go broke in order to pay a lot of taxes and struggle with two strikes against me to start.

Each day we get letters of mergers among small manufacturers and wholesalers for the same reason. It is my guess that a few hundred large corporations will control all businesses within the very near future, and with this thought in mind I am placing our business on the market in the hopes that I can find a buyer; as I can take the money that I have invested and put it back in stock of any one of a number of good corporations and have a greater net return with no inventory, no headaches, and I won't even have to work.

If it is the desire of Government to have a few empires like General Motors and Standard Oil to run the country, I suggest that Congress leave the tax structure as it is today.

In closing let me say that it is quite amusing for the average small-business man to read about all the consideration he is receiving in Washington.

Very truly yours,
RICHMOND AUTO PARTS, INC.,
H. B. TRUSLOW, *President.*

Newark's Glory

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. RODINO. Mr. Speaker, without in any way minimizing the beauty of the cherry blossoms that bloom in Washington, I wish to point with pardonable pride to the cherry blossoms which bloom in Branch Brook Park, which is part of my congressional district. The beauty of these cherry trees was at their fullest this past Sunday and many visitors from all parts of the State came to look upon this picture of nature in her finest dress.

The following editorial which appeared in the May 1, 1956 issue of the Newark Evening News entitles the story of the beautiful cherry blossoms well as "Newark's Glory":

NEWARK'S GLORY

Thousands are drawn to Washington from all parts of the country every spring to see the blossoming of the Japanese cherry trees around the Tidal Basin in Potomac Park. Few outside Essex County know that here in Newark is a cherry blossom display which many consider more dramatic than Washington's.

The lovely spectacle along Second River in Branch Brook Park was retarded more than 2 weeks by unseasonable weather. But

it has arrived at last. Of the 28 varieties, ranging from snow white through pink to dark red, the single-blossomed trees came to full flowering under the warm sun of the weekend. They will be succeeded in a few days by the magnificent double blossoms which last, barring heavy rain or windstorms, for 10 days.

The Essex County park commission last year began floodlighting the cherry grove from dusk to midnight to give more persons an opportunity to enjoy nature's glorious display. The experiment was so successful that this year the lights have been doubled. More will be installed next year. The effect is enchanting.

The people of the community have reason to be grateful to Mrs. Felix Fuld, the generous and public-spirited woman, sister of Louis Bamberger, who gave the trees to the county park system in 1928. Hers was a gift of rare and enduring beauty that each year gladdens the hearts of an ever-increasing number of visitors.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call to the attention of the Congress the fact that May 3, the occasion of Poland's Constitution Day, is a particularly fitting time to recall Poland's historic struggle to regain her lost freedom through generations of oppression and rule by conquerors. Today the changing atmosphere behind the Iron Curtain quickens the hearts of Poles everywhere in the hope that their beloved homeland may once again see freedom.

From the time Poland reached full-grown statehood in the 14th century ideas of democracy, freedom, religion, toleration, intellectual culture have been of first importance in that nation. These ideas are the traditions of the people rather than of the state. During the 19th century, when no Polish state existed, the nation nonetheless endured tenaciously, and, indeed, the people, lacking a state, clung all the more closely to their traditions. Not what the Polish state has been and has done but what the Polish people have been and still are—these are the components of that great tradition. It has been carried on by men and women, not by governmental bodies or agencies. The achievements resulting from the tradition are personal, not official, and those persons who achieved much during former glorious centuries remain vivid in the memories of their descendants, state or no state. When Poland was restored in 1918 that tradition sprang at once into national and political effectiveness, as witness the turning back of the Bolshevik invasion.

During Poland's golden age, in the 16th century, much of the Polish tradition took shape. Time and again, far oftener than most of us today trouble to recall, the Poles were the eastern defenders of Christianity, order, and civilization itself. The eastern hordes of Tartars, Turks, and—in the 20th century—Bolsheviks were turned back by the valor and sacrifice of Poles whose bodies today lie in the soil fought over a hundred times.

Of few national traditions can Poles be more proud than that of tolerance—chiefly in the religious and political spheres, but also as a personal trait of the individual. In tolerant Poland of the middle ages the Jews found refuge from the persecutors who pursued them in other nations of Europe. In the 16th century, Poland was the only place that gave the Protestant revolution a just hearing. Jan Zamoyski, perhaps the greatest of all Poles, expressed this religious tolerance when he called together his friends who had left the Catholic Church; he would gladly give half his remaining life to see them return to the church, he said, but rather than see them return under compulsion he would lay down his life.

The Polish political tradition of nonaggression was clearly evidenced in the 15th and 16th centuries when Poland increased her territory threefold and her population twofold without intimidation, terror, or bloodshed. Her characteristic tolerance made other groups, the Lithuanians and Ruthenians, desire to join Poland.

The fate of Poland, the traditional friend of the United States, will always be of primary interest to Americans, if only in remembrance of the heroic work of Kosciuszko and Pulaski in helping the American colonies to win their independence.

Today, the Polish struggle for liberation is widespread. It is being waged on the national, social, cultural, and moral levels, where human mind and feeling often play a greater role than that of bayonet, prison, or concentration camp. The characteristics of national temperament of which I have spoken undoubtedly will help the Polish people endure the present Soviet occupation. The tradition of individualism constitutes an obstacle to the subordination of Poland to the Communist system which disregards the dignity and freedom of man.

We will never rest easily, never forget the Poles' justifiable and burning desire for freedom until the yoke of Soviet enslavement and brutality has been lifted. We look to the day when Poland will again emerge a strong, free, prosperous, and happy nation. We know the people will never give up their hope for the arrival of that day. With the help of courage, perseverance, and faith in freedom, that day will come, I know.

Rhode Island Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. FORAND. Mr. Speaker, tomorrow is independence day for the great State of Rhode Island. One hundred and eighty years ago tomorrow the State of Rhode Island dissolved all legal and moral ties with her mother country, Great Britain. By repealing an act entitled "An act for the more effectual securing to his Majesty the allegiance of his subjects in this His Colony and Dominion of Rhode Island and Providence Plantations."

On May 4, 1776 Rhode Island formally severed all social, political, and economic association with Great Britain. The events that led up to these acts of impunity are concisely and authoritatively recited in our history books.

In 1763 the English Government determined to institute a program to strengthen colonial administration, and to raise colonial revenue. Each of these measures was eminently unpopular in America, but the question of a colonial revenue proved to be the principal pivot of controversy. At the close of the French and Indian Wars the British public debt was overburdening and in England the taxpayers were clamoring for relief. To help defray the expenses of the new colonial policy parliament, in 1764, passed the sugar act, imposing a tax on imports of foreign molasses into America. This was the first instance of a parliamentary act designed for the express purpose of raising a colonial revenue.

The sugar act provoked a storm of protest. In spite of these protests, parliament proceeded, in 1765, to a still more objectionable revenue measure—the stamp act—whereby a tax was levied on all legal and commercial papers, pamphlets, newspapers, almanacs, cards, and dice. Immediately rioting broke out, because of these imposts, and British goods were boycotted.

In 1766 a new ministry in England repealed the stamp act and reduced the duties imposed by the sugar act. Within a few months however, still another ministry was in power and the attempt to raise a colonial revenue was renewed. By one of the Townshend acts of 1767 duties were imposed on imports of glass, lead, paint, paper, and tea. Again the colonies responded with a boycott of British merchandise.

Colonial resentment found expression in a series of incidents, many of which occurred in Rhode Island. As early as 1764 Newporters climaxed a riot with crewmen of the British schooner St. John by firing upon the vessel with cannons. The following year a Newport mob, angered by impressment of American seamen, seized and burned one of the boats of the British vessel Maidstone. Most famous in this series of incidents was the burning of the British revenue schooner Gaspee.

After the Gaspee affair tensions rose to a climax. In 1773 Rhode Island formed a committee of correspondence for cooperation with the other colonies. On December 16, 1773, the Boston Tea Party was staged to protest a British plan for stimulating the sale of taxed tea. This defiant action, which caused the British to retaliate with coercive legislation known as the Intolerable Acts, was vehemently discussed and approved by

town meetings in Rhode Island. The Bristol town meeting boldly asserted that the time might come when the people would be provoked to renounce their allegiance and assert an independency.

The colonial spirit of independency was the rock on which Britain's North American empire was finally wrecked. Accustomed for more than a generation to little or no taxation, and to nearly complete freedom in the management of their internal affairs, the Americans were disposed to resent every British attempt to strengthen colonial administration. Free from the menace of New France, strong and self-confident, the Thirteen Colonies prepared to resist.

In 1774, Rhode Island gave support to the calling of the Continental Congress, naming as delegates the former political rivals Stephen Hopkins and Samuel Ward. In 1775, upon receipt of the news of Concord and Lexington, the general assembly created an army of observation—most of the troops later joined Washington's Continental Army. The same year the assembly commissioned its own navy, consisting of two units, to protect the colony's trade. Before the year was out, this force had attacked and captured a vessel of the Royal Navy. On May 4, 1776, the Rhode Island General Assembly climaxed its program of resistance by formally declaring its freedom from Britain. This action, taken 2 months before the Declaration of Independence at Philadelphia, made Rhode Island the first sovereign state established by Europeans in the New World.

This formal declaration of freedom has been called the "shot heard around the world."

Our State's firmness lies in her record. Rhode Island still remains the land of "firsts." The circumstances have changed the times, but the character and determination still lies dormant only to be kindled by any sort of tyranny over the mind of man.

Rhode Island is a proud State. Her people are progressive and hard working. The products of her workmen can be found in every part of the world. It is the cradle of religious liberty in America.

We shall continue to be proud and independent. We shall continue to work for the good of all and oppose all things that are not in the public interest.

The Polish Constitution of 1791

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 19, 1956

Mr. REUSS. Mr. Speaker, there are certain landmarks in the history of mankind's efforts toward a society of liberty under law which Americans can never forget. Just because Americans are drawn from the peoples of every part of the world, in a special way they find their inspiration in the history of those peoples.

On May 3 we mark the 165th anniversary of the Polish Constitution of 1791. It is a sobering thought that for most of those 165 years the Polish people have not been their own masters, least of all today, when they must bear their enslavement by the Communist tyrants. Yet, the spirit of freedom has always burned fiercely in Polish hearts, and the constitution which they adopted on May 3, 1791, is a shining example of the embodiment of democratic principles.

No celebrations will be allowed in Poland today, but we in America can commemorate this day by reaffirming our own dedication to the fundamental precepts of the Polish Constitution of 1791 and by restating our determination that the Polish people shall once again be free.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. FULTON. Mr. Speaker, May 3, 1956, is a day of reverence and remembrance for all the people of Poland, and their relatives and friends wherever they may be, in their native land of Poland, or in America, or throughout the world. It is a day they remember freedom.

May 3 is constitution day, celebrating the constitution of May 3, 1791, establishing democratic rights and religious freedom for all Poland's people.

We remember our good friends and relatives in Poland. In these difficult times, we urge them to continue their faith and good spirit. We people of America have not forgotten them, and we look forward to that great day of freedom, independent, and justice for all the people of Poland which is certainly on the way as evidenced by the rising spirits, success, and unity of the free peoples of the world.

We salute our friends, the people of Poland on constitution day.

I am glad to include in my remarks the following cheering statement of my good friend, Judge Blair F. Gunther of the Superior Court of Pennsylvania and supreme head of the Polish National Alliance in the United States:

POLISH CONSTITUTION DAY, MAY 3, 1956
(By Blair F. Gunther)

These are unsettled times for the peoples of the free world but these are times of crisis for the people of Poland. While the Poles inside Poland are not now able to demonstrate openly their intense desire for the freedom they have been denied, free Poles all over the world and those of Polish origin will, with additional vigor, commemorate the 165th anniversary of the signing of the constitution of the 3d of May. They call upon others with similar feelings for freedom to join them in the commemoration of this significant event.

Poland has nurtured seeds of democratic thinking since its earliest days. The freedom of the individual to speak, worship, and carry out his own work as he chooses has been fought for throughout many generations. Poland was one of the first states in Europe to elect its rulers by vote of its citizens. It has ever been liberal in its attitude toward religion. It has always strived toward a high level of education, and its ideals of justice have made it an historic place of refuge for many racial groups persecuted elsewhere.

The Poles have long understood, and still appreciate, the feelings which motivated the struggle for independence in the United States. The sending of numerous sons to aid on the field of battle is but one outward example of the sympathy they felt for this young and free country. The same spirit which manifested itself here during the Revolution brought about in Poland, at the same time, the adoption of the Constitution of the 3d of May.

The Constitution of the 3d of May 1791, can validly claim to be one of the world's greatest documents of freedom. It was the first written democratic constitution in Europe establishing the rights of all classes and assuring the religious freedom of all groups.

Those unfortunate Poles locked in by the curtain of iron can only look back silently at the past greatness of their country, praying also in silence for a reestablishment of the principles embodied in the Constitution of the 3d of May. Those who can commemorate this event, by word or deed, must do so with increased spirit to compensate for and inspire those who cannot. We are all related to the fervent patriots of the constitution, either closely or more distantly, either by blood or spiritually, and our debt to them is a great one. Our actions today can be a sign of those bonds of kinship.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. JENKINS. Mr. Speaker, I regret that it is necessary for me to be absent today on important official business, when the House has before it the agriculture bill of 1956. The measure was not previously programed for this week, and in the meantime I made certain commitments I am obliged to fulfill.

I have not missed a single vote in this session of Congress on the many measures that have come before us affecting our farmers. Nor would I miss this one today were it not absolutely necessary and were it not that I have assurances from the leadership of the Republican Party that my presence is not necessary, as most of the differences on the various features of the proposed legislation have been resolved.

Having been brought up on the farm, naturally I am inclined to favor any sound proposition that would be for the benefit of deserving farmers. For a number of years I have been a member of the grange and of the Farm Bureau, and I have been in close touch with the various programs that have been advanced for the benefit of the farmers. I have given considerable study and thought to the whole subject, and par-

ticularly to the bill now before the House.

The bill before the House is by no means perfect in every particular, but I do believe that on the whole it will make a constructive contribution for a solution to the farm problem. Were I present today and voting I would, accordingly, vote for the bill.

Agriculture is the leading industry of all of our industries. More people are employed in agriculture than any other business, and more money is invested in agriculture properties than any other business.

My votes in Congress have always been in favor of giving encouragement to this big industry and to the many people who engage in agricultural pursuits. My votes have always been for legislation which will give our worthy farmers a program that is economically sound and which will enable them to progress and prosper.

In Tribute to Poland, the First Ally

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. WIER. Mr. Speaker, I consider it an honor to participate in the celebration of the anniversary of Polish independence and to pay tribute to a heroic people. Today all people of Polish extraction greet this eventful date with a song on their lips, the Third of May Mazurka, and I am sure that even though the Iron Curtain alters the tones and distorts the words, the echo repeats from all sides: "Poland is not dead yet, while we are alive."

On May 3, 1791, Poland guaranteed freedom to all her citizens by adopting a consttiution, and became the first nation in Europe to have a written democratic document proclaiming the principles of human liberty.

On September 1, 1939, Poland was the first nation to take up arms to resist Nazi aggression—the first who had the courage to say, "No" to Hitler. Poland in her international policy was faithful at all times, not only to the letter but also to the spirit of her treaties, and did not allow herself to be led astray by the Nazi proposal to take part in an attack on Soviet Russia, and refused to cooperate in any anti-Soviet plot, abiding by her neutrality and striving for peace. Yes; Poland was first to fight, and for this honor paid dearly with the blood of her soldiers, not only in Poland during the September campaign but on all Allied fronts—in Norway, France, in the Battle of Britain, Africa, Itlay, Belgium, Normandy, Holland, Germany—on the seas, and in the skies over Europe.

Poland was the first ally. While Poland was the "mother of the United Nations," she was excluded from the Conference of the United Nations, convened on April 25, 1945, at San Francisco. Yet the thought that was to guide the work of the San Francisco Conference was expressed by a Polish king in 1750—Stanislaw Leszczynski, one of the early protagonists of international cooperation, who wrote a memorandum on strengthening the general peace. The thought underlying his plan was that the community of nations should go to the assistance of any country attacked. Likewise, in 1833, Poland's greatest poet, Adam Mickiewicz, proclaimed in his works the ideal of the common brotherhood of man—a genuine international organization.

The Polish people have always been brave to the point of folly and they have always been believers in freedom. Time and again they have been found defending the rights of men and women to live their own lives in their own way. The Polish people fought against a German invader trying to steal other peoples' lands as far back as the year 963. In 1241 they saved Europe from the invading Tartar hordes. In 1685 it was Sobieski and the gallant Poles who protected and saved Christianity from the ravages of the Mohammedan sword and stopped the infidel hordes from overrunning Europe and destroying the Christian people. The liberty-loving Poles came to the aid of our American Colonies in the Revolutionary War. Wherever liberty and justice are at stake, the sons of Poland never fail to rally. Thousands of Polish boys from my State fought courageously on the battlefields of Korea.

Poland has always been devoted to the cause of humanity. Her contributions to human liberty and free institutions are glorious. She is a symbol of freedom and of peace.

In observing this anniversary of a great event in the history of Poland, let us recognize that the fate of this old, brave, great nation still disturbs the world and America. At Yalta, Teheran, and Potsdam, we played a role not entirely compatible with our ideals. Let us all hope and pray that Poland, the first nation in Europe to adopt a democratic form of government, will be permitted to work out her own destiny under a government of her own, chosen by her own people.

The Lowest Summit Conference

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 24, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the New Republic for April 9, 1956, is worthy of the attention of our colleagues:

PARLEY IN A SANDTRAP

We have talked to several reporters back from the Eisenhower-Canadian-Mexican conference at White Sulphur Springs. Their eyes are still popping. The chief executives from Ottawa and Mexico City couldn't seem to figure out what it was all about. Neither could the reporters. Eisenhower knew; he had come to play golf with professional Sammy Snead. The reporters couldn't kick—there was a free bar open all the time—but why, after all, were they there? Mexicans were happy; they were upgraded. Canadians were miffed; they were downgraded. Otherwise the two had little in common. There was no agenda. At the windup Eisenhower scheduled 2-hour individual conferences with each guest; these were cut down to 20 minutes when it turned out they had nothing to say. Ike got out on the links again.

Shrewd writers believe that this was smart politics. "The average American," one of them explained, "distrusts striped pants and diplomacy. He favors man-to-man talks at top level. It's what he thinks he would do if he were President. Ike went out personally and ended the Korean war, didn't he? How can you explain that the real United States-Canadian problems are so technical that Ike probably has never heard of them? This was good headline stuff and made votes." The conference has been dubbed the lowest summit conference.

Getting to the Top

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 23, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, there was a time when a mother would tell her son that the way was open to the Presidency of the United States—that was then supposed to be the top.

However, Franklin Ford, in the Washington Evening Star of April 30 last, points out that at least there is another road to wealth and riches, even though it is not one traveled by the Horatio Alger boys. Here is what he wrote:

LIVE LIKE LORDS

(By Franklin Ford)

If you want to do right by your son, train him to be a labor leader. The Lords of Labor, with a capital L, are today's aristocracy, the modern princes of privilege, the well-fed, well-clothed, and well-housed.

Wouldn't it be dandy if your son and mine could be housed, for example, as well as Dave Beck, head of the Teamsters' Union. The Associated Press says his home in Seattle has a swimming pool, a movie theater, and a waterfall. About a year ago he permitted his union to buy the property from him for $163,000, a real bargain, providing he could live in it rent-free for life, and also that the union would pay all costs of service, taxes, and maintenance. And now he is going to allow his truck drivers to buy the furniture for $100,000, provided it stays in his house, presumably.

Besides, says the Associated Press, Mr. Beck gets $50,000 a year plus expenses, plus "furnished living quarters in the Teamsters' new $5-million marble and glass headquarters in Washington, plus an apartment in a Washington hotel."

Now, that's really living it up. And the "expenses" cover such things as Mr. Beck's trip to Hawaii with other executives of his union, for a business meeting. It wasn't, I'm sure, that these labor bosses merely wanted an expense-paid trip to the hula-hula land of romance and moonlight. It was because Hawaii is so much more convenient and centrally located for a business meeting than, say, Chicago. Besides, the AFL big brass meets in Miami, where there are lots

of night spots, race tracks, and swimming pools. So why not Honolulu for the king of the Teamsters' Union and his princes and barons?

Our President, Senators, governors, mayors, etc., hold office only for fixed terms, none more than 6 years but that's the silly American idea of rotation in office, with a secret ballot so the voters can pick the man of their choice. Of course, there's none of that stupid democratic nonsense in labor unions. The boss stays in for life, and the faceless zeros down in the ranks are subjects of an absolute monarch. Their only function, besides paying dues and assessments, is to obey.

Since today's kings like Beck, Reuther, Lewis, Hoffa, etc., hold in their grasp the economic livelihood of millions, and extract tribute from them in an unregulated system of private taxation, it seems right and just that these regal gentlemen also control the social and political lives of their subjects, and spend their dues money for mansions for themselves, or as campaign funds for politicians who will promise to do their bidding.

Yes, the smart thing to do is educate your boy to be a labor leader. Then he will really be sitting in the pullman diner of the gravy train, eating high on the hog.

The Cold War

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. MULTER. Mr. Speaker, permit me to direct to the attention of our colleagues Mr. Roscoe Drummond's column entitled "What Next in the Cold War?" The column appeared in the New York Herald Tribune for April 29, 1956. It follows:

WHAT NEXT IN THE COLD WAR?

(By Roscoe Drummond)

Part of the great debate in Washington today is over who's winning the cold war—the Soviet Union or the West? Mr. Dulles has been saying that we are winning the cold war because the Soviet Union has been forced to shift policies in midstream, and because the Kremlin has found it prudent to slough off some of the more ruthless coatings of the Stalin dictatorship. Adlai Stevenson has been saying that we are losing the cold war because the new Soviet tactics are more difficult to cope with, and because Soviet enticement and influence in Asia, North Africa, and the Middle East have made visible headway in recent months. President Eisenhower has been saying that we can't really know who is winning the cold war because it is impossible at this stage to cast up a firm balance sheet. My own instinct is to feel that, in this instance, Mr. Stevenson is nearer right than Mr. Dulles, and that Mr. Eisenhower is usefully candid in saying that dogmatic claims either way are misleading. What is needed, I think, is a fresh evaluation of what the United States can and must do—militarily, economically, and politically—to recapture the initiative. The purpose of this column is not to judge the cold war but to look at the criteria by which we can measure the adequacy of United States action as events take clearer shape.

THE BALANCE OF MILITARY POWER

This is absolutely critical, and this is why Senator STUART SYMINGTON's investigation into the scope and pace of United States defense production, whatever its political motivation, is timely and proper.

We hear it constantly repeated that we are today nearer peace, further from war, than 2 or 3 years ago. We hear it said that since each side can inflict massive destruction on the other, neither will find it profitable to embark upon war.

This is absolutely true and profoundly misleading. It leads to the suggestion that Soviet superiority in some major modern weapons is not crucial since we have sufficient nuclear arms to make their use by the Kremlin uninviting. This is a perilous premise. It is perilous because it is possible to avoid war and lose the peace. It is perilous because a significant shift in the balance of military power to the U. S. S. R. could incalculably strengthen Soviet influence all over the world and, though never used, overtly, could undetermine the will of the free world to stand together.

Moscow talks about reducing its armed force, but the United Nations Economic Survey of Europe for 1955 reveals that there was at least a 12 percent rise in Soviet military expenditures last year, and a continuing shift toward heavy industry and armaments. In England, Mr. Khrushchev discloses that the Soviets have dropped an H-bomb from an airplane (we haven't), and reports that Russia "will soon" have a guided missile with an H-bomb warhead capable of "hitting anywhere in the world." We haven't Moscow is producing submarines which can deliver atomic missiles at a rate far exceeding our own.

If this shift in the balance of power continues, it could undermine the Free World without firing a shot. To permit the balance of power to slip away from us is to invite disaster.

THE SOVIET POLITICAL CHALLENGE

The Soviet Union is today exerting diplomatic and political influence in parts of the world where its presence was not felt a few years ago—in the Middle East, where its arms sales are disturbing; in Asia where, for example, Ceylon has just voted a neutralist government into office; in the Western Hemisphere, where the Icelandic Parliament has called for the dismantlement of the NATO airbase.

THE SOVIET ECONOMIC CHALLENGE

By virtue of its ability to buy surplus foodstuffs, which are a drug on the American market, Moscow is making its trade-and-aid program increasingly felt.

These Soviet measures are counterable but only if the United States is ready to expend the resources to keep the balance of power from shifting to the Soviet Union; only if we are ready to help the newly independent, uncommitted nations to achieve political and economic progress which will cause them to identify their future with the Free World.

There is no present sign that American public opinion is yet prepared for this great exertion. It will require decisive and sustained leadership from the White House.

Giovanni da Verrazano, Discoverer of New York Harbor

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. ANFUSO. Mr. Speaker, on Tuesday, April 17, 1956, at Oscar Tucci's Delmonico's Restaurant in New York City, the annual Verrazano Day was celebrated.

Giovanni da Verrazano is the great Italian navigator who first discovered the harbor of New York in 1524. Great credit for this public and well deserved recognition is due the Italian Historical Society of America, of which John N. La Corte is the director.

Oscar Tucci, the owner of Delmonico's, who was born in Florence, Italy, where the great navigator Verrazano was likewise born, spoke eloquently of his native countryman. Another speaker at the Verrazano Day celebration was Prof. Edward D. Re, of St. John's University School of Law in Brooklyn, whose eloquent address is of special interest at this time.

Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to insert Professor Re's address, which is as follows:

REMARKS OF PROF. EDWARD D. RE, PROFESSOR OF LAW, ST. JOHN'S UNIVERSITY SCHOOL OF LAW, ON THE OCCASION OF THE VERRAZANO DAY CEREMONY IN NEW YORK, TUESDAY, APRIL 17, 1956

Mr. Chairman, distinguished and honorable guests, my fellow Americans and friends, we Americans who share the noble traditions of freedom and liberty, the seeds of which were planted on the plains of Runnymede, in that fateful encounter between King John and the barons, often know more about dramatic historic events of other nations than we do about our own. Although one does not detract from the importance of knowing the history of Europe that is so closely linked with the very discovery, foundation and heritage of the Western Hemisphere and our own country, nevertheless it is felt that greater attention should be given to the many glorious chapters of American history. I say this because I believe that there are many chapters of American history that should be as well known to us as the signing of Magna Carta on the plains of Runnymede. Surely many events of American history are equally dramatic. It is therefore in an effort to instill justifiable pride in the American that we celebrate today the achievement and discovery of Giovanni da Verrazano, an achievement destined to become of the greatest significance.

Although Verrazano day is sponsored by the Italian Historical Society of America, since Verrazano was a Florentine navigator, the celebration is in no sense Italian. Likewise, if it were celebrated under the auspices of a French historical society, since Verrazano sailed a French vessel under the sponsorship of Francis I, King of France, the celebration would not commemorate a French event. The celebration, rather, is intended and must be understood as an American celebration commemorating an important and dramatic chapter of American history. From one standpoint it may be viewed as one of the most beautiful events of American history because it was Verrazano who first opened the great portals of New York Harbor to the peoples of the world. The millions of thankful immigrants who share with us the blessings of liberty and freedom may gratefully acknowledge Verrazano as the first immigrant who made possible their happy, fruitful life in this land of opportunity.

The Verrazano story, like the story of Amerigo Vespucci, commences in the beautiful city of Florence, Italy, for it was there that these two great navigators first saw the light of day. Although there is some doubt as to the year of birth of Giovanni da Verrazano, there is no doubt that he was born in Florence, Italy, the son of Pietro Andrea and Fianetta Capelli. James Carson Bre-

voort, the founding president of the Long Island Historical Society and a champion in the cause for the recognition of Verrazano, sets the date of birth of the intrepid Florentine navigator as 1480. Others believe the year of birth to be 1485. What is of interest to us, however, is the fact that Verrazano, a courageous sailor, became an experienced navigator who entered the service of France. In 1508, as a seaman, sailing out of the port of Dieppe, Normandy, he took part in the discovery and exploration of the Gulf of St. Lawrence.

The event that we celebrate today, however, commenced about 15 years later. Under the sponsorship of Francis I, King of France, Verrazano was commissioned the pilot of the 100-ton, three masted caravel or carrack, named *La Dauphine*. This vessel, named in honor of the eldest son of the king, under the command of one Antoine de Conflans, set sail in search for the "blessed land of Cathay." This trip, which led to the discovery of New York Harbor, is described in great detail in a letter, in the nature of a report, addressed by Verrazano to the king, who was referred to in the salutation as "the most serene crown of France." It is interesting to note that in this report Verrazano refers to *La Dauphine* as "*Dalfina*," being the Italian for Dauphine. According to the report, the first landfall on the American Continent was in South Carolina. He followed the coast northward until in mid-April 1524 the *Dauphine* sailed into New York Bay. The report states that, after cruising the shoreline about 300 miles, "we found a very agreeable site located within two small prominent hills, between which flowed to the sea a very great river, which was deep within the mouth." This is probably the very first recorded description of what is today the Bay Ridge hills of Brooklyn and Staten Island. Having entered the river in a small boat, Verrazano adds: "The people clothed with feathers of birds of various colors, came toward us joyfully, uttering very great exclamations of admiration, showing us where we could land with the boat more safely." After entering the river "within the land * * * in an instant, as is wont to happen in navigation, a gale of unfavorable wind flowing in from the sea" forced Verrazano "to return to the ship, leaving the said land with much regret because of its commodiousness and beauty."

Although unfortunately he was forced to leave quickly, he nevertheless had named the areas that he had described. He named the place Angouleme, since, prior to his succession to the throne, the king had been the Count of Angouleme. In the words of Verrazano's report: "We called it Angouleme, from the principality which thou attainest in lesser fortune, and the bay which that land makes, Santa Margarita, from the name of thy sister, who vanquishes the other matrons of modesty and art."

This story may very well be given the name selected by Monsieur Jacques Habert, "When New York was called Angouleme." Others may prefer Santa Margarita, but the story is nevertheless American. It is the story of an intrepid navigator who first set eyes upon the Narrows and New York Harbor 85 years before Henry Hudson's *Half Moon* sailed up the Hudson River to its navigable headwaters at the present site of Albany. It was therefore entirely befitting and proper, in October 1909, at the time of the Hudson-Fulton celebration in New York, that a statue to Verrazano was unveiled and erected here in Battery Park.

Although the Verrazano monument was temporarily removed during the operations connected with the digging of the Brooklyn Tunnel, happily, it was subsequently restored here in Battery Park—to a place of prominence and dignity. In this connection all Americans owe a debt of gratitude to those historians and civic-minded persons who have generously given of their time and effort to make known this Verrazano story not only to New Yorkers but to all Americans. This debt is owed to men such as Brevoort, Greene, Carli, de Costa, and Habert. Brooklynites may be especially proud of James A. Kelly, Brooklyn borough historian, who had dramatized the achievement of Verrazano with such enthusiasm that it was almost inevitable for the Italian Historical Society of America, founded by Mr. John N. LaCorte, to perpetuate the memory and discovery of Verrazano.

Due recognition has been given to this glorious event of American history by Mayor Robert F. Wagner who, in his proclamation proclaiming today Verrazano Day in the city of New York, urges "all citizens to do fitting honor to the memory of Giovanni da Verrazano for having been the first to enter this great harbor and gateway to the land of golden opportunity which has long shone as a beacon light to the oppressed peoples of a sad and troubled world."

Through the very gateway described by Verrazano, only 432 years ago, millions have passed to reap the rich harvest of freedom and liberty. Today that gateway assumes more than merely commercial and material importance. Rather, it represents the greatness that is America for in the center of that same gateway there stands the symbol of American democracy and the American way of life—the Statue of Liberty.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Daily Digest

HIGHLIGHTS

Senate adjourned out of respect to Senator Barkley.

House passed farm bill.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 6627–6628

Bills Introduced: 1 resolution was submitted, as follows S. Res. 258. Page 6628

Bills Reported: Reports were made as follows:

H. R. 6143, to amend the Internal Revenue Code with regard to income-tax treatment of transfer of patent rights, with amendments—reported May 1 under prior authorization (S. Rept. 1941);

S. 2582, 3472, H. R. 3964, 4051, 8187, 4536, 4633, 5495, 6395, and 4162, private bills—reported May 1 under prior authorization (S. Repts. 1942–1951, inclusive); and

H. R. 7471, providing for conveyance of certain U. S. lands to the St. John's County, Fla., Board of Commissioners, with amendments—reported May 2 under prior authorization (S. Rept. 1952). Pages 6627–6628

Bills Referred: Four House-passed bills were referred to appropriate committees. Page 6627

Condolence Resolution—Senator Barkley: Senate adopted S. Res. 258, expressing condolence on death of Senator and former Vice President Barkley. Page 6628

Program for Monday: Senate adjourned at 12:04 p. m. until noon Monday, May 7, when it will continue on S. 3073, D. C. transit system.

Committee Meetings

(*Committees not listed did not meet*)

PROCESSED TOBACCO

Committee on Agriculture and Forestry: Subcommittee on Tobacco concluded its hearings with regard to the use of reconstituted or processed tobacco in the manufacturing of tobacco products. Witnesses heard were Dr. Robert N. DuPuis, of Philip Morris, New York; John C. Whitaker, R. J. Reynolds Tobacco Corp., Winston-Salem, N. C.; John A. Crowe, American Tobacco Co., New York; T. M. Wade, Brown & Williamson Tobacco Corp., Louisville, Ky.; Irvin H. Peak, P. Lorillard Co., New York; Stanley S. Keyser, Consolidated Cigar Corp., New York; Charles H. Horn, Federal Cigar Corp., Red Lion, Pa.; Harry Wurman, Bayuk Cigars, Inc., Philadelphia; Victor C. Davidson, of John H. Swisher & Son, Inc., cigar manufacturers of Jacksonville, Fla.; Leon Singer, Cigar Manufacturers Association of America, Inc., New York; Dr. Ernest Ball, associate professor of botany, North Carolina State College; Dr. W. G. Frankenburg, General Cigar Co., Inc., New York; Dr. W. E. Colwell, North Carolina State College, Raleigh; and William A. Blount, Liggett & Myers Tobacco, New York.

APPROPRIATIONS—PUBLIC WORKS

Committee on Appropriations: Subcommittee continued its hearings on proposed fiscal 1957 budget estimates for Army civil functions, hearing testimony on indicated projects from the following witnesses:

On various Montana projects—with testimony from Senator Mansfield;

On funds for New York-New Jersey channels—with testimony from Senator Smith (New Jersey) on behalf of himself and Senators Ives, Lehman, and Case (New Jersey);

On funds for the Port of New York Authority—with testimony from Representative Osmers, former Senator James Mead, and a local witness;

On funds for Ouachita River, Calion, Ark., and De Gray Dam—with testimony from Representative Harris and local witnesses;

On Middle Rio Grande Flood Control Association—with testimony from Senator Chavez, Arthur Perry, administrative assistant to Senator Johnson (Texas), and local witnesses;

On funds for various projects in the Pacific Northwest area—with testimony from Senator Neuberger; and

On various power projects throughout the country—with testimony from Clyde T. Ellis, National Rural Electric Cooperative Association.

Hearings continue tomorrow.

Appendix

Astute Advice of Secretary Brucker

EXTENSION OF REMARKS
OF

HON. JAMES T. PATTERSON

OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PATTERSON. Mr. Speaker, everyone in this important legislative body knows of the outstanding ability of our great Secretary of the Army—the Honorable Wilber M. Brucker. Since assuming his tremendous responsibility, Secretary Brucker has worked unceasingly to improve the defense of our Nation. Having fought gallantly during World War I in the United States Army, our distinguished Secretary is well aware of the vital role that the Army plays in all wars.

On April 27 Secretary Brucker delivered an inspiring speech at Fort Knox, Ky., in which he offered the Nation sage advice. So important were his words that I wish to here insert his speech in the CONGRESSIONAL RECORD:

TEAMWORK: THE STRENGTH OF THE ARMY

(Remarks by the Honorable Wilber M. Brucker, Secretary of the Army, United States Armor Association, Fort Knox, Ky., April 27, 1956)

It is inspiring to be here at Fort Knox, and to meet with leaders of our Army, and, in particular, of our armored striking force, which is so important an element of our great Army team. I emphasize the word "team" because consummate teamwork all along the line—as you have so often demonstrated in the fires of war—is the keystone of the Army's ability to discharge its tremendous responsibilities for the defense of our Nation.

I am reminded of a verse of the well-loved Caisson Song:

"Cavalry, boot to boot,
We will join in the pursuit,
While those caissons go rolling along."

The spirit expressed in those lines, with their nostalgic flavor of the old Army, must always be the ruling spirit of our new Army—the Army of tomorrow—firmly joined, man and man, arm and service, in the pursuit of a common purpose.

We must not make the disastrous mistake of underestimating the task that faces our Army today. Despite the ostensible "new look" of the Communist conspiracy—its freshly gilded promises and tawdry smiles, its artful retreading of belligerence into benevolence—there is not the slightest evidence to justify a belief that the Communists have modified in any degree their ruthless determination to subjugate the entire free world by whatever means they can. Backing that determination is the steel of the largest mobilized armed forces on earth, growing in size and power with each passing day.

"The vast Soviet military establishment has not been scrapped," President Eisenhower warned America only a short time ago. "On the contrary," he said, "the Soviets and their Communist allies are increasing the strength and effectiveness of their armed forces, and are providing them with equipment of the most modern design. The threat implicit in this vast aggregation of military power still casts an ominous shadow over the world."

The United States Army is a vital part of our defense against this massive threat. It is the hard core of our security. It is a central element of the greatest system of collective protection against a common foe that has ever been created—a system in which our country is now associated with 45 other nations.

Over 40 percent of our troops are deployed overseas in 73 countries in support of our global commitments. In Europe and Asia, standing guard with the troops of our allies, they form tangible barriers to any aggressive moves by the vast armies of Soviet imperialism. These men in the Army uniform constitute visible proof to the leaders of the Communist conspiracy that we mean exactly what we say—that we steadfastly intend to resist aggression in any form. Their mere presence stimulates the morale and stiffens the resolution of our friends by constantly reminding them that we are in this together, and that we intend to see it through together, come what may. In addition, our Army is helping to train more than 200 Allied divisions, a very substantial portion of the free world's collective strength.

The paramount purpose of our whole defense team is to deter aggression—to prevent war—but we know that in order to be an effective instrument of deterrence, it must be prepared to fight and to win under any circumstances. The evidence of its ability to do so must be so clear and so convincing that a potential enemy cannot fail to realize in advance that resort to armed attack would prove to be a most costly mistake.

If it should come to actual fighting—if our best efforts to prevent the outbreak of war should prove futile—the major combat burden would sooner or later fall, as always, upon our ground troops. No technological advance has diminished their importance. Weapons, equipment, and tactics have all been revolutionized more than once in the 40 years since I slogged through the mud of France in World War I with the Rainbow Division, but the fundamental role of the Army as we knew it then has never changed. It is the component of the defense team which has the means and capability needed to gain and to maintain control over an enemy's land, his resources, and his people; in other words, not merely to wreak destruction upon him but actually to conquer him, which is the ultimate wartime goal of all military action.

Since the days of the cave dwellers men have been devising new, more ingenious, and ever more lethal weapons of war with which to extend their capabilities, but nothing has yet been devised to replace man himself. As long as man lives on the land, and depends upon it for his sustenance, final victory in any military conflict will have to be gained on the ground. It will be gained by men who meet the enemy face to face and dig out the very roots of his resistance. The notion that wars can be won by remote control—with pushbuttons—is a dangerous myth. If encouraged, it can lead only to psychological, spiritual, and downright physical unpreparedness for the realities of military conflict.

In the event of war—no matter what kind of a war it might be, no matter what might transpire in its initial stages—our Army must be ready to play its full part as a dominant force. It must be prepared to fight successfully against any aggressor, any time, anyplace, and on any terms. It must be capable of fighting an all-out war. It must also be capable of coping with an urban riot, a remote brushfire war, an attempted seizure of power through military pressure, or any other device of military aggression contrived by the Communist mind. It must be equally as ready to fight a war in which atomic weapons are used, or are not used. In short, it must never allow itself to become irrevocably committed to any one concept of war, to any particular family or type of weapons, or to any inflexible tactical doctrine.

The ability of the Army to carry out its mission successfully is one of the most important measures of our national security. As members of the Army, we can be proud of what is being accomplished throughout our whole organization to make it ready for whatever tasks, or whatever magnitude, it may face in the critical years to come. We can see on every hand the results of dynamic thought, unremitting research, and positive, energetic action within every branch of the service, which will give the Army as a whole the means to be the fastest moving, hardest hitting Army in the world—a military force of incomparable power and versatility—a reliable and ready Army which is an indispensable part of the Nation's first line of defense.

Major emphasis is being laid at the present time upon the development of atomic weapons precisely tailored to the Army's needs. Weapons of this nature now in the hands of using units—the Corporal and the Honest John—give us a valuable interim capability, but they constitute only a beginning. In the not-too-distant future we will have whole families of guided missiles, ballistic missiles, and rockets to supplement the big guns with which our troops are armed. They will give our artillery the vastly increased range and effect necessitated by the requirements of the huge atomic battlefield. One example is the 1,500-mile IRBM Jupiter, which is now being developed jointly by the Army as a ground-launched weapon, and by the Navy for surface ship and submarine use. We are making such substantial progress with this high-priority project that the time necessary to develop the range we seek, coupled with the accuracy we have already attained, will be cut to a minimum. Units are being organized to utilize the shorter-range Redstone, the accurate experimental vehicle leading to Jupiter.

We believe that we should have in our arsenal an adequate supply of atomic weapons which can be used with discrimination against close-in as well as distant pinpoint targets, with complete accuracy under the most adverse conditions of weather and visibility. They will make it possible for us to support our troops adequately under any circumstances without unnecessary wholesale destruction, without the annihilation of large segments of the population—which might well be a friendly population—within an area of combat.

We are not overlooking the importance of intensified research and development in the field of nonatomic weapons as well, because they are urgently needed for a great many specific tasks, and will be for as long as we can foresee. We will never turn our backs upon any weapon or family of weapons until we have something definitely better in every important respect which performs the same function. We must always insure that the Army has the means at hand to apply the exact amount of force required to deal with every situation—from the silent thrust of a bayonet to the detonation of the most powerful guided missile.

The attainment of maximum mobility, both tactical and strategic, is one of our primary objectives. It would be a prime factor of success in any war we might have to fight. The traditional ground mobility and tremenodus shock power of armor take on new significance in the light of the requirements of the atomic battlefield. Armor will play a very important role in any war of the future. However, all elements of the combat commands of the atomic field army—infantry, engineers, and all forms of artillery, as well as armor—must be able to move swiftly to the attack from dispersed positions in order to exploit to the full the effects of our atomic firepower. Faster, lighter, more versatile ground vehicles are being provided to give them that capability. Air vehicles—including the "Flying Boxcars" which drop our paratroopers, the new assault transports which can land infantry on any reasonably level field, the Army's own organic helicopters which can put down men and supplies on the roughest and most inhospitable terrain—all these are literally giving wings to our ground troops.

In order to carry out its mission successfully, the Army must also be able to transport its major units by air over long distances, between continents and across oceans. We have made considerable progress in attaining that degree of mobility. We know, for example, that if the need arose and we were assigned the requisite transport aircraft, we could fly an entire airborne division, together with its essential automotive equipment and organic artillery, from the United States to any part of Europe or Asia. We could get it there in time to dominate a dangerous situation before it got out of hand. We look forward to the time when it will be practicable to move armored units with equal facility.

A high-priority undertaking to which it is imperative that the whole Army address its best efforts is the building of an adequate Reserve. The armored center has played an impressive part in the Reserve program. Due in large measure to the accomplishments of the officers and men here at the home of armor who participated in the training of the first experimental UMT unit in 1947, a ground swell of sentiment in favor of more widespread military training along the lines contemplated by the Congress when it originally passed the Universal Military Training and Service Act began to develop. Now we have the Reserve Forces Act of 1955, with its 6 months' training feature, which for the first time provides a definite and equitable means of building a strong, vitalized Reserve. Again the armored center is doing a splendid job in training many of the young Americans who have enlisted in the Reserve under this program.

Military Reserve Week, which is being observed throughout the country this week, is helping to focus the attention of the Nation upon the intensive efforts being made to build up our vital trained and ready Reserve forces, both the Army Reserve and our splendid National Guard, the backbone of our Reserve strength, which now numbers over 400,000 well-trained and well-equipped troops of high morale, and is growing rapidly. Already more than 28,000 young men have enlisted in the Army Reserve, and they are coming in at the present time at a rate of over 1,100 a week. It is proving to be something that appeals to young Americans, and those I have observed in training in various camps are making splendid soldiers, fully worthy of the honored uniform they wear. The program is rolling, and it is up to all of us to put forth every effort to keep it rolling and gathering momentum. The success of this program must be a prime concern of every member of the Army.

It is going to take teamwork of the finest kind to accomplish all the tough and tedious tasks that lie ahead of us today. I recall the story of a small attack group of the 25th Division which was working its way up a hill in Korea toward a platoon objective. A private who was leading the group used up his grenades on an enemy foxhole halfway up the ridge and yelled for others in the group to pitch him some more. Working together with the precision of an infield tossing the ball around, they kept him supplied through the air. The group advanced in short bounds with perfect coordination. The leader would catch a grenade, pull the pin, and throw it. The group dropped flat until it exploded and then tossed him another grenade, and the action was repeated. Eventually the group successfully fought its way to the top of the hill. The whole maneuver was perfectly executed because these were good soldiers who quickly grasped a situation and knew how to work together as a team to achieve their objective.

This epitomizes the team spirit which must permeate the Army at all levels of command. Teamwork does not mean merely cooperation. It involves a far closer welding of purpose and effort, a true yielding of the individual point of view to the success of the team as a whole.

During this critical era, the ability of the Army to do its job is of especially grave consequence to America. Every person connected with it owes no less than undivided allegiance to the team. Each of us must have a spirit of unqualified dedication, and singleness of devotion to this great Army that will stamp us as worthy in the tremendous days that lie ahead. Every job and every branch is of great importance. I served as an infantryman, and I am proud of the Infantry, but I am sure it would not accomplish very much without the rest of the team solidly behind it.

There is no room anywhere within the structure of our Army for any narrow self-interest which subtracts from the effectiveness of the Army as a team. I am by no means selling honest competition short. Competition is highly commendable when it impels a man or an organization to do the best possible job—to outstrip all others in excellence of performance.

The professional associations of the several arms and services—such as your Armor Association—have, through the years, zealously promoted this branch competence and contributed substantially to the effectiveness of the Army as a whole. There is a real and continuing need for them. There is also a challenging need—well expressed in an editorial in your magazine, Armor, which recently came to my attention—for a dynamic association, composed of members of all branches, which can and will speak with one powerful voice for the entire Army, and help to tell the Army's story to the Nation. All of us, both individually and collectively, have a solemn and inescapable obligation to the American people whom we serve to be as articulate as we possible can, to make crystal clear the cold facts about military security as we know them so well, to spell out the vital part the Army team is playing in the attainment of our national objectives. With a view to filling the need you have recognized for an all-inclusive organization, the Association of the United States Army was formed some months ago to provide a common meeting ground for the combat arms and technical and administrative services. It seems to me that if the Armor Association were to join with it—without, of course, losing its separate identify as a professional association—attainment of that one voice we all so earnestly desire would be brought one long step nearer.

The Army has a tremendously important job, a job it is fully capable of doing, but we must continue with unflagging zeal to seek improvement all along the line. This is the forward-looking and forward-thinking Army of tomorrow, and we must keep it so. We respect the past. We derive inspiration from countless examples of the courage and devotion which have made the Army great, but our watchword must always be: "Forward."

We must be ever ready and willing to cut a new pathway through any jungle growth of custom, of precedent, or of tradition that blocks the march of true progress. The Army team has a splendid example of forward-thinking of the person of armor's own George Patton. The foresight, strength, and determination which were so characteristic of the soldier whose creed was "In yourself demand the impossible" are doubly essential today. We must ever press on toward higher and seemingly impossible goals. We can never reach so lofty a plateau of accomplishment that there will not be looming above it another challenging mountain.

There is an old proverb that says: "An army is maintained for a thousand days so that it may be used on one particular morning." Each of us has a vital, personal responsibility to make certain that if the particular morning should dawn when the United States Army must fight again in defense of this Nation, it will be ready.

1956 Farm Bill

SPEECH

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10875) to enact the Agricultural Act of 1956.

Mr. COOLEY. Mr. Chairman, I think I can explain these amendments very briefly.

The first one strikes out the following language on page 26, line 19: "for immediate reference to the Committees on Appropriations of the Senate and House of Representatives." That is the language that comes out.

I understand that that will be done in ordinary routine fashion, therefore the language is not needed at all and should be deleted from this bill.

The same situation applies with reference to the language on page 38 which has the same purpose and provides substantially the same thing. The language that we are striking out is just this:

Any bill or joint resolution embodying the recommendations presented to the Congress under subsection (b) shall, upon introduction in the Senate or House of Representatives, be referred to the Committee on Agriculture and Forestry of the Senate or the Committee on Agriculture of the House of Representatives, as the case may be. Such committee shall proceed as expeditiously as

possible to consider such bill or joint resolution.

(2) This subsection is enacted by the Congress (A) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such shall be considered as part of the rules of each House, respectively, and (B) with full recognition of the constitutional right of either House to change such rules (so far as they relate to the procedure in such House) at any time, in the same manner and to the same extent as in the case of any other rule of such House.

Now that, too, is exactly what will happen even if this language is deleted. The Committee on Agriculture certainly would proceed expeditiously and I am certain that the Speaker of this House would properly and promptly and appropriately exercise the powers of his office in making these references. It seems to me the language is objectionable and should be taken out.

Poland's Constitution Day

SPEECH
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. KLUCZYNSKI. Mr. Speaker, it was a warm and pleasant day in Warsaw on that May 3 of 1781, when the Sejm—Parliament—was called to meet. Quite a few of the deputies were still vacationing on their private estates, scattered all over the country. Some citizens and the gentry who had gathered around the tables in Fukier's wine cellar, knew that something was brewing at the Sejm—what exactly, they did not know.

An old politician from out of town remarked, "The King is going to talk on some very important matter." He elaborated further, "that they will give equal rights to the peasants, commoners, and Jews."

Someone yelled from the back, "That will be the day." And deep in the corner lying under the table a nobleman reached for his sword declaring: "That will never happen, never, as long as I live."

It was close to 11 a. m. on that memorable morning. The tension of the crowd assembled in the Sejm seemed to mount. In the galleries, spectators were chattering, men and their ladies dressed in their finest outfits were looking at one another, trying to read each others thoughts as to the big question: "Are you for, or against the new idea?"

What this great new and progressive idea was we will not repeat here. Year in and year out, we have hailed this great Polish Charter. It was equal to any other democratic legislature in existence in those days. We have mentioned its democratic character throughout, and I doubt that there is any need for repetition.

With the sound of the bell striking 11 o'clock at St. John's Church, King Stanislaw August Poniatowski, followed by a train of some 200 noblemen, officers of the guard, and royalty, entered the Sejm. Dressed in his favorite uniform of the cadet corps, he slowly proceeded toward the throne. Those opposed to the proposed program had threatened to take drastic measures in case a new order should be adopted. The chamberlain of the court and many a nobleman kept their hands ready on the hilt of their swords in case of disorder. The throne was protected by guards of the court and Ulan lancers. At the center door also, at the end of the assembly hall, stood the Sejm's marshal, and right behind him Prince Gen. Joseph Poniatowski and General Golgowski, guarding the exit against anyone who might try to get away after having caused the slightest disturbance. As the King ascended to the throne, the people in the galleries rose to their feet to get a glimpse of him. Some person yelled, "Long live the King," and the crowd in a spontaneous outburst began to hail their monarch. The opposition remained silent. Their facial expressions were hostile, as if judging a foe on the battelefield.

Malachowski, the president of the assembly, announced its opening by pounding his large cane three times against the floor, and the historical session began. To emphasize the gravity of the political situation, telegrams from Polish envoys abroad were first read. An outburst of the opposition was heard and some of them tried to leave the place but were forced back to their seats. When finally, after almost 7 hours of debating, someone rose to read the newly adopted constitution, a violent exchange of words began. At last they were interrupted by the King, who rose to his feet.

"The King behind his nation and the nation behind its King," could be heard from the galleries. Soon this phrase was picked up by the entire crowd, with the exception of a few hostile deputies. King Stanislaw August rose to his feet and solemnly swore to adhere to the constitution:

Juravi Domino, no me poenitebit—I swore to God and will not regret it—and now I call upon whose who dearly love their fatherland to follow me into the church and there take an oath with me praying that God will let us succeed and see to it that we will achieve our great task.

While a great crowd with its king assembled in the church of St. John, some deputies of the opposition remained in the Sejm, arguing over their defeat, and the merits and disadvantages of the new charter. But there were not more than about 50 altogether against the 350 deputies assembled there before, they calmly dispersed and went to their homes.

Mr. Speaker, today, 165 years after this great event, we once again bow our heads toward Poland, and its gallant nation. Although, in the last year alone some great political changes have taken place behind the Iron Curtain and the new anti-Stalin drive is in full swing, let us not be fooled by this treacherous new line. Many top-ranking Communists perished under Stalin's purges and others are now being rehabilitated and vindicated. Not one shadow of doubt remains in my mind, that this is a new trick and diversion directed at the western powers. It is a new policy of smokescreen, largely written up in our press. But who are the people leading this new policy? Are they newcomers? All of them were the closest collaborators of that tyrant, Stalin. Without them, one man could never have succeeded in wiping out entire populations, jailing others, humiliating and disgracing them. Bulganin, Khrushchev, Malenkov, Zukov, Rokossowski, and so forth, are not new names to us. They have come up ever since Stalin's became known here. And how about their protectors? General Serov, of the infamous MVD, the mass murderer of the Baltic Nations? I hope that this time we shall not repeat mistakes of the past, and will not be fooled by the "angels of Russia's new regime." The only way we will be able to save other thousands of human beings behind the Iron Curtain from further unwarranted cruelty and punishment, is to follow the spirit of the May 3 constitution, to preserve the liberty, and integrity of the Polish people.

The Imperative Need for a Flash-Flood Warning System

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. PATTERSON. Mr. Speaker, I have had so many requests from Congressmen and others for copies of the letter I recently sent to the chairman of the Subcommittee on Appropriations in regard to the Department of Commerce Weather Bureau appropriations that I would like to insert in the RECORD at this time a copy of the letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 1, 1956.

The Honorable PRINCE H. PRESTON,
Chairman, Department of Commerce, Subcommittee of the Appropriations Committee, House of Representatives, Washington, D. C.

DEAR MR. PRESTON: I have just finished reading the recently issued hearings before the subcommittee of the Committee on Appropriations, in regard to the appropriations for the Department of Commerce Weather Bureau for the year 1957.

In the accompanying subcommittee report and bill reported to the House of Representatives, I note with dismay that absolutely nothing is provided to meet one of the major weather problems now confronting our Nation, namely, the menace of flash floods.

It seems incredible—after the most costly flood disasters in the history of North America—that it nevertheless is intended that no provision whatsoever should be made by Congress to provide our citizens with any better protection against the deadly flash floods.

I do not believe that the elected Representatives of these States which have been stricken by the disastrous floods of the past few years will remain quiet and do nothing this year after they have been informed how most of the loss of life and how much of the loss in property can be eliminated by an up-to-date flash-flood protective system.

The total savings possible, on a nationwide basis, could be enormous. For example, in my own State of Connecticut last year, in a single flash flood, dozens of lives and millions of dollars worth of property could have been saved with a fully developed, modern high-water-warning service. Within a short period of months similar large losses could have been avoided in Pennsylvania, New York, California, and other States.

The size of the flood-loss problem is highlighted by the fact that the annual property loss from floods in major river basins of the United States averages more than $300 million a year. Engineers and flood experts have estimated that the amount of property loss which has been avoided through adequate flood-warning services averages about 10 percent of the total flood loss, which means about $30 million of prevented loss a year. Despite the huge flood losses mentioned above, and the large savings possible through adequate warning, there is not a single valley in America that is protected by a modern flood-warning system. Even in the Naugatuck Valley of Connecticut, which was flooded in a few hours by the heavy rains of Hurricane Diane, a pilot flash-flood-warning project is just now getting started and already suffers from lack of funds. And let us not forget that there are more than 2,500 valleys in the United States subject to flash floods.

My travels through flooded areas of New England have prompted me to ask Congress again to do something to protect our people from the disastrous flood menace that confronts almost every State of our country.

Recently I have talked with engineers, meteorologists, hydrologists, and river experts on the flood problem and they have assured me that for only $3 million (that is less than 1 percent of the real annual flood loss) it has now become possible to establish a modern flash-flood-warning service that will provide the protection needed along every river in the United States.

If it is acceptable to you and the other members of the Appropriations Committee, I would be pleased to offer a floor amendment to the Department of Commerce Weather Bureau appropirations for the fiscal year 1957 that would increase the expense item by an amount of $3 million for the establishment of an improved flood-warning service throughout our entire country; or perhaps you may deem it advisable to offer a committee amendment to accomplish this purpose.

If this added amount of $3 million was made available by the Congress, it would enable the Weather Bureau to take the following recommended action:

(1) Establish five additional district river forecasting centers.

This increase of 5 district river forecasting centers would make a total of 14 such centers, and would thereby provide adequate flood forecast coverage for the entire country.

The river valleys to be provided this new and additional flood-warning service, and the locations of the respective district river forecasting centers, are as follows:

1. Lower Mississippi Valley: Vicksburg, Miss.

2. West Gulf and Rio Grande Valley: Austin, Tex.

3. California: Sacramento.

4. Colorado and Great Basin: Salt Lake City.

5. Great Lakes: Lansing, Mich.

(2) Establish 5,000 cooperative river and rainfall observation stations in flash flood valleys, with necessary observation equipment and reporting facilities.

(3) Establish an adequate research and development program in regard to the forecasting of flood-producing rains and water supply, in cooperation with other Federal and State agencies and universities.

(4) Install 20 additional modified surplus radar stations in flash flood areas which are now more than 150 miles from established or planned radar storm detection locations.

(5) Strengthen professional river stage and flood study staffs at existing river forecast centers by two or more persons.

The river forecasting stations include Hartford, Conn.; Harrisburg, Pa.; Augusta, Ga.; Cincinnati, Ohio; Knoxville, Tenn.; St. Louis, Mo.; Kansas City, Mo.; Portland, Oreg.; and Tulsa, Okla.

Your support of this proposed measure will be greatly appreciated by the millions of Americans who live in the flood-hazard valleys of America and who should no longer be denied the flood-warning services that modern technology can not provide. I earnestly solicit your sympathetic consideration of this matter.

Sincerely yours,

JAMES T. PATTERSON,
Member of Congress.

Practice Versus Preachment

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. LEHMAN. Mr. President, there appeared in the Washington Post and Times Herald of May 1, 1956, a very interesting column written by the distinguished American journalist, Mr. Marquis Childs, entitled "Practice Versus Preachment." I ask unanimous consent that the article by Mr. Childs be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRACTICE VERSUS PREACHMENT

(By Marquis Childs)

"The quick admission of Alaska and Hawaii to statehood will show the world that America practices what it preaches."—Dwight D. Eisenhower in a speech in Denver on September 16, 1950.

One of the conspicuous—and tragic—failures of the decade since the war's end is the failure to admit the Territories of Hawaii and Alaska as States of the Union. It amounts to a confession that the American system is incapable of further expansion.

There still might be a chance for the bill for statehood for the two Territories, pending from the last session of Congress, if the President wanted to get his administration behind it. In the campaign of 4 years ago and several times since he has preached the admission of Hawaii and Alaska. But practice has fallen far short of preachment.

In the elections recently held in Alaska, the voters, by a majority of 2 to 1, adopted a constitution anticipating approval of statehood.

By nearly as large a majority, they approved what is known as the Tennessee plan. Under this plan, which was used by Tennessee to force the issue of admission to the Union in 1796, Alaska will go through the motions of electing 2 Senators and 1 Representative as though it were a State.

When the 85th Congress convenes next January the two Alaskan Senators and the Alaskan Representative will be waiting on the doorstep demanding admission. They will not be seated, but their voices raised in a demand for statehood may at last be heard.

Michigan, Oregon, and California all used the Tennessee plan as a lever to overpower the forces that more than a century ago resisted the westward expansion of the Republic.

Something of the same division that tore the country apart over slavery works against the admission of both Hawaii and Alaska.

Hawaii is an outstanding example of the capacity of the races of West and East to live together in harmony. The courage and the stamina of the Nisei in World War II were legendary. These men of mixed inheritance proved in the heat of battle their loyalty to a country that had not yet granted them full citizenship.

Yet the suspicion of race lurks behind the conventional arguments against statehood, particularly among southern Democrats. The same suspicion works against the Eskimo in Alaska.

Among some members of the world's most exclusive club, namely, the Senate of the United States, there is implacable opposition to letting down the bars to foreigners.

Racial prejudice coincide with certain powerful economic interests to insure a roadblock big enough, regardless of the actual voting strength in Senate and House on statehood, to hold it back southern Democrats and conservative Republicans in this instance, as in so many others, form a working coalition exercising a veto power. Although it is not at all fashionable to speak about it, this is the focus of the stalemate that prevails in so many areas.

Although they have no proof for it, many Alaskans firmly believe that President Eisenhower has been influenced against statehood for Alaska by his good friend and close associate, Gen. Lucius Clay.

Clay is chairman of the board of the Continental Can Co., which has close ties to the Alaska canned salmon industry. If one can believe the story of resentful Alaskans, Clay persuaded the President that Alaska was not yet ready for statehood.

The fear of the salmon fishing industry is that if Alaska should become a State, the industry would be subject to restrictive regulations that would really be enforced.

In a fiery speech at Alaska's constitutional convention last November, Ernest Gruening, governor of Alaska from 1939 to 1953, charged that Alaska was America's colony and subject to the same kind of colonial exploitation this country denounces when practiced by European powers.

As a result of discriminatory legislation, according to Gruening, Alaskans pay higher freight charges, higher wharfage and longshoring charges, and higher maritime charges than anywhere else.

This increases the cost of living above the national average which, in turn, restricts the population and helps to keep Alaska in the status of a colony.

"If there is a clearer and louder example of colonialism anywhere," Gruening said of the Federal law covering Alaska shipping, "let it be produced. Here is a clear case where the Government of the United States—through its legislative branch which enacted the legislation, the executive branch through the President, who signed it, and the judicial branch which, through its courts, upheld it—imposed a heavy financial burden on Alaskans exclusively for the advantage of private business interests in the mother country."

In the case for statehood, a distinction has long been made between Alaska and Hawaii. The latter, it has been argued, is far more ready for statehood with a rapidly growing population, industry and agriculture in striking contrast to Alaska with its unpopulated areas of forest and mountain.

A bill granting statehood to the two territories has been bottled up in a subcommittee for many months. The chances for action at this session are virtually nil. But the hope that springs eternal is that in the new Congress next year, practice will finally catch up with preachment.

The Farm Bill

SPEECH
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10875) to enact the Agricultural Act of 1956.

Mr. ABERNETHY. Mr. Chairman, I think every member of the Committee on Agriculture has done his very best to bring to the floor of the House a bill which they think is appropriate and acceptable not only to the House but to the other body and to the President. There are some of us who feel that the veto was unfortunate, and I am one of them. There are some who do not feel that way about it. Now that the committee has eliminated those features which were controversial, I hope that by this time tomorrow we can conclude our work by bringing to the farmers something which will be good and something which we hope the administration and the members of the other body will accept.

Without criticizing anyone, Mr. Chairman, I am one of those who is not too impressed with the idea of the soil bank.

I am going to vote for it. I voted for it before and I shall vote for it again tomorrow; but I am concerned with what is going to happen to the land which is taken out of the production of crops and put into the bank. And certainly the amount of money which will be paid to farmers in lieu of crops on allotted acreage put into the bank will not be sufficient to cover the cost of putting the banked acreage into soil-building or soil-preserving crops and at the same time leave farmers enough to live. The money being insufficient I am concerned about that land going to waste, growing up in weeds, and being subjected to the winds, the storms, and the elements, every day and every week.

Then, too, the soil bank idea has the effect of paying farmers for doing nothing. Good farmers do not want pay for doing nothing. They prefer activity and actual farming. They do not like the idea of seeing their land lie out, idle, and playing no part in agricultural productivity.

I am also concerned with the effect which it is going to have on the merchants in the little farm communities of our Nation. Almost all of the smaller communities of our country are surrounded and sustained by active farming operations. In these communities down my way you will find a little country bank, cotton warehouses, a few gins, and so forth. Up in the Corn and Wheat Belts you will find similar operations. They are very heavily dependent upon crops produced from nearby farms. On these crops they lend money; they handle, process, store, and transport them. When the lands go into the bank there will be just that much less wheat to be milled, there will be that much less cotton to be ginned, there will be less business at the bank, there will be less business at the country store. Not only will these people feel the effect of reduced production but all people of the community will feel the effect of it.

Maybe it will not work out that way, I hope not. On the other hand there are many who have some concern about this so-called soil bank and its general effect on the community life. They have expressed the identical fear of its effect.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. I think the gentleman made a statement a minute ago he might want to qualify. He said he expected to vote for the soil bank tomorrow. I think he meant to leave the impression that he expected to vote for this bill.

Mr. ABERNETHY. Of course, the entire bill which embodies other provisions.

Mr. JONES of Missouri. I do not think the gentleman would vote for the soil bank just as that.

Mr. ABERNETHY. No; I am for the entire bill. The gentleman from Illinois [Mr. YATES], asked a question a moment ago. I think the answer ought to be developed further. In doing so we must assume that the soil bank is a fine thing; and it may be, I am not sure about it.

He asked the question if there was to be a dollar ceiling on the amount any farmer would receive from the bank. I imagine that which prompted the question was to be assured that any farmer who might own a very large farm would not be getting too many dollars from it. The gentleman's premise may be sound, but I doubt it. The No. 1 objective of the soil bank is to reduce the surplus. The theory is that acreage put into the bank will be taken out of crops and production reduced below demand. Then the crops that are now in storage will gradually be siphoned off to meet the demand. The advocates contend that sometime in the future, a year or two or more, the surplus would soon be exhausted. So, if a ceiling is placed upon any amount of acreage that a farmer puts in the bank then to that extent the very purposes for which the bank is created is defeated. The more acreage a farmer puts in the bank the less the production; and the less the production the sooner the surplus will disappear.

Down my way we have hundreds of small farmers. They cannot very well afford to participate. But the small farmer will benefit indirectly by way of a reduction in the surplus brought about through the large farmers' participation. The object is to remove the surplus. A ceiling on participation would defeat the objective.

There is another thing in this bill that I am concerned about. The bill permits the first year of operation to be financed with funds of the Commodity Credit Corporation. Personally, Mr. Chairman, I think an appropriation should be made for such. Why siphon off the capital assets of the Commodity Credit Corporation?

The Commodity Credit Corporation was established for the purpose of providing money for price-support operations and for that alone. Through other inappropriate authorizations, we are now gradually depleting the capital assets of the Commodity Credit Corporation. They are showing up in the balance sheets of the Corporation as a loss to the price-support program when as a matter of fact they are not such a loss.

Something has been said about the $1.25 to be paid for corn, that is, the unlimited production at $1.25 per bushel. I do not live in the commercial Corn Belt but I am tremendously concerned about the possible effect. The Department of Agriculture has told us that the trouble with corn today is that we have too much, so they have proposed the soil bank to get rid of it. Yet on the other hand just a few days ago, and it was not a part of the President's original recommendation, the Department announced that it is going to support the unlimited production of corn at $1.25 a bushel. I believe you heard the gentleman from Kansas [Mr. HOPE] say, and I think I am quoting him correctly, that he had some concern about this inasmuch as he was afraid that the Corn Belt would really turn to corn. The Secretary also has told our committee, and I think he is right—this is one time I agree with him—that the reason we have had cheap cattle and cheap hogs is that we have had too much corn, cheap corn. If the Corn Belt should turn to corn at $1.25 a bushel, and I think it will, that means a tremendous surplus of corn. That means the warehouses will eventually be filled with it and that means a depressed price. It further means that eventually the surplus will be disposed of at heavy loss to the Government, with added troubles for corn farmers as long as the surplus exists.

From what I know about corn, and I do not know much, I have been told and I have read that the price of hogs follows the price of corn. If corn is cheap hogs will be cheap. If corn is cheap cattle will be cheap. I am concerned about it. I thought we were trying to get rid of the surplus. Surely this is not the way to do it. A high support price on unlimited production will undoubtedly increase the surplus.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Texas.

Mr. POAGE. It is pretty well known that cheap corn always makes cheap hogs.

Mr. ABERNETHY. That is what I have been told.

Mr. POAGE. And that cheap hogs never improve the likelihood of high-priced feed.

Mr. ABERNETHY. That is exactly what I have been told.

Mr. POAGE. Are we not certain to have cheap corn if we deliberately go out and put a premium on overproduction?

Mr. ABERNETHY. That is also what I have been told.

Mr. POAGE. Does the gentleman remember any other time when we have been talking about wanting to cut down that we have gone out and tried to reduce our production by deliberately en-

couraging production by paying a pretty substantial support on unlimited production?

Mr. ABERNETHY. When you put a substantial support price on unlimited production it always makes for trouble. As I said a moment ago, I represent thousands of small farmers. The average cotton allotment in my district is only about 8 acres to the family. But you give them a comparable support price for cotton, with unlimited production, that which has now been given corn, and they will fill the warehouses of this country with cotton. It would wreck cotton farmers. It could, and may, wreck the Corn Belt.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. ABERNETHY. I yield.

Mr. YATES. Will the gentleman tell us whether or not establishing this price of corn at $1.25 a bushel will be an incentive or a detriment to farmers to put their land in the soil bank?

Mr. ABERNETHY. I can only answer that on the basis of what some of them from the Corn Belt have said to me—that it would be an incentive to put their acreage in corn and not in the bank. In turn, the overall objective—reduction of surpluses—would be defeated.

Insurance Against Flood Damage

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. McNAMARA. Mr. President, in behalf of the junior Senator from Rhode Island [Mr. PASTORE], I ask unanimous consent that there be printed in the Appendix of the RECORD a statement prepared by him with reference to Senate bill 3732, a measure to provide insurance against flood damage, and for other purposes.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF UNITED STATES SENATOR JOHN O. PASTORE, DEMOCRAT, RHODE ISLAND, WITH REFERENCE TO S. 3732, A BILL TO PROVIDE INSURANCE AGAINST FLOOD DAMAGE AND FOR OTHER PURPOSES

On April 26, the Senate Committee on Banking and Currency reported S. 3732; a bill to provide insurance against flood damage and for other purposes.

As everyone knows, various sections of our country suffered tremendous damage and loss of life due to natural catastrophes within the past few years. In my own State of Rhode Island and in the New England area, floods and hurricanes wreaked damage almost beyond comprehension. Scenes were graphically portrayed in newspapers, magazines and on television showing the devastating havoc wrought by the floods. The hearts of the American people were moved to compassion at the misery which prevailed. And from all parts of the land and many parts of the world came messages of commiseration. These were heart-warming indeed. But little could be done by anyone to relieve the shocking plight of those whose loss of house and home, of factory, farm or shop, constituted a wholly uncompensated disaster against which there was and cannot be adequate insurance protection from private insurance companies. Many of these unfortunate people witnessed the loss of their entire life's work. Home upon home was swept away and, in many cases, nothing but an unpaid mortgage was left in its place.

The situation thus presented called for action—action on the part of all the people of the United States. To this end, therefore, the Senate Committee on Banking and Currency initiated a very thorough and exhaustive study of an insurance program which would attempt to alleviate the apprehension of those individuals who were unable to secure flood insurance.

The committee, under the acting chairman, the junior Senator from New York [Mr. LEHMAN], visited various stricken areas of the country to view firsthand the grim results of these floods. Witnesses from all walks of life were heard. All proposed plans received study and attention.

The committee visited my own State of Rhode Island on November 10, 1955, and there as in so many other States and towns which were visited, they received the views of individuals qualified to speak on such an important, specialized problem as disaster insurance.

I personally joined in sponsoring S. 3137 and S. 2768. I understand that S. 3732, as reported by the Banking and Currency Committee, has taken features from both of these bills and from a bill introduced by the senior Senator from Connecticut [Mr. BUSH]. To me this is a concrete example of the bipartisanship nature of this legislation, which, in my judgment, merits the approval of the Senate.

Possibly there will be some who will disagree with some of the provisions of S. 3732, but there is a certain amount of trial and error which will be experienced in setting up an adequate flood-insurance program. This is to be expected.

This bill would create an agency called the Federal Flood Insurance Administration. This Administration would be under the Housing and Home Finance Agency and administered by a Commissioner appointed by the President and approved by the Senate. The detailed provisions of S. 3732 can be more comprehensively explained by the members of the committee who worked so diligently on S. 3732.

The need for such legislation is very apparent. For an individual to see his home and personal possessions which he earned by strenuous personal industry, washed away by a flood, is a scene which would tear at the heartstrings of any human. The tragedy at the present time lies in the fact that no individual can secure compensation for such loss. He may secure insurance against lightning, earthquakes, and other storms, but not against flood risks. Hence, this bill becomes more necessary as the days go by.

In connection with the need for this legislation, I include an editorial which appeared in the Providence Journal of Monday, October 31, 1955, entitled "Writing a Disaster Insurance Plan Fast":

"The Senate hearings on disaster insurance, opening today in Washington, come as a hopeful sign to flood-weary New Englanders who have been bearing the brunt of nature's costly extremes.

"As the hearings progress, it should become clear that the need for Federal participation in a disaster insurance plan is beyond question. There simply is no alternative—except impoverishment and suffering.

"Relatively few persons are vulnerable to flood damage, and because of this, commercial insurance companies have been unable to undertake their risks at reasonable rates. As a result, New Englanders will be able to recover only a tragically small percentage of the estimated $650 million losses suffered this year. One estimate, on the basis of earlier figures for the August floods, place insurance coverage at 10 percent or less of the total damages.

"Sadly, the uninsured losses are the important, everyday necessities—homes, furniture, shops, and factories. They must be swiftly restored without bankrupting their owners if our regional economy is to remain sound. This time, as in the past, the Red Cross and the various relief agencies gave invaluable aid to recovery. But still, all too many who suffered losses have found themselves unqualified for this aid. Many have to borrow to patch up their losses, but such loans are a continuing drag on the economy. Our residents and businessmen must be given solid assurances that they will have certain recourse when disaster strikes again.

"Federal participation in disaster insurance will, in fact, be a sort of premeditated relief. Because the population at large will be undertaking the risks of a few, such a program will be more in the nature of a subsidy than pure insurance, which is a voluntary spreading of risks. But there seems to be little room for disputing it on these grounds. One way or another, the entire Nation has always responded with relief to its stricken citizens, sharing in common the costs of misfortune—be it war, plague, or disaster.

"Nor does there seem to be adequate grounds for fearing that Federal disaster insurance will be another step in Government encroachment on private business, or that Government will ultimately be forced to underwrite less justifiable risks. Government in this case will be filling a glaring need that private business thus far has been unable to satisfy. This is not encroachment, nor could it ever be claimed as a precedent for encroachment.

"The Lehman commmittee should therefore act with decision in drawing up a sound disaster insurance plan to lay before the next Congress. And it should be enacted without delay, for more storms may strike before crucial flood-control devices can be built. New England will be impatient of political small talk, for the survival of many of her citizens is at stake."

The responsibility of the committee has just about been concluded. The members of it have worked endless hours, have traveled hundreds of miles and have had the benefit of one of the most efficient staffs of any committee on Capitol Hill. I wholeheartedly urge—yes—I even plead with the Senate to give favorable consideration to S. 3732 so that this measure may proceed on the legislative path to the other body.

There have been bills on this subject introduced in the House of Representatives. Possibly if the House receives a bill from the Senate, it might further expedite matters. Time is of the essence and as the expression goes, "Time and tide wait for no man."

The livelihood and welfare of literally millions of people rest upon this bill. While it is not a flood-preventive measure, at least it is a consolation for the people of this great country to know that the door will be open to them to make provision for insurance against the risk of flood. In the meantime, we can proceed with plans and preparations to control or avert the devastation of natural catastrophes.

The Red Cross knows what this problem is. The President of the United States knows what this problem is, as evidenced by the fact that he declared certain areas disaster areas during 1955 after these floods had left their marks of destruction.

This bill is not a handout by the Federal Government. The premium rate and the terms and conditions of any policies issued by private insurance companies on the basis of Government reinsurance are made subject

to the Commissioner's approval. Private companies alone cannot do the job. This is evident by a review of the testimony offered during the hearings on this legislation.

The Federal Government must lend a helping hand with the hope that the experience gained can eventually be of assistance to private insurance companies. The gap must be plugged until such time as private industry can cope with the problem.

When the Committee on Banking and Currency visited Providence, R. I., I submitted a statement setting forth my views. I said that the committee was faced with a tremendous task and I was certain that they wished to report legislation which would provide a ray of hope for those whose futures may be threatened by a repeat performance of the havoc which at that time had been wrought by Hurricane Diane and other natural catastrophes.

I congratulate the committee for the fine job it has done resulting in S. 3732.

I am very happy to note that this bill received the unanimous approval of the Committee on Banking and Currency.

This Congress has, through both the Senate Committee on Public Works and the Senate Appropriations Committee, considered the requests for preventive measures for flood control. Now, in order to properly weave the various threads of this problem into a complete cover, we must consider the insurance aspect of the flood problem. This has been done in S. 3732. If over a period of time it found that there are certain provisions of this bill which can be improved upon, this can be done in a future Congress.

We must get this program off the ground. We cannot do it by further study or prolonged debate and discussion. It is a matter of vital concern which requires our prompt and expeditious action on the floor of the Senate.

Personally, I can perceive no objections, nor have I heard of any objections by Members of Congress, to a flood-insurance program. As I previously pointed out, the President saw the need for such a program and so expressed himself. Former President Truman saw the need for such legislation in 1952. Here in this great body, the matter, in my opinion, has transcended party lines. It is a case of a national problem which must be dealt with on a national scale. It is not a problem to be left to the various States, because it affects the very economy of our entire Nation. If a plant in Woonsocket, R. I., is damaged by flood, thus causing production to stop, those people in the rest of the United States or in the world who depend upon that product must go without it or consume valuable time at great economic loss in securing a new source of supply.

The hearts of the American people have been touched on numerous occasions when a plea has been made by the Red Cross for funds to cope with the human suffering which resulted from these floods. Basically and simply, the problem is—we need flood insurance legislation. With this, no one quibbles. This is it.

Further, the problem must be solved on a national scale. This is where we in the Congress of the United States fit into the picture. S. 3732 enables us to carry out our obligation to all the people of the United States.

The instrument for relief is at our disposal. The Committee on Banking and Currency of the United States Senate has put this instrument before us. I urge with all the fervor at my command for favorable consideration of S. 3732. It will give a lift to those who need it. It will bring consolation to those who are moved with compassion for their fellow man. It will show that no problem is too big for the United States to overcome once it puts its machinery of democracy into operation.

Address by Hon. Styles Bridges, of New Hampshire, Before Annual Meeting of American Cotton Manufacturers Institute

---

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the annual meeting of the American Cotton Manufacturers' Institute, at Hollywood Beach, Fla., on Saturday, April 7, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTRODUCTION

I am delighted to come to Hollywood Beach this morning and join in your annual meeting.

The American Cotton Manufacturers Institute, as the central organization of one of America's largest and most important industries, is doing an outstanding job for its members. I have known this for a long time, of course, but the size of the audience here today makes me all the more certain of it.

I have come here today from our Nation's Capital—one of the two great nerve centers of the world. The other, of course, is Moscow. Decisions are being made—and will be made in the next few months and years—in these two world capitals, which may well decide the destiny of the civilized world. In my judgment, it is imperative that the citizens of this country understand some of the basic issues which confront us. It is only by understanding them that we can meet the challenges—courageously and intelligently.

I happen to be the ranking Republican in the United States Senate and chairman of the Senate Republican policy committee. As such, I represent 1 of the 2 great political parties of our country. We now have a Republican administration after 20 years of control by the New Deal and Fair Deal leadership of the other party.

A little more than 3 years have passed since this change in government took place. They have been short years. They have gone quickly. But a great deal has taken place in that brief period of time. It is right that we stop and evaluate our progress.

In the first place, we must know what this administration in Washington is doing. Secondly, we must identify the major problems which confront us today, and determine how those problems shall be solved.

I think it is fair to say that this administration probably satisfies neither extreme in our country—neither the extreme left wing nor the extreme right. I am sure that the New Dealers are not pleased with it, and I imagine that the ultraconservatives are not happy either. In my judgment, the administration is following a constructive middle course—a course dedicated to the best interests of the great majority of Americans. My definition of it is: "A wise application of traditional American principles to today's problems."

THREE OF THE FUNDAMENTAL ISSUES

This administration has had to cope with a multitude of problems. If time and your patience permitted, I could discuss them for hours. However, we can reach some understanding of the complexities of Government, if we discuss three of the fundamental and basic issues that confront us today. The first and most important is that of fiscal stability. Our fiscal health determines in great part how successful we will be in our approach to the remaining two problems—foreign trade and national defense.

PROGRESS IN ECONOMIC STABILITY

For the last 10 years, the American people have fought a constant battle with fluctuating prices, fluctuating wages, and inflationary trends.

One of the most important developments which has occurred in the last 3 years has been the economic stability which accompanied the economic progress this administration brought to the Nation.

A striking example of the byproducts which come from sound fiscal policy is found in the termination of controls. The calamity howlers said that the removal of controls would ruin our economy. They insisted that without controls we would experience a further inflationary spiral.

The New Deal planners maintained that controls were essential and that the free-enterprise system was out of date. They told us that if the President dared to remove controls on prices, wages, and rents, the American wage earner would be the loser by $3 billion a year in increased cost of living. Fortunately, President Eisenhower and the leaders in Congress were courageous enough to do what they knew was right.

WHOLESALE PRICES AND COST-OF-LIVING INDEXES

The results of their courage are apparent. In January 1953, the wholesale price index was 109.9. In January 1956, this same yardstick was 111.9. The wholesale price level of commodities has risen only 2 points in the last 3 years, whereas, in the last 3 years of the Truman administration, the wholesale price index jumped 12½ points.

The cost-of-living index in January 1953 was 113.9. In January 1956, 3 years later, it was 114.6—an increase of only seven-tenths of 1 percent.

I can offer no better proof that this administration's doctrine of economic commonsense has been effective. In my judgment, these figures bear plain witness to the fact that free enterprise is the true American system.

STRENGTHENING THE DOLLAR

Another clear indication of improvement in our economic health has been the ability to stop inflation of our currency and the cheapening of our dollar.

In 1939, the purchasing power of the dollar was 100 cents. By January 1953, the deficit financing and inflationary programs of that period had decreased its value to 52 cents.

This depreciation of our currency has had devastating effects on wage earners, investors, and on the aged who depend on fixed retirement income for their security. It is a brutal but accurate fact that an annual income of $5,000 in 1940 would provide little more than $2,500 worth of commodities in 1952. I hardly need to dwell on this. You know as well as I do what cheap money can do to the Nation's economy.

It is tremendously significant that, since January of 1953, the purchasing power of the dollar has varied within a range of only one-half of 1 cent. That is a record of fiscal responsibility. It is this same sense of responsibility which makes us continue to strive to balance our national budget and spend within our means.

REDUCTIONS IN APPROPRIATIONS AND SPENDING

When this administration came into power on January 20, 1953, and President Eisenhower assumed the responsibility of leadership, we were faced with an almost impossible fiscal situation. We had, carried over from the previous administration, contract authorizations amounting to over $83 billion.

These were actually I O U's incurred by our predecessors and left for us to pick up and pay.

Imagine taking over a business and finding $83 billion in bills facing you—and finding $83 billion to be $20 billion more than the entire income of the business. In addition, Mr. Truman had made excessive recommendations for appropriations and spending to the new Congress. The 1st session of the 83d Congress cut appropriations by $14,100,000,000 under the Truman estimates. In the 2d session of the 83d Congress, we again made substantial cuts and the final appropriations by that Congress were $27,800,000,000 under the appropriations of the 82d Congress.

For the fiscal year ending June 30, 1956, a balanced budget is in prospect.

Latest Treasury estimates indicate a $200 million surplus, although this figure may change in the spring after the Treasury receives heavy corporate and individual Federal income-tax payments.

Furthermore, President Eisenhower has submitted a balanced budget for fiscal year 1957, with an estimated surplus of some $400 million.

The struggle to balance the budget has been a tough one. It will require continued vigilance to keep the Government from going into the red again.

Later in my talk, I will make reference to the Bridges-Byrd amendment, which I believe would contribute materially to this goal.

TAX CUTS

The Republican Party has taken the lead historically, in reducing income taxes. In fact, it has voted 7 out of 10 income tax cuts that have been made since 1913. We will cut taxes again whenever it is reasonable and proper that we do so. But first things must come first. We would be irresponsible and negligent in our duties—if we went before the American people and advocated a tax cut at this time. It is our conviction that fiscal stability is essential to the welfare of the country, but we will never have that stability so long as we spend more than we take in.

The national debt of this country is almost beyond human understanding. It presently rests at $277,700,000,000. Secretary of the Treasury Humphrey has stated that this debt is so tremendous that we owe more money than all the people in the world have ever owed.

SIGNS OF A HEALTHY ECONOMY

The constant efforts of this administration to achieve economic stability are good signs in government. In my judgment, these measures are applauded by all thinking Americans.

There are other signposts, however, of improvements in our economic condition, which I invite you to consider.

More than 64 million Americans are now employed, out of a record civilian work force of 66½ million.

More than half of the 47 million American householders own their own homes.

Americans have put aside $85 billion of savings in life insurance and own more than $50 billion worth of United States savings bonds.

Government and private retirement funds for American workers now total almost $60 billion.

Total output of goods and services hit a new high in 1955—more than $387 billion, and the rate in 1956 may run over $400 billion a year.

Personal income in 1955 broke all records: $303 billion, an increase of $15.5 billion over 1954.

Disposable personal income—which is total personal income less personal taxes—reached an all-time peak of $269.2 billion in 1955—rising $14.4 billion over 1954.

What's more, the Nation's expanding income was widely shared. Income received by labor in the form of wages, salaries, social-security benefits, and related payments, rose to 75.4 percent of total personal income plus personal contributions for social insurance. The share of proprietors fell about one-half percent; the share of investors remained unchanged.

Meanwhile, the consumer price index fluctuated within a range of less than one percentage point during 1955.

In other words, while personal income was rising, the cost of living was steady, meaning a net increase to our people.

Unincorporated firms showed gains, as seen by the rise in business and professional income from $25.9 billion in 1954 to $27.3 billion in 1955—an all-time high.

Corporate profits in 1955 rose above 1954 by $9 billion before taxes and by $4.5 billion after taxes.

New production records were set in industry and related activities, and construction expenditures reached a new high of $42.2 billion.

This country has never known such prosperity—either in peace or in war.

Farm prices and incomes alone are depressed amid the Nation's greatest prosperity.

Average prices received by farmers for all products remained fairly stable in the first half of 1955. Near-record harvests, however, sent the index of prices received by farmers downward from June through December.

Another measure of the farm situation—the parity index which includes the index of prices paid by farmers, interest rates, taxes, and wage rates—held steady and was at the same level at the end of 1955 as in 1954.

Although farm prices and incomes generally declines during the year 1955 and both farm mortgage and non-mortgage debt rose, total farm asset values and owners' equities in these assets increased, chiefly because the value of farm real estate continued to rise. Average values of farm real estate on November 1, 1955, were 6 percent higher than a year earlier and above the previous peak reached in 1952.

I believe the farmer is entitled to his fair share of the general prosperity. This administration has proposed a far-reaching program attacking the principal causes of the present farm dilemma.

These causes are: 1, production and market distortions as a result of wartime production incentives too long continued by the previous administration; 2, current record livestock production and near-record crop harvests piled on top of previously accumulated carryovers; and 3, rising costs and high capital requirements.

Congress is currently trying to write a farm bill that will help the farmer share in prosperity, and, in so doing, to help assure continued prosperity for the Nation as a whole.

There is a further important policy of this administration that is a factor in fostering a healthy economy; the Federal Government is getting out of business activities in which it never should have engaged in the first place. Barge lines, rubber plants, ice cream factories, clothing factories, paper mills, formerly operated by the Government in competition with private enterprise, are being liquidated and disposed of at a fair market price.

All of these things are signs of a healthy economy. Furthermore, they have been accomplished without endangering our national defense.

I want to say just a word about reductions in Federal personnel. A little over 3 years ago, we inherited a great sprawling bureaucracy. We found tremendous amounts of duplication. We found functions which were unnecessary or obsolete. Since that time nearly 300,000 Federal employees have been eliminated from the public payroll.

When one reviews the progress which has been made in a brief period of time in restoring fiscal stability to our country and removing the uncertainty of inflation and recession, the program has indeed been effective.

FOREIGN TRADE

I come now to the second of the three important issues—foreign trade.

First of all, I know that we are gathered here as people who have common feelings on the need for protecting American industry from low-cost imports. When the textile industry of this country has over two million people working for it, our import problems demand not only your attention as industry representatives but the attention of Americans in all walks of life.

As Spencer Love of the Burlington Industries, one of your spokesmen, recently said, "The strength of the American textile industry is a part of the strength of America. It is a part of this Nation's essential system of defense." No clearer statement of necessity can be made when we consider the effect of foreign economic policy on industry and employment in this country.

Now, the last session of Congress saw our Trade Agreements Act extended for another 3 years. As you all know, it was the subject of bitter debate in both the House and Senate, even to the point where President Eisenhower felt it necessary to publicly state that "No American industry will be placed in jeopardy by the administration of this act."

When it was referred to the Senate, there were many of us who felt that our domestic industries needed a greater measure of protection than was spelled out in the bill, that certain changes would be necessary to preserve the reciprocal and selective principles of the Trade Agreements Program. There were a great many amendments offered and considered. Perhaps the most constructive of these were the nine amendments that I introduced with Senator Pastore of Rhode Island.

Of these 9, 8 were accepted by the Senate Finance Committee and passed on the floor of the Senate. I will not list them in detail for you this morning. However, I do want to point out that their adoption certainly made the bill more responsive to a sound and realistic continuation of the Trade Agreements Program.

The present session of Congress has before it other legislation which is important to all of you, and the textile industry generally. I should like to mention just three of these bills. I am sure that most of you are familiar with them.

The first of these is known as the Customs Simplification Act. It passed the House of Representatives late in the last session. You should watch it closely for, as it is written, there exists the threat of tariff reduction through indirection. It could result in our present congressional safeguards being circumvented.

I shall not dwell on it at length, but I will make the prediction that if Senate floor action takes place on it before adjournment and there is a possibility that it will not—the bill will be modified from its present form in several respects.

Now, the second of these bills is one which the American Cotton Manufacturers Institute and I view with deep concern. It calls for United States participation in the Organization for Trade Cooperation.

OTC, as it is known, would administer the General Agreement on Tariff and Trade. Now, it must be remembered that GATT is

an international trade agreement entered into by some 35 countries, including our own. It has never been approved by the Congress despite many efforts. Few people—and not too many Members of Congress—fully realize the implication of this bill.

Twenty-two years ago, Congress virtually surrendered control of trade policy to the State Department. The results have not been happy. Now, by approving OTC, we are asked to take the final step and transfer that power to an organization subject to the control of foreign governments.

As Roger Milliken, president of Deering-Milliken & Co. and a leader in your organization, recently testified before the House Ways and Means Committee, "We regard OTC and GATT, viewed separately or in combination, as instruments designed to suppress our national freedom in international trade and our freedom as a Nation to govern the internal economy of the United States in accordance with the Constitution and the laws of Congress." He could not have described this situation more accurately.

Let me give you just one illustration of what I mean. The United States, as a participating member of GATT, would have only 1 vote out of 35 in any dispute arising over, for example, the revision of tariff levels—and not even that if we happened to be a party to the dispute. Other countries who would participate in such decisions with a vote equal in every respect to our own would be, to name a few, the Duchy of Luxembourg, Rhodesia, India, and, believe it or not, Communist Czechoslovakia.

The President has called for the passage of this bill, and as much as I should like to, I cannot share his views. I cannot avoid the feeling that he has not been fully advised as to its breadth and implications. I have no choice but to oppose it in the Senate of the United States.

Now the third and last bill I shall mention is the one that Senator JAMES EASTLAND introduced. It has the bipartisan support of 62 other Senators, of which I am one. It seeks to do two things:

1. Have our Government maintain a fair share of the world market for United States cotton, and

2. Limit the importation of cotton into this country by the establishment of quotas.

The second of these two proposals is a relatively new approach to the problem of low-cost foreign competition. As a measure of its importance, I think you all know that the Japanese textile industry has already suggested establishing its own voluntary quotas. You can be sure that this proposal has them worried.

I am not going to hazard a guess, this morning, as to what its chances may be, for House action must take place first through a companion bill. However, there is increasing sentiment for Congress to look long and seriously at its potential.

Before closing this subject, I want to leave with all of you this one word of warning. It is this: Those of you who favor the establishment of quotas should not be misled into making any concession on OTC and GATT legislation for your own near-term purposes. It would be a serious, and possibly later, a fatal mistake.

In any session of Congress, and particularly in this one, we in the House and Senate count on you people to keep us advised. We seek your counsel and guidance. It is virtually impossible to predict accurately the trend of events this year. This is a presidential election year, and much of the time, thought, and effort of Congress will revolve around that fact.

We will not have time to do all we should. We need advice, facts, and recommendations on a broad policy basis. You can help us in many ways. Your knowledge of these situations can be invaluable to us. The more that you can do as a group, the greater help you will be to us in the Congress—and the more certain you can be of attaining the results that you seek.

NATIONAL DEFENSE POLICY

Regardless of the fact that our foreign relations have improved, I would be unrealistic if I did not tell you that we are living in a world of crisis.

We might as well face the fact that the American system cannot coexist with communism. The basic doctrine of communism is class struggle. Their eventual plan calls for revolution throughout the world.

We might as well recognize communism for what it is—a conspiracy. It is a conspiracy that has been growing for nearly a hundred years and there is no reason to assume that it will end tomorrow.

I believe we have made some terrible mistakes in dealing with this conspiracy. In 1945, we emerged from the bloodiest and most costly war the world has ever known. We emerged as the acknowledged leader of the free nations. We had the best-equipped and strongest Army, the greatest Air Force and the most powerful Navy on earth. In addition, we had sole control of the atomic bomb—the new weapon which could be used to control the world.

In 11 short years we squandered away most of these advantages. We appeased, we compromised, and we condoned and sheltered traitors in our midst.

We are now faced with the fact that Soviet Russia has the capability to manufacture atomic and hydrogen weapons, and there is every indication that they will use those weapons, if and when they consider it profitable to do so. It may not happen tomorrow—it may not happen for 10 years—it may never happen. However, the potential is such that we can never again afford to go to war without adequate preparation or the ability to wage war.

In view of these basic facts, it has been necessary to revise our planning for national defense. It now is apparent that we must plan for an indefinite date in the future.

There are those who advocate an all-out crash defense program—more planes, more guns, more ships, more men in service, and more expenditures. They would have us spend 100 billion dollars a year for several years. True, we could make this Nation invulnerable if we turned it into an armed camp, but we could lose the struggle against communism without a shot being fired if we burden our economy to the point of breakdown.

I think the Communists have made it entirely clear that they hope to participate our economic destruction, as an easy and cheap means of overthrowing our Government. It follows then that we must be realistic in planning for an adequate, yet economical, defense program. The course we are following now is both logical and intelligent. We have abandoned—I hope for once and for all—the old theory of national defense which was based on feast and famine.

As I have indicated, we never again will have a year or two in which to prepare our defenses. In the same breath, we cannot afford to spend ourselves bankrupt.

BASIC AIMS OF DEFENSE PROGRAM

This is a period of extended tension. We may reasonably expect that this tension will continue indefinitely. For this reason, we have devoted ourselves to a program which:

1. Provides us with armed forces capable of deterring an aggressor.

2. Providing a well-trained and professional defense force, immediately available to handle whatever situation develops and to repel any national attack.

3. Establishes an increasingly stronger continental defense program.

4. Establishes and develops a powerful military manpower reserve.

5. Provides a strong industrial economy working for peace, but ready for conversion to war.

6. Increases our superiority in weapons and techniques.

It has become increasingly apparent that our superiority must depend upon our technological ability. We cannot hope to compete, on a man-to-man basis, with countless numbers of Russians and Chinese. Our greatest hope is our continued superiority in the fields of nuclear weapons, guided missiles, and all the other modern devices of war.

I can summarize the national defense picture by saying that we are fundamentally strong, and are growing stronger every day. Yet, this has been accomplished at tremendous savings to the taxpayer by cutting waste and extravagance.

These three general areas—fiscal stability, foreign relations, national defense—are all interrelated. Each is tremendous in scope and complex in nature by itself. I have personal knowledge of the time, energy, and thought which must be devoted to these problems, and I can give you my personal assurance that their solution is a matter of the gravest concern to the administration and the Congress.

BRIDGES-BYRD AMENDMENT

In company with the distinguished Senator from Virginia, Senator BYRD, I have introduced a joint resolution proposing an amendment to the Constitution of the United States. Without going into the technicalities of my proposal, it may be simply explained as follows: This legislation, if adopted, will require the imposition of Federal taxes sufficient to provide for revenues which will be equal to appropriations. By this simple constitutional amendment, we will require that the President submit to the Congress a budget which shall not exceed the total of the estimates of the receipts of the Government during the coming fiscal year.

In the event that the Congress makes appropriations which exceed the estimates of the receipts of the Government, it shall be mandatory upon the Congress to enact measures to raise an amount of additional revenue at least equal to the excess of appropriations over receipts.

This proposal further provides that the Congress shall not recess or adjourn for a period of longer than 3 days, until such action has been taken.

This Nation is prosperous. Our people are well clothed, well fed, well housed. We are in a period of abundant employment. There is just no reason why we cannot pay our operating expenses. I should think that every American would wholeheartedly support this constructive suggestion which merely states that the Government is obliged from now on to collect at least as much as it spends.

SENATE BILL 1343

I have also introduced another bill to require that whenever a committee of Congress reports favorably on a measure authorizing the appropriation of money from the Treasury, that the Department or agency of Government concerned submit a printed report to include an estimate of the probable cost of carrying out the legislation.

The purpose of this bill is sound in principle and easily understood. Only too often Congress has enacted legislation without the faintest idea of how much money would be required to carry out the intent of the legislation.

There is not one of us who would sign a contract with an automobile salesman until we knew the price of the car. Why in the world should the Government pass laws without knowing how much it is going to cost to implement those laws?

SENATE BILL 1341

Another of my bills is one requiring that every year the Federal budget shall include a

special analysis of all long-term construction and development projects authorized by Congress. This analysis would show the total estimated cost, the actual or estimated amount expended during previous fiscal years, the amount needed during the current fiscal year and the amount needed in subsequent years.

With these figures available the Congress will have the kind of information which any individual needs when he undertakes to build a house. Any intelligent person would want an estimate of the total cost, how much had already been spent, and how much he would have to spend in the future. I can see no possible objection to giving the Congress of the United States this very same information.

I agree that these measures are not the kind which call for headlines in the sensational press. They are, in my opinion, much more important to our future security than so many items of sensational but temporary interest.

CONCLUSION

In conclusion let me say this: I cannot avoid the conviction that the stability and national security of this Nation is dependent upon a sound economy.

We must never forget that the Communist manifesto, known as the Bible of Communism, written in 1848 by Frederick Engels and Karl Marx, predicted that economic factors would determine the course of history. It states that capitalism is doomed to destruction because of its inability to maintain a stable and productive economy.

The comrades in the Kremlin hope and pray that we will waste our resources and spend our way into financial collapse. I am convinced that such a result need never take place.

As a representative of a thrifty New England State, with considerable experience on the national scene, I am convinced that the last 3 years have put us back on the track. I feel justified, therefore, in leaving you on this hopeful note.

This country of ours is the greatest and strongest on earth. It was made that way through the qualities of courage, intelligence, morality, and plain commonsense of individual Americans. We are sometimes slow to act, and too often leave the impression that we are soft. The world is beginning to understand that our humanity is not softness—that the fiber of America is no less strong than it was in 1776.

Foreign Aid and the Governor of Utah

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. BENNETT. Mr. President, I have long felt that the CONGRESSIONAL RECORD could do with a good column. It is one of the few daily publications in the United States without the benefit of a good column.

As an example of what might be used for the purpose, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "The Great American Novel," written by Dan Valentine and published in a recent issue of the Salt Lake Tribune. As many of my colleagues probably know, the Governor of my State has declined to pay a part of his income tax on the ground that the funds were being used for foreign aid, to which he objects.

My friend, Dan Valentine, in his column has worked out a fictional solution to the problem, which may be more romantically interesting than the actual solution, which came last week, when the Internal Revenue Service exercised its lien on the Governor's bank account and collected the unpaid portion of the taxes.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Like most men in the newspaper business, I have always had it in the back of my mind to write a novel. (I have read some of the novels written by newspapermen. It would have been better if the stuff had stayed in the back of the mind.)

However, I have never written a novel because I have never been able to come up with a plot strong enough to go 350 printed pages and sell for $3.95.

But I think I will get at it now. Because I have finally come up with a plot that will knock the bindings off the publishing industry.

It came to me just like that.

The main character is the governor of a State, see? He's a good governor, honest and fearless, and he's the hero.

Well, after a couple of chapters about the background of this governor, the novel gets going.

This governor decides not to pay his income tax because he doesn't want the money going to India and points east. So he decides to put his income tax in the bank instead of giving it to the Government. At the same time, he decides to run for governor again.

Well, the Government asks for the money. But the governor says no, so they send out a handsome young income-tax collector to get it.

This handsome young income-tax collector knocks on the door of the governor's mansion, but the governor isn't home. His beautiful young daughter answers the door.

"No, no, a thousand times no," the governor's pretty young daughter says when the handsome young income-tax collector asks for the income-tax money.

Well, meanwhile back at the State capitol, the Governor is crating all his valuables into boxes to be sent to Alaska. He doesn't think the Government can take 'em, but he's not sure.

But back at the Governor's mansion, the Governor's beautiful young daughter is falling in love with the handsome young income-tax collector, but they can't do anything about it because the Governor will not let his beautiful young daughter marry an income-tax collector.

This goes on for 5 or 6 chapters, young love fighting against tremendous odds.

The Governor can't get in the capitol because the Federal Government has put a cavalry outfit on the front lawn. So at midnight the attorney general sneaks in the capitol and takes the official State seal, and the Governor goes back to his hometown and hides in a coal mine. This coal mine is made into a provisional State capitol, and he does all his paperwork wearing a hat with a candle on it.

Well, meanwhile, the Governor's son is recalled into the Army and given command of a brigade, and this brigade is told to capture the Governor.

See the suspense, get the conflict? Father against son, son against father.

Well, the brigade is bivouacked in front of the coal mine, but the Governor doesn't care, because his beautiful daughter is sneaking in sandwiches at night.

Meanwhile, the country is up in arms. There is a threat of civil war. Finally, the President of the United States flies to the coal mine.

He talks down the shaft, and the Governor talks back.

They discover they are old World War I buddies, and that the Governor had saved the President's life once. So, the President tells the Governor that if he will write a check for the income tax due, he, the President, will see that it is never cashed.

Then, the Governor comes up and consents to the marriage of his daughter and the income-tax collector, and the son sends his brigade back to Fork Knox, and the book ends as the President and the Governor walk arm in arm up the rolling green lawns toward the capitol building in the sunset.

Now, I ask you, is this going to be a book, or is this going to be a book?

Cast-Stone Panel Industry at Bend, Oreg.

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most informative news story from the Bend (Oreg.) Bulletin of April 20, 1956. Written by Don Higgins, a staff writer, this article tells of a new industry recently developed in this central Oregon town.

Without fanfare or flurry, the inventor and manufacturer, Ike Whitely, is producing a new article for the building trade and it is described very adequately by writer Higgins.

Significant, Mr. President, is the resourceful and enterprising use being made of pumice, a material found in abundance in the vicinity of Newberry Crater, just east of the Cascades in central Oregon. In fact, from the south shore of the lake there rises a whole mountain of this light gray variety of volcanic glass generally referred to as pumice. Newcomers to this lake are amazed to see walnut-sized pumice pebbles floating at the water's edge. This is possible because the material is full of many cavities.

At national Scout jamborees, Oregon Boy Scouts swap chunks of pumice for the oddities and wonders offered for barter by Scouts from other areas. Long known for its polishing and cleansing qualities, as implied in its name, this material has become widely known as a building material in recent years.

This article, Mr. President, attests to the ingenuity, resourcefulness, and enterprise of our people who are seeking always for new resources, as well as for new uses for old resources.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW PLANT MANUFACTURING CAST-STONE PANELS AT SITE JUST NORTH OF DESCHUTES JUNCTION

(By Don Higgins)

A new industry has appeared in the Bend area and has begun manufacturing with nary a trumpet tooted in advance.

Few people have noticed it although the building was constructed in plain sight of hundreds every day. The passing throng was looking straight ahead, as it should.

The new plant is the Hy-Bloc Manufacturing Co. a mile north of Deschutes Junction on Highway 97 between Bend and Redmond.

WHITELY IS OWNER

Ike Whitely, a sturdy stonemason of 50, is the owner and working boss. He is manufacturing lightweight cast-stone panels 6 inches by 12 inches by any lengths but the standard is 7 feet 9 inches. They are for use as sidewalls or partitions for houses and buildings of any kind.

"I haven't said anything about it before," said Ike.

The plant is a dream realized for Ike. He says it is the only one of its kind in the world. His product is made by a process he invented and he has applied for a patent.

Ike had the do-it-yourself man in mind when he invented his panels. They are hollow, crammed with zonolite insulation, reinforced by a three-eighth inch steel rod at each corner. They are so light that 1 strong man, or 2 of medium strength, can wall a building with them without the use of lifting machinery. Each weighs about 160 pounds.

SET VERTICALLY

The panels are set vertically like modern ranch style homes. They are bolted together top and bottom and sealed with mastic instead of mortar.

Whitely's factory is a long, narrow, low building of pumice block—80 by 20 by 8 feet—with an odd looking superstructure at the front end that resembles a sawed-off grain elevator. He has built it since January 1 with the help of his son-in-law, L. R. Blume, and a workman.

The superstructure is called a bunker and holds a hopper into which the pumice is dumped from trucks that reach it over a ramp. Step by step the especially ground pumice goes down the gravity feed from the hopper into a mixer below which contains a plastic material and cement.

STEAM MOLD

There is a rumble and the mixer vibrates and compresses the mixture and delivers it to a steam mold which sets it into long panels with hollow cores that are filled with insulation by a special process.

The panels are wheeled 1 by 1 to the curing room in the rear of the building by a traveling hand crane suspended from an overhead track. Paper is placed between the blocks during 3 weeks of curing. They are sprayed lated by a zonotone plastic process, that anneals into a permanent waterproof skin.

The panels are finished usually in any of 20 colors ordered and have the appearance of granite; or they are delivered unfinished for later spray painting by the purchaser.

Whitely says his panels are light, compare favorably in strength with the heavier cast stone that is a familiar building material, especially in the East and Middle West. The latter is made of sand, gravel, and cement.

The new manufacturer says his present aim is 100 panels a day. They sell between $7 and $9 each on the retail market and it takes 100 of them to build an average 5-room house.

The other day when this information was obtained, Whitely was molding his first lintel and processing his first order. He said he wasn't worried about sales. Milo Harris and his Pamelia Lumber Co. will market the panels in this area and on the coast the selling will be done by the Hy-Bloc Sales Co., of Portland.

Whitely is a native of Payette, Idaho. He has been a stonemason during his working life and was a contractor for 3 years in Madras. During that time, his idea was born for his factory and he has been developing it into the unique plant of today at Deschutes Junction.

With his wife Whitely lives in Redmond. Their two children, a son and a daughter, are grown and married.

"Our new baby is his plant," said Ike proudly. "We are making the only hollow core, insulation filled cast stone on the market."

Address by Hon. Barry Goldwater, of Arizona, at Taft Memorial Dinner

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the distinguished Senator from Arizona [Mr. GOLDWATER] at the Robert A. Taft memorial dinner, held in Boston, Mass., on May 3, 1956. The address is entitled "The Fallacy of the Common Man." It is a fine address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Any American would be honored, as I am, by the opportunity of participating in this occasion, so appropriately dedicated to the late Senator Robert A. Taft.

Because I was privileged to serve with him for a brief period in the Senate; because he was a Republican and contributed of his time and talents to my campaign in Arizona in 1952; and because we have always appeared to share the same philosophy of Government and ideals of freedom, I feel a particular sense of personal pride in being asked to recall with you the enormous and enduring contributions which Bob Taft made to his country.

The ledgers of our Nation's history are abundant in their memorializations of the great leaders of the past who played such vital roles in the building of our liberty. Few men, however, for all the reverence and esteem in which they have been held by succeeding generations of their countrymen, have lived to realize the greater compensations of their job well done.

Bob Taft not only enjoyed the rare experience of being a prophet who had honor in his own country, but he also received in the course of his public service the satisfactions that come from the selflessness and sacrifice that is the mark of true statesmanship.

He was a genuinely brilliant man; but, somehow, to those who remember him, his brilliance is actually overshadowed by his character, his convictions, and the courage which fortified him against the assaults which are inevitably made upon men to whom principle is more sacred than profit.

He was the soul of integrity. His unswerving dedication to the right set an example of strength and greatness which has been permanently fused upon the spirit of the American Congress.

The quality of Bob Taft's service cannot be measured entirely by surface achievements. It is true that he built a record of accomplihment seldom equaled in legislative annals; but the principal substance of his towering stature was the way he lived, the ideals he cherished, and the faith which guided him.

He was never ambitious for himself, yet he was always striving to inspire others in the way of his own governmental convictions. To be President of the United States meant, for him, the ultimate opportunity to render service to the Nation he loved. I am sure that he never considered this aspiration in terms of self-glorification or personal reward.

Indeed, all of us know—as I am sure Bob Taft, but for his humility, would have realized—that he did not need to be President to be forever beloved and revered by his fellow citizens.

When, God, in His greater wisdom, denied Senator Taft the fulfillment of this highest official goal, He also lighted the way to the greatest single triumph of his career; and Bob Taft followed this beacon to become the most trusted and faithful confidant of the man whom he had opposed for the presidential nomination.

Bob Taft was, truly, an American first; a Republican, second; and a "Taft man" last. How appropriate, indeed, was Senator KNOWLAND's reference to him at this meeting last year as "Mr. American."

No one will say, of course, that Bob Taft was an ordinary, a common man. He dwelt among us in the days and years which called for an uncommon man, a leader, a statesman. Senator Taft was that man.

He was outraged by the attempt of self-styled, pseudo-liberals to penetrate the foundations of our constitutional, free enterprise system with their socialistic theories. In this respect, then, he was a conservative; but, as a believer in the rights of individuals to live their own lives, to follow their own pursuits, to exercise their own wills, and to retain the products of their own labors, he was a liberal in the true, historic sense of that word.

Bob Taft believed in liberty. He believed in preserving the creeds and institutions which created our liberty.

He knew that he was not a common man. He knew that there is no such thing as a common man in America.

He recognized the wide diversities we have in races, nationalities, religions, occupations, and income levels in the United States.

He believed in treating our citizens as individuals, with sacred rights and freedoms, and opportunities greater than anywhere else in the world.

He did not subscribe to the collectivist theory that Americans are cast from a common mold.

The preachers and prophets of gloom in our country—those despairing individuals who believe that we have reached the zenith of freedom's opportunities and must now revert to an antiquated system of slavery and regimentation—have long leaned heavily, in the name of liberalism, upon the theme of the common man.

They have employed the tyrant's tactic of division and disunity by appealing to the lingering prejudices of a system of ranks and class which pure freedom does not recognize. When they speak, they speak not to all Americans as Americans, but rather they set labor against management, farmer against worker, black against white, Jew against gentile, Catholic against Protestant, rich against poor.

In other words, they classify Americans according to race, color, religion, and occupation, and they say to each group that they are the common men who are being oppressed by the privileged few.

This privileged few, of course, in the eyes of the socialist-minded speudo-liberal, is anyone who has enjoyed a measure of success and prosperity that is greater than that of the particular group to whom he is speaking.

For many years, the Democrat Party has applied this strategy. It has portrayed itself as "the people's party," while Republicans have been described as "the party of the

special interests"—in other words, the "common man" in opposition to the "privileged few."

This claim is utterly false, but the self-styled liberals who have, unfortunately, gained control of the mechanism of the Democrat Party, have pressed it so boldly, for so long, and in so many forms that they have achieved for it a substantial measure of popular acceptance.

It is a flagrant example of the "big lie" in politics.

No major party could function successfully in a country of the size and diversity of the United States if it served only the common man or the privileged few.

It is one of the virtues of our nationwide two-party system that the voters may switch from one major party to the other and find each one an adequate instrument to serve the Nation as a whole.

If this were not true, our political system would soon degenerate into a multiplicity of small special-interest parties not capable of governing.

The very health and vigor of our two-party system—each one drawing strength from all four corners of the Republic—belies the Democrat Party claim.

These statements by so-called liberals who have corrupted the traditional Democrat Party philosophy are so absurd that I often wonder just how stupid they think the American people are.

In his acceptance speech before the Democrat National Convention on July 15, 1948, Harry Truman said, for an example:

"The people know that the Democratic Party is the people's party and the Republican Party is the party if special privilege."

He said further, at that same time, "The Republican Party favors the privileged few and not the common, everyday man."

Adlai Stevenson, in a speech at Chicago on November 19, 1955, said:

"In whatever direction we look—tax policy, resources policy, credit policy or what not—we see the sharp outlines of what can only be described as special interest Government in Washington, something we haven't seen since Republicans were there last."

Another instance of this pseudo-liberal, "common man" approach to Democrat partisanship may be found in the report on Congress issued by the CIO in September 1954. This report says, on page 20:

"The question is not whether there will be any tax relief, but who will get it. The Democrats wanted it for the people. The Republicans wanted it for the upper brackets and the corporations."

As recently as April of this year, according to a story which appeared in the Washington Evening Star on the 13th of last month, Democrat Senator SAM ERVIN, of North Carolina, said:

"The Republicans believe in government for a few elite; the Democrats believe in a government serving all the people."

The big lie marches on.

One reason behind the Democrat Party claim that it is the party of the common man is the fact that for years it has labored hard to mold the American people into common men.

Secretary of Labor James P. Mitchell called attention to this tendency of the Democrats to turn our people into common men in an address at Flint, Mich., on January 20, 1956, when he said:

"The keepers of this doctrine were interested not in individual men but in collective man, massed man. For them social problems were quite simple. One merely had to determine what was good for collective men and then shove it down his throat like castor oil. The Government was of the people, for the people, but by the social planners."

Dr. James B. Conant, former president of Harvard University, put his finger on the sources of the doctrine of massed man when he wrote:

"The Soviets seek uniformity and strict adherence to the creed of Marxism-Leninism."

In that creed man is nothing as an individual. He exists only as an unidentifiable atom in a collective mass; and men and mass exist only for the state.

Recent history shows the many steps through which the Democrats, who were in control of Government, deprived our people of their individuality.

Democrats centralized the government of everyday affairs in Washington, leaving less and less for people to do in their home States and localities. They handed out billions in relief, grants, and aids from Washington, making people dependent upon the Great White Father at the Nation's Capital.

Through social security they reduced the individuality of persons to numbers in electronic computing machines. They forced men into unions to bargain collectively.

By raising great citizen armies to fight in foreign wars they put the GI stamp of uniformity on every mother's son. By spawning Government housing developments they scattered clusters of identical brick and frame boxes from one end of the country to the other.

The list of laws, acts, and regulations which systematically robbed people of their individuality and piled them up in collective masses could be extended a mile long.

No one can deny that the Democrats intended to do good by these operations. No criticism need be leveled against relief programs, social security, collective bargaining, and public housing. Yet, it cannot be denied that an inescapable and most harmful by-product of such operations has been the weakening of individual personality and self-reliance.

The Democratic Party has done its utmost to pour our people into the mold of common men and to deal with them in the mass. This is the basis of their political philosophy and voting appeals.

While they have had some measure of success, especially where our technical progress has emphasized collective or mass action, this success has been superficial because deep down our people are proud and jealous of their individuality. They resent being compressed into the mold of the common man.

Behind the mass production and the collective this and that, our people still have wide diversities and at heart remain individualists. This is clear when we examine some of the deep-seated diversities in American life.

Where Democrats are sincere in making the claim to be the party of the common man, as some of them undoubtedly are, they see the forest and not the trees. They look at the material uniformities in American life—the same trains, hotels, restaurants, cooking, and newspapers—and quickly come to the conclusion that all our people, too, are of a common mold.

What they fail to see is that this conformity is merely an expression of our technical, material progress. They fail to understand, or deliberately close their eyes to the fact that beneath the common material veneer is a people still highly individual in talents, aspirations, and with the intense desire to fulfill their individual personalities.

Again, in his address at Flint, Mich., in January of this year, Secretary of Labor James P. Mitchell declared:

"We were told for some years that government was supposed to minister to the common man. This doctrine of the common man was as singularly unfree a doctrine as we have ever witnessed in this country. The idea that we are all alike, a common mass, the products of some sort of biological punch press, seeking the same end, through the same means, with the same ideas, desires, and needs, is indeed a devastating one."

A similar view is expressed by James B. Conant in his latest book, the Citadel of Learning, where he says "We in the free world, through our schools, colleges, and universities, seek to perpetuate that tradition of western culture which emphasizes diversity, controversy, and tolerance."

So where are we to find the "common man" the Democrats are always talking about?

Is he of the Anglo-Saxon, Scandinavian, Germanic, Latin, Slavic, Celtic, or the score of other races which make up our population?

Is he English, Irish, Scotch, German, French, Italian, Norwegian, Swedish, Czech, Polish, or among any of the other three score and more nationalities which people the United States?

Do we find that our "common man" is a Catholic, Methodist, Unitarian, Presbyterian, Baptist, Jew, or any of the other hundreds of religious sects which flourish among our people?

Is he the business executive, the local banker, the city or rural lawyer, the office clerk, the shop manager or foreman, the factory worker, the school principal, the teacher, the corner grocer and his wife, the chainstore manager, the garage owner or mechanic, the department store clerk, the Army officer or private, the housewife, or in any of the other thousands of occupations which make up our working population?

We have over 65 million employed persons in all occupations today. Where is the "common man" in this total?

Is he the worker in manufacturing who numbers only 15 million of our nonagricultural employed; or the 1 million engaged in mining; or the 2 million doing construction work; or the 4 million engaged in transportation; or the 9½ million who work in wholesale and retail trade; or the million and three-quarters who handle finance, insurance and real estate; or the 5 million engaged in service industries; or the 5½ million people who work in Federal, State, and local government?

Is the "common man" to be found among our 8 million farmers? Is he the soft or hard winter wheat farmer, the cotton farmer, the rice farmer, the truck gardener, the cattle rancher, the cattle feeder, the peanut grower, the dairy farmer, the sheep raiser, the poultry and egg producer, or among the hundreds of other farm producers in our vast lands?

Does he come from the 7.6 percent of consumer units who have a family personal income of $1,000 per year or under; or the 15.1 percent whose income ranges from $1,000 to $2,000; or the 18.9 percent with income from $2,000 to $3,000; or the 19.3 percent with income from $3,000 to $4,000; or the 12.8 percent with income from $4,000 to $5,000; or the 14.8 percent whose income is from $5,000 to $7,500; or the 4.8 with incomes between $7,500 and $10,000; or the final 4.5 percent who have incomes of $10,000 and over?

What do these facts show?

They show one thing above all else: That there is no such thing as a "common man" in the United States.

Every man and woman is an individual, with talents, interests, needs, hopes and dreams of his or her own. Each person seeks freedom to live his own life, to develop his own personality, and a fair opportunity to get ahead in the game of life on his own merits.

When young we dream of making a professional career, starting a small business, operating a farm, owning our own home, establishing a family, and building a competence for old age.

America is the land which urges us to "hitch our wagon to a star," to plan and to build on the rich foundations of our freedom and the heritage of those who came before us and provided for us, and for the generations of Americans yet to come, the opportunities we have had, as well as inspiration to move ahead to yet undiscovered frontiers in this sanctuary of freedom.

Democrat Party leaders who make the claim that theirs is the party of the "common man" are well aware that ours is a Nation of great diversities, and that there are no "commen men" in our midst.

Still, they do not hesitate to develop and inflame class distinctions in their aim to separate a few of our people from all the others.

One doesn't have to think hard to find the reasons for such Democrat trickery. One reason is that the Democrats have been running the Government on the doctrine of the collective man, massed man.

A second reason lies in the field of raw politics.

Political history shows that Democrat Party leaders will make any claim and follow any line which promises them the votes to gain control of the country and remain in power.

They have shrewdly calculated where the bulk of votes lie and they make their appeals accordingly. That is why they label Republicans as the party of the rich, the bankers, big business, and the privileged few. They know that such labels carry an unpleasant, even sinster implication; and that few votes can be had from those sources.

They label their own party the party of the comman man, the average man, and include among these the farmer, the laboring man, the white-collar worker, and the small-business man because such labels sound wholesome and the bulk of votes can be drawn from those sources.

It apparently does not trouble Democrats in the least that this deliberate inflaming of class distinctions can do great harm to the peace and unity of the Nation.

It apparently does not bother them to malign good men and women among our people.

Their consciences seem not to trouble them when it is pointed out that their party, too, has its share of millionaires, its quota of advisers from banks and big business, and a very sorry record of favors to the privileged few. It doesn't seem to bother them, either, that a great many of the things they have done with professed intentions to help the so-called little man have resulted in great harm to the bulk of our people.

In using the inflammatory phrases of class distinction, they have had but one thought in mind—to get in power and stay there.

We are reminded in the third chapter of the First Epistle General of John that "Whosoever hateth his brother is a murderer."

Isn't this, after all, the end result of these pseudo-liberal, common-man appeals?

They are attempts to instill fear in the minds of our citizens—fear of one another, fear of those who are different, fear of the self-reliance which is the keystone of liberty.

What has happened to the faith of our fathers?

America was not made free by hate. Humanity does not move forward in a climate of fear.

America has grown great because its citizens have trusted wholeheartedly in God, in our country, and in each other.

If the deceit of this new New Deal-Liberal dogma of the common man is perpetuated, freedom's call will go unanswered, opportunities will go unfulfilled, and competence for the future will be destroyed.

We cannot continue to reap the blessings of liberty by incubating cowards. We cannot carry on America's tradition of strength and leadership by stifling ambition, curbing incentive, and abandoning faith.

We need—desperately need—the uncommon men our our Nation. We need the courage and unquenched spirit of adventure which inspired the freedom of these United States.

We need to encourage in all Americans the qualities which guided Bob Taft—Senator, statesman, and uncommon American.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address delivered by the Senator from Tennessee [Mr. KEFAUVER] before the faculty and student body of Vassar College at Poughkeepsie, N. Y., on Wednesday afternoon, April 26, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I believe it is correct to say that we have been undergoing a review and reappraisal of our foreign policy during recent weeks.

The Secretary of State himself set this stocktaking into motion, either intentionally or unintentionally when he submitted to an interview in Life magazine—the famous "brink of war" interview.

This interview produced violent reactions both at home and abroad. If it was indeed the Secretary's intention to launch a great debate, then we need not comment here upon the propriety of his choice of a forum. No matter how eminent the publication, he does have access to the regularly established committees of Congress which share with him and the President a certain responsibility for the foreign policy of this Nation.

If, on the other hand, as I suspect is more accurate, this interview only accidentally launched the curren stock-taking, then insofar as it contributes to the present sober discussions it has served a good purpose.

I was glad to note that here in New York Mr. Dulles this week turned the debate into a phase of our foreign relations which has given me considerable concern. This is our relations with bur fellow Western democracies of the North Atlantic. He did so in his address to the annual meeting of the Associated Press in New York City Monday.

Not long ago I was rereading some of the files that I have accumulated through the years in the Senate, and ran across a report which I felt was quite incisive. It was dated April 2, 1952, and outlined some of the developments within the North Atlantic Treaty Organization during its first year of existence. It included this statement which I shall read in full:

"As we look back over these developments, it seems almost as if the nations of the West have been, for decades, blindly enacting parts in a drama that could have been written by Lenin, prophet of militant communistic expansion. This pattern of events, which points so surely to ultimate disaster, can be changed if only the peoples of the West have the wisdom to make a complete break with many things of the past and show a willingness to do something new and challenging. NATO itself is a significant step to meet both the present danger of aggression and the tragic struggles and dissensions that have divided our peoples in the past. But NATO's development is not automatic: action is the test."

The report went on to say that if "the free nations are to remain secure, our peoples must march together, agreed on common goals, and win that cooperative unity possible only in a free society."

Now personally I found myself in agreement with the sentiments expressed in that report at the time I originally read it in April of 1952. I find myself in agreement with them now. The report was signed by Dwight D. Eisenhower, then Supreme Commander of NATO.

This week I was interested in reading in Mr. Dulles' remarks this statement:

"The North Atlantic Treaty Organization is another organization which, in its own distinctive way, contains the possibilities of great development. It was, to be sure, conceived primarily as a military alliance, and that aspect of the organization remains vitally important. But the organization can and should be more."

Mr. Dulles continued:

"The historic weakness of the West has been its disunity. Out of this disunity came wars which have taken the lifeblood of its finest youth and weakened its economies. A major task of postwar statesmanship was to find the ways whereby the West can maintain its solidarity * * *"

I find myself also in agreement with these remarks of the Secretary of State concerning NATO. But I am wondering what has happened in between April 2, 1952, when Eisenhower spoke from his post of Supreme Commander, and April 23, 1956, when Dulles spoke as Secretary of State in an Eisenhower Cabinet.

Just a little over a year after his report, General Eisenhower became President Eisenhower. He then had the office and the authority to seek to bring about the conditions that he believed beneficial. But where is the action that he spoke about as the test?

There has been none.

In 1952 General Eisenhower wrote that "the enormity of the present threat will never be met by half-hearted measures." And he continued: "Required is the full awakening of the free world and the pursuit of energetic, far-reaching measures to insure our form of life—even our survival."

But what has President Eisenhower done since he entered the White House to awaken the free world to the enormity of the threat to which he called attention so ringingly in April 1952. I leave it to you and to him to decide.

Do I need to prove to any of you that the threat remains enormous still? Would you say that the free world needs to be awakened to it any less now than in April 1952. The one thing that President Eisenhower has done which gained the most attention in the world was to go to the Summit Conference in Geneva. But no one would say that its purpose or result was to awaken the free world to the enormity of the threat it faces.

Where are the "energetic, far-reaching measures"? I search my memory and can recall the Marshall plan, NATO, point 4—all adopted under the administration of Franklin Roosevelt and Harry Truman. But what has the Eisenhower administration proposed?

During the past 4 years, rather than improving, our relations have deteriorated badly. The fact is that the Atlantic Community's continued disunion has left the West far weaker in April 1956 than it was in April 1952. With the Mediterranean—the whole southern flank of the Atlantic alliance—seething from one end to the other, I am sure that I need not convince you that there is serious need for improvement in the alliance. We are today weaker in important areas of Africa and Asia. Need I do more than mention Indochina, India, the Middle East, Cyprus, Tunis, Algeria, Morocco?

Our relationships will continue to deteriorate, in my judgment, unless we take some of the bold and imaginative steps that President Eisenhower called for but then failed to carry out. I note in Secretary Dulles' present speech the flimmer of hope that something may now be done. He says that the Canadian Government "has notably espoused this point (that NATO can be more than a military alliance)."

What has the Canadian Government done?

It has done only what I have long proposed that our own Government do, and

which only our Government can do successfully, because only it has the geographic location, prestige, and strength to provide the necessary leadership.

On February 9, 1955, I introduced in the Senate a resolution which I have had pending from time to time for a much longer period. This resolution, simply provides that the President call a convention of the other sponsors of the NATO agreements to meet and determine what steps they might take to forge unity in their military, economic, and political policies. It is known as the Atlantic Union Resolution.

I have no partisan interest in this resolution. The Marshall plan, NATO, point 4, all were adopted with Republican support. Some of us remember that the proposal for a League of Nations was put forth first by a Republican, former President William Howard Taft whom Woodrow Wilson defeated in the 1912 election. But in May 1916, Wilson announced his support of a League of Nations, at a dinner presided over by former President Taft.

Many people have forgotten that Wilson took over the proposal of the league from Taft. Once he adopted the idea, it was his. And so it can be with Eisenhower. If I sought personal political advantage, I would wait until after Congress adjourns to make this speech, but now there is time for Eisenhower to provide the leadership within his party necessary to fulfill the desires that both he and his Secretary of State have expressed.

The convention, let me emphasize, would be one at which free peoples would meet together to discuss the desires and hopes and dreams of the entire free world searching for a common policy, the purpose of which would be to make freedom itself more secure.

Whatever proposals they in their wisdom adopted would have to be ratified by the respective nations according to their own constitutional prerogatives. To fear such a meeting is to fear democracy itself.

And democracy cannot be strong, nor can it be democracy, if it is afraid.

What we seek is unity of purpose.

Only good can come from intensifying that search.

One Hundredth Anniversary of the Birth of Robert E. Peary, Discoverer of the North Pole

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. PAYNE. Mr. President, yesterday, May 6, marked the 100th anniversary of the birth of Robert E. Peary, discoverer of the North Pole. Admiral Peary was a truly great American explorer, and has always been one of the State of Maine's best-loved sons. His courage, steadfastness, and patriotism have been an inspiration to those who knew him personally, as well as to those who have read of his activities in Arctic exploration.

In 1910 the United States Senate thanked Admiral Peary on behalf of the American people for the work he did for his country, by passing a bill, introduced by the late Senator Eugene Hale, of Maine, promoting him to the rank of rear admiral in the United States Navy.

Time passes quickly, and lest we forget men like Admiral Peary I ask unanimous consent to have printed in the Appendix of the RECORD the text of a statement which I have prepared for this occasion.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PAYNE

I believe that the occasion of the 100th anniversary of the birth of the Arctic explorer, Robert E. Peary, is a fitting time to recount the life of a man who exemplified the true pioneer spirit which has inspired this Nation down through the years.

Robert Peary was born at Cresson, Pa., but the State of Maine has always claimed him, and rightly so, as one of her noted sons. At the age of 3 he came to live at Cape Elizabeth with his widowed mother and spent his boyhood there. Peary grew up in a rugged Maine environment and attended one of the State's proudest educational institutions, Bowdoin College.

Upon his graduation from Bowdoin in 1877, where he studied engineering and was a prominent athlete, he became a county surveyor in Fryeburg, Maine. In 1879 he entered the Coast and Geodetic Survey in Washington as a cartographic draftsman and later joined the Naval Corps of Engineers. He was sent to Nicaragua as assistant engineer to survey a route for the proposed Nicaraguan ship canal. He distinguished himself on the Latin American project by inventing a new type of lock gate for the proposed canal.

Up to this point in his life, it would appear that Robert Peary was destined to be a successful engineer, one who could make astute decisions, who had a forceful personality, and that was all.

In the summer of 1885 all this was changed. Quite by accident Peary came upon some papers in his reading which described the inland ice of Greenland. Instantly he was fired with the desire to explore one of the world's last remaining geographical secrets, the Far North.

From this point on, through the next 35 years of his life, Robert Peary underwent the severest physical and mental rigors. Suffering defeat on nearly all of his Arctic trips, he persisted until he succeeded in conquering the vast desert of wastless snow, only to have the public initially reject his claims to the discovery of the North Pole.

Securing a leave from the Navy in 1886 Peary was determined to cross the inland ice of Greenland. He sailed on a steam whaler to Godhaven, a small Danish station on the west coast of Greenland. Here, with few supplies, almost no equipment, and among strange people, Peary organized his first expedition. Many had gone before him. Franklin, de Long, and Greely all had met with defeat, and so did Peary on his first trip. Winds, sleet, and lack of supplies forced his return.

For the next several years Peary was in Nicaragua again, this time as chief engineer on the canal survey project. He spent his spare time in Arctic research. Efforts to secure interest and financial backing for a second expedition received a serious blow when, early in 1889, news came of the crossing of Greenland by the Norwegian explorer Fridtjof Nansen. But Peary was determined to return. In 1891 he had solicited enough aid from scientific and geographical societies to finance another trip north. He, Mrs. Peary, and a party of six left New York aboard *The Kite*, a chartered Newfoundland sealing vessel.

During the voyage Peary suffered a broken leg and had to be carried ashore at the destination. While he lay on his bunk in a crude wooden shack, the decision was made to remain. Under Peary's leadership the party, which had been joined by a number of Eskimos, passed the winter in relative comfort. It was during this winter that Peary learned the Eskimos' way of life, their language, and their culture.

That spring he pushed northeastward to the Greenland shore of the Arctic Ocean. The insularity of Greenland was proven. Upon his return to camp he found *The Kite* waiting, and the party returned to New York in September. Peary was immediately hailed as an outstanding explorer. The 1,300-mile sledge trip, the studies of Eskimo life, and the various meteorological data which he brought back furnished him with material for an extensive lecture tour. Public interest and sufficient funds insured a trip the following year.

The sailing from Philadelphia in the summer of 1893 was a jubilant occasion, ironical for an expedition which was to end in utter failure. Mrs. Peary went along, and their daughter, Marie Ahneghito Peary Stafford, was born that fall. She was the farthest northern born white child known.

The object of the 1893–94 trip was to push on as far to the Pole as possible. The winter proved extremely bitter. A fatal disease struck down Peary's dogs, and one by one his men broke under the strain. An expedition in March 1894, on which all of the food gave out, sent most of Peary's men home more dead than alive.

With three remaining men he pushed on almost to the point of death. Facing death as a certain eventuality if he continued, Peary returned to his base of operations, walking the last 50 miles. Exhausted and half starved he later wrote:

"Never shall I forget that time and scene, 3 exhausted men and 9 starved dogs standing in the gaunt frozen desert. These and the glistening snow, the steel blue sky, and the cold white sun. Five hundred miles in an air line across a waste of snow to the nearest human being, with insufficient rations for even that return journey, yet we were still facing the other way * * * I felt then, as I feel now, that in that cool, deliberate moment we took the golden bowl of life in our hands, and that the bowl had suddenly grown very fragile, and I now feel, as I felt then, that we were neither rash nor foolhardy in so doing, but simply followed the dictates of temperaments which could not act otherwise, and which would do the same thing again under the same circumstances."

Again Peary had failed, but out of this expedition came the Cape York Meteorites, which he found in 1894. He made two successive trips to bring them back to New York. In 1897 he secured another leave from the Navy. This leave and successive ones, together with the attempts of his friends to secure promotions for him, perpetrated a controversy which rose to plague him in later years.

The 1897 trip also ended in failure. In fact, the next few years seemed to lead Peary almost nowhere. In 1899 a group of his close supporters organized the Peary Arctic Club, which performed invaluable service for him in managing his ships and personnel, and in dealing with public opinion, which, by this time, was becoming crystallized against further Arctic exploration, especially by a man who seemed destined to failure.

By 1900 the tide was turning. The past decade of failure had convinced a number of people that Peary was a man who would never give in to it. In 1904 the Perry Arctic Club and its benefactors made possible the construction of the ship *Roosevelt*, designed by Peary himself and built at Bucksport, Maine.

Once again Peary pushed northward through the ice. The *Roosevelt* proved herself in combating the icepacks. April 21

1906, found his party turning back again, this time within 174 miles of its goal.

In 1908 Peary was 52 years old. He had spent 25 years of his life in what appeared to be futility. But he had learned much. These years of failure had imparted to him all that he needed to know. Various routes had been attempted, different equipment had been tested, and the Eskimos were now his trusted allies.

The *Roosevelt* sailed from New York on the last trip north in July 1908. President Theodore Roosevelt came aboard at Oyster Bay and wished Peary well. "I believe in you, Peary, and I believe in your success," were his words.

The trip was carefully planned, and on September 28 the *Roosevelt* reached 82°30' North, a world's record for a ship under its own power. Here the party moved west to Cape Columbia where a winter camp was erected. Peary had also carefully planned the activities of his men. His staff was small. Capt. Bob Bartlett commanded the *Roosevelt*. Matt Henson, Ross Marvin, Donald MacMillan, George Borup, and Dr. Goodsell made up the official party. Mrs. Peary remained behind this time. These men, together with the Eskimos who had been selected for the final dash across the ice, were welded together as a unit by Peary in a military manner. Every facet of the 25 years experience was put into use.

On February 22, 1909, Peary left for the Pole. Compared with his other attempts this final one was comparatively easy. Much of his success can be attributed to experience and organization. When men and dogs faltered and fell behind there were others to take their places. This time there was an abundant supply of food.

On March 26 Peary sent the last of his assistants back to the *Roosevelt* except Henson. He now traveled with Henson and 7 Eskimos and 60 dogs. The days' marches lengthened. On April 5 they were 35 miles from the Pole. The going became easier and on the morning of April 6 the Pole was reached at last. Peary had won. The United States flag flew from the top of the world. The exhausted party took a few readings and turned back.

"One backward glance I gave," Peary said, "then turned my face toward the south and toward the future."

The future was in many ways a bitter experience for the explorer. The party returned to Cape Columbia on April 23. When the *Roosevelt* reached Labrador the message was sent of the discovery—"Stars and Stripes nailed to the North Pole, Peary."

Another explorer, a Dr. Cook, was in the Arctic a year before. Shortly before Peary's message was received he announced to the world that he had reached the Pole in the spring of 1908. Many sided with Cook in the ensuing controversy.

The National Geographic Society recognized Peary's claim, and in 1910 Senator Eugene Hale, of Maine, introduced a bill in the Senate for Peary's promotion and thanking him in behalf of the American people. For this, Peary underwent a congressional investigation, which sought proof of actual discovery. It was, in many ways, a painful method of receiving the tribute which was due the man. Throughout the whole proceedings Robert Peary maintained his characteristic dignity. In the end the investigating committee found in his favor.

In the years that followed Admiral Peary gave many lectures in this country and in Europe. Geographic and scientific societies awarded him well-deserved honors. He retired to his home at Eagle Island, Maine, and during World War I he served his country as one of the great air-flight pioneers. He recognized the significance of the strength of air power, both commercially and for national defense. Not only did he write and lecture for its promotion, but he made many flights himself as an aviator.

The physical torture to which he had submitted his body for the greater part of his life finally took its toll. Peary contracted pernicious anemia from which he never recovered. Even while he was dying his spirit never faltered. When, at last the end came, in 1920, the admiral died as he had lived, with a never-ending faith in the future.

Dr. John Milburn Price

EXTENSION OF REMARKS
OF
HON. PRICE DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. DANIEL. Mr. President, on Thursday night in Fort Worth, Tex., the people are honoring Dr. John Milburn Price, founder and director of the School of Religious Education at Southwestern Baptist Theological Seminary. On behalf of my colleague Senator LYNDON JOHNSON and myself, I ask unanimous consent to have printed in the Appendix to the RECORD a statement calling attention to the career of this distinguished American.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DR. JOHN MILBURN PRICE

On Thursday night in Fort Worth, Tex., a singularly moving and gratifying event is planned for a particularly distinguished and deserving American. The people of that city are to honor Dr. John Milburn Price, founder and director of the School of Religious Education at the Southwestern Baptist Theological Seminary.

We would like to call the Senate's attention to Dr. Price's splendid record and his contribution to Texas, to the lives of countless of his students, and to the Christian ideals.

The Southwestern Seminary at Fort Worth trains young men and women of all faiths. Its school of religious education is the first in the South and the largest in the world. Dr. Price founded the school 41 years ago, and he has been in the teaching profession for 53 years.

As a preacher, teacher, writer, educator, and administrator, Dr. Price's record is unparalleled. Some notable achievements of his school of religious education include: The first school among Baptists to offer vocational training in religious education (1915); first school in America to offer a religious education diploma (1917); first conference in religious education (1921); first and oldest Vacation Bible School among Baptists (1922); first building in America designed exclusively for teaching religious education (1950).

Dr. Price has been past president of the American Association of Schools of Religious Education. He will retire on August 1 of this year after 41 years of service to the school which he founded.

Dr. Price, a Kentucky mountaineer with a pioneering spirit, began teaching in Cleveland, Ky., in 1903. He has been preaching for 50 years—in Kentucky, Rhode Island, and Texas. He was pastor of the Webb Baptist Church in Tarrant County, Tex., for 21 years. He has written for magazines, newspapers, periodicals, and over one-quarter million copies of his books in religious pedagogy are either translated or being translated in four languages around the world.

While a collect student—a Marston scholar at Brown University—Dr. Price was inspired by the thought of training laymen and women to become Sunday school teachers. While completing his theological training at Southern Baptist Theological Seminary in Louisville, Ky., the opportunity presented itself. Dr. L. R. Scarborough, then president of Southwestern Baptist Theological Seminary in Fort Worth asked him if he would like to "break new ground" in helping establish a School of Christian Pedagogy in Texas.

He had been elected Sunday school secretary for Kentucky, and he yearned to remain in his home State. At the same time, friends in Canton, China, urged him to join a seminary faculty there. He decided that in the Southwestern Baptist Theological Seminary, he could—through his students sent out into the world—be in Texas, Kentucky, and China at the same time.

The first year at his new School of Religious Education, only five courses were taught. Today, 129 courses for vocational training in religious education are available. Six thousand students have enrolled in the school since 1915; there are 800 enrolled today. These trainees have revolutionized Sunday school and training union work in the Southern Baptist Convention. Since 1920, the Southern Baptist denomination has increased from 3 million to 8 million members. The phenomenal growth is due in many ways to the teaching ministry of the church.

The largest school of religious education in the world stands today as a permanent memorial, vibrantly alive, to the man who dared to establish his life "by way of the throne of God."

Problems Faced by America's Reserve Forces

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. WILEY. Mr. President, on Saturday evening, May 5, I addressed the convention of the Reserve Officers' Association of Wisconsin, pointing up the problems faced by America's Reserve forces.

I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I'm happy to be with you tonight.

I salute you, as alert members of the Reserve, vigilant night and day in fulfilling a citizen-soldier's responsibilities of national defense.

As you so well know, the safeguarding of the future of our Nation can no longer be left in the hands of the Armed Forces Regulars alone.

Defense has become everybody's business, everybody's responsibility—yours and mine and everyone else's.

AMERICA—A PEACE-LOVING NATION

America remains, of course, a peace-loving Nation. We Americans are, by tradition, a peaceful, nonaggressive, easygoing people.

Cherishing our freedom, however, we have always been solicitous of the rights of others to freedom. We remember how other peoples have lost their freedom—with 900 million people now behind the Iron Curtain.

Moreover, we remember how, in the past, war has come to our people by surprise attack—by a blitz against our unsuspecting Nation—in April 1917, in December 1941, then again in June 1950.

DANGER OF A NUCLEAR PEARL HARBOR

We are determined that never again shall we be unalert, unprepared, undefended. Never again will we risk another Pearl Harbor.

We shall not be lulled to sleep by Comrades Khrushchev's and Bulganin's sirupy words. We will not be deceived by the phony dissolution of the Red International Cominform.

Aware of what war could mean, we will, of course, do our utmost to explore avenues of peace. But we will never again be asleep at the switch—unprepared for modern, high-speed war in the atomic age.

Today, already, our best jet plane can fly at 1,500 miles per hour. Development of guided missiles of 10,000 miles per hour is reportedly on their way. We dare not therefore, coast on our laurels, as the race for technical supremacy intensifies, for the Reds are rapidly moving ahead on their own.

COLD WAR CONTINUES

Meanwhile, on every continent, the cold war rages: In Asia, Africa, South America, Europe and elsewhere; the war of propaganda by radio, press, TV, motion pictures, newspapers, pamphlets; of Soviet trade offensive, cultural offensive, yes, even athletic offensive (in the coming Olympics games in Australia).

The cold war is a war which we must and can win, so as to avoid a "hot war."

ADMINISTRATION PROGRAM IS SOUND

On the home front, the challenge today is to develop a comprehensive peacetime program to protect our Nation at all times.

I believe the philosophy of the program of our national administration in Washington is sound.

The major tenets of this philosophy are—that military strength should be maintained at a level of development necessary for the changing needs of national defense; that the defense effort should be a well-balanced program between the three services, but with particular stress on aviation; that the program should be geared to the long haul, and to the ecenomy of the country.

MEASURES OF DEFENSE

To create a program that will fulfill this philosophy of defense, we must—maintain armed forces equipped with even more modern, long-range weapons, with the greatest retaliatory striking force in the world; maintain a flexibility of operation, to adapt to rapid technological changes and developments; improve our continental defense—our Distant Early Warning Radar system, our Nike program; maintain a front-line perimeter of defense in bases around the world, ready to respond at the first siren of emergency; fulfill the needs of our Reserve and our National Guard so that they are ready and able to charge into the battle-line in the event of attack.

COMMUNIST MILITARY GROWTH SERIOUS

As you and I know, our great concern for an adequate defense effort is not based on illusion or miscalculation.

The hard facts of the military strength of aggressive communism will dissolve any doubt that we need a strong defense.

The Soviets have modernized their air power; most of their 20,000 operational planes are now modern jet fighters and bombers. New and improved planes—with super-thrust engines are coming off production lines throughout Russia and the other Communist countries.

They have modernized their mobile army of 175 divisions, and have increased the capability of the European satellite armies which comprise some 80 tough divisions.

The Russians have built a strong undersea fighting force, including more than 400 modern submarines. (That is five times as many as Hitler had at the start of World War II.)

The capability of the vast military forces of Red China are greatly increased. The Red Chinese air force, jet equipped, is now the fourth largest in the world.

These are but a few of the unhappy facts we must face, in girding ourselves for the long-haul, defensive effort.

And, of course, I need hardly remind you that Soviet development of A-bombs and H-bombs, as well as progress in guided-missile research—looms as one of the topmost acute problems on the world stage.

MILITARY, ECONOMIC, AND IDEOLOGICAL STRUGGLE

Presently, in all the continents, there are two principal phases to the struggle between communism and the free world: the military and the economic.

We should be aware, however, that accompanying the military and the economic struggle, there is always the ideological factor.

The basic tenets of the contest are: Our way of life against the communistic; freedom against slavery; truth against falsehood; recognition of the dignity of the individual, against complete subjugation of the individual to the dictatorial state.

UNION OF SOVIET SOCIALIST DICTATORSHIP

The U. S. S. R. is, of course, solely responsible for the state of continual crisis in which the world is now living.

The demotion of Joseph Stalin has not basically changed Red strategy. Conquest of the world remains communism's dominant aim.

UNITED STATES MODERNIZING DEFENSES

To meet the Soviet threat, we are now re-evaluating our military defense. A Senate Armed Services subcommittee is reviewing our long-range bomber and guided missile programs. President Eisenhower has requested one-half billion dollars more from the Congress for Air Force production of B–52's.

Obviously, we cannot be smug over our existent defenses. Nor need we however be overly critical of our own progress.

We have made dynamic advancement in modernizing and bringing up to date our fighting standards. Here are a few examples:

Our jet-equipped Air Defense squadrons are being strengthened with increasing numbers of supersonic aircraft;

Our interceptor planes will be increasingly equipped with Falcon air-to-air guided missiles;

On the ground, an increasing number of Army antiaircraft battalions are being converted to Nike guided missiles—such as those already encircling the city of Milwaukee;

The guided missile, Corporal, is in the hands of our troops and ready for action, capable of delivering an atomic warhead on targets at long ranges;

The mighty atomic artillery rocket, the Honest John, an outstanding weapon for close-in support, is also in the hands of our troops.

The Army and Navy have joined together as a team in developing the ballistic missile with the intermediate range of 1,500 miles, to be launched from land, ship, or submarine.

The development of these mighty missiles will give our fighting forces the power to demolish pinpoint targets deep within enemy-held territory—despite fog, rain, snow, or any other adverse conditions.

As you know, the destructive firepower of today's division is estimated to be 80 percent greater than it was in World War II. We must exert all-out effort to maintain and improve this completely modernized fighting force.

ROLE OF THE RESERVES MORE AND MORE IMPORTANT

Meanwhile, the role of the Reserves is becoming increasingly important in our national-defense picture.

The ultimate objective of the reserve program, of course, is its integration into the fighting force of the United States as effectively as possible, so as to best support the overall-defense program.

We need all 5,000 reserve units throughout the country at top strength, trained and ready to meet the needs of emergency. We need complete units: manned, equipped, trained, and ready for mobilization.

GOALS OF RESERVE PROGRAM

The reserve program too, is a most valuable way of educating our national citizenry to its defense obligation. This can be done: (1) Without too greatly disturbing the pursuits of the individual in life; and (2) without impeding our technological advancement, in fact, we are strengthening it, by having a maximum of our citizens, as reservists, possess current technical knowledge.

The reserve program, also, is designed to operate without upsetting our economy pattern, and without impeding our intellectual, cultural, and spiritual development as a nation.

The men who are in the Reserve, of course, are the best judges of its effectiveness, and of its ultimate degree of contribution to our national defense.

RESERVE PROGRAM BROADENED

Fortunately, in recent times the reserve program, because of its increasing significance in the national defense effort, has been made more just, has been broadened and made more flexible.

The basic aim of the enactment of the historic Reserve Forces Act was to make more just and equitable our reserve policy and to improve the structure and size of the Reserve Forces. Under the current program, the Reserves essential elements are, as you so well know, composed of the Ready Reserve and the Stand-by Reserve.

SCREENING OF READY RESERVES

The statutory size of the Ready Reserve has been increased, as you are aware, from 1.5 million to 2.9 million.

The screening process for the Ready Reserves is extremely important to make certain that this highly important segment of the reserve program is genuinely ready. The objectives of the program are to ascertain that we have in the reserves only those who are actually available for immediate mobilization; that we do not have in the Ready Reserve, persons with critical civilian skills who can make a better contribution in a defense-supporting economy.

In addition, we need careful screening procedures on such categories as: those failing to meet service standards; hardship cases; persons with skills in excess of service needs for the Ready Reserve; students and apprentices in training for critical professions and occupations, and others not available for mobilization.

This screening is essential to keep the units at the highest level of efficiency—ready to plunge into the front line of the Nation's defense.

STANDBY RESERVE

The Standby Reserve, composed of 2 million men, is greatly needed to provide for additional units and individuals. Although essentially a nonorganized pool of experienced personnel, this group of the Reserve program will be invaluable in time of national crisis.

SIX-MONTH ACTIVE-DUTY FOR YOUNG RESERVISTS

Unfortunately, the program for 6-month active-duty training for young men who will then go into the Reserves, has not yet had as great an effect upon Reserve enlistment as anticipated.

However, it is hoped that with time the program will take hold. We need to educate our people, and especially our young men, to the requirements and benefits of this program, so that as many as possible of our youth may avail themselves of its opportunities in discharging their service obligations.

INCREASE IN RESERVE WAGES

Last week, as you know, the Reservists received a raise in pay from $50 to $78 monthly for voluntary active duty. This corrects a disparity between the reservists and other active-duty personnel.

This raise may help, also, to provide the needed manpower for the Reserve program. We dare not have "too few and too late" if war again comes.

TWENTY-TWO MILLION VETERANS IN AMERICA

We have all heard it said many times: "We no longer have a class of veterans among us; instead, we are becoming a nation of veterans."

America today has more than 22 million veterans, in all walks of life. However, the veteran still assumes a unique role in our society.

We are requiring our veterans to give more of their time and their service, yes (in the tragedy of war) of their lives, if need be.

With this great sacrifice, we must also help to provide them with the genuinely deserved benefits of our way of life. That is why, for example, I have personally introduced legislation to extend for 3 years the GI home loan benefit program. Otherwise, that program will expire by mid-1957.

OTHER LEGISLATION FOR VETERANS

As you know, there are hundreds of other veterans' bills pending before the Congress. These cover such problems as increase of pensions, employment, hospitalization, educational benefits, loans, rehabilitation, and many other answers to the real problems of today.

On April 24, the House Veterans' Affairs Committee, before which this legislation is being largely considered, passed over, without prejudice, all compensation and pension legislation, pending study and analysis of the findings of the Bradley Commission. As you are aware, parts 1 and 2 of this report were issued last week.

A meeting of the committee is expected in early May. After consideration of the Bradley recommendations, a report on overall veterans' legislation will be forthcoming.

CONCERN OVER BRADLEY COMMISSION REPORT

I personally have not as yet had an opportunity to study in full the Bradley report. I am inclined, speaking generally, to agree with what it states about the need for more aid for the severely disabled combat-connected vet.

But I certainly do not agree with what the report seems to state about depriving noncombat disabled veterans of their just due.

The findings of the Commission seem unfortunately, to point toward an undermining of programs of benefits for most veterans—programs which all of us have worked hard to provide over the years.

Be assured that I will strongly oppose any kind of recommendations that would undo our well-deserved efforts. And I am confident that the present 84th Congress would not act in the slightest to impair statutory rights and privileges of our ex-servicemen.

LIBERALIZATION OF SURVIVOR'S BENEFITS

Meanwhile, there is, as you know, important House-approved legislation before the Senate to liberalize benefits for the survivors of servicemen and veterans. This legislation is now before the Senate Finance Committee.

Until now, there has been an unfortunate disparity in the treatment of survivors. This current legislation will help to correct this disparity. This is not, of course, a perfect piece of legislation; but it is a step in the right direction.

Along with our national administration, I believe that the enactment of this legislation would provide fairer treatment of all categories of survivors.

You may be assured that I shall urge prompt action by the Finance Committee, to expedite this legislation, for the benefit of deserving families of veterans and servicemen throughout the country.

OTHER VETERANS' AND SERVICEMEN'S PROBLEMS

There are, as you are well aware, many, many other problems yet to be worked out for veterans and servicemen. We must continue our efforts to analyze the problems, and propose solutions, to correct any inequities in existing programs.

For myself, I believe this is one of the foremost responsibilities of the Congress.

As Calvin Coolidge wisely said, "A nation which forgets its defenders will itself be forgotten."

CITIZEN PARTICIPATION IN TOTAL DEFENSE

There is a great need on the part of the public for understanding the new "kind of overall defense" which we must undertake to meet the current world crisis. It is a total defense pattern—defense from without and from within—in which every citizen must participate.

The American people must cooperate to build a formidable wall of protection for ourselves and the free world.

At the same time, we must all contribute to the progress and development of our own Nation, itself—keeping it healthy and clean and prosperous.

FREEDOM IS ALIVE EVERYWHERE

Our land is the symbol of hope, of freedom which flames in the breast of every human being.

Among the Communists, only "higher-ups" enjoy even a limited freedom. The Kremlin's ruling class, however, is never quite sure when the party line will change, and its members will be purged, possibly killed, or sent to prison in Siberia.

WE CAN BE DEFEATED ONLY BY APATHY

We have no such fear. The only things that can cause our defeat by communism would be a lack of patriotism, or a lack of initiative to rise up and meet the dynamic challenge of our times.

We have—potentially all that we need to have—materially, economically, militarily, and spiritually to win the peace. I believe in my heart that we, individually and as a Nation, will do so.

DESIRE FOR FREEDOM IS UNIVERSAL

We must always remember that we are not alone in our desire for, and need of, freedom. The love of liberty is aflame in the breasts of millions of souls behind the Iron and Bamboo Curtains, and throughout the rest of the world. Despite all the efforts of communism to extinguish that flame, it burns even brighter.

Every now and then, however, we might each adjourn to our "inner rooms," and consult with our souls, and our God. For a strong, spiritual faith is "basic equipment" for every American.

CONCLUSION

I firmly believe that, if we unite now, as we have in other times of crisis, we will assuredly triumph over communism, and without a mortal conflict.

More than that, we will bring to the world the rich kind of life that results only from free people—working and praying together—to attain their goals.

These goals, based on God-given freedom, are defined in the Bill of Rights, and embedded deep in the heart of all humanity.

It is your minutemen—your reservists—who will help us—help all mankind to maintain or attain our birthright.

Enlightened Self-Interest

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Enlightened Self-Interest," which was published in the Wall Street Journal of May 2, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENLIGHTENED SELF-INTEREST

Foreign aid was supposed to end a number of times in the past, but now there is no longer any attempt to present it as a temporary phenomenon. Increasingly the administration stresses its permanence.

Secretary of State Dulles this week said he thinks military aid will have to go on as long as the security of this country is threatened. The administration seeks authority to make 10-year economic-aid commitments. No one suggests that even another decade will see the end of this type of assistance.

What is proposed, then, is a drastic change in United States foreign policy. On what grounds is it proposed?

In his statement the other day Mr. Dulles made the superficial case for continued military aid. Some strategically important countries cannot afford to maintain the kind of military establishment considered necessary to deter or rebuff Communist attack. So, it is argued, it is in our interest to maintain their defenses for them.

Perhaps so. But the argument glosses over a couple of points. When the anti-Communists build-up began, the idea was for us to help other nations get their rearmament going to the point where they could carry it themselves. The idea was not for the United States to subsidize their armed forces in perpetuity.

If, after all the billions of military aid, these nations are still unable to afford their present defense establishments, they probably never will. The question arises whether it is sensible, in the long run even feasible, to base anti-Communist defense on so shaky an economic foundation. Already the United States is finding it has to provide some economic aid just to enable certain countries to absorb the military aid. That is a situation which borders on the absurd.

The case for perpetual economic aid to the so-called underdeveloped nations is even more questionable. The aid is supposed to help keep these nations from going Communist. But where has economic aid to underdeveloped nations won the friendship of their governments for the United States or cooled their flirtations with the Communists?

That is by no means the only question about this type of economic aid. To what extent has it deterred underdeveloped nations toward economic improvement? How much has been wasted, grafted, or used for foolish undertakings? And anyway, by what moral or historical precedent should the American people be expected to give up billions of their annual income for these purposes year after year?

Mr. Dulles invited Congress to probe deeply into the premises of foreign aid, and President Eisenhower recently proposed that a special citizens' council be formed for that purpose. Such an intensive review is long overdue. And the fundamental issue it should study is just what we are letting our-

selves in for if we change foreign aid from a temporary to a permanent arrangement.

It is one thing to help a country get a rearmament program going or give it military aid if it is attacked, or to provide dollars or goods to a nation devastated by war or temporarily impoverished by natural disaster. National interest or simply charity may dictate such assistance on occasion.

But it is the opposite of enlightened self-interest to establish an American policy of subsidizing half the world from here to eternity.

What the Hoover Commission Program Can Mean to Business

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important address delivered by the Honorable James A. Farley at the annual meeting of the Chamber of Commerce of the United States, on April 30.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT THE HOOVER COMMISSION PROGRAM CAN MEAN TO BUSINESS

The admirable program which the United States Chamber of Commerce has undertaken to build public understanding of the Hoover report is enough to assure me that I need not dwell in detail on the better-known aspects of my topic. Permit me to say, as a member of the bipartisan second Hoover Commission and as a director of the Citizens Committee for the Hoover Report, that the chamber has never given a better demonstration of its civic spirit; your Hoover Commission program is splendidly conceived for maximum effectiveness.

You know, of course, that the first Hoover Commission was unanimously created by Congress on a bipartisan basis in 1947; that it completed its report to Congress in 1949; that some 72 percent of its recommendations were eventually adopted which resulted in savings that now total, I am informed, over $7 billion. The success of the first report was due primarily to the great leadership of its chairman, to the quality and objectivity of its research, and to strong, bipartisan citizen support of its recommendations.

The first Commission paved the way for the second, on which I had the honor to serve from 1953 to 1955. Under the same leadership and with experience to build on, the second Commission's report was even more comprehensive, even more searching, and potentially even more rewarding to the Nation than the first. Taken solely as a matter of dollars and cents, full adoption of the report would yield savings of over $5 billion a year. That would be a return of $1,500 for every one of the 3,300,000 words in the reports of the Commission and its task forces. And that, I submit, is a royalty beond the dreams of any author in or out of Hollywood.

But here, for the sake of perspective, let me remind you that, prior to 1947, innumerable boards, commitees, and commissions had made studies of the Government and issued reports all of which perished in the dusty pigeonholes of Washington. We cannot assume, on the basis of one precedent-shattering experience, that the acceptance of the first Hoover report is in any sense a guaranty of the success of the second. Quite the contrary. The current report digs more deeply into the root problems of modern "Big Government." It bites more sharply into areas of vested interest. It calls for fundamental policy decisions of the sort which both officials and legislators traditionally prefer to avoid. We may be due for disillusionment unless we bend all our energies to the mobilization of public support.

The educational task ahead of us, it seems to me, falls into two main parts. First, of course, there is the job of seeing to it that the factual findings of the Commission and its task forces are not forgotten. This means that, by every possible medium, we must continue to make those facts known far and wide. Second, and just as important, is the task of interpreting the Commission's findings in terms of their true meaning and deep significance to all of us as citizens.

In this way, I believe, we may yet succeed in awakening the Nation to the grave realities which the Hoover report so clearly underscores. It sometimes seems to me that in these recent, hectic decades of depression, war, cold war, emergency, and more war, we have almost lost our appreciation of the principles on which this free Nation was founded. Something has happened to numb our sense of history and even our understanding of simple arithmetic. In a very real sense, I fear, we have been hiding our heads in the sands of careless governmental expansion, inflation, and runaway public debt.

If you will pardon a personal reference, let me say that my service with the Hoover Commission was not only a great privilege and a great honor but a striking revelation to me. Quite frankly I had not realized that I, like so many of us, had accepted without much question the mushroom growth of modern government. You may recall that I entered the Federal service as Postmaster General in 1933. It seemed then that we had a large and complex executive branch with 572,000 employees, 450 different departments and agencies, and a budget of $4 billion.

Here, 20 years later, we found the results (and I consider them inevitable) of the vast international pressures which have forced us to expand our governmental functions in every direction. With 2,300,000 civilian employees and nearly 3 million more in uniform, we have built a vast structure of more than 2,100 departments, agencies, boards, bureaus, and commissions. For every dollar we spent in 1933 we were spending more than 15. To put it another way, the cost of Federal paperwork alone today is equal to the whole Federal budget a mere 20 years ago.

I was, I still am, appalled.

Perhaps we need to give more attention to our self-education in fundamentals. At any rate, we cannot at the moment say with any assurance that the second Hoover report is well on its way to successful implementation. Ten months have passed since the Commission sent the last of its report to Congress. Where, in terms of its acceptance, does this report stand today? As you know, some 45 percent of the Commission's recommendations can be implemented by executive branch action; most of the remainder require legislation. As far as I know there has been no official announcement of governmentwide results as yet, although we have had good news of Executive action on several fronts.

Every citizen, I am sure, applauded President Eisenhower's recent exchange of letters with Civil Service Commission Chairman Philip Young in which the administrative application of the Commission's Report on Personnel and Civil Service was so strongly urged. It was equally gratifying to read the announcement that such a high percentage of the Commission's total report had found acceptance in the Defense Department that annual savings approximately $450 million a year will result. I certainly concur with my good friend Clarence Francis of the Citizens Committee that this represents a "giant stride" to wider implementation of the report as a whole.

We citizens need news of this sort. It reassures us in our determination to see that the report and its issues are fully understood. It encourages us to go on working in support of the administration and Congress in their every effort to make a lasting reality of the Commission's concepts.

Americans always like to see results and, in this connection, permit me to cite one little-known illustration of the fact that something can be done to reduce governmental delay, confusion, and waste. Among the recommendations of the first Hoover Commission's report on budgeting and accounting was the spot-checking, rather than the double-checking, of governmental vouchers. In the past, huge truckloads of vouchers would be driven into Washington from such places, as let us say, the Rock Island Arsenal. These had already been checked once at Rock Island but they had to be checked all over again, one by one, at the General Accounting Office.

Almost at the very time that the Commission was making its recommendation, the General Accounting Office was building a large new building here in Washington. The recommendation on spot-checking was meanwhile accepted and the parade of trucks was brought to a halt. As a result, there was plenty of room in the Government Accounting Building when the second Hoover Commission came to town in 1953 and there, if you please, was where the Commission was comfortably housed. Thus, you might say, the first Commission literally made room for the second.

To return to current results we see, as I say, much that is encouraging. The citizens committee recently estimated that approximately 22 percent of the second commission's recommendations have so far been adopted with savings reckoned at $470 million a year. But here's the rub: 18 percent of these gains were made by executive action and only 4 percent by legislation. By contrast with the 1949 record for a comparable period, this is deeply dismaying. For, 10 months after the first commission completed its report in 1949, Congress had enacted 5 major public laws, a number of lesser ones, and 6 Presidential reorganization plans.

Now to be fair we must recognize certain important differences. This is not only a bigger report than the first, it is much tougher, so to speak. It deals with functions, not departments, and it cuts into policy lines. Its full adoption may well be the work of years. Yet, to assure real success in 1957, we need a 1956 record of congressional action as a precedent. And the great majority of the recommendations, 80 to 85 percent in fact, are not controversial. Surely we can deal with a substantial portion of them now, even in a so-called Presidential year.

I, for one, do not believe that this Congress is by and large hostile to, or unwilling to act upon, the Hoover report. Quite to the contrary my friends on Capitol Hill tell me that they are much impressed with the report as a whole even though they may, as individuals, differ with certain provisions. But when I ask them why Hoover report legislation isn't moving faster they tell me in effect that they just simply aren't being asked enough.

Congress, traditionally, responds to requests for action from two main sources, the executive branch and the public. The enactment of bipartisan legislation, such as the Hoover Commission's recommendations, depends on teamwork. There must be teamwork between the leaders of both parties and between the administration and the Con-

gress, any administration and any Congress. Evidence of such teamwork thereupon stimulates interest and support on the part of citizens of both parties.

At this point, let me repeat what I have so often said before: By its very nature, the Hoover report is not, cannot be, a matter of partisan politics. Every single Member of Congress voted for the Commission's creation. The Commission itself was scrupulous in its avoidance of political considerations. As I said when we completed the report in June 1955:

"At no time did politics enter into the deliberations of the Commission. Where we differed, they were honest differences of opinion, and Mr. Hoover recognized the right of each member to give free expression to his views."

Neither party can be for or against something which both created. This is attested by the large number of leading citizens of both parties throughout the country who are actively working today for public understanding of the report. Truly, this is one issue on which the two parties can either cooperate and share the credit or fail to act and share the blame.

It is solely as a citizen who happens to have served on a bipartisan commission, therefore, that I feel bound to point out one current gap in the pattern of teamwork so greatly needed to assure full consideration and action on the Hoover Commission's recommendations. In 1949 frequent Presidential messages were sent to Congress requesting the enactment of Presidential reorganization plans and other pieces of specific legislation on such major issues as military unification, General Services, and State Department reorganization. To date no Presidential requests have been directly addressed to the Congress for action on specific legislation based on the report of the second Hoover Commission. This is said with full appreciation of the fact that the Commission is mentioned favorably in the 1957 budget message and again in the state of the Union report. But my friends in Congress of both parties can still say with justification that they haven't been directly asked.

Withal there has been some congressional activity on the Hoover report and hearings have been held on some important measures. There is still time, I believe, for Congress to move substantially on measures based on the Commission's reports on budget and accounting, personnel and civil service, paperwork management, business enterprises of the Government, and surplus property. Considerable progress has been made on a bill to create a National Library of Medicine and thus provide safe housing for thousands of priceless books now stored in inadequate buildings where they may be damaged by fire or rain. Where expenditures were needed, the Commission did not hesitate to recommend them.

Both budgeting and accounting and personnel procedure, while they may seem dull subjects, are absolutely vital to the efficient and economical operation of any human organization, including government. Frankly, I differed with my fellow Commissioners on some of the specific remedies but not for a moment did I question the importance of the problems or the need for thorough and vigorous congressional consideration of them.

We simply must plug the leaks in our fiscal system and strengthen congressional control of expenditures. And what can be more vital to the Nation's progress, and indeed its very safety, than the wise use of the minds, hearts, and hands of the 2,300,000 people in civilian service and the 3 million who wear the uniforms of our armed services? Manpower is increasingly a critical national resource. Let us not be deceived by the crocodile smiles of Moscow's emissaries to London. They mean to go right on driving for world domination and they have one important edge—manpower.

This is just one way of stating the big message of the Hoover Report in its meaning to the citizen and the message is simply this: We have been deceiving ourselves; we have grown extravagant in our use of our resources, both human and material; we have become dangerously indifferent to the conduct of the affairs of our free Government.

Spelled out in a score of ways, that is the message. We believe we have a national debt of $274 billion. The Commission shows us that indirect obligations in the form of loans, guaranties, and insurance activities, plus the retirement program, have brought the Nation's total indebtedness to something much more like $700 billion. We budget annually, then lose control of expenditures. So we find that, as of June 30, 1955, the executive departments had $52 billion on their hands, appropriated but not spent, over which Congress had no further power of review. We seek to maintain a dynamic system of private enterprise, then let Government competition undermine it in one area after another.

The Hoover report confronts us with a challenge which we can ignore only at peril to our progress, our freedom, and our very lives. Thomas Jefferson said long ago: "The nation which expects to be ignorant and free expects what never was and never will be." In the spirit of the scrap drive and the blood bank, let us redouble our efforts at self-education. Truly the text from which we wage our "war on waste" is today's real "battle cry of freedom."

Jim Farley and Waste

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. McCLELLAN. Mr. President, immediately following the insertion of Mr. Farley's address in the Appendix of the RECORD, I should like to have printed an editorial entitled "Jim Farley and Waste," published in the New York Herald Tribune of May 3, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM FARLEY AND WASTE

When James A. Farley became Postmaster General some 23 years ago, the total cost of running the Government was only a little more than $4.5 billion.

When Jim Farley, as a member of the Hoover Commission, helped make the survey which led to the Commission's notable reports last year, he found among other things that the cost of the Government's paperwork alone was nearly this much.

Mr. Farley made a speech about it the other day to the United States Chamber of Commerce.

"I was—I still am—appalled," Mr. Farley said.

For every dollar the Government spent when he took over the Post Office Department, Mr. Farley said, it now is spending $15.

"Quite frankly," he added, "I had not realized that I, like so many of us, had accepted without much question the mushroom growth of modern government."

The Hoover Commission has recommended changes which would save an estimated $5 billion—more than the whole Government used to cost. Mostly this $5 billion now is just being wasted. It is unnecessary spending. But the money comes out of the pockets of taxpayers, who otherwise could use it for their own purposes.

Some of the Hoover suggestions have been put into effect—but not many. Some need action by Congress; others the President can manage by ordering them.

After all, delay accomplishes nothing. But it costs the taxpayers money. They have a right to squawk. And it would be a good idea if they did.

Government by Crisis a Thing of the Past

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Government by Crisis Thing of Past," written by George Minot, and published in the Boston Sunday Herald of April 22, 1956. I think it is worthy of the attention of the Senate as well as the general public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT BY CRISIS THING OF PAST—FEAR-PEDDLERS PLAY RED TUNE

(By George Minot)

It would be a relief to wake up some morning and find there wasn't some new country in a mess and expected the United States to rescue it. Better still would be to read that somebody, somewhere, had said a good word about us. Instead, day after day, come blasts from the Indians, the Israelis, the Arabs, the British, the French, the Italians, the farmers—all crying that we haven't shelled out generously enough.

The more we do, the more unpopular we become. From July, 1945, through the fiscal year 1956 this country will have spent $55.6 billion on various forms of foreign aid. Of this, $4.7 billion will be disbursed this year. Of the total amount $35.8 billion went as grants, not repayable to the United States. The rest is to be returned in theory only.

WE SHOULD CHEER REDS

If we were trying to buy allies by all this spending, it should be obvious that we have failed. Nehru, for instance, and despite all the hundreds of millions India has received, delights in ridiculing and criticizing this country and praising Russia and its aims. The Israelis blast us for one thing, the Arabs for another. So do the Greeks and Turks.

We have poured millions on end into financing communistic and socialistic regimes, building up a monster that may destroy us in the end. Now that Russia is getting into the act of offering economic aid in some of those places, we ought to cheer instead of acting afraid. Let the Reds try to buy up good will.

The Chicago Daily News put is pretty well the other day:

"There is something craven in the spectacle of a rich and powerful nation which thinks it must scatter candy around the world lest it find itself alone and friendless. The facts seem to be that our largess brought no friends, and earned us more resentment than good will. But we still fear to change the formula."

Today we act as if we wanted everybody to love us. That's impossible. If we are going to be strong and independent, live up

to our great heritage and not waver in our steadfastness—then we are bound to make enemies.

PART OF OUR POLICY

We have got to stop following the old line mapped out by the Truman-Acheson crowd. That was based on the fact that if we sent money enough Europe wouldn't succumb to communism and would do something to help itself. Today we find this matter of contributing a few billions every year has become a part of our foreign policy.

Now there are internationalists who want us to go further and engage in a spending contest with the Russians, lest they lure away some of those countries we have been helping. Look at them. France and Italy are riddled with communism. The Germans are flirting with Moscow. In Greece, the Popular Front opposition is overcoming government candidates supported by us.

IF YOU LOOK YOU FIND

The United Kingdom which has received almost $7 billion from us has practically given up the ship in the Middle East and wants us to help restore the old order. Yet, when we criticize their actions in Cyprus, or their trade with Red China, then they are bitterly resentful.

In this country there are still hang-overs from the New Deal monstrosity who are world government zealots at heart and who want to see how much we can give away in order that everybody eventually will arrive at the same level. "Nowadays," says John S. Knight, one of the great editors of these times, "we don't wait for aid requests. Our Secretary of State goes gadding all over the globe to see if we have missed anyone who has communism or socialism for sale. He looks for trouble and usually finds it."

The funny part about the whole business is that we land up with the dirty end of the stick. Within the last few weeks the French Premier, the Italian President, the Icelandic Parliament, the Egyptian Premier, and the Israeli, British, and Dutch Governments all have lodged complaints against us. All of them openly resent the fact that we enjoy peace and prosperity over here while they have neither.

That's what the Soviets have been yelling about for years. It's amazing how many in this country fall for the same state of mind. Egged on by a group of columnists and commentators who worshipped at the feet of Roosevelt and Truman, the internationalists in both parties openly sneer at the optimism Eisenhower and Dulles express.

They are not satisfied unless we have a war scare every few weeks and a new crisis every day. They resent expressions of confidence that the free world is doing all right. They want to insist on emergencies, the necessity for military action and the fact the Russians are outstripping us in almost everything.

THIS IS NOT SENSIBLE

It hardly seems sensible to preach that everything the Russians do is brilliant and subtle while everything we do is confused, stumbling, and too late. Yet that is what the kiss-me-mother-I'm-dying boys would have you believe. They seem to prefer the government by crisis that Roosevelt and Truman operated for years. Those were the days when the administration was complacent and easygoing while Communists were boring inside many key agencies, but always was alert when it came to calling out the troops.

Our latest appeals come from Europe. There the North Atlantic Treaty Organization is on the rocks. France has pulled out her best troops. It's obvious Germany is in no hurry to contribute any. The development of atomic weapons and guided missiles has rendered useless many of the bases on which we have spent billions.

There's a lot to be done. It's unthinkable anything should break the Anglo-American alliance. Yet hysteria never will solve any problem. The New Dealers proved that. So far at least, the record of Eisenhower and Dulles can't be improved upon. It's the height of silliness to listen to the fear peddlers every time the Reds dream up a new scheme to plague us.

America's Siberia

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 3, 1956

Mr. BURDICK. Mr. Speaker, I have here an editorial written by the Rev. Dr. Robert Shuler, editor of the Methodist Challenge, of May 1956 issue of that publication, which I have been requested to insert in the RECORD in an effort to bring before the people further facts regarding the so-called mental health bill. I commend it to your attention and thoughtful consideration:

AMERICA'S SIBERIA

Russia's Siberia is infamous in that it is the forcible retreat of political and social misfits and undesirables, not only of Russia itself but of the whole world. Americans have been imprisoned there. It is a land of living death. Any one who gets in the way of the men in power in the Kremlin is banished to Siberia.

In They Wrote to Us, the editor's attention has been called to a well planned bill now before the Senate, having already passed the House, which provides for a domain of a million acres to be set aside in Alaska, supposedly for the mentally ill of that far North. There are fewer than 500 mentally ill people in Alaska, now being cared for under contract by the State of Oregon.

This would appear to be a most worthy enterprise. But an examination of the bill jolts a studious reader. For instance, it provided that any State, desiring to send mentally ill people to this million acre retreat may do so by meeting certain conditions, not difficult of fulfillment. Contemplate this provision of the bill:

"The Governor (of Alaska) is hereby further authorized to enter into a reciprocal agreement with any State providing for the care and treatment of mentally ill residents of Alaska by such State, and for the care and treatment of mentally ill residents of such State by Alaska, each on a reimbursable basis."

Surely the medical fraternity in the United States and our leaders in Washington have not sensed the fearful potentialities of this bill if it should be signed into law by the President. Frankly and practically, it means that objectionable persons could be railroaded into perpetual exile in the icy North, far from loved ones and friends, there to spend their remaining days hopelessly and helplessly. It is unthinkable, and yet Russia is doing that very thing, as are other nations.

The monstrous political implications of this provision of the bill are so un-American and inhuman that we certainly would not accuse the President or any President of intentionally building such a deadfall for our citizens. But that alone is not the only deadly feature of this provision. Perfectly sane people might be thus disposed of. Take Governor Lee of Utah or Senator McCARTHY. The railroading of such objectionable public men, who are objectionable to the status quo, would be easy. Gerald L. K. Smith would have been landed there long ago. I could name scores.

In fact, I shudder at what might have happened to me if a million acres of ice in Alaska should have been set aside for the mentally ill. I recall that several years ago three judges tried me for contempt of court. Those were days when millions of dollars were at the disposal of men who were determined to get rid of me. Of the three judges presiding at that trial, the judge of the psychopathic ward, who handled the crazy people, was one who sat and considered my fate. This judge was a splendid man, but it was freely stated by the reporters from the newspapers that he was there to observe me and decide whether or not I was sane.

Suppose an icy waste had been prepared for the poor victims and my fate had rested with a judge whose political affiliations or love for money should have been a constraining influence, what chance would I have had?

There are thousands of people who would go to almost any limits to rid themselves of obnoxious kinfolks, people who stand between them and fortunes, enemies that they are not quite prepared to have murdered, but certainly would go to extreme lengths to get out of the way. Think of what a handy million acres of ice that Alaska preserve might become! Russia may have caught up with us on secret weapons but we would certainly overtake her on our American Siberia, if President Eisenhower should sign such a law.

There is another question to seriously face. Just how many of us might with sufficient excuse if not with justification be sent to Alaska's ice domain, if such a law as is proposed were passed and signed? The psychiatrists tell us that at least 50 percent of American adults have at some time been "mentally ill." Anger, excitement, disaster, indeed quite a number of common happenings may produce such mental abnormality. There are enough miscarriages of actual justice together with the tragedy of false diagnoses or mistaken professional opinions to stir many of us to great pity and sometimes indignation, when the victim is only a few miles away. What chance at rectifying an injustice when they are thousands of miles from help, with a sea of ice intervening?

We do not want a police state prison system operating near the North Pole. There may be no salt mines there, but the effectiveness of such a St. Helena could be atrocious.

Our lawmakers claim that certain doctors recommended this new law for the care of the "mentally ill." Who were these doctors? Those who have watched certain doctors, alienists and psychiatrists in courts where large sums of money are often used to influence the processes of justice are justifiably alarmed.

Needs of the Mentally Retarded

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. WILEY. Mr. President, last Friday night it was my privilege to deliver an address before the Phi Mu Sigma Fraternity Chapter of the Wisconsin State College, of Milwaukee. Phi Mu Sigma is an organization dedicated to increasing the number of specialists looking after the educational and other needs of America's mentally retarded.

At the dinner, awards for distinguished service for the mentally retarded

were given to President Eisenhower; Roy Rogers and his wife, Dale Evans; Dr. Samuel A. Kirk, of the University of Illinois; and Dr. Salvatore Di Michael, executive director of the National Association for Retarded Children.

I was personally pleased to receive an honorary life membership in the fraternity.

Special citations were also given to the Manitowoc County Association of Retarded Children and the Milwaukee County Association, as well as the Wisconsin Council for Mentally Retarded Children.

I was happy to circulate some advance texts of my remarks of that evening and received many kind comments in response. One such came from the superintendent of Southern Wisconsin Colony and Training School at Union Grove in my State, Mr. John M. Garstecki. I am pleased to quote this distinguished leader:

The address has been read with considerable interest, and it is encouraging to note that the feeling prevalent among those who work daily with the retarded child is also a feeling exhibited throughout the address. It is our sincere hope that public awakening to the needs of the mentally retarded will continue to show the benefits that have been accrued during recent years. We look forward also to the day when mental retardation will join with all the other plagues of mankind eradicated by medical science through research and discovery into causes and prevention.

We deeply appreciate receiving the address and the many fine comments regarding the group of children who require such a full measure of consideration.

I ask unanimous consent that the prepared text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I can think of few more memorable or more satisfying evenings than those like this, in which I have been able to join with folks, such as you, who are dedicating yourselves to serve your fellow man.

I cannot too strongly endorse the work of this fraternity, designed as it is, to advance the professional service of teaching and otherwise aiding the mentally retarded.

The awards you are conferring tonight are amply merited for deeds well done. May they serve as an inspiration for still more deeds—in Washington, in Madison, in Milwaukee, and everywhere else—for the retarded.

THE CHILDREN WHO NEVER GROW UP

Yes, if I may say, may they particularly spur our aid to the little ones, to the children who never grow up, to those whose brains unfortunately cannot mature to full adult levels of intelligence.

As you know, they may be among your children or grandchildren or mine, for retardation is democratic—in striking almost anywhere, any family. Retarded children lack brainpower, but they are God's children, with Godlike qualities—with human feelings and human wants and frailties. They need love and affection and understanding and help.

I will not attempt to spell out in detail the problems of the mentally retarded, with which, after all, you, more than I, are very familiar.

WE ALL HAVE A RESPONSIBILITY

I would, however, like to make a few observations on this field:

The first is that every single group in our society has a responsibility in this area. We in the Congress certainly do. (I shall amplify this point a bit later on.) You of the college and university world, the professional field do, and every community, every parent, every PTA, has an obligation, as well.

If we are genuinely to be adequate to our over-all goal, we need not a partial effort, but a speeded-up comprehensive program. I refer to a program which will advance greatly the frontiers of our understanding, diagnosis, prevention and treatment of the mentally retarded.

TWOFOLD GOAL: MORE RESEARCH, SERVICES

Basically, this means: (1) expanded research, (2) expanded services.

Research for example, into the 70 known causes of retardation, ranging from damage to the nervous system before, during and after birth, to genetic factors, infections, toxic agents, endocrine disorders, etc.

And, yes, services—all types of modern services; community diagnostic—treatment clinics; home counsellors; nursery classes; special education (that's where you fine folks come in, or course) with improved vocational training and social training; sheltered workshops; community centers with recreational, social and counselling facilities for the adolescent and adult retarded, etc.

All this takes time. It takes energy. It takes money. But somehow we must and will find all three ingredients.

THE ALTERNATE OF NEGLECT

The alternative is dismal. The alternative, neglect of the problem means hardship. It means suffering. It means utterly wasted years. It means a lapse in fulfilling our moral obligations.

It means an avoidable national loss of potential human resources. America, despite all its wealth, all its prosperity, all its 165 million strong—can ill afford such staggering loss as we are now experiencing because of our neglect of the deficient, the feebleminded.

All God's children are precious. Each is entitled to his or her birthright. In the eyes of God, no child, no adult is unworthy of fulfillment.

TEAMWORK BY FEDERAL AGENCIES

It seems surprising, but it is a fact that the overall challenge of mental retardation, so far as Uncle Sam is concerned, has only just begun to be acutely felt in all its proportions.

Fortunately, the national administration is now well alert to the wide dimensions of the challenge. The administration has surveyed the field and it is now going into action—in cooperation with the Congress on a well-coordinated basis.

That means, of course, the full teamwork of the invaluable United States Children's Bureau. It means the United States Office of Vocational Rehabilitation, the Bureau of Public Assistance of the Social Security Administration, the National Institutes of Health, the United States Public Health Service, itself, the United States Employment Service, the President's Committee on Employment of the Physically Handicapped, the United States Office of Education, and still other sources as well, working for a common goal.

The problem is not limited to our own land of course, as the World Health Organization has noted in its important statements in this field.

UNDERSTANDING NEEDS OF GIFTED CHILDREN, DISTURBED CHILDREN

In other words, we are really just about opening up a whole new frontier of effectively looking after these folks in our society.

I might point out, incidentally, as a side note, that there are other frontiers which we are fortunately opening up.

America has been "discovering" slow learners. It has been "discovering" the unique problems at the other end of the scale—problems of those exceptional children who are especially gifted in intelligence. We have found that this type of youngster, too, needs our understanding and our attention, so as to realize his or her full potentialities.

We are also "discovering," so to speak, the problems of emotionally disturbed children of all levels of I. Q. We are realizing—a great many Americans almost for the first time—that the emotional problems of later years have their deep roots in childhood. We are realizing that emotional disturbance in a preschool child, has best be caught in its inception, lest it grow more and more serious as time goes on.

One cannot, of course, draw artificial dividing lines in a human being. A mentally retarded child may, as you know, simultaneously be emotionally disturbed.

A brilliant, gifted child may be emotionally disturbed; and so may the so-called average child.

A child may be physically well, but emotionally ill; or emotionally well, but physically ill.

There are, as you well know, all sorts of combinations of circumstances in the miraculous human creature. So what we need to do is to look at the whole child and at all children—not in theory, but in life, and concentrate our attention on those who need our services most.

Certainly, the retarded child needs our services, and that is why I am so thankful to be in your personal presence this evening.

HUGE MAGNITUDE OF PROBLEM

An indication of the magnitude of the problem we face is borne out by this statistic: Three percent of our population is affected by mental retardation.

Other illness or inadequacy problems have tended to be more publicized, but mental retardation affects infinitely more than the more publicized problems.

Thus, out of every 100,000 children, it is estimated that 15 are likely to be blind, 7 are cerebral palsied; 7.2 are polio victims; 200 are rheumatic heart patients—and here is the figure for all of us to remember—there is a staggering 3,000 who are mentally retarded.

Three-hundred of the children born every day are estimated will be in the mentally retarded category.

In round figures, total numbers are, as you know, estimated at 4.8 million, of whom 1½ million are children; 153,000 adults and youngsters are, confined in institutions for the mentally retarded and epileptic.

Around $150 million a year is spent on public and private institutions of this nature.

The length of stay in institutions is longer than for any category of handicapped person.

Inevitably, the cry rightly goes up. "We need specialists to handle this problem—specialists and more specialists! We need 55,000 more teachers for the mentally retarded—the very need you are seeking to fulfill."

And we need more of almost every category of specialist—social workers, physical and occupational therapists, psychologists, psychiatrists, and myriads of other personnel. This is what Senator LISTER HILL'S fine bill is all about—as I shall shortly mention.

CONGRESS SHOULD ACT ON SENATOR HILL'S BILL

Naturally, all eyes turn to the United States Congress for its realization of and action on this problem.

Toward that end, I personally have been in contact with the Senate Labor and Public Welfare Committee, with the House Education and Labor Committee, with the Department of Health, Education, and Welfare, and with Senate and House Appropriations Committees.

I was pleased indeed when the House Appropriations Committee took the first indispensable step and increased the budget requests of $11.9 million for maternal and child-health services in the very modest Children's Bureau Budget to $16 million.

The committee made a formal recommendation, as you know, that half of the increase provided, be spent on the problem of mentally retarded children. The committee likewise approved an increase over the $750,000 appropriated last year for medical research on the mentally retarded.

Then, as you no doubt know, last month, Senator LISTER HILL, of Alabama,, on behalf of himself and other Senators, introduced a landmark bill for the purpose of providing funds for research and training in the field of mentally retardation. I am happy now to serve as a cosponsor of this vital legislation.

S. 3020, now pending before the Senate Labor Committee must be enacted into law. It will help provide funds to aid in training more undergraduates and graduates, more teachers, more supervisors, researchers, and administrators to provide ever improved programs—the type of programs which, as I have indicated, are so sorely needed by so many.

Time must not be lost.

We have a great deal of time to make up. For too long, the mentally retarded have lived in the shadows—neglected, often rejected, unwanted. The Federal Government has a clear responsibility to fulfill its role in conjunction with the States and the cities to improve overall services to the mentally retarded.

CONTINUE CHILDREN'S BENEFITS BEYOND 18; LIBERALIZE TAX TREATMENT

Meanwhile, in Washington, as you know, we are approaching the final stages of enacting liberalizing changes in the social security laws.

One of those necessary changes (to which I personally have given my complete support), provides for the payment of social-security benefits to widows caring for those children beyond the age of 18, who are still unable to look after themselves.

After all, if a widow has been tending a retarded youngster, let us say, all by herself, from the age of 11 on, that child still needs help, even after he passes the chronological age of 18. The widow's social-security benefit—to look after him—should not, therefore, cease simply because he has passed that chronological age. His mental age would still prevent him from looking after himself.

In accordance with this same principle of fairness and easing financial burdens, I have long been in favor of taking a new look at our tax laws. On the Senate floor, I have urged liberalizing of tax deductions for the care of mentally retarded dependents.

Tax liberalization results in a loss of some revenue. But surely with Uncle Sam taking in $65 billion, he can spare taxpayers a few more dollars to look after their own loved ones who are retarded.

LOOKING AFTER PARENTS

But legislation—and even legislatively provided funds or tax deductions will not—in and of themselves—provide all the answers.

I have spoken of frontiers. There is a whole new frontier in looking after the needs of parents of the mentally retarded.

I am pleased that organizations and individuals who have concerned themselves with the children's problems now are giving their serious attention to the needs of parents, as well. I refer to such splendid groups as the National Association for Retarded Children. Thanks to NARC and others, more and more people realize the deep emotional prolems which are caused to a parent of a mentally deficient child.

The parent may utterly lose confidence, may seek to live in isolation from the community, may have a feeling of guilt, even though there is no traceable reason for the child's problem (no accident, for example which caused injury to the brain due to any parent's fault.)

In order to meet the needs of the child, therefore, more and more of you experts are trying to meet the need of parents, as well—for improved understanding. After all, a parent can come to feel just as much if not far more pride in what a retarded child can with aid, accomplish, as in the achievement of a so-called average child.

WISCONSIN'S TRAILBLAZING

In the overall field, I am particularly proud at the outstanding progress which has been made in our State—by yourselves and others.

I was delighted, for example, to note the council work adjustment center here in Milwaukee. It never would have come about, had it not been for the wonderful cooperation, the magnificent teamwork of women's organizations, the local office of the State board of vocational education, the division of vocational rehabilitation, Southern Colony and Training School, Milwaukee Vocational School, the Wisconsin State Employment Service, and the Community Welfare Council.

A complete range of services is being provided. There is medical service, educational service, family case work, psychological service, etc.

This is a heartwarming sign of better days ahead. And there are other welcome signs of progress in many other parts of our State. I have been pleased to hear from many professional workers, parents, and others in all parts of the Badger State reporting progress.

CONCLUSION

We all have a role to play in continually looking after this problem. I know you will not pass the buck to Uncle Sam. Let the Federal Government do its role; let it not shirk its responsibility. (I pledge my own efforts to see that Uncle Sam doesn't let you down.) But let every American continue to do as you are doing—to do whatever he or she can—for these youngsters, and for adults as well, in need. Certainly, you, in this audience tonight, who are dedicating yourselves, should serve as an inspiration to all of us.

Those of us who are not privileged to serve in this cause 365 days a year, so to speak, can at least do our modest share to be worthy of the fine tradition which you are establishing for us.

Good luck. To the award winners, my heartfelt congratulations—and best wishes to you all.

East-West Trade

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Public Affairs Luncheon Club of Dallas, Tex., on April 24, 1956. It relates to the East-West trade in strategic goods.

I quote one paragraph from the resolution:

Resolved by the Public Affairs Luncheon Club, assembled this 24th day of April 1956, That so long as the United States Army divisions are needed in Europe to bolster Western defenses, trade in strategic materials of war by our allies with the Soviet bloc is indefensible.

I ask that the full text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas Congress passed the Battle Act to prevent our allies from sending strategic materials to the Soviet bloc; and

Whereas the Coordinating Committee Conference on East-West Trade held in Paris, July 1954, changed, amended, and modified our Battle Act list, thereby perverting the intent of Congress; and henceforth permitted our allies to sell and ship the most strategic materials and equipment such as copper wire, aluminum, machine tools, electric and electronic equipment, etc., to Communist countries. Said action being taken with the advice and consent of Mr. Harold Stassen, United States Government conference representative; and

Whereas the shipment of scrap metal to Japan which became the scandal of the 1930's and 1940's, can well be considered a minor blunder when compared with this—the building up, accelerating, and strengthening of the Communist war potential: Now, therefore, be it

Resolved by the Public Affairs Luncheon Club, assembled this 24th day of April 1956, That so long as United States Army divisions are needed in Europe to bolster Western defenses, trade in strategic materials of war by our allies with the Soviet bloc is indefensible; and be it further

Resolved, That Congress be urged to withhold all monetary aid to these countries so long as such trade continues; that a copy of this resolution be spread upon the minutes of this club; and that copies be sent to Senators LYNDON JOHNSON and PRICE DANIEL, and to Senator JOHN MCCLELLAN, chairman of the Senate Investigations Subcommittee.

The Proof of the Pudding

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. CANNON. Mr. Speaker, under leave to extend remarks, I include an editorial appearing in the Missouri Farmer, the most widely read farm paper in Missouri, and written by Fred V. Heinkel, one of the most authoritative writers on farm topics in America today.

Mr. Heinkel says:

President Eisenhower, in his message to the American people following his veto of the comprehensive farm bill, indicated that farm prices will be supported at 82½ percent of parity. The bill provided for 90 percent supports and many other features designed to restore farm income. The question that might be asked by farm people is, "At what percentage point of parity would they have us believe that farm price supports cease to be good and become bad?" Would this point be at 83, 87, or 89 percent of parity?

According to farmers with whom I have talked and visited, farmers generally believe that price supoprts at 90 percent are good and, in fact, they are inclined to believe they are entitled to 100 percent of parity.

On March 15 the parity index was 82 percent, and farmers were not doing well. How much help can farmers expect from this

promise of a meager 82½ percent of parity on wheat, corn, cotton, rice, and peanuts? And why the delay in even this scant help?

What President Eisenhower and Secretary Benson have never realized is that flexible supports are a cause of—not a cure for our farm problem.

Testifying before the Senate Committee on Agriculture and Forestry back in 1954, on March 24, I warned that flexible supports would be a failure. On that occasion I told the committee:

"A flexible price-support program is based on two premises: First, that production will be controlled voluntarily by farmers when the prices farmers receive for their products are lower, and second, that lower farm prices will mean increased consumption of the products of agriculture. We contend that both of these premises are false. If these premises are not true, then the whole case for a flexible price-support program falls."

Now let us review what has happened.

Flexible supports have failed to control production. President Eisenhower should know this. If he thinks flexible supports can control production why is he asking for a soil bank? He is asking for a soil bank because he knows good and well that cutting prices is not the answer to cutting production.

The administration cut price supports on oats 22 percent since 1952. Production has gone up 25 percent. Soybean supports were cut 20 percent during the same period, and production has gone up 30 percent. Barley supports were cut 23 percent. Production went up 73 percent. Rye supports were cut 17 percent. Production climbed 81 percent. Supports on grain sorghums were cut 25 percent. Production has gone up an amazing 180 percent.

While part of these increases in production resulted from decreased acreage allotments on the basic crops, it is quite clear that where the return per bushel dropped, the farmer produced more in order to recoup his lost income.

The last time the parity index was 100 was late in 1952. Since then the parity index has dropped as low as 80, and on March 15 of this year, it stood at 82. While farmers have been taking a cut in income of up to 20 percent, prices to consumers have dropped only 3 percent. It is obvious that this lowering of farm prices has not brought on a rush by consumers to purchase farm products.

The Missouri Farmers Association was not alone in advising against flexible supports. Other organizations, and many distinguished economists, foretold the disaster that could be expected to accompany the flexible supports foolishness.

Back in September 1952 Rainer Schickele, head of the Department of Agricultural Economics at North Dakota State College, warned, "Lower support prices are not likely to bring about a reduction in output any more than low free-market prices did in the early 1930's."

President Eisenhower and Secretary Benson said the farm bill as passed by Congress was a bad bill. In our opinion it was a good bill. As evidence, it had the bipartisan support of the overwhelming majority of Senators and Congressmen in the principal Farm Belt States. This included the support of both of our Missouri Senators and all of our Missouri Congressmen but two.

The bill was supported by the entire Kansas delegation—with the exception of one Congressman—all of whom are Republicans, including the dean of the delegation, CLIFFORD R. HOPE, who is himself an authority on farm legislation.

Just prior to President Eisenhower's veto of the farm bill, a news article in the April 11 issue of the New York Times stated, in part as follows:

"Food industry interests opened a campaign yesterday to mobilize consumer sentiment against certain features of the farm bill.

"They acted as a result of a telephone conversation between John Q. Adams, chairman of the board of directors of the Coordinating Committee of the Food Industries, and Secretary Benson. The committee was set up by 52 trade associations in various levels of food production, processing and distribution."

It is common knowledge that as farm prices drop the spread widens between what the farmer gets and what the consumer pays. Farm legislation should be for the benefit of farmers and thus promote the well-being of all our people—not just food processors alone.

The agricultural economy is sick—very sick. And what it has is contagious—as contagious as any plague that ever threatened the people of this world. Our national economy cannot remain healthy, with part of our economy booming and prosperous, while at the same time the farmers and businessmen in our small towns are suffering from economic distress.

What is needed most of all to improve the economic position of farmers, aside from some good rains, is more income.

This could be accomplished if Congress would pass a law providing for the use of production payments such as are in use on wool and sugar.

Since production payments do work satisfactorily, and the President and Congress have both approved their use for wool and sugar, why not give them a trial run on hogs, cattle, poultry and eggs, which do not have the benefit of mandatory price supports.

And if we have surpluses that need moving, these could be channeled into a better diet and better living for the 6 million people who have incomes of less than $55 per month, by use of a food-stamp plan.

Demonstrations at National Conventions

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. ROOSEVELT. Mr. Speaker, I have recently received from Mrs. Clara Shirpser, the Democratic national committeewoman for California, a most interesting resolution which she proposes to place before the 1956 Democratic National Convention. I quote it:

To the Rules Committee, 1956 Democratic National Convention:

Resolved, That—

(a) All demonstrations at the 1956 Democratic National Convention be restricted to a period of 15 minutes;

(b) That all parades in the aisles be eliminated;

(c) That an invitation be extended to each Democratic candidate whose name is placed in nomination for President of the United States who receives at least 15 percent of the votes on the first ballot, to address the 1956 Democratic Convention for a period of 15 minutes.

Mr. Speaker, it seems to me that this suggestion has a great many advantages and few, if any, disadvantages. Perhaps it will be considered by both political parties and certainly it would be a fine thing for all those who will undoubtedly be watching the proceedings of the conventions on television to have the opportunity to directly see and judge the candidates who remain in the running under the proposed formula. There seems to me to be one of the improvements in the convention system which has long needed to be made more democratic. I hope it will be widely discussed and supported by the delegates to the 1956 Democratic National Convention.

Competition for Manpower Between the National Guard and Organized Reserves in the State of Missouri

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. JONES of Missouri. Mr. Speaker, I believe I am expressing the views of a majority of the Members of Congress when I say that I am interested in maintaining a strong Reserve defense force. I am equally certain that most of us are conscious of the competition existing in certain areas, between the Organized Reserves and the National Guard which, at least partially, defeats the purposes for which the Reserve Forces Act was enacted.

Prefacing my remarks, it should not be necessary to remind my colleagues that the intent of Congress as enunciated in the Reserve Forces Act of 1952, remains unchanged in the Reserve Forces Act of 1955, in that:

The Congress further declares in accordance with our traditional military policy as expressed in the National Defense Act of 1916 as amended that it is essential that the strength and organization of the National Guard and the Air National Guard as an integral part of the first line of defense of this Nation be at all times maintained and assured.

In some areas the strength and effectiveness of the National Guard is being jeopardized by policies adopted by the Organized Reserves, which are proving detrimental to the overall Reserve defense program.

In a recent address before a conference of the Adjutants General Association at Augusta, Ga., Maj. Gen. A. D. Sheppard, the adjutant general of Missouri, presented the problem, cited instances of how the policy was operating contrary to the implied intent of Congress, and made suggestions as to how the program could be improved, as is being presently done in Missouri.

Those who are anxious for a strong Reserve, particularly those in whose districts are located traditionally strong and active National Guard units, will, I am certain, be interested in reading the timely remarks of General Sheppard, which are presented herewith:

COMPETITION FOR MANPOWER BETWEEN THE NATIONAL GUARD AND ORGANIZED RESERVES IN THE STATE OF MISSOURI

The Reserve Forces Act of 1955 amends the Armed Forces Act of 1952 (Public Law 476, 83d Cong.) and the Universal Military Training and Service Act (Public Law, 82d Cong.).

Contrary to some current publicity, the Reserve Forces Act of 1955 in no way changes the status of the National Guard, which is

set up in section 201 (b) of the Armed Forces Act of 1952 and remains unchanged, as follows:

"The Congress further declares in accordance with our traditional military policy as expressed in the National Defense Act of 1916 as amended that it is essential that the strength and organization of the National Guard and the Air National Guard as an integral part of the first-line defenses of this Nation be at all times maintained and assured. It is the intent of the Congress that whenever Congress shall determine that units and organizations are needed for the national security in excess of those of the Regular components of the ground forces and the air forces, the National Guard of the United States and the Air National Guard of the United States or such part thereof as may be necessary together with such units of the other Reserve components as are necessary for a balanced force, shall be ordered into the active military service of the United States and continue therein so long as such necessity exists."

The position of the National Guard in the defense structure of the Nation is thus clearly established by the Congress of the United States. Nevertheless, Organized Reserve units have been and are being located in communities where National Guard units have already been established, causing competition for manpower to the detriment of both components, particularly the National Guard.

This is done in violation of the implied intent of Congress, and in violation of the Army regulations governing the location of Organized Reserve units as contained in paragraph 30, Army Regulations 140–305, Department of the Army, December 5, 1952, which reads, in part, as follows:

"30. Location of units: (a) The location of the home station * * * will be designated by the area commands and will be based on the following considerations:

"(1) Home stations for units should be selected so as to insure, so far as possible, continued maintenance of personnel strength in the units. Competition for personnel between services or Reserve components of the Army should be avoided where possible, and projected plans for home stations should be coordinated at the appropriate levels prior to implementation.

"(2) Density of male population of military age, coupled with proper geographic distribution to and within military areas.

"(3) Availability of personnel for units requiring technically trained personnel."

National Guard units have generally been located and fitted into their communities for many years and are identified with them by strong ties, and hundreds of thousands of dollars have been invested by the State in real estate and armory facilities. We cannot abandon this property; therefore we must fight for it. It is the superimposing of Reserve units upon these communities, in violation of the act of Congress and the Army regulations cited above, to which I object.

In the following paragraphs I will give illustrations of the disregard of the above instructions in placing Reserve units to the detriment of both the National Guard and Reserves. It will also be pointed out that the manner of determining the density of male population, called the manpower potential by the Department of the Army, is not a satisfactory guide in placing units.

The data relating to the locations and strengths of Organized Reserve units used below was furnished by the Chief, Missouri Military District, for this purpose. A report similar to that below has been furnished each Senator and Representative of Missouri in Congress, outlining the situation as it pertains to his or her particular district.

The Missouri National Guard is organized into 112 Army and 22 Air units, the total strengths of which, as of February 29, 1956, were as follows:

	Officers	Warrant officers	Enlisted men	Aggregate
Army	590	112	7,127	7,829
Air	220	8	1,669	1,897
Total	810	120	8,796	9,726

Army units are located in 48 counties and the city of St. Louis. Eleven of them are detachments, the 101 remaining being company-size units with an aggregate enlisted strength of 6,839, an average of 68 men per company.

The Air National Guard units are located at Lambert Field, St. Louis, and Rosecrans Field, St. Joseph. Its units are at 74 percent strength, which is good. It is not as concerned with the placement of Organized Reserve units as is the Army Guard.

The Army Guard is more successful with units located in the smaller towns of the States than is St. Louis and Kansas City. For instance, the 140th Infantry Regiment in southeast Missouri averages 94 officers and men per company in comparison to an average of 62 officers and men of the 138th Infantry Regiment located in St. Louis. The only company of the 138th outside St. Louis is the Heavy Mortar Company, at St. Clair, which has as a strength of 110.

It has been my policy not to object to the location of Organized Reserve units in either St. Louis or Kansas City on the theory that there should be sufficient manpower in them to support any reasonable number of units. A look at the results obtained in these cities will show that this supposition may be false.

St. Louis

	Authorized strength			Actual strength		
	Officers	Warrant officers	Enlisted men	Officers	Warrant officers	Enlisted men
National Guard:						
Army	230	28	4,230	138	16	1,662
Air	215	18	1,392	163	5	1,114
Organized Reserve	839	90	6,037	664	62	1,442

The Air National Guard units are at 80 percent of their authorized enlisted strength. The Army National Guard units are at 39 percent of their authorized enlisted strength. Two National Guard antiaircraft artillery battalions, earmarked for the on-site defense of St. Louis, are seriously under strength. It is hoped that when moved to their tactical duty stations this can be corrected. The Organized Reserve units are at 24 percent of authorized enlisted strength. Thirty-four units of the 102d Infantry Reserve Division have 891 enlisted men, or an average of 26 men per company, approximately cadre strength.

Kansas City

	Authorized strength			Actual strength		
	Officers	Warrant officers	Enlisted men	Officers	Warrant officers	Enlisted men
National Guard	123	11	1,019	82	14	714
Organized Reserve	458	46	3,021	423	34	611

The National Guard units are 70 percent of authorized enlisted strength, the Reserve units at 20 percent of authorized enlisted strength. Fifteen units of the 102d Infantry Reserve Division have 288 enlisted men, or an average of 19 men per company, less than cadre strength.

In cities other than St. Louis and Kansas City, the placing of Organized Reserve units where there is already an established National Guard unit is strongly opposed. The average size town cannot support both the National Guard and Organized Reserve without detriment to both.

St. Joseph is an illustration. The following summary is given:

	Authorized strength			Actual strength		
	Officers	Warrant officers	Enlisted men	Officers	Warrant officers	Enlisted men
National Guard:						
Army	10	3	177	6	3	61
Air	70	5	680	57	4	555
Organized Reserve:						
Army	29	2	347	25	4	183
Marine and naval	41	0	586	23	0	334

Again the Air National Guard is in good shape, but the Army National Guard and Reserves are well under their authorized enlistments. The only reasonable conclusion is that more organizations have been allotted St. Joseph than can be reasonably supported. The State of Missouri has an investment of $135,000 in an armory in St. Joseph for the 35th Signal Company, a key organization of the 35th Division. It is highly desirable that this company strength be increased. The Army Reserve units were located in St. Joseph over my objection, the military district calculating that the area had a manpower potential of 10,068. This has not proved out.

Recently a group of Reserve officers put pressure on the Chief, Missouri Military District, to locate an additional Reserve unit in Springfield to which I objected. The situation in Springfield was as follows, given in detail to show the extent to which Reserve units fill their vacancies:

Springfield

	Authorized strength			Actual strength		
	Officers	Warrant officers	Enlisted men	Officers	Warrant officers	Enlisted men
National Guard:						
35th Infantry Division Band	0	1	42	0	1	34
Company A, 735th Ordnance Battalion	4	1	146	1	1	73
Headquarters and Headquarters Detachment, 229th Medical Battalion	6	1	22	6	1	22
106th Ordnance Company (heavy maintenance)	5	2	145	5	2	69
Total	15	5	355	12	5	198
Organized Reserve:						
Company I, 409th Infantry	6	0	165	0	0	0
Company K, 409th Infantry	6	0	165	6	0	27
Headquarters and Headquarters Battery, 283d Field Artillery Battalion	14	1	91	11	1	29
Service Battery, 283d Field Artillery Battalion	3	2	54	3	2	19
Battery A, 283d Field Artillery Battalion	4	0	85	4	0	25
Battery B, 283d Field Artillery Battalion	4	0	85	2	0	22
Headquarters and Headquarters Company, 320th Engineer Group	16	1	51	13	0	38
Headquarters and Headquarters Company, 750th Transportation Battalion	11	2	95	8	2	22
Company A, 750th Transportation Battalion	6	0	180	5	0	27
Company B, 750th Transportation Battalion	6	0	102	2	0	25
Company C, 750th Transportation Battalion	7	0	228	2	0	26
Headquarters, 3d EBTG ERTC	8	0	10	8	0	12
Headquarters, 2d Battalion, 3d EBTG ERTC	2	0	4	2	0	3
Headquarters, 3d Battalion, 3d EBTG ERTC	2	0	4	2	0	2
Total	95	6	1,319	68	5	277

There were vacancies in the existing Reserve units for 27 officers, 1 warrant officer, and 1,042 enlisted men, in addition to vacancies in the National Guard for 3 officers and 157 enlisted men, the total vacancies being for 30 officers, 1 warrant officer, and 1,199 enlisted men. The unit proposed to be added to Springfield was a company of an Engineer Basic Training Group creating vacancies for 6 officers and 26 enlisted men. The officers were of no consequence, but the enlisted men were. They included the following high-ranking grades:

Master sergeants (E–7)	5
Sergeants first class (E–6)	6
Sergeants (E–5)	8
Corporals (E–4)	4
Privates (E–3)	3
Total	26

As shown in the Reserve tabulation, there appears to be little effort made by the Reserves to fill up their units after the plush jobs and high enlisted ratings are filled. To add 19 more of the three top grades to the large number already in existence in Springfield is in direct conflict with the interests of the National Guard which must also have a proper percentage of the lowest ranks in order to have balanced combat units. The Guard units in Springfield are at only 56 percent of authorized enlisted strength as a result of this unhealthy situation.

Columbia and Jefferson City also offer pertinent examples. Columbia has the following status:

	Authorized strength			Actual strength		
	Officers	Warrant officers	Enlisted men	Officers	Warrant officers	Enlisted men
National Guard	12	0	247	10	1	126
Organized Reserve	60	4	412	59	2	161

A breakdown of the enlisted grades authorized in the above is as follows:

	Master sergeant, E–7	Sergeant, 1st class, E–6	Sergeant, E–5	Corporal, E–4	Private, 1st class, E–3	Private, E–2	Total
National Guard:							
Battery B, 128th Field Artillery Battalion	3	7	14	24	45	4	97
Company A, 175th Military Police Battalion	1	5	13	71	59	1	150
Total	4	12	27	95	104	5	247
Organized Reserve:							
Company A, 327th Engineer Battalion	4	11	23	36	27	9	110
Headquarters and Headquarters Battery, 816th Field Artillery Battalion	5	6	18	26	32	4	91
Battery B, 816th Field Artillery Battalion	3	7	8	29	59	----------	106
Service Battery, 816th Field Artillery Battalion	1	5	7	23	11	7	54
Medical Detachment, 816th Field Artillery Battalion	----------	1	2	6	----------	----------	9
Headquarters leaders course, ERTC	1	11	21	9	----------	----------	42
Total	14	41	79	129	129	20	412

By comparing these authorizations with the actual enlistments, it is found that the National Guard has only 126 enlisted men out of an authorization of 247, or 51 percent. This is below normal. Forty-three of the 247 enlisted spaces authorized are allotted to the 3 highest grades (E–7, E–6, and E–5). This leaves 83 men or 66 percent of the 126 enlistments who must be serving in the 3 lowest grades, that of corporal (E–4), private, first class (E–3), and private (E–2).

The Organized Reserves have only 159 enlisted men out of an authorization of 412, or 38.5 percent. This is above normal for Reserve units. One hundred and thirty-four of the 412 authorized enlisted spaces are allotted to the 3 highest grades. This leaves only 25 men or 16 percent of the 159 actual enlistments who must be serving in the 3 lowest grades. As an example, Battery B, 816th Field Artillery Battalion, with an authorized enlisted strength of 106 actually has only 22, and is authorized 18 of the top 3 grades.

Just the opposite exists in Jefferson City, where the National Guard has the advantage in a high proportion of top grades and where many members are employed in the office of the USP&FO and in the State maintenance shops. Their enlisted strength is 94 percent of that authorized. The Reserve units are at only 27 percent enlisted strength, this being possible only because the 420th Military Government Company is above its authorized enlisted strength. The combat unit, Battery A, 816th Field Artillery Battalion, is at 8 percent of enlisted strength, having 9 men against an authorized 106.

The situation in Columbia and Jefferson City are ample proof that the so-called manpower potential as calculated by the Department of the Army to justify the establishment of additional units in a given locality is not sound. In neither of the above compared localities are the units of both the National Guard and the Organized Reserve at a satisfactory or effective strength. In letter, Missouri Military District, May 13, 1955, subject: Relocation of Army Reserve Unit, in which approval or objection of the adjutant general of Missouri to locating Battery A, 816th Field Artillery Battalion in Jefferson City was requested, a total manpower potential of 1,937 men for Jefferson City was computed. I objected to putting the battery in Jefferson City, and further stated that I did not agree to such a manpower potential for recruitment. Nevertheless, the battery was established, and where military district stated at that time there were 4 officers and 10 enlisted men pledged to join the unit, it is significant to note that now, 11 months later, the unit has a strength of only 5 officers and 9 enlisted men.

An Organized Reserve unit may be maintained with cadre strength, or 25 percent or enlisted strength when cadre strength is not shown in T/O&E or T/D (table I, Army Regulations 140–305). The National Guard cannot function on a similar basis. It must have an effective strength to carry out its State and Federal missions. The more Organized Reserve units placed in any locality and allowed to subsist by filling only high-ranking vacancies, the more difficult it is for the National Guard to obtain an effective strength in that locality, as illustrated above. Men who should be privates in the National Guard are attracted to positions in the Organized Reserve they are not qualified to hold, in order that Reserve maintenance strength may be reached and the Reserve officers be paid for drill attendance. Even though the enlisted man may not be promoted at once to the rank commensurate with the vacancy occupied, the fact that the vacancy exists and the knowledge that promotion will surely be much faster than in the National Guard is sufficient without being told that Reserves are not subject to

being called out by the governor for riot or other State emergency. What would have happened if the Missouri National Guard had not answered the call promptly for the penitentiary riot in Jefferson City in 1954?

Many of our National Guard units have been an integral part of their communities for 50 or 60 years, and we do not wish them to be crowded and made ineffective by Reserve units with high-ranking vacancies but of secondary importance in the overall defense structure. It is highly desirable that they be up to strength and able to function efficiently and effectively. To allocate too many units to any area defeats the purpose of both the National Guard and the Reserve. To lose a unit in a town having a State-owned armory would result in a serious economic loss. On the other hand, the Reserve has few armories, and a change of location is of little consequence. In fact, they appear to be in continual movement, whereas National Guard units are a fixed part of the community.

One last point. In the Guard-Reserve edition of Army Times, volume XVI, No. 24, January 21, 1956, the following résumé of the recent and future planned strengths of the Army Guard in comparison to the Army Reserve was set forth:

	Officers	Enlisted men	Total
Army National Guard:			
Nov. 30, 1955	34,375	336,508	[1]370,883
June 30, 1956	36,790	370,310	407,100
June 30, 1957	36,850	371,250	408,100
Army Reserve:			
Nov. 30, 1955	67,368	102,878	169,946
June 30, 1956	73,900	141,155	215,055
June 30, 1957	84,600	214,000	298,600

[1] From National Guard Bureau Report.

This shows that the National Guard is planned on a combat basis with a proportion of officers to enlisted men of approximately 1 to 10. The Army Reserve is planned to be raised from a proportion of officers to enlisted men of approximately 1 to 1.5 in November 1955 to 1 to 2.5 in June 1957. And this is under the new Reserve Forces Act of 1955 plan. This cannot be considered an effective force, but only high ranking, cadre strength.

We are most anxious for a strong Reserve. We have many towns in Missouri requesting military organizations. We have suggested the organization of Reserve units in these towns and have pledged the Missouri National Guard to help the Reserve recruit their units and help them in every way possible.

With all of these communities available for the Organized Reserve, we think it anything but commonsense for the Reserve to pass up this virgin territory and insist on coming into towns where the Guard has good units and deliberately forcing us to fight them to protect our investments and old units.

We can never have a strong Guard and Reserve under this method, and there are plenty of communities available for both Reserve components where there would be no competition whatever, and would assure both components being strong, which is what we all desire.

Oust the Top Soviet U. N. Spy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Now Oust That Top Soviet U. N. Spy," and published in the Philadelphia Inquirer on Friday, April 27, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW OUST THAT TOP SOVIET U. N. SPY

United States ousting of 2 minor Soviet officials at the United Nations, for their part in kidnaping 5 Russian seamen who sought asylum in America, is a welcome move. But it is only a beginning.

Last Sunday the Inquirer urged expulsion of Arkady Sobolev, Soviet delegate to the United Nations, if evidence implicated him in that kidnaping. The evidence apparently does, for the note of our State Department to the U. S. S. R. states:

"Ambassador Arkady Sobolev himself insisted on intervening, despite the presence of an accredited representative from the Soviet Embassy in Washington."

It was to Sobolev's Park Avenue headquarters that the five seamen were lured the day before the kidnaping. Sobolev was charged with engineering the spiriting away of the five in testimony given Senate investigators last week by a sixth Soviet seaman, who managed to escape the Red gang.

Three highly important issues are involved:

First is whether those who seek sanctuary in this country from the Soviet terrorism can, and will, be protected from the operations of Soviet agents.

Second, scarcely less important, is whether the new-look leadership shall be permitted to continue the Stalinist system of using Soviet diplomatic agencies here as espionage centers.

Third, and vital, too, is whether the Soviet Union shall continue to abuse the hospitality of both the United Nations and the United States, as it has in this case. The United States note properly protests that the ousted Red officials abused the privilege of residence.

Soviet officials now blandly insist that the five seamen left of their own free will. They say Sobolev was present at the airport only as a friend and compatriot to bid them goodby. (If so, why were the seamen surrounded by an estimated 20 Red agents?) Word also comes from Moscow telling how happy the five are to be back.

Such flimsy yarns do not jibe with the fact that one of the abducted men was about to be married, in New York, to a pretty 24-year-old Russian girl who came here 5 years ago. Nor do those explanations stand up before testimony of the landlady of two of the men—testimony which tells how, on the night of April 5, the seamen were visited by two men who looked like Soviet agents and how, next day, the Soviet seamen were gone, leaving behind them a wrecked room, a blood-stained shirt, and other signs of a struggle.

Soviet lying in matters of this kind is historic.

Red thugs tried to say Mrs. Oksana Kosenkina wanted to go back to Russia—until the truth came out after her famous leap to freedom from a third floor window of the Russian consulate in New York.

In Australia, Red thugs tried to say that Mrs. Vladimir Petrov was eager to go back to Russia, although they had to push her, apparently in a drugged state, into a plane bound for Russia. She lost her shoes in the process. The truth came out when, later, that plane landed at Darwin and Mrs. Petrov succeeded in escaping when Australian police took away the guns of the Soviet thugs.

These are only two of the most notorious kidnapings which the Reds have engineered on the soil of other nations.

One other aspect of this latest outrage remains unexplained by the State Department. That is why United States authorities who were on hand at the airport made no effort to halt the kidnaping and apparently no real attempt to determine what actually was going on. An Immigration Service inspector is quoted as fearing that if he detained the seamen it might provoke an international fracas.

Well, his failure to do so has provoked just such a fracas. And the issues involved—especially the right of sanctuary for those who seek asylum here—call for firm and effective measures.

Send Sobolev home.

For a Better World

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks including an address For a Better World, made on February 12, 1956, before the New York Province of the Newman Clubs at New York City by Hon. Robert Murphy, Deputy Under Secretary of State.

The address is as follows:

The New York Province of the Newman Clubs has greatly honored me by inviting me to take part in your convention dedicated to the theme For a Better World. This is a goal to which we all aspire. We can find guidance in our search for a better world in the life of Cardinal Newman himself and from the principles to which your clubs are devoted. Newman's Apologia and the Idea of a University remain classics today and were fitting inspiration for Timothy Harrington when he called his fellow students together to found a Newman Club at the University of Pennsylvania.

John Henry Newman is a symbol of those who struggled for and attained happiness based on faith and spiritual understanding. His life was devoted to service of our faith and to increasing human understanding. We of the 20th century would do well to approach the difficult problems of our world in the spirit of calm and detached contemplation Cardinal Newman achieved.

Although he lived in what now seems a simple age, Newman's life-span covered a period of great ferment and change. In the 19th century, industrialization was gathering momentum in Western Europe and the United States. New economic and social theories were challenging and testing the existing order. The concerns of the times were concerns about material things. It was said that men should have more goods; that goods should be more equitably distributed; that society should be reorganized to provide the maximum material benefits, to provide the greatest good for the greatest number.

Most of the economic and social ideas of the 19th century were idealistically conceived. They were intended to solve the problems created by new political institutions, by growing populations, and by the industrial revolution. The 20th century, however, has seen some of these schemes and theories used in practical life, and used in such a way as to destroy whatever may have been good and to bring to dominance the error and evil they contain.

The materialist creed of Karl Marx, with its negation of faith and spirituality, its worship of the state alone, has become the enforced gospel of nearly a billion people, almost half the population of the world. Its economic dogmas have been adapted by Lenin, Stalin, and their successors to politi-

cal and imperialist programs designed to promote Soviet communism into every part of the world. While this is an ideological purpose of vast significance, it serves handily as a cover, and an effective cover, for Russian expansionism.

These doctrines have strong appeal for many peoples who are striving to improve their conditions and their standards of living. These peoples are often reluctant to believe that Communist intentions are predatory, that economic gain under the Marxist system will inevitably be at the expense of political liberty and spiritual freedom.

INTERNATIONAL COMMUNISM WELL ARMED

International communism is well armed for the struggle to which it is so fully committed. Its military forces include the two largest land armies in the world. It possesses substantial airpower and a growing stock of nuclear weapons. A huge percentage of the budgets and the resources of the U. S. S. R., of Red China, and of course the Eastern European satellites is devoted to national defense, armament, and internal security. Vast quantities of manpower are allocated to these purposes. As you know, these millions of men and women have little or no choice when it comes to military service or, in fact, any labor for the state. Political and economic control is maintained by power in the hands of a few at the top and by tight organization in the ranks.

By denying the needs of its own and subject peoples, the Soviet Union can set aside goods and equipment for export where it foresees political gain. Thus it can focus its resources on a given world area if it sees in that region a possibility of political gain. In the same way it can export technical assistance. And to the war of ideas it devotes vast resources which it can mobilize without much regard for public opinion. It has mastered the art of making the worse appear the better cause, of making the undemocratic sound democratic, of cloaking aggressive aims with peaceful words.

To meet this threat, a threat to the security of nations in addition to our own, the United States ocoperates in an immense effort by the free nations to build their common strength. As a great power we have special responsibilities whether we welcome them or not. We have formed a system of alliances not only for mutual defense but for economic and social cooperation. We are doing much to drive home the story of what the free nations stand for and what international communism means. Our strength is great, and we intend to remain strong. We intend to remain economically strong, militarily strong, and in particular morally strong. We must maintain faith and confidence in the values for which the United States stands. As Secretary Dulles has said:

"The Government of the United States has, I like to believe, a rather unique tradition in this respect. Our Nation was founded on an experiment in human liberty. Our institutions reflect the belief of our founders that all men were endowed by their creator with inalienable rights and had duties prescribed by moral law. They believe that human institutions ought primarily to help men develop their God-given possibilities, and that our Nation, by its conduct and example, could help men everywhere to find the way to a better and more abundant life."

We share the tradition of a respect for human liberty and moral law with a number of the nations with which we are now in close alltiance. We must build upon these traditions and concepts if we are to build a better world. We must teach the new nations emerging in Asia and Africa the importance of these ideals. We must show them they can and must be adapted to their own conditions. We must teach by example that a society without moral value and without principles is doomed to fail, no matter how hard it struggles to build up economic and military power.

BATTLE FOR MEN'S MINDS

Not long ago Archbishop O'Boyle, of Washington, delivered a thoughtful and stimulating sermon on the conflict we face. "When mercy is considered treason," he said, "when truth is classed as a lie, and good is called evil, we are indeed faced with a monstrous perversion of human nature, a denial of every ideal that civilized man has cherished."

The archbishop accurately noted that communism appeals not only to the disgruntled, the bitter, and the neurotic members of a community, but also to men of sensitive nature and high ideals. He declared that there is danger we may look at the world struggle too narrowly, that we may concentrate too much on the economic, military, and political menace of communism, and so neglect the battle for men's minds. "The American people should speak out," he concluded, "through their proper organizations and representatives, on the real nature of communism. We should realize that the struggle is total, and not merely a matter for Government action only."

This is where I think you members of the national Newman Clubs have a major role to play. Why not mobilize your talents and your great abilities to spread an affirmative doctrine of the things for which your Government stands?

The United States is today making a tremendous effort to win the battle for men's minds. Our Government has a worldwide information program which is doing an effective job in many areas. Many nongovernmental groups are also doing excellent work in meeting foreign peoples and explaining our way of life. Missionaries, labor leaders, businessmen, and thousands of other Americans are a vital part of our effort here and abroad to increase international understanding.

In the battle for men's minds, we should make a particular effort to reach those men whose thoughts and ideas will be decisive in guiding the policies of the new nations in Asia and Africa. As Archbishop O'Boyle said: "In wide areas of the world, men of learning are the real leaders of their nations. This is particularly true in the nations newly freed from colonial status. It is in these very areas that the power of communism is growing with sobering speed."

Sometimes Americans have trouble understanding the attitude of the people of new new nations. Usually these young nations want to solve their own problems their own way. They distrust foreign help and advice. They have an intense desire for rapid economic development. They know little about the Soviet Union, but they are told its achievements are vast. Efforts are being made to persuade them that the pattern of Soviet industrial development has more meaning for them than the freer, more humane process by which the institutions of the United States and Western Europe were developed.

The tours of Bulganin and Khrushchev to India, Burma, and Afghanistan are efforts by the Soviet Union in the new direction. We would be foolish to deny that the new Soviet policy presents us with dangers and a challenge. Where formerly the Iron Curtain implacably shut off the the Soviet Union and its satellites from the rest of the world, we now see traveling salesmen, with broad smiles and back-lapping, offering tempting bargains to the uncommitted nations. There are offers of economic and military aid, proposals for treaties of friendship, requests to set up diplomatic posts, and plans for interchange of experts in many fields.

It is ironic and typical, however, that at the same moment they speak of peace and friendship in India, Burma, and Afghanistan, the Soviets and their Communist allies continue their nuclear tests, their threats of war to take Taiwan, and their warnings of reprisal upon Iran and Pakistan for participation in the Western defense system. In a sense, the Soviets have put a new wrinkle in their traditional policy of zigzag. They have found it possible to zig and zag at the same time. They continue to show plainly, for anyone who cares to look, that aggression is still their end, to be pursued by peaceful talk or warlike threats, or both—whatever suits the need of the moment.

By their own deeds they warn us again that we cannot relax our vigilance, we cannot lower our guard.

I have spoken to you already of the means—military, political, and economic—by which we must keep ourselves and our allies prepared to defend themselves. But the willingness and the ability to undertake our defense, while essential for avoiding war, is neither the only means nor the best means, in the long run, for preserving peace. We believe in a forward strategy not only in the military sense but in the political and social sense. As President Eisenhower put it earlier this year:

"The sum of our international effort should be this: the waging of peace, with as much resourcefulness, with as great a sense of dedication and urgency as we have ever mustered in defense of our country in time of war."

One of the highest tests, I think, of the greatness of a Nation is the test, in times like these, whether we can be strong enough to win a war, yet gentle enough to help the weak; resourceful enough to gain great wealth, but wise enough to use it well.

RESPONSIBILITY FOR MORAL LEADERSHIP

Moral leadership is a great asset in any struggle. It is especially important in the present world battle for the minds of men and women everywhere. The responsibility for moral leadership in our country certainly rests upon our Government, but not upon Government alone. It is also the direct responsibility of our churches and schools, of youth organizations such as the Boy Scouts and the 4–H Clubs, and especially of all these Newman Clubs of which we are justly proud. These agencies, civic and religious, must maintain the spiritual vigor and moral strength of the people who run our Government, who man our fighting forces, who carry on our dealings with other lands, who cast the votes that decide the course our Nation follows.

I am certain that your organization is doing a great deal, but you can do more. I have had close contact over the years with many young men and women who have been trained by our Catholic colleges and universities and shaped under the guidance of the Newman Clubs and other groups. Most of them measure up admirably to the challenges they face.

But none of us must forget that the evil forces that oppose are tireless in their self-criticism, in their manipulation of Government programs, educational institutions, and youth programs. Their brutal efficiency is high, and, in all realism, we can expect it to go higher.

The moral superiority that our values, our system, have over those of the Soviets can and should be decisive in this contest between us. But it is not inevitable. Our values must be applied. Our system must be made to work. We must match their tirelessness with our own, their efficiency with ours, if our moral superiority is to be decisive. As we seek to win the allegiance of the uncommitted nations to our standards and our values, we must do it by our deeds as much as by our words.

These nations will watch us, first, to see how we apply our values among our own

people. Our record in this respect is good, though certainly not perfect. The opening of the channels of opportunity, the emphasis on free choice and private initiative in the past few years, has brought prosperity for nearly all Americans. In addition, progress has been made through legislative and judicial efforts to bring about greater social justice among our people.

Not only are we being watched in applying our values to our own people, we are being watched in applying them to other peoples. Here, again, we do not need to apologize for our efforts. In the past 10 years a number of nations have won their freedom from colonial control. It has been our policy to respect this new freedom. By our economic strength and in many ways we have helped it to survive and to grow.

It has also been our policy to support the further attainment of freedom by subject peoples who desire it. In particular we support the liberation by peaceful means of the peoples of Eastern Europe, who have been unwillingly made subjects of the new colonialism of the Communists.

Another means by which we have given moral leadership is through our efforts to bring about disarmament. The whole world was thrilled by President Eisenhower's proposal of "atoms for peace" in 1953, and again by his proposal for aerial inspection to insure disarmament in 1955.

The final means by which the United States has rendered moral leadership in the world is the courage, the determination, the high principle, the good faith with which President Eisenhower, Secretary Dulles, and the leaders of our Government, with the full backing and support of the American people, have faced the perils and the opportunities of this age in which we live.

Your convention is dedicated to the theme For a Better World. In these remarks I have tried to outline for you, perhaps inadequately, some of the obstacles that lie in the road to a better world and, more important, some of the means by which we will surmount these obstacles. You who are on the threshold of your careers will play, I know, a major role in achieving our national objectives.

To all of you I wish Godspeed and good luck as you go forward with your own efforts to bring this better world into being.

World Vision—Mission to the Motherless

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. NEUBERGER. Mr. President, there can be no nobler act than to aid the unfortunate children and orphans, and World Vision, Inc., with its international headquarters in Portland, Oreg., has spearheaded much of this great work.

World Vision, an interdenominational religious organization, is supporting 6,500 children in 94 orphanages in South Korea, and last year contributed more than $700,000 for work in 10 countries.

World Vision has done a great job in helping mixed-blood war orphans in Korea, orphans fathered by American and other United Nations military personnel. These orphans are not accepted by the people of Korea; they are mistreated and many are abandoned and killed.

Mr. President, last year I had the honor to sponsor legislation in the Senate which allowed Mr. and Mrs. Harry Holt of Creswell, Oreg., to bring to the United States their eight adopted Korean war orphans, and I know of the fine job being done by Mr. Holt and World Vision in facilitating adoptions of these mixed-blood war orphans in our country. I have recently introduced legislation to continue the orphan provisions of the Refugee Relief Act which expire, unless extended, at the end of this year.

I have had an opportunity of working with Dr. Bob Pierce and Dr. Frank Phillips, World Vision president and executive secretary, respectively, and I know of the fine job they and their coworkers are doing. Portland is proud that World Vision has made its international headquarters in our city and of their fine work to help the unfortunate of the world.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine article by Mervin Shoemaker which tells of the oustanding work being done by World Vision which appeared in the Northwest rotogravure magazine of the Sunday Oregonian of April 29, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSION TO THE MOTHERLESS

(By Mervin Shoemaker)

There were few dry eyes in the happy crowd at Portland International Airport one day last October when 12 Korean children debarked from a big Pan American plane to enter on a new life.

Eight of these were the well-publicized children brought to this country by Harry Holt, of Creswell, who recently took another Korea trip to arrange more adoptions. For the remaining four, other foster parents were waiting at the airport.

They could not possibly have first touched the continental United States at a more appropriate place.

Adoption of all the children was arranged by World Vision, Inc., a relatively new and highly unusual missionary organization. Holt was accompanied on the Pan Am "stork ship" by Dr. Bob Pierce, president of World Vision. And the home office for this fast-growing, world-service organization—which has one particularly distinguishing feature—is in Portland.

The distinguishing feature is "personalizing" of foreign mission, which is something unusual, if not new, in alleviating the woes of the world, and World Vision is vividly demonstrating its merit.

A staff of 35 persons works in the organization's second floor quarters at 258 Southwest Alder Street. An important part of the staff's job is to encourage a personal relationship between contributor and benefactor. This may seem not to engender the purest kind of altruism, but it gets money, saves souls and feeds hungry youngsters.

World Vision is only a little more than 5 years old. But through this office last year went more than $700,000 for support of missionary work in ten countries. The year before the figure was more than $500,000. These totals do not come up to point 4 appropriations, but they do indicate a significant contribution to building good will for the United States in other countries.

"The purpose of World Vision," said Dr. Frank C. Phillips, executive secretary, "is to meet emergency needs in crisis areas of the world. We do this principally by working through native churches and existing missions in the various countries to make our funds do the most possible good. We play no favorites among denominations in giving financial aid to missions where we think the need is greatest."

Financing the care of Korean war orphans, and arranging for adoption of some of them, is World Vision's biggest job. The magnitude of the task was not appreciably diminished by departure of the dozen who came to this country with Holt and Dr. Pierce. The organization now is supporting more than 6,500 children in 94 orphanages over South Korea.

"There are many more who need care," said Dr. Phillips, "and we are expanding as rapidly as possible."

World Vision's care of orphans is financed by some 4,800 persons, mostly in the United States, who contribute $10 a month for each child. There are 125 orphan-sponsors in Portland. Seventeen of them are members of the World Vision headquarters staff.

Some support more than one orphan. Roy Rogers and Dale Evans (Mrs. Rogers), the ridin', shootin' couple who daily battle TV outlaws, have taken responsibility for 25 Korean orphans, and are planning legally to adopt one and take him into their home. The Holt family of Creswell is supporting 33 orphans in Korea in addition to the 8 they have adopted.

"Every State in the Union, the District of Columbia and Alaska are represented on World Vision's list of sponsors," said Dr. Phillips. "Money is collected elsewhere over the world, and we recently opened offices in London and Belfast, where contributions are accepted."

Approximately 800 of the Korean orphans pose a special problem. The others are ordinary Korean children who will be educated and generally prepared to live a normal life in their homeland. These 800, however, are the children of United Nations military personnel. Many have American fathers.

The Koreans do not accept the mixed-blood children. These unfortunates are mistreated under the best of circumstances, and sometimes are killed. It doesn't speak too well for the Koreans, but a lot of United States citizens are in no position to throw rocks. Mothers often hide these children as long as they can, but a great majority of them wind up at an orphanage.

"As far as most orphans are concerned," said Dr. Phillips. "We think they will be happier living useful lives in their home country. But we would like to find homes out of Korea for the 800."

It was from this group that the Holts took their eight children. The Roy Rogers child also will come from this group.

The $10 a month paid by a sponsor takes care of food, lodging, clothing and education of a child. Sponsors are asked to pledge support of a child (or more than one) for a period of a year.

Such a sponsor receives a picture of the child he is supporting, his name and the English meaning of the name, along with such history of the child as is available. Then he is encouraged to correspond with the child. Letters are translated—Korean to English and English to Korean—in World Vision's Seoul headquarters.

One of Portland's sponsors is Miss Dorothy Strivenga, 2017 SW. Broadway. The child assigned to her is Choung Choon Young, a girl born in 1949—the year before the Korean war began. Her parents died when she was tiny. A brother tried to care for her, but he had to give up. She is at the Song Jook orphanage in Seoul. Her name means "spring and song."

Another Portland sponsor is Roy Wolfe, director of publications and artist for World

Vision. Wolfe, who went to World Vision from the art department of the Oregonian, is 1 of the 17 staff members who are supporting 19 orphans and 1 returned prisoner of war studying to be a minister. Wolfe's orphan is Lee Uoo Kee, meaning "rainy season." This child, almost 10 years old, is at the Long Life Orphanage, Seoul.

TITLES TRANSFERRED TO CHURCHES

World Vision does not own, or direct the staff of, any of the orphanages to which it contributes funds. When it constructs a building or purchases equipment it transfers title to a church or mission organization. In its 5 years' existence it has spent a total of $309,912.94 in this manner.

Many civilians were killed in the Korean war, and care of orphans became a desperate necessity early in the conflict. Some of the orphanages were established by missionary organizations, some by Korean individuals, and some by United Nations military personnel touched by the spectacle of thousands of homeless children.

One Seoul woman took 10 children with her on the retreat toward Pusan, seaport of the small beachhead that marked the low ebb of United Nations fighting. When the government went back to Seoul she returned with the children and established an orphanage. This is the Faith-Hope baby home, with 62 children.

The Sun Rin Orphanage, operated by a Presbyterian mission at Pohang City, is one where American servicemen are well remembered. This is clear in the report of John Sohn, Seoul, overseas secretary for World Vision, on the application of the orphanage for funds from the Portland-headquartered organization.

"This orphanage was established by Chaplain Cleaves and Pastor Ok Ken Mock," wrote Sohn, "to take care of fatherless and motherless children in February 1952, and Kyung Dong Presbytery became a founder by the law. The orphanage was able to keep 7 children when it first opened, but now it has 103 children."

Many of the orphanages, said Dr. Phillips, were established by American military men, who contributed money, did construction work, scrounged supplies from their own bases, and then aided in management of homes for homeless children.

One of the orphanages—located at Songjong Ri, near Kwangju—was established by Gen. Sun Yup Paik, commander of the Republic of Korea 1st Army. It now has 240 children, but it was originally established to house the sons and daughters of Red guerrillas who were executed or imprisoned by a task force operating in the mountainous Chiee-San region of southwest Korea. Commander of the task force was General Paik.

Other Korean and American members of the task force contributed to initial financing of the orphanage. World Vision is supporting 188 of the 240 children.

WARTIME VISIT INSPIRED HELP

It was Dr. Pierce's compassion for orphans when he visited Korea during the first few months of the war, in 1950, that resulted ultimately in forming of World Vision, Inc. The president is an inspirational evangelist, and—in the lodge—an acknowledged master at getting money from a crowd.

He is a close friend and coworker of Billy Graham, and left the United States in January to accompany the famous evangelist for a series of meetings in India. Dr. Pierce is 42 years old.

World Vision's business manager is Dr. Phillips, 44, a Baptist minister and a bacteriology graduate of the University of Toronto. He holds an honorary doctor of laws degree from the Bible Institute of Los Angeles, and practiced veterinary medicine in Portland from 1938 to 1945.

The executive secretary is an old China hand. For several years in the early 1930s he lived in Shanghai, where he was employed by the Chinese Government to change the city's milk grade from B to A.

"I came to love the Chinese people," said Dr. Phillips, "and to understand the social and economic problems of the densely populated Orient."

Dr. Pierce was fired with zeal for helping Korean orphans when he returned to the United States in 1950. Contributions came quickly when he began to tell the story. He showed motion pictures that he had made, and this is still an important part of World Vision technique in collecting funds. But at that time Dr. Pierce did not know where to send the money. Then he remembered Dr. Phillips' China background, and sought his help.

"I sent that money to the proper places," said Dr. Phillips, "but pretty soon there was just more money than we could handle that way. So we incorporated."

While World Vision is nondenominational, it is thoroughly a religious organization. The Portland headquarters staff begins each day with a prayer service. Money is sought in the name of souls saved for Christ; as well as by appeals to sympathy for the physically deprived. World Vision is fundamentalist, evangelical—but it is as modern as television.

It is not unusual among missions in holding out a hand for a physical lift as it delivers its gospel message. Not many mission organizations, however, are so efficiently streamlined for flexible, effective action on short notice. Dr. Phillips needs only arrange a telephone conference to get approval of an important grant.

Other members of the board of directors, besides Dr. Pierce and Dr. Phillips, are: Paul Myers, Los Angeles, vice president; Cliff Barrows, Greenville, S. C.; Don DeVos, Grand Rapids, Mich.; Evon Hedley, Brantford, Ontario, Canada, and Dr. Jack Shuler, Arcadia, Calif. Myers is a Los Angeles radio evangelist, known as "First Mate Bob."

Caring for orphans is World Vision's biggest single project, but to list the other important jobs it does is difficult in limited space. In Korea alone the list is impressive.

Korean schools are on a tuition basis. Orphanage children go to school, but many thousands of children cannot pay the tuition. To meet part of this deficiency, 72,000 children are being taught in Presbyterian, Methodist and Holiness churches. They are divided into groups of 800, with five teachers to a group. World Vision is paying the teachers in the Presbyterian part of the project, and has expressed willingness to give similar aid to the other denominations.

"To us," said Dr. Phillips, "the education program represents the future of Korea. Those in the orphanages will be among the leaders. In the top 30 pupils, scholastically, in one school, 28 were from the orphanages."

The Presbyterians operate a 1,000-bed hospital at Taegu, Korea. World Vision built a 50-bed children's hospital as a wing to the main structure. All patients in this wing are nonpaying, and here World Vision furnishes doctors, nurses, and medicine.

World Vision established its first "amputee center" at Seoul, then another at Taejon, and soon will have them also at Taegu and Pusan. There are many amputees in Korea.

This project was started and is directed by Dr. Reuben A. Torrey, 70-year-old retired Presbyterian minister, who himself has an artificial arm.

Amputees here are given the materials, taught to make their own prosthetic devices, and then are trained to use them. Last November the 500th amputee mastered use of an artificial limb, and was read to start on a new job.

Seventy-five widows and 100 children of war-killed Korean ministers are supported by World Vision in Seoul, Taegu, Pusan, and Taejon.

"When the Communists came into South Korea," said Dr. Phillips, "they went after the church leaders first. An estimated 600 pastors were killed."

World Vision operates a seminary for 80 returned prisoners of war who are studying to be ministers.

It finances students and other nationals carrying on missionary work in mountain communities.

A home for unwed mothers in Seoul, which is sponsored by the Salvation Army, is operated—financed completely—by World Vision.

World Vision is active in Formosa. At Taipeh it finances two homes for ex-beggar boys who were taken off the streets. They are being educated and taught trades. This project is under direction of Mrs. Lillian Dickson, wife of a Presbyterian missionary. World Vision is planning to build a new church here this year.

At Taipeh, World Vision also operates a home for the children of lepers, who are taken from their mothers immediately after birth to prevent their contracting the disease. Twice a year the children are shown to their parents at the leper colony.

Madame Chiang Kai-shek, wife of the generalissimo, is conducting a project that will see a couple of her prayer groups outfitting a mobile medical unit which will be accompanied by a doctor, two nurses, and a minister. World Vision is furnishing the medicine.

Twenty-four native workers are supported in a village evangelism program in Formosa.

World Vision is stepping up its program in India, where Dr. Pierce and Billy Graham were working together in January.

The organization operates 3 milk and medical clinics in Calcutta. It supports 30 Indian nationals in village evangelism work, and is planning to begin an orphanage program in Calcutta.

World Vision built a large dormitory for students in the Union Biblical seminary of India at Yeotmal, and has sent money to build a second one.

World Vision's work in Africa dramatizes its interest in purely spiritual activity. Many thousands of the Mau Mau people have been herded into compounds because of the difficulty of identifying the terrorists among them. World Vision gave the Pocket Testament league $2,000 to supply gospels of John in the Gujarati and Urdu languages for use of people in the compounds.

Another $1,000 went for Bible tracts for the Vietnam territory, and here World Vision also supplied seven motorcycles and a jeep to aid in their distribution.

Smaller missionary projects are carried on in Greece, Ecuador, New Guinea, the Philippine Islands, and Portugal.

A great many people find it hard to understand how mountain climbers and missionaries get that way, and no mission project is above suspicion in the minds of the more materialistic. This is perfectly well understood by Dr. Philips, top businessman of the organization.

A public accounting firm regularly examines the books of World Vision. Administrative costs in the 1953–54 fiscal year, said Dr. Phillips, were slightly over 10 percent, but in the year ending last September, they had dropped to about 8 percent. Incidentally, according to the executive secretary, a sponsor's $10-a-month goes entirely to the orphan. Administrative expense is paid from other funds.

A monthly financial statement is given each of the 29 members of the board of trustees. The trustees are mostly churchmen over the Nation. Billy Graham is chairman of the board.

But there are laymen, also, in the group. And some of these could be expected to be particularly hardboiled in demanding assurance that a missionary organization was

on the level before allowing use of their names in solicitation of funds.

Gov. Arthur B. Langlie, of Washington, is one of these. Another is United States Senator FRANK CARLSON, of Kansas. Also Roy Rogers and Dale Evans. Then, too, there Lt. Gen. William K. Harrison, commander in chief of the Caribbean Command, Canal Zone, who was chief of the U. N. armistice delegation in Korea at the signing of the truce.

"I believe in World Vision, Inc., because it is dedicated to bringing lost sheep to His fold," wrote General Harrison in a letter used as introduction to one of the organization's brochures.

One of World Vision's most valuable endorsements comes from a neighbor—Dr. Paul S. Wright, pastor of the First Presbyterian Church in Portland and moderator of the Presbyterian Church in the United States.

"I wish to express my personal gratitude to World Vision, Inc., and to Dr. Pierce for the extremely valued help which you have given," wrote Dr. Wright to Dr. Phillips shortly after the Presbyterian Church leader returned from a visit to Korea last December. "I saw signs of your generosity everywhere, and I had the privilege on occasion of riding in a station wagon purchased by your funds.'

Dr. Wright's expression is a good illustration of the principle implicit in World Vision's "personalized" missionary work—the common, courteous "thank you" for a favor.

A man may be ever so selfless in his giving—of money, of time, of service to the community. Still he appreciates a pat on the head. It is an incentive to continue. And the pat of a child who needs him means something special.

It is not far-fetched to consider that World Vision's program may also construe important missionary work in this country. How else would so many new people learn that foreign mission giving can be gratifying and exciting?

Important if True

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. CANNON. Mr. Speaker, our old friend Josh Billings made a remark on one occasion about "knowing so much that ain't so."

Whenever I hear one of these fellows who live at the farmer's expense—who demand a high price for everything they sell the farmer and then refuse to pay him a fair price for his labor and investment—talk about farm legislation I am reminded of Uncle Josh's oft-quoted remark. They know so much that ain't so.

This week's issue of the Missouri Farmer tabulates some of the often reiterated fallacies with which these economic parasites attempt to bolster up their imposition on the farmer in taking away from him the products of his labor and investment without paying him as fair a price as they demand for their own labor and capital.

The list is as follows:

FALSEHOODS ABOUT FARM LEGISLATION

Falsehood No. 1: High price supports are a carryover from the war.

The truth: During the war farm prices were controlled. Farmers operated under price ceilings and were not concerned with supports.

Falsehood No. 2: Government-owned surpluses are depressing the market.

The truth: There are no Government-owned surpluses of beef or pork, yet the depressed market for cattle and hogs has flattened a lot of farm pocketbooks.

Falsehood No. 3: That flexible supports, by reducing prices, will cause farmers to voluntarily control production.

The truth: When prices are cut farmers produce more in an effort to maintain income by selling more at reduced prices.

Falsehood No. 4: Lower farm prices will increase consumption.

The truth: In the last 3 years farm prices have dropped approximately 20 percent and consumer prices have dropped only about 3 percent. This has not created a rush to buy farm-produced commodities.

Falsehood No. 5: Once we get rid of our high price supports and return to the free market our surpluses will disappear and farmers will have no worries.

The truth: During the 1920's and early thirties farmers did not have price supports yet low market prices were blamed on surpluses.

Falsehood No. 6: High support prices built up our huge surpluses.

The truth: Technical know-how has been a far greater factor in building up surpluses than has price supports. Flexible supports or a threat of flexible supports has encouraged farmers to get rid of crops ahead of further price decline. Another factor, when prices are reduced farmers produce more in an effort to maintain income at reduced prices.

Falsehood No. 7: All agricultural commodities held by Government are surplus.

The truth: The Government carries the current inventory for many industries. For example, in the old days the mills waited at the gins to buy cotton at bargain prices from planters that were hard up and in need of cash. Today these planters place their cotton under loan and put their cotton in storage. The mills buy the cotton as they need it and the Government carries the inventory. Creameries place butter and cheese under loan during flush milk seasons and redeem butter and cheese during months when the cows are not giving as much milk. The Government also carries inventory on rubber, metals, and other raw materials.

The Arab Campaign Against American Jews

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. MULTER. Mr. Speaker, the American Jewish Congress at its recent national biennial convention adopted a most important report. It is entitled "The Arab Campaign Against American Jews." I am pleased to direct the attention of our colleagues to this report as follows:

THE ARAB CAMPAIGN AGAINST AMERICAN JEWS—A STATEMENT OF THE FACTS AND A CONSIDERATION OF AMERICA'S MORAL AND DIPLOMATIC RESPONSIBILITY

FOREWORD

One of the least known byproducts of current Arab-Israel hostility is the widespread campaign by Arab League countries against Jews in the United States. Internal anti-Jewish campaigns indulged in by Arab States at the expense of their own subjects may be a matter for their sovereign discretion and even then may contravene commitments undertaken pursuant to the United Nations Charter. But efforts to package and export anti-Semitism to this country, especially when that anti-Jewish sentiment is directed at American citizens, becomes a matter demanding immediate remedial action by our own Government.

The principal forms of discrimination currently employed by the Arab States against American Jews may be classified into three categories: (1) Arab denial of entry or transit visas to American Jews; (2) Arab boycott of American Jewish businesses; (3) the establishment and subvention of large-scale Arab propaganda centers to disseminate anti-Semitic literature in the United States. Each of these is discussed in detail at a later point in this paper.

Some of these anti-Jewish discriminatory practices have been continued over a period of years without occasioning more than gentle rebuke from any agency of the United States. Whatever expressions of disapproval have recently been made by our State Department have tended to be perfunctory and shortlived, limited to the writing of notes and the routine exchange of correspondence. Not once in recent years has this country ventured beyond mild protest into any form of action.

Encouraged by this seeming official casualness, if not indifference, the Arab States continue to act virtually as they please in the mistreatment of American Jews, perfectly confident that our Government will not uphold the rights of its Jewish citizens. The apathy and apparent indifference of our Government has served not only to intensify Arab hostility to Jews within our own territories but to increase and introduce anti-Semitism in new and unexpected quarters here.

The most recent illustration of State Department thinking on these issues may be found in the testimony of Secretary of State John Foster Dulles before the Senate Foreign Relations Committee on February 24, 1956. Those portions of Mr. Dulles' statement that are relevant to matters discussed in this memorandum are contained in the following colloquy with Senator HUBERT HUMPHREY, of Minnesota:

"Senator HUMPHREY. Speaking of Americans who are in Saudi Arabia, is it true what I read in the paper here, and which I spoke about in the Senate, and which today the Pentagon apparently seems to feel is true, but I want to get all departments in on it, to the effect that arrangements have been arrived at between our Government and Saudi Arabia under the terms of the Mutual Security Agreement and our air base at Dhahran, that certain American personnel are not permitted to be stationed in Saudi Arabia, American personnel of the Jewish faith?

"Secretary DULLES. It may be. I think that for many years, not just in recent years, but that running over a long period of years, there has been a prohibition on Jews in Saudi Arabia.

"Senator HUMPHREY. I mean Americans; I am talking about citizens of the United States of America.

"Secretary DULLES. I am talking about persons of Jewish faith.

"Senator HUMPHREY. Yes, but Americans.

"Secretary DULLES. Yes, of any nationality.

"Senator HUMPHREY. Is it true that American businessmen who may be of the Jewish faith are not permitted to engage in commercial enterprise in Saudi Arabia with our agreement and our recognition of that discrimination?

"Secretary DULLES. No, not with our agreement or recognition of it. The King of Saudi Arabia regards himself as the primary cus-

todian of the sacred places of the Moslem faith, and they have a long time been extremely rigorous in the practice of the Moslem law.

"I was there—when I was there visiting King Ibn Saud, it was during the period of the Ramadan, where from the very time the sun rises in the morning—and at that time of the year it rises very early—until it sets at night, no one can take a drop of liquid or a bite of food, and the former King Ibn Saud was an aging feeble man, but he nevertheless stuck rigorously to that, and there is another prohibition that applies there also. There is not a drop of liquor that is allowed to be sold or used in the whole area.

"Now, they have got some practices which we may think curious.

* * * * *

"Now, we do not like or approve of or acquiesce, except perforce in any such practices, such as that, but we do have to recognize the fact that Saudi Arabia is an ally, became an ally in the first instance, through the conversations and subsequent communications with President Roosevelt, and then it was confirmed by President Truman, and we have a very special relationship there with that government.

"That does not mean we approve of all of its practices at all. It does mean we get along together in a way which is of mutual advantage.

"We, perforce, accommodate ourselves to certain practices they have which we do not like; they, perhaps, accommodate themselves to certain of our idiosyncrasies which they do not like, but on the whole, they have a pretty arbitrary rule, largely dictated by the strict tenets of the Moslem faith."

The American Jewish Congress is an organiziation of American Jews whose membership is generally sympathetic to Israel. But our concern over the serious errors in national policy and diplomatic judgment discussed in this paper does not derive from either of these factors. The injury and affront we discuss here is sustained by all Americans who are currently made witness to arrogant Arab violation and disregard of the rights of American citizenship. We respectfully submit that the time is past due for our diplomatic representatives to resist such encroachments upon American rights with firmness and dignity.

We are not unmindful that much is at stake. American officials in high places have made it their business to emphasize frequently that the present unusual solicitude in dealing with Arab governments is designed to protect military and economic relations presumed to be vital to our material interests. We are told repeatedly that important commercial and industrial undertakings remain possible only because of American willingness to compromise and to accommodate Arab prejudice. We are warned that substantial American interests will be put in jeopardy if Arab-American relations are, in any way, strained or impaired. It is even intimated that we must concede something, even at the expense of a certain number of our citizens, in order not to risk this economic stake.

We submit that this view is a perversion of traditional and basic American doctrine. It reflects a way of thinking that accepts the subordination of the rights of citizenship to the expediencies of international bargaining and that regards the legal incidents of citizenship as expendable items to be traded away. We cannot refrain from adding, though we do not believe this paper to be the appropriate occasion to argue this point at length, that it is doubly deplorable that this position should be urged to support a course of conduct that is not only morally wrong but badly calculated in terms of national advantage. We are convinced that a realistic appraisal of the economic potential of the Middle East will disclose that no legitimate American interest is in real danger from Arab rulers who, however fanatic their religious hatreds, nevertheless remain hardheaded businessmen whose economic advancement is wholly dependent upon American investment dollars.

Issues of precisely this character are not without precedent for the United States. The diplomatic history of any great nation is the record of its capacity to sustain, or its willingness to abandon, those ideals that embody its national creed. When confronted with a threat to the liberties of its citizens, indeed, when forced to choose between condoning exactly the kind of anti-Semitism now practiced by the Arab states and risking the possibility of economic loss, this country did not in the past waver or equivocate. For us the claim of freedom has always been of greater force and dignity than the claim of profit.

When Woodrow Wilson was advised in 1911 (as we are now advised respecting the Arab states), that there must not be American diplomatic intercession against foreign anti-Semitism because of possible danger to American investment opportunities, he stated:

"There lies a principle back of our life. America is not a mere body of traders; it is a body of free men. Our greatness is built upon our freedom—is moral, not material. We have a great ardour for gain; but we have a deep passion for the rights of man. Principles lie back of our action. America would be inconceivable without them. These principles are not incompatible with great material prosperity. On the contrary, unless we are deeply mistaken, they are indispensable to it. We are not willing to have prosperity, however, if our fellow-citizens must suffer contempt for it, or lose the rights that belong to every American in order that we may enjoy it. The price is too great" (48 CONGRESSIONAL RECORD, 497–498 (62d Cong., 2d sess., Dec. 6, 1911)).

Before turning to a detailed examination of Arab anti-Semitism in the United States, we believe it pertinent, therefore, to consider briefly past actions taken by this country in protest of foreign anti-Semitic excesses.

I. AMERICAN DIPLOMATIC PRECEDENTS

American diplomats have never been diffident in denouncing religious discrimination against any American nationals who travel abroad. Under the act of July 27, 1868 (15 Stat. 244) the President of the United States and the Department of State are required to take immediate action whenever the rights of any American citizen are violated or threatened by a foreign state. This right of protection admits of no religious limitation. As stated by Secretary of State Lewis Cass, the object of our foreign policy is "not merely to protect a Catholic in a Protestant country, a Protestant in a Catholic country, a Jew in a Christian country, but an American in all countries." (Quoted in J. B. Moore, American Diplomacy (1905), at p. 135.)

This diplomatic principle derives from the recognition by those charged with determining and administering our foreign policy that the defense of religious liberty is an inseparable aspect of all American undertakings. In a diplomatic note protesting Austro-Hungarian anti-Semitism directed at the family of an American minister-designate, Secretary of State Thomas F. Bayard declared in 1885:

"Religious liberty is the chief cornerstone of the American system of government, and provisions for its security are imbedded in the written charter and interwoven in the moral fabric of its laws.

"Anything that tends to invade a right so essential and sacred must be carefully guarded against, and I am satisfied that my countrymen, ever mindful of the sufferings and sacrifices necessary to obtain it, will never consent to its impairment for any reason or under any pretext whatsoever.

"It is not believed by the President that a doctrine and practice so destructive of religious liberty and freedom of conscience, so devoid of catholicity, and so opposed to the spirit of the age in which we live, can for a moment be accepted by the great family of civilized nations or be allowed to control their diplomatic intercourse.

"Certain it is, it will never, in my belief, be accepted by the people of the United States nor by any administration which represents their sentiments." (Foreign Relations (1885), p. 50.)

A. Czarist Russia

Perhaps the most noteworthy of all of the interpositions by our Government to protect the rights of Jewish communities from the force and effect of foreign anti-Semitic decrees—if only because it is virtually on all fours, both in the character of the anti-Semitic discrimination and in its attempted rationale, with the discrimination currently practiced by the Arab governments—was that made over a period of years in protest against Czarist Russia's expulsion and exclusion of American citizens of Jewish faith. This intercession with Russia is significant not only because it unequivocally fixed and defined American policy on this issue but also because it reflected the ardor with which American spokesmen insisted upon adherence to principle, even at the risk of commercial disadvantage, and in the enthusiasm and unanimity with which the people of this country endorsed that stand. We submit that neither the State Department nor the general community now should be content with any less zealous protection of fundamental rights.

In the 19th century Russian anti-Semitism, like Arab anti-Semitism today, was intense and deeply rooted. The history of the Jews in Russia was a catalog of savage and bloody assaults upon them, attacks that were endorsed, either openly or tacitly, by the Russian Government itself. In addition, the Czar had promulgated a network of anti-Jewish legislation directed nominally at his own Jewish subjects but applied without distinction to Jews of any nationality who found themselves within Russian borders. Among these restrictions were rules forbidding the free entry, travel or residence of Jews in certain parts of the country outside the Pale of Settlement. As a result American Jews who dared to enter the proscribed areas were forcibly expelled by order of the Russian authorities, while other Americans, non-Jews, but otherwise of identical status, were permitted freely to reside, travel, and transact business throughout Russia.

The State Department was thus forced to decide, exactly as it is forced to decide now, whether it would submit passively to the demands of religious prejudice or instead would endeavor to enforce throughout the world, even in those areas where it might be difficult or embarrassing to do so, the rights of American citizens of every religious persuasion, without distinction or difference. The State Department did not a hundred years ago hesitate to assume responsibility for all Americans, including American Jews, and it would be unconscionable and delinquent for any agency of our Government now to do less.

When protests were made during the 1880's that American Jews were systematically expelled from certain parts of Russia, repeated attempts were made by American diplomats, first by exhortation and moral argument, to persuade the Russian Government to adopt a more humane attitude toward its own Jewish population and to extend to American Jews treatment equal in all respects to that accorded all other Americans. When these moral entreaties failed, this Government moved firmly and decisively and abrogated the long-standing and profitable commercial treaty of 1832 between this country and Russia. Because of the failure of the czarist regime to refrain from further anti-

Semitic discrimination against American Jews, these treaty relations were never resumed.

The mere recital of the facts cannot fully disclose the high quality and courage of statesmanship, fully cognizant of all its responsibilities, that culminated in this action. Some of the notes on the question prepared and dispatched by our highest diplomatic officers remain instructive in reminding us of the manner and context in which decisions affecting international behavior of this kind must be formulated.

Among those who were most forthright and uncompromising in demanding that the Russian Government deal with all Americans equally and fairly was John W. Foster, the American Minister to St. Petersburg and the grandfather of the present Secretary of State, John Foster Dulles. It is an unusual family and an unusual historical era that permits grandfather and grandson during successive periods to pass directly upon the same urgent problem. It is to be hoped that Secretary Dulles will reconsider and examine the precepts and policies laid down on behalf of the United States by his grandfather, himself later to become an eminent Secretary of State, and that he will find implicit in those policies a moral view and a national commitment of lasting and enduring force.

In the late summer of 1880, Henry Pinkos, an American Jew who had assumed residence in St. Petersburg for several months with is wife and family and had established a small business there, was expelled from the city and the country as soon as his Jewish identity became known. Despite efforts by American officials to delay execution of his expulsion, Mr. Pinkos left Russia without awaiting further steps in his behalf. The Chargé d'Affaires of the American Legation thereupon was disposed to drop the whole matter, stating that "there now appears to be no necessity for my communicating with the Russian Government."

Mr. Foster who was then newly appointed United States Minister to St. Petersburg and the then Secretary of State William N. Evarts, were agreed however that there was a principle in issue that transcended Mr. Pinkos and whose significance in no way depended upon his physical presence in Russia. Rejecting an easy opportunity to evade a difficult and troubling issue and disregarding staff suggestions that we silently absorb the affront to our Jewish citizens because the issue had become moot, Mr. Foster wrote in clear and unmistakable terms to Baron Jomini, acting Russian Minister of Foreign Affairs:

"The Secretary of State instructs me to state to your excellency that in the presence of the fact that an American citizen has been ordered to leave Russia on no other ground than that he is the professor of a particular creed or the holder of certain religious views, it becomes the duty of the Government of the United States, which impartially seeks to protect all of its citizens of whatever origin or, faith, solemnly, but with all respect to the Government of His Imperial Majesty, to protest. As this order of expulsion is understood to apply to all foreign Jews, in certain cities or localities, at least, of Russia, it is, of course, apparent that the same is not directed specially against the government of which Mr. Pinkos is a citizen, and, indeed, the long-standing amity which has united the interests of Russia with those of the Government of the United States would of itself forbid a remote supposition that such might be the case. Notwithstanding this aspect of the matter the United States could not fail to look upon the expulsion of one of its citizens from Russia, on the simple ground of his religious ideas or convictions, except as aggrievance, akin to that which Russia would doubtless find in the expulsion of one of her own subjects from the United States, on the ground of his attachment to the faith of his fathers" (Foreign Relations, 1880, p. 881, et seq.).

It is significant that Mr. Foster's intercession was not inhibited or deterred by the fact that the anti-Semitism practiced by the Russian Government was universal and "not directed specially against the government of which Mr. Pinkos is a citizen." Mr. Foster was aware that the larger interests of the United States dictate forthright opposition to all religious prejudice aimed at or affecting Americans whether our citizens are made to suffer indignity and insult as part of a general campaign of hatred and bigotry or directly in their capacity as American nationals. In either case our citizens are deprived of rights this country is committed to protect, and in either case this foreign conduct constitutes an encroachment upon American freedoms that must be requited and corrected.

Exactly as Arab extremists seek to manufacture an apology for their terrorism and to justify current anti-Jewish excesses as a security measure designed to protect them from supposed Zionist violence, so did the Czarist regime strive to rationalize its anti-Semitic decrees as a protection against a supposed Jewish insurrection. To this Mr. Foster replied:

"It having been intimated to the Secretary of State by this legation that the reason of this order may be found in the supposed implication of Jews in the plots formed against the life of His Imperial Majesty, the Emperor, the Secretary directs me to say that insofar as this may be true, the Government of Russia has the entire sympathy of the Government of the United States, in all just preventive efforts, and if there existed any good evidence that Mr. Pinkos has been connected with any of these attempts, the Government of the United States could not object to this expulsion on that ground. But neither the police authorities, in the several communications which the members of the consulate general and this legation have had with them, in their efforts to obtain relief for Mr. Pinkos, nor Your Excellency's department, in the notes addressed to this legation on the subject, have ever intimated the existence of such a charge. Nor does the character of citizens of the United States of Jewish faith afford ground for the supposition that they would be likely to engage in conspiracies or plots against the established government of the country. From the foundation of the United States as a Nation, they have been entitled to full and unrestricted privileges of citizens, and have shown themselves to be peaceable and law observing in their conduct, quiet and industrious in their habits and are esteemed a valuable portion of the community, so that insofar as the regulation for the expulsion of foreign Jews from Russia affects American citizens, whatever may be the conduct of their coreligionists of this or other countries, it is an unjust reflection upon American Jews as a class and a discrimination which cannot be acquiesced in by my Government" (ibid.).

When these notes were insufficient, Mr. Foster continued to press his demands with untiring vigor. In a letter to the Secretary of State on March 25, 1881, he was the first to suggest that this country base its demands for equal treatment for American Jews upon the treaty of 1832 and employ the influence and status we enjoyed as a signatory to that treaty as a means of enforcing our claim. (Foreign Relations 1881, at p. 1012.) This device, in fact, became the solution finally adopted.

Mr. Foster enjoyed the support and encouragement of his superiors in the State Department. As has already been noted, Secretary Evarts first directed Mr. Foster's intervention with the Russian Government. Upon Secretary Evarts' death, his successor James G. Blaine, shortly after his appointment, unreservedly ratified Foster's strong position. He wrote Foster as follows:

"Your course appears to have been discreet, and it is hoped that you will press your representations to the successful establishment of the principle of religious toleration for our citizens peacefully residing or traveling abroad, which we as a Nation have such a deep interest in maintaining. * * *

"It would be, in the judgment of this government, absolutely inadmissible that a domestic law restraining native Hebrews from residence in certain parts of the empire might operate to hinder any American citizen. * * *

"I need hardly enlarge on the point that the Government of the United States concludes its treaties with foreign states for the equal protection of all classes of American citizens. It can make absolutely no discrimination between them, whatever be their origin or creed. So that they abide by the laws, at home or abroad, it must give them due protection and expect like protection for them. Any unfriendly or discriminatory act against them on the part of a foreign power with which we are at peace would call for our earnest remonstrance, whether a treaty existed or not" (Foreign Relations, 1881, P. 1030).

The American people were no less sensitive to these deprivations based upon religious affiliation. When diplomatic intercession alone failed to correct this anti-Semitic discrimination, the issue became one for general public notice and for more direct executive and legislative action. Indeed, it became a matter of such moment that in his speech of acceptance of the Republican nomination for the Presidency in 1908, William H. Taft noted that "in some countries * * * distinctions are made in respect to the treatment of our citizens traveling abroad and having passports of our executive, based on considerations which are repugnant to the principles of our Government and civilization." He committed his party and administration "to make every endeavor to secure the solution of such distinctions which in our eyes are both needless and opprobrious." (Adler and Margalith, With Firmness in the Right (1946), at pp. 281-282.)

On December 4, 1911, conclusively to dispose of this issue, Joint Resolution No. 166 was introduced in the House of Representatives by Representative, later Governor, William Sulzer of New York. The text of the resolution declared:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the people of the United States assert as a fundamental principle that the rights of its citizens shall not be impaired at home or abroad because of race or religion; that the Government of the United States concluded its treaties for the equal protection of all classes of its citizens, without regard to race or religion; that the Government of the United States will not be a party to any treaty which discriminates, or which by one of the parties thereto is so construed as to discriminate between American citizens on the ground of race or religion; that the Government of Russia has violated the treaty between the United States and Russia, concluded at St. Petersburg, December eighteenth, 1832, refusing to honor American passports duly issued to American citizens, on account of race and religion; that in the judgment of the Congress the said treaty, for the reasons aforesaid, ought to be terminated at the earliest possible time; that for the aforesaid reasons the said treaty is hereby declared to be terminated and of no further force and effect from the expiration of one year after date of notification to the Government of Russia of the terms of this resolution, and that to this end the President is hereby charged with the duty of communicating such notice to the Government of Russia."

This resolution was adopted by a vote of 300 to 1 on December 13, 1911. On December 15, 1911, Mr. Sazanoff, then Russian Foreign Minister, was notified by Secretary of State Philander C. Knox that the United

States had decided to abrogate the treaty of 1832.

Although this was perhaps the most extensive action yet undertaken to protect the rights of American Jews from foreign anti-Semitism it met with immediate and widespread popular approval. Thus, the Republican National Convention of 1912 adopted a plank declaring:

"We approve the action taken by the President and Congress to secure with Russia, as with other countries, a treaty that will recognize the absolute right of expatriation, and that will prevent all discrimination of whatever kind between American citizens, whether native born or alien, and regardless of race, religion, or previous political allegiance. The right of asylum is a precious possession of the people of the United States, and it is to be neither surrendered nor restricted." (American Jewish Year Book, 1913–1914, p. 442).

Almost identical planks were adopted the same year by the Democratic and Progressive Party Conventions. The American people have consistently abjured any suggestion, whether by internal decree or foreign treaty, that there can be class distinctions among American citizens or that there are varying degrees of protection to which our citizens are entitled.

B. Switzerland

One of the earlier intercessions of this Government on behalf of American Jews abroad perhaps illustrates better than any other the personal zeal with which American statesmen have endeavored to combat foreign anti-Semitism.

In 1853, Theodore S. Fay, then United States Minister to Switzerland, was advised that Swiss cantons were denying visiting rights to American Jews. The Swiss Federal Council was willing to interpret liberally the treaty of 1850 between the United States and Switzerland and to extend to American Jews the same rights and privileges granted American Christians. Some of the cantons, however, persisted in their discrimination and refused to permit American Jews to establish themselves within their jurisdiction.

Mr. Fay became absorbed in the whole problem of anti-Jewish prejudices and made a detailed study of the condition of the Jews in Switzerland and neighboring countries, inquiring even into matters ranging far beyond those affecting Amercan Jews. The Secretary of State encouraged Mr. Fay in this inquiry and notified him that the removal of oppressive restrictions upon the Jewish community was "a matter which the President (Buchanan) has much at heart." (See Executive Document No. 76, House of Represeentatives, 36th Congress, 1st Session, page 22.)

As a result of his extensive inquiry and investigation, Fay wrote the famous "Israelite Note," which he circulated among the respective cantons. The then president of the Swiss Confederation, Dr. Furrer, wrote that as a result of Fay's note "an immense majority of the Council of Zurich is disposed to change the legislation respecting the Israelites in the interest of amity and progress." (Ibid., p. 77.) Many other cantons followed and gradually, one after another, removed all restrictions against the Jews. Thus, because of his personal concern over the oppression of religious minorities, an American minister in Switzerland was able to play a decisive and crucial role in amending the Swiss constitutional system to eliminate all Swiss discrimination because of race and religion and, almost singlehandedly, was instrumental in restoring to American Jews the right to travel throughout that part of Europe without restraint or inhibition.

C. Other countries

Our deep attachment to the concept of religious freedom has motivated our Government to urge intercession even in instances of religious suppression and persecution that did not directly affect citizens of the protesting states and even if such protest entailed direct criticism of the internal legislation of other states, a matter not ordinarily within the purview of any foreign power. Thus in the very first representation relating to Jews made by the United States to any foreign state, Secretary of State John Forsyth at the direction of President Van Buren, in 1840 in a dispatch to the American consul at Alexandria, Egypt, urged intervention in behalf of Damascus Jews who had been accused of murder.

Since that time the diplomatic record is studded with instances of genuinely altruistic intervention by American officials on behalf of persecuted Jewish populations abroad. See the account of protests made by the United States Government because of local anti-Jewish persecution in Morocco in 1863 (Adler and Margalith, With Firmness in the Right (1946), at 11); in Persia in 1897 (ibid., at 16); in Syria and Palestine in 1915 (ibid., at 65); in Italy in 1938 (ibid., at 386); in North Africa in 1942 (ibid., at 410); and in Argentina in 1943 (ibid., at 430). This is not even to mention the strenuous protest made through every available diplomatic medium against the atrocities of Nazi Germany. Indeed, the sense of revulsion against the barbarities of the Nazis and their attempt to import racial doctrines into the United States was one of America's moral armaments in the days of President Franklin D. Roosevelt (ibid., at p. 348 et seq.).

This brief review of American diplomatic practice indicates a continuing course of conduct by American foreign officers extending over 100 years to protest religious persecution by foreign states adversely affecting American citizens.

It is, therefore, both disappointing and disturbing that Secretary Dulles' recent testimony intimates that the United States in effect has acquiesced and yielded to the demands of current Arab anti-Jewish aggression, even to the point of sacrificing some of the protection legally due its citizens. We do not believe it an adequate justification that this retreat has been undertaken in the hope of finding a way in which the Arab countries and the United States may live together in a manner which presumably is to their mutual advantage. We do not believe that the American people will concur in this bargain or will endorse or accept any diplomatic approach that requires the United States to hold the rights of its citizens less dear than did our predecessors. We are convinced that the only reason this position could ever have been suggested is that the full measure of American concessions required to meet the demands of Arab bigotry has not been completely understood. It is in the hope of correcting this general lack of information that this paper has been compiled. We are convinced that once the facts are fully and publicly stated, the people of this country and those who have been appointed to guide its foreign relations will be in a better position to assess and evaluate those factors that must dictate our future conduct if the freedoms of all our citizens are to be assured.

II. CURRENT ARAB ANTI-JEWISH PRACTICES

The discriminatory actions practiced by the Arab countries under the direction of the Arab League fall into three categories: A. The denial of entry or transit visas to American Jews; B. The commercial boycott of American Jewish businesses; C. The establishment and subvention of large-scale Arab propaganda centers to disseminate anti-Semitic literature in the United States. Each of these three practices is discussed below.

A. Denial of entry or transit visas to American Jews

In recent years various Arab countries, including Lebanon, Syria, Jordan, and Saudi Arabia have sought to extend and promote their programs of domestic anti-Semitism by promulgating a rule flatly prohibiting the issuance of entry permits and travel visas to American citizens who are Jews. This discrimination extends to government officials and to members of the United States Armed Forces. A number of invidious consequences have flowed from this Arab policy; American State laws against discrimination in employment have been openly and repeatedly flouted, and recruiting for employment, even on defense contracts paid for by American taxpayers, has been conducted on a discriminatory basis because of Arab refusal to admit American Jewish workers. Thus, Arab bigotry has already forced its way across our own borders and infected our own domestic practices.

(1) Restrictions Against Military Personnel

On May 20, 1955 a chaplain serving in the United States Air Force wrote Senator HERBERT H. LEHMAN:

"United States Air Forces Europe (USAFE) Manual 30–1, dated June 1953, deals with 'Clearance and Documentations for Leave and Duty Travel' for members of the United States Air Force. In section 26, paragraph 3, we read: 'Individuals of Jewish faith or descent are strictly barred entrance to or transit of Saudi Arabia. Further, any passport containing an Irsaeli visa will not be honored.'

"In section 13, paragraph 3c, we read: Individuals of the Hebrew Race will not be issued visas or admitted to Jordan.

"By restricting the travels of a Jewish serviceman on military aircraft, the Military Air Transport Service (MATS), a lawful agency of the Government of the United States of America, subjects itself to the bigoted religious doctrines of a foreign power."

This letter elicited the following reply on June 20, 1955, from Harold E. Talbott, then Secretary of the Air Force, to whom it was forwarded by Senator LEHMAN:

"The countries of Saudi Arabia and Jordan for purposes of internal security will not issue a visa for persons of the Hebrew race. This restriction is not only applicable to American citizens, but applies to Jewish people of all nations. Further, Arabic countries, specifically Saudi Arabia and Jordan, will not issue a visa to any person regardless of race, if the passport of the individual is stamped with any margins which would indicate that the traveler had visited Israel prior to the application for entrance into Saudi Arabia and Jordan.

"These restrictions are promulgated and enforced by the Arabic countries and are not within the prerogative of the State Department or the military to change.

"The only exception to the above procedures is when the traveler receives special permission from the Arabic Government concerned to enter that country."

Senator LEHMAN wrote to Mr. Talbott on July 12, 1955:

"I have your letter of June 20. I am aware of the practice of the Governments of Saudi Arabia and Jordan in barring entrance to persons of Jewish faith. I had hoped, however, that the appropriate departments of the United States Government would work ceaselessly against any such regulation insofar as it affects American citizens. I was especially shocked to know that American GI's who happen to be of the Jewish faith are likewise discriminated against. I hoped that far from simply taking cognizance of the matter, the Air Force would use its influence to the extent possible to see that this discrimination was not practiced against Americans who were serving their country in the Air Force."

Secretary Talbott's answer, dated July 20, 1955, exhibits an odd lack of concern:

"The Air Force is cognizant of the situation concerning restriction of travel to mem-

bers of the Jewish faith to Saudi Arabia and Jordan. However, it must be recognized that we are dealing with a tradition of long standing, and in all probabilities, will take much effort and time on the part of all Governmental agencies, including the Air Force, to try and work out a satisfactory solution with the countries concerned. The Air Force together wtih governmental agencies, has worked ceaselessly to abrogate regulations of this nature put into effect by foreign governments which affect American citizens. Unfortunately, as indicated in my previous letter, these restrictions or regulations are promulgated and enforced by foreign countries and are not within the prerogative of the Air Force to change."

When, on February 24 of this year Secretary Dulles was specifically asked by members of the Foreign Relations Committee whether, pursuant to the trems of the mutual security agreement between this country and Saudi Arabia, American Army personnel of the Jewish faith were not permitted to be stationed at the Dhahran Air Base, the Secretary replied, "It may be." We question Mr. Dulles' apparent belief that his further statement "over a long period of years there has been a prohibition on Jews in Saudi Arabia" can be a sufficient explanation for this Government's tolerance of foreign disqualification of American military personnel because of their religious beliefs.

We submit that continued collaboration in the exclusion of Jewish servicemen invites manifold invasion of the rights of American citizenship. If we accept the principle that foreign states are to be permitted to pass upon the religious qualification of any American in military service stationed abroad, reaching down even to the level of private soldier, then we necessarily become party to the negation of the constitutional concept of religious freedom and religious privacy. We should then be required to screen and survey the religious convictions of prospective public officials who may otherwise be fully competent and qualified. We would then be able to employ as our representatives abroad, whether as ambassador, technician, soldier, or clerk, only those whose religious beliefs correspond favorably to those of some foreign ruler. In contravention of express constitutional prohibitions, we should inevitably be obliged to impose a religious test for public office. The logical extension of this approach would require, obviously, that any emissary of this country sent, for example, to Communist countries should be required to pass Communist tests of nonreligious fitness. The absurdity and inequity of this practice seems patent.

That the first amendment to the United States Constitution obligates this country to refrain from entering into any treaty or agreement that might serve as an instrument for discriminating against any group of American citizens by limiting their right freely to travel abroad because of their religious convictions, was plainly stated by Clifton R. Brickinridge, American Minister to St. Petersburg in 1895 in a note to the Russian Minister of Foreign Affairs. Replying to a Russian contention that the American Constitution could not apply to Russian domestic legislation and therefore could not be invoked to interfere with treaty arrangements between the two states, the American Minister declared:

"Our Constitution does not say that Congress shall not make a law simply prohibiting or authorizing a religious exercise or belief, as your excellency seems to understand.

"It says that 'Congress shall make no law respecting an establishment of religion, nor prohibiting the free exercise thereof.' Certainly if a law deprives any people or persons of a certain faith, because of that faith, of all or of any part of the rights, privileges, and immunities enjoyed by any other citizen, or class of citizens, it is made respecting that religion, and it militates against the free exercise thereof as much so as if the sect had been mentioned in the title of the act and the consequences had been named as pains and penalties for the conscientious belief and observances entertained and practiced" (Foreign Relations, 1895, p. 1066).

We suggest that a proper attitude, one consonant with the requirements of our Constitution and with our own national temper, is reflected in the action of the United States in the one prior time in its history when one of its representatives was found unacceptable by a foreign country because of admittedly religious factors.

(a) The Keiley precedent

In May 1885, President Grover Cleveland appointed Mr. Anthony M. Keiley, of Virginia, envoy extraordinary and minister plenipotentiary of the United States at Vienna. The United States was informed, however, that Mr. Keiley would be unacceptable to the Austrian Government because "the position of a foreign envoy wedded to a Jewess by civil marriage would be untenable and even impossible in Vienna" (Foreign Relations, 1885, p. 48).

Secretary of State Bayard replied in unmistakably language:

"The supreme law of this land expressly declares that no religious test shall ever be required as a qualification to any office or public trust under the United States and by the same authority it is declared that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof.

* * * * *

"It is not within the power of the President nor of the Congress, nor of any judicial tribunal in the United States to take or even hear testimony, or in any mode to inquire into or decide upon the religious belief of any official, and the proposition to allow this to be done by any foreign government is necessarily and a fortiori inadmissible."

"To suffer an infraction of this essential principle would lead to a disfranchisement of our citizens because of their religious belief, and thus impair or destroy the most important end which our Constitution of Government was intended to secure.

* * * * *

"The case we are now considering is that of an envoy of the United States, unquestionably fitted, morally and intellectually, and who has been duly accredited to a friendly Government, toward which he is thoroughly well affected; who in accordance with the laws of this country, has long since contracted and has maintained an honorable marriage, and whose presence near the foreign government in question is objected to by its agents on the sole ground that his wedded wife is alleged to entertain a religious faith which is held by very many of the most honored and valued citizens of the United States.

"It is not believed by the President that a doctrine and practice so destructive of religious liberty and freedom of conscience, so devoid of catholicity, and so opposed to the spirit of the age in which we live can for a moment be accepted by the great family of civilized nations or be allowed to control their diplomatic intercourse.

"Certain it is, it will never, in my belief, be accepted by the people of the United States, nor by any administration which represents their sentiments" (Foreign Relations, 1885, p. 48).

The Austrian Government thereupon changed the ground of its opposition to a supposed "want of political tact evinced on his (Mr. Keiley's) part on a former occasion, in consequence of which a friendly power declined to receive him; and upon the certainty that his domestic relations preclude that reception of him by Vienna society, which we judge desirable for the representatives of the United States with which power we wish to contine the friendly relations existing between the two governments" (Foreign Relations, 1885, p. 55).

This country, however, was not deceived by these representations and refused to appoint an envoy in Mr. Keiley's stead. The position of this Government was that the acts of Austria and her ministers in this case would require this country to agree to permit Austria to reserve for herself the right to prescribe a religious test for office in the United States and that this could never be found acceptable by the people of this country. In his annual message to Congress, December 8, 1885, President Cleveland reviewed the entire case:

"Question has arisen with the Government of Austria-Hungary touching the representation of the United States at Vienna. Having, under my constitutional prerogative, appointed an estimable citizen of unimpeachable probity and competence as minister at that court, the Government of Austria-Hungary invited this Government to take cognizance of certain exceptions, based upon allegations against the personal acceptability of Mr. Keiley, the appointed envoy, asking that in view thereof, the appointment should be withdrawn. The reasons advanced were such as could not be acquiesced in, without violation of my oath of office and the precepts of the Constitution, since they necessarily involved a limitation in favor of a foreign government upon the right of selection by the Executive, and required such an application of a religious test as a qualification for office under the United States as would have resulted in the practical disfranchisement of a large class of our citizens and the abandonment of a vital principle in our Government. The Austro-Hungarian Government finally decided not to receive Mr. Keiley as the envoy of the United States, and that gentleman has since resigned his commission, leaving the post vacant. I have made no new nomination, and the interests of this Government in Vienna are now in the care of the secretary of legation, acting as charge d'affaires ad interim" (Foreign Relations, 1885, p. iv).

(b) The Government plea of noninterference

Unquestionably the qualification of an ambassalorial appointee depends in considerable measure upon his standing in the country in which he is designated to serve. It is not diplomatic custom for any state to impose an unwelcome envoy upon another. The grant of diplomatic standing normally is regarded as the exclusive prerogative of the host state. This country nevertheless felt that the exercise of religious prejudice in the Keiley case was a matter of sufficient importance to override all considerations of diplomatic practice. How much greater an effront is it, therefore, for the Arab States to dictate to our Armed Forces with respect to the religious affiliations of our military personnel ordered to serve in our defense installations in Arab lands. The religious beliefs of members of the Armed Forces of the United States can be no business of the Arab countries and it is a gross invasion of the constitutional guaranties of religious freedom for any agency of this Government to agree to the exclusion of Jewish servicemen, or indeed Jewish public officials of any rank, from acting on behalf of their country anywhere in the world.

It is plainly no argument to allege, as Secretary Talbott alleges, that since these restrictions on the entry of Jewish military personnel are enforced by the Arab countries they are "not within the prerogative of the State Department or the military to change." Matters that impinge so directly upon the welfare and liberty of American citizens cannot thus be so immunized from American intervention. It should be remembered that

upon proper occasion the United States has not been unwilling to instruct its diplomatic emissaries abroad to take action with respect to matters that entail criticism of the internal activities of another state, something that is not within the ordinary purview of normal diplomatic conduct. Thus, on November 22, 1881, in seeking to persuade Great Britain to join in protest against Russian anti-Semitic discrimination, Secretary of State Blaine wrote James Russell, then United States Minister at London:

"I am well aware that the domestic enactments of a state toward its own subjects is not generally regarded as a fit matter for the intervention of another independent power. But when such enactments directly affect the liberty and property of foreigners who resort to a country under the supposed guarantee of treaties framed for the most liberal ends, when the conscience of an alien owing no allegiance whatever to the local sovereignty, is brought under the harsh yoke of bigotry or prejudice which bows the necks of the natives, and when enlightened appeals made to humanity, to the principles of just reciprocity and to the advancing spirit of the age, in behalf of tolerance, are met with intimations of a purpose to still further burden the unhappy sufferers and so to necessarily increase the disability of foreigners of like creed * * * it becomes in a high sense a moral duty to our citizens and to the doctrines of religious freedom we so strongly uphold, to seek proper protection for those citizens and tolerance for their creed, in foreign lands, even at the risk of criticism of the municipal laws of other states" (Kohler, The United States and German Jewish Prosecutions, pp. 40–41).

It always will remain possible to search out reasons for not acting but the present prim and circumspect regard for every legalism that might justify American indifference must be contrasted with the attitude of former Secretary of State William N. Evarts. He did not hestitate to employ the power of his high office to instruct an American consul in Morocco that while intervention by this country in behalf of Jews who are Moorish subjects ordinarily might be considered improper, "Still, there might be cases in which humanity would dictate a disregard of technicalities, if your influence would shield Hebrews from oppression." Letters of Secretary Evarts, March 20, 1878, quoted in J. B. Moore, American Diplomacy (1905), page 349. We are forced to conclude that American diplomatic intervention against the Arab States is more likely deterred by lack of will than by lack of legal warrant.

(2) Restrictions Upon Private Travel

In the face of this official indifference toward limitations imposed upon the right to travel of military and Government personnel, it is hardly surprising that travel restrictions against American Jews who are merely private citizens should continue with almost no comment. The Passport Division of the Department of State expressly informs applicants for passports that persons of Jewish faith will be denied the right to visit Arab lands. Information supplied to passengers departing America aboard ships of the American Export Lines, which during cruises touch ports in Arab countries, declares that persons of Jewish faith or Jewish name (sic) will be denied certain cruise travel privileges in Arab countries freely available to other passengers. Airlines regularly traveling to Arab countries contain notations in their schedules indicating that Jewish passengers will not be allowed to disembark at Arab ports of entry.

This regular withholding of travel privileges by Arab officials in this country from American citizens of Jewish faith is demeaning and introduces a discordant and dissonant note in a free community. Thus, in 1895 Acting Secretary of State Alvey A. Adee reminded the American Minister at St. Petersburg that the refusal of Russian consuls to grant visas to American Jews was of continuing concern to this country if only because of the impact and effect of this practice within our own borders, Mr. Adee wrote:

"Apart from the constitutional objections to the discrimination made by Russian consular officers against American Jews, this Government can never consent that a class embracing many of its most honored and valuable citizens shall within its territory be subjected to invidious and disparaging distinctions of the character implied in refusing to visa their passports. For, notwithstanding Prince Lobanow's suggestion that his Goverenment's consular regulation upon the subject under consideration does not apply to all Israelites and therefore cannot be regarded as a discrimination against them on religious grounds, the fact remains that the interrogatories propounded to applicants for the consular visa relate to religious faith, and upon the response depends the consul's actions.

"Viewed in the light of an invidious discrimination tending to discredit and humiliate American Jews in the eyes of their fellow citizens, it is plain that the action of Russian consular officers does produce its effects within American territory, and not exclusively in Russian jurisdiction." (Foreign Relations, 1895, p. 1067.)

The denial of visas to Jews by Arab countries, moreover, frequently has a more serious consequence than the mere withholding of travel for pleasure. Arab anti-Semitism has been made the occasion and excuse for anti-Jewish discrimination in hiring practices in this country, in direct contravention of the purpose and policy of State fair employment practices legislation.

(a) SCAD and private employment

In 1950 a help-wanted advertisement inserted by a private employment agency in New York City newspapers sought welders for foreign service. When applicants for these positions were interrogated about their religious beliefs, a complaint was filed with the New York State Commission Against Discrimination charging that these inquiries constituted an unlawful employment practice.

The State Commission reported:

"Investigation disclosed that the welders were being recruited by a subcontractor of the Arabian American Oil Co. for work on a pipeline in one of the Arabian countries, and that a visa from the Arabian Government was a prerequisite to employment.

"The investigating commissioner was informed by the Arabian American Oil Co. that the Arabian Government does not issue visas to persons of the Jewish faith. The company advised that it had an understanding with the Arabian Government to screen all prospective employees for work in Arabia before they applied for Arabian visas, for the purpose of excluding persons of the Jewish faith to whom visas will not be granted. The respondent urged the commission not to take any action which would jeopardize this agreement in view of considerations important to the international interests and security of the United States.

"Pursuant to Commission policy to seek confirmation of the facts upon which the existence of a bona fide occupational qualification is predicated, the investigating commissioner communicated with the United States Department of State. He was advised by the Political Adviser for the Office of African and Near East Affairs that as a result of the recent conflict between the Arabian countries and Israel, the Arabian governments refused to grant visas to persons of the Jewish faith for work in any of the Arabian countries. This representative of the Department of States stressed the importance of not having anything interfere with the existing relationship between the Arabian Government and the Arabian American Oil Co., explaining that this relationship was the basis for the harmony between this Government and the Arabian Government and should it be disturbed in any way the international interests of the United States would be seriously affected" (Report of Progress, 1950, New York State Commission Against Discrimination, pp. 47–48).

As a result of State Department intervention, the New York State Commission Against Discrimination found these employment practices not violative of State law. Two factors are worthy of note in this report. First, it is indicative of the contagious effect of religious bigotry that an American employer in New York should enter into an understanding with Arabian governments to screen American citizens who are candidates for employment "for the purpose of excluding persons of the Jewish faith." Thus, in direct contradiction of the intention and purpose of existing State fair employment practices legislation American employers are induced and even compelled to undertake religious inquiries and to fix religious standards as a qualification in hiring practices.

Secondly, it is shocking that a "representative of the Department of State (should have) stressed the importance of not having anything interfere with the existing relationship between the Arab Government and the Arabian American Oil Co." It should be remembered that the "anything" that might in this case have disturbed this relationship would have been a demand for the full and equal protection of the rights of American citizens. It is bad statesmanship as well as bad principle that our traditional concept of equal protection should be abandoned for the purpose of furthering certain commercial transactions, whether they be with the Arabian American Oil Co. or with anyone else. It is not true that the American people are willing to maintain contractual arrangements for international exchange of commodities, whatever they may be, when such arrangements are made contingent upon implementing in our own community the religious or racial hatreds and prejudices of foreign governments. Private deals cannot be sanctioned when they are made at the cost of national ideals.

(b) Defense contracts abroad

It is even more disturbing that Arab antisemitism has been made the occasion for the practice of religious discrimination by United States Army contractors engaged in defense projects, projects paid for by all the American people. The New York Times of February 2, 1952, reported that Maj. Gen. G. J. Nold, Deputy Chief of Engineers, United States Army, testified before a Senate subcommittee that New York workers were not recruited by Army contractors for building military bases in Arab countries because the contractors believed a large number of New York applicants would be of Jewish origin and, if hired, would be resented by the Arabs and possibly be in personal danger. It is not surprising that this is precisely the argument advanced by Russian Foreign Minister Prince Lobanow in 1895 to justify his Government's refusal to visé the passports of American Jews, explaining that his country's attitude was essentially philanthropic, serving to warn American Jews while they were still in the United States and thus save them from "difficulties and dangers which they would encounter later if they had not been advised." Adler and Margalith, *op. cit. supra*, at 250. In any event, either forgetful of SCAD's prior ruling or uncertain whether the Army would be granted the same special license to discriminate previously accorded the Arabian American Oil Co., the New York State Employment Service had informed the air base contractors that they must operate in conformity with the State law against discrimination in employment and could not screen out Jewish applicants for the jobs. General Nold tes-

tified that the contractors thereafter simply avoided the New York labor market and recruited their entire work force in the Middle West.

In response to an inquiry by the Chairman of the New York State Commission Against Discrimination, the then Secretary of the Army, Frank Pace, Jr., on March 3, 1952, wrote:

"The charge that the Army has refused to recruit workers from New York for construction work in Arab countries because New York law prohibits discrimination in the hiring of workers has resulted from the recent testimony of the Deputy Chief of Engineers before the Senate Preparedness Subcommittee. The Deputy Chief of Engineers there testified that a problem existed in recruiting people of the Jewish faith for work in Arab countries. Insofar as this testimony indicated that there were problems in recruiting Jewish workers for every country having an Arab population, the statements of the Deputy Chief of Engineers were broader than the facts justified. Although his testimony was not so limited, actually the Deputy Chief of Engineers was cognizant of the recruitment problem with respect to the country of Saudi Arabia. The situation there, however, is not one caused by Corps of Engineers contractors. These contractors have not discriminated against qualified Jewish workers for Saudi Arabian projects. They are willing to recruit workers of this faith; however, these workers are unable to obtain the required visas from Saudi Arabia."

This comment by Secretary Pace is characteristic of official nonchalance and indifference to this problem. It reflects the too frequently held view that mere reference to Arab anti-Semitism is all that is necessary to condone American collaboration in discriminatory acts. During the course of his letter to the chairman of the State commission, the Secretary claimed that contractors recruiting workers in the United States for military construction in North Africa by and large conform to the policies laid down by President Truman barring discrimination based on race, creed, color, and national origin; but he also admitted, somewhat coolly, that contractors do, in fact, discriminate against workers of Jewish faith in recruiting for military construction in Saudi Arabia. Government agencies as well as individual contractors usually disclaim any discriminatory intent, even loudly assert that exclusion of Jewish employees is contrary to their own wishes and forced upon them because Jews are refused visas for entry into Saudi Arabia. But the net result is no less an instance of discrimination in Government contracts, in clear, open, and undeniable violation of standing Executive orders.

(c) State Department passivity

More is required of the State and Defense Departments than mere passive recognition of existing facts. Regrettably, Secretary of State Dulles, like his associates, appears largely undisturbed by the Arab policy of discrimination against American Jews. During his testimony on February 24, 1956, before the Senate Foreign Relations Committee in response to a question relating to our endorsement of discrimination against American Jewish businessmen, Secretary Dulles found it appropriate to refer to the religious requirements of Moslem law and to indulge in analogies concerning Moslem dietary customs. The general temper of Secretary Dulles' reply may perhaps be evident in his concluding comments that the Arabs "have some practices which we may think curious. * * * We, perforce, accommodate ourselves to certain practices they have which we do not like; they, perhaps, accommodate themselves to certain of our idiosyncrasies which they do not like, but on the whole, they have a pretty arbitrary rule largely dictated by the strict tenets of the Moslem faith."

It ordinarily might be supposed that the practice of religious discrimination against American nationals is not a mere curious practice to be likened to exotic dietary habits, nor would it ordinarily be thought properly comparable by an American Secretary of State to folk idiosyncrasies of our own to which the Arabs might conceivably object. At issue are national policies that impose serious penalties upon many American citizens and these cannot lightly be dismissed as quaint, almost charming, eccentricities which we need not trouble to regard seriously.

The occasional objections made by the State Department to this practice of religious discrimination thus far have been palpably inadequate. For all of its perfrunctory assurances, the State Department has never indicated the precise nature of its protests of whether those protests when conveyed were pursued with vigor and persistence. Nor has Secretary Dulles, or any other Department spokesman, ever suggested any further course of conduct should our protests, as seems inevitable at present, continue to go unheeded.

The right to travel and go abroad is a right much treasured and desired, and if the Arab states were suddenly to close their doors to all Americans we should unquestionably deem it to be an affront and unfriendly act. We can properly be no less affronted when the Arab countries single out one group of Americans to whom they bar their borders solely because of religious affiliation. And it becomes doubly unconscionable when this practice, abetted by American participation, becomes the prelude and apology for imposing economic penalties against American Jewish citizens.

It would seem, at the very least, that if any American citizens are barred from entry to any Arab states for religious reasons, this Government, with the exception of necessary and authorized diplomatic personnel, should prohibit all citizens from Arab countries from entry here. There is ample precedent for such a move. Section 243 (g) (7) of the McCarran-Walter Immigration and Nationality Act of 1952 authorizes this country to refuse any further immigration from those states who are unwilling to accept return of their nationals who are deported from the United States. Surely the crude religious discrimination practiced by the Arab countries is at least as significant a cause for invoking this reciprocal prohibition. There is no tenable reason for the United States to continue to receive immigration from countries who capriciously and arbitrarily deny an equivalent right to a considerable section of our own citizens. It is a well-established principle that no foreign government can with impunity discriminate between one American passport and another. That principle needs now to be implemented.

III. BOYCOTT OF AMERICAN JEWISH BUSINESS

It is generally conceded that pursuant to a directive of the Arab League there is at present an Arab boycott of business throughout the world that have representatives or branches in Israel or that maintain commercial relations with Israeli firms, however small these transactions may be. This is evidenced by a recent statement by the Iraqi Consul in New York, Gen. A. K. Gailani asserting that:

"Our policy is that all firms, be they Christian, Jew, or Moslem, are not allowed to do business with the Arab countries if they have a subsidiary or branch in Israel. This was a decision of the Arab League, not of Iraq alone, and the reason is that Israel is at war with the Arab countries." (New York Post, February 3, 1956.)

An article recently appearing in the Foreign Commerce Weekly, published by the United States Department of Commerce, further confirms this fact:

"Member states of the Arab League have agreed to take the following actions in implementation of their boycott against countries having relations with both Israel and the Arab countries, the Iraq Government has informed diplomatic missions in Baghdad.

"Imports of products from foreign countries will be banned if the companies have branches or assembly plants in Israel; if their general agents or regional offices in the Mideast are located in Israel; or if Israeli companies are granted the privilege of using trade names.

"Foreign companies, bodies, and establishments, both public and private, having shares in Israeli firms or plants will be prohibited from carrying out business in the Arab countries.

"Regularly scheduled foreign steamships passing through Arab ports on both-way trips will not be allowed to anchor in an Israeli port on either journey. Exceptions are world tourist steamships, provided the Arab states through which they are to pass are notified in advance of their names and the dates of departure—Embassy Baghdad" (Foreign Commerce Weekly, vol. 51, No. 1, January 4, 1956).

There is irrefutable evidence, moreover, that this anti-Israel boycott has now been expanded into a blacklisting of all businesses throughout the world, whether or not they have branches in Israel, that are owned by Jews, employ Jews or even subscribe to Jewish philanthropic activities. According to the Economic Bulletin of the Arab League (Cairo), there are now 162 Jewish firms on the blacklist; 45 or British, 44 American, 23 French, 14 Swiss; 11 are in Argentina; 10 in Canada, 8 in Belguim, 6 in Holland and 1 in Australian. Despite the occasional camouflages that have been attempted, the character of this economic reprisal is now sufficiently clear as to leave no doubt whatever as to its anti-Semitic purposes.

The boycott is conducted by cooperation of a number of the member states of the Arab League. The Saudi Arabian Government has been the most active and consistent in this connection in the United States although other Arab states have also participated with increasing frequency.

A. Saudi Arabian boycott

The American Jewish Congress has in its possession correspondence from Arab firms located in Saudi Arabia, canceling contracts with American Jewish businesses because of a directive promulgated by the Saudi Arabian Chamber of Commerce, but unquestionably inspired by the Saudi Arabian Government, instructing Saudi Arabian firms to discontinue all relations with businesses abroad owned or controlled by Jews or that employ Jews. These letters state that any contract negotiated in violation of this directive will be subject to summary cancellation and that any merchandise imported into Saudi Arabia from firms employing Jews abroad will run the risk of confiscation. The Saudi Arabian Government evidently requires its domestic import companies to obtain affirmative and positive assurances that their business associates abroad are free of all Jewish connections.

The claim has been adduced by representatives of the State Department among others that this boycott is not by any official agency in Saudi Arabia but only by private individuals. This contention must be weighed against the undisputed fact that Saudi Arabia is an absolute despotism without any semblance of representative government. It is unthinkable that any influential agency in that country could issue policy directives without the prior knowledge and approval of responsible officials. Moreover, no body other than the Government itself would possess authority to confiscate incoming shipments. The Government of Saudi Arabia has plenary authority to impose conditions on international transactions and it must be concluded that, despite the nominal denials

glibly issued by their spokesmen and consular representatives in the United States, Saudi Arabian Government officials themselves have stipulated and directed the anti-Jewish restrictions now invoked.

The nature of the discrimination is clearly reflected in the following excerpts from letters in our files received by American firms owned by Jews from their Saudi Arabian customers. The names of the recipients and senders of these letters are not here disclosed in order not to disturb other commercial relations these firms may have. Photostatic copies of the letters, however, are in American Jewish Congress' possession.

January 3, 1952: "We very much regret to inform you that our Government has duly published a notice announcing that any importers of Saudi Arabia must not be permitted to import the goods, any kind of goods, from any Jewish firms of the world.

"Further, they have listed your name as being your firm is Jewish firm, as these steps are taken suddenly against you, we are obliged to cable you to stop the shipments of our orders, until we write you.

"However, we are obliged to ask you to let us have full particulars as to what faith your firm belong, to Jewish or Christian? And until we have full particulars from you we are obliged to stop our business with you."

October 1, 1953: "In connection with our request for not effecting the shipment of our order by any steamer which belongs to any Jewish steamship company. This is in compliance of our Government's regulation announced recently, further this ordinance warns that any shipment by such steamers will not be allowed to enter Saudi Arabia."

September 17, 1953: "We have also to inform you that you are well aware we are quite prohibited to import any goods manufactured in any Jew factories. Now our Government has issued a new regulation warning all the importers that no goods may be brought by the steamers belonging to Jew steamship company. You are kindly requested to take this matter into consideration in order to avoid any sort of trouble arising by doing so."

September 22, 1953: "We hope that you have not shipped our order by now. We append the text of notification from our local government, for your kind information and perusal. Merchant or merchants established in Saudi Arabia intended to import goods from foreign countries should know that it is forbidden to deal with a Jewish company or with a company whose any of its workmen is Jewish or has branch in Israel, and if a merchant intended to deal with a company and knows that the same company is not Jewish, should also be asked to submit a letter of certificate issued by the chamber of commerce certifying that neither of its workman is Jewish nor has branch in Israel. Therefore, we will request you to furnish us with a certificate issued by your local chamber of commerce to that effect."

November 27, 1955: "We refer to your letter dated March 8, 1955, addressed to our associates —— from which we gather that you are desirous to establish business relations in Saudi Arabia.

"It may also be noted that according to Saudi Arabian Government's regulation all invoices for the goods supplied, must be legalized by Saudi legation of your side. We are strictly prohibited to deal with Jew firms and therefore it will be appreciated if you can furnish us with a certificate duly legalized by the Saudi legation stating that your firm is not Jews firm, otherwise we regret we shall not be able to enter into business with you."

January 7, 1956: "With reference to your letter No. IW:ek of the November 21, 1955, we have to inform you that you will have to get the original certificate attested and certified by the Saudi Arabian Consulate in your country to the effect that firm which exports the machine is not a Jewish firm, without which we can not have dealings with your firm."

One of the recipients of the letters quoted above regularly exports wheat, flour, rice and textiles to Saudi Arabia and prior to the boycott his business in that country amounted to about $2 million a year. No United States export license is required for shipment of these materials but under the terms of the International Wheat Agreement to which both the United States and Saudi Arabia are subject, the United States pays 70 cents for each bushel of wheat shipped as a subsidy to American exporters. The effect of this boycott therefore is that the United States Government may make grants to non-Jewish firms shipping wheat to Saudi Arabia, but because of American submission to Arab demands Jewish firms are excluded from comparable benefits.

The discontinuance of contracts by Saudi Arabia importers reflects not only an effort on the part of the Saudia Arabian Government to regulate the conditions of its internal economy, but to reach out far beyond its own borders to boycott what it regards as Jewish enterprise. American Jewish businessmen are flatly excluded from competition for a large segment of international trade. Certainly to the extent that funds used to subsidize this trade derive from tax payments and other contributions on the part of all the people of this country, it would appear intolerable for any American national to be barred from participation because of religious considerations.

B. Boycotts by other Arab countries

Although the boycott carried out by Saudi Arabia has received the greatest attention in this country there are clear indications that other members of the Arab League have carried on an identical policy of barring Jews from international trade. The following excerpts from a letter to the Chairman of the Board of Directors of Verkoopkantoor Van der Heem N. V., The Hague, Holland, on November 13, 1955, indicates the firm intention of all members of the Arab League to make the boycott of Jews universal:

"As you are aware the Arab countries are in a state of war with Israel and for this reason we are making an economical siege around that Israel. This siege is administered by a special control and investigation office with members of all the Arab States.

"An officer in said office visited us today and requested that following information be supplied about your company:

* * * * *

"5. Do you have any Jewish employees in your company, if yes how many and what are the positions held by them.

"6. Are there any Jews in your board of directors as members?

"7. Is any of your managers or branch managers a Jew, if yes please give name of the department headed by such a man.

"8. Is any of the persons authorized to sign on behalf of your company a Jew?

"9. What is the number of Jewish laborers in your factories and offices?"

In a letter quoted below from Assistant Secretary of the State in 1953, the State Department acknowledged that there has been from time to time a blacklisting of American Jewish firms by the Lebanese Government. American newspapers report similar experiences by American Jewish businesses throughout the world in dealing with member states of the Arab League (New York Herald Tribune, Feb. 12, 1956). The boycott now suffered by American Jewish firms is a vital part of the international plan of the Arab League to deny Jewish businesses access to principal markets.

C. The reluctant State Department

This matter was first brought to the attention of the State Department in 1952 when reports of this practice were first received by the American Jewish Congress. The issue presumably was satisfactorily concluded, in May 1952, when in a letter to Senator LEHMAN, Jack K. McFall, Assistant Secretary of the Department of State, declared that the racial and religious restrictions imposed on international dealings by the Saudi Arabian Government had been discontinued effective April of that year:

"I refer again to your note of January 30, 1952, and my reply of February 6 regarding Saudi Arabian trade discrimination against Jewish firms in the United States. As you know, this action and its possible repercussions in this country were matters of real concern to this Department. The delicacy of the problem in Saudi Arabia recommended an informal approach rather than official representations to that Government as best designed to meet with success in causing the discontinuance of that discriminatory practice.

"Several frank but friendly discussions were held with the Saudi Arabian Embassy in Washington and by our Ambassador in Saudi Arabia with appropriate high authorities there. I am now happy to be able to report to you that these efforts have been successful and the broad restrictive Saudi Arabian decree has been superseded as of April 4, 1952.

Regrettably, however, as is evident from the letters quoted earlier, the boycott of Jewish firms has not, in fact, been stopped and continues even to the present month without any lessening of its force.

(1) The Claim of Private Boycott

Repeated efforts have been made to persuade the State Department to assert its influence to cause an effective discontinuance of this economic boycott by American Jews. In a letter to Senator LEHMAN on December 15, 1953, the then Assistant Secretary of State, Thruston B. Morton, declared:

"As I informed you in my letter of May 15 last, the Department at that time sought an appropriate occasion to reassert the United States feeling toward the boycott. This presented itself in July, when a report was received from our Embassy in Beirut that there were indications that the Lebanese Government contemplated blacklisting American firms dealing with Israel. The Department promptly took this occasion to instruct the Embassy, and to inform our other Embassies in the area, that if such action were taken it should state in positive terms to the Government of Lebanon that the United States Government was seriously concerned, and that the blacklisting action was unwarranted. Specific points upon which the Department based this position were transmitted to the Embassy for use if the occasion arose, and these points were also relayed to the other Embassies for guidance if they were confronted with a similar situation.

"Insofar as the Department has been informed up to this time, the action reportedly contemplated by the Lebanese Government has not been taken. In fact, the Embassy recently took steps to obtain an import permit for an American consignment in transit to Jordan, which had been refused some time ago by the Lebanese Government, and was successful in obtaining it. We are currently taking steps to remove from a blacklist three American tankers refused permission to enter a Saudi Arabian port.

"One of the cases cited in your letter had been previously brought to our attention and sent to our Embassy in Saudi Arabia for its report. The other case which you cite has now also been referred to the Embassy. The type of discrimination implicit in these cases is indeed serious. The Department hopes that these instances are in the nature of sporadic, out-of-bounds actions based on excessive zeal or misunderstanding on the part of certain individuals rather than an indication of fundamental intensification of boycott practice by the Saudi Arabian Govern-

ment. This hope is supported by the report which we have just received from the Embassy on the first of the two cases reported to it. The Embassy states that is can find no decree of the Saudi Arabian Government barring imports from Jewish firms but is investigating the possibility that a local sheikh or other official may have issued an order effective only in his area. A leading figure of the Arab League has also recently indicated to an officer of the Department that discrimination of the type exemplified in the cases under reference is not to his knowledge contemplated nor supported by the league."

A letter similar in import was sent to Dr. Nehemiah Robinson, director of the Institute of Jewish Affairs of the World Jewish Congress, on December 30, 1953, by Merrill C. Fay, officer in charge, Economic Affairs, office of Near Eastern Affairs of the Department of State. Mr. Fay's letter declared:

"A report has now been received from the American Embassy in Jidda, Saudi Arabia, in response to the Department's inquiry whether a decree has been issued by that government prohibiting merchants from trading with Jewish-owned firms in the United States.

"The Embassy reports that decree No. 3/4/2179 of April 4, 1952, forbids the importation of 'Israeli products of the products of foreign companies with branches in Israel.' Order No. 11299 of August 26, 1953 (16/12/1372), prohibits this importation of goods on 'Israeli ships or through Israeli navigation companies or on foreign ships which may anchor, during the trips to Arab countries, in Israeli ports.'

"The Embassy reports further that no official action has been taken by the Saudi Arabian Government against trade with Jewish firms who do not have branches in Israel or engage in trade with Israel through Israeli shipping companies. It would therefore appear that the documentation requirement mentioned in your letter has no official status.

"The Embassy speculates that some Saudi Arabian importers entertain apparently groundless fears that their goods might be confiscated, under one of the foregoing regulations, if the supplying firm bore a Jewish name, may have written to their American connections that a certificate by the local chamber of commerce should accompany their shipments. There is nothing that the Department can do, unfortunately, to cause them to desist from such a practice which does not appear to accord with their government's regulations.

"You may rest assured, however, that this situation is being kept under constant study by the Department, and that all appropriate steps will be taken to protect the interests of American exporters."

It has already been suggested that the use of private fronts to conceal official governmental boycott of American Jewish firms is an obvious dodge, one designed to permit Arab countries to engage in anti-Semitic discrimination against American citizens while pleading innocent of any implications in these acts. The insistence by Arab exporters upon a certificate of non-Jewish ownership is too regular and consistent to be attributable only to excessive zeal on the part of some local sheikh. It would be naive to suppose that such a widespread pattern of conduct could be sustained without the approval and participation of government agencies.

Occasionally, the mask has slipped. Recent newspaper accounts indicate that Arab diplomatic officers in this country have admitted government sponsorship of the discriminatory boycott. The New York Mirror, December 29, 1955, reported the existence of a Saudi Arabian blacklist of Jewish firms and declared:

"At the Saudi Arabian Consulate in the Chrysler Building, a trade attaché admitted that American firms either owned or headed by Americans of the Jewish faith cannot do business with the Arab country."

Similarly, a report in the same newspaper on December 30, 1955, announced State Department disapproval of the exclusion of Jewish firms from this area of international trade and observed:

"An official of the Saudi Arabian consulate in New York declined to confirm the report, but said that Saudi Arabian firms would 'naturally be reluctant to deal' with American businesses owned by Jews."

(2) The Boycott Becomes Official

Moreover, evidence has come into the possession of the American Jewish Congress unmistakably establishing overt conduct, not on the part of private individuals, but by authorized representatives of the Saudi Arabian Government to promote, create, and maintain a boycott of American Jewish business firms. American Jewish exporters have separately filed affidavits with the American Jewish Congress declaring that the Saudi Arabian consulate in New York City has refused to legalize commercial invoices they have submitted for approval on the grounds that they are "undesirable" concerns. And each of them has attested that he cannot account for this classification except for the intensive questioning that he or his representatives have recently undergone by members of the consulate staff as to the fact of their Jewish ownership or as to their employment of Jewish personnel. Even the messengers employed by these firms merely to deliver and hand over papers have been interrogated about their religious affiliation. Under the existing custom of international trade the legalization of commercial invoices frequently is a prerequisite to the fulfillment of contractural obligations between American shippers and Arab purchasers. It will be noticed that in the letters quoted above demanding a certification of non-Jewish ownership, several Arab firms have referred to the fact that "according to Saudi Arabian Government regulations all invoices for the goods supplied must be legalized by the Saudi delegation of your side." A refusal by the Saudi Arabian Government, therefore, to validate these instruments precludes any possibility of maintaining commercial dealings by American Jewish exporters with their Arab customers.

None of the exporters affected by this ruling until this time had had any difficulty or disagreement with the Arab consulate in New York or with their Arab customers. Despite the generally understood disapproval by the Saudi Arabian Government of commercial transactions carried on by its nationals and foreign Jewish businesses, many of these exporters with the cooperation and help of Arab purchasers had been able to work out devices to avoid official intervention in their transactions. However, the boycott now imposed by Arab Government officials flatly precludes any possibility of negotiation or cooperation on the part of private individuals of either country to carry out contracts for trade. It is precisely because this ban is conducted under the auspices of the Arabian Governments themselves and not as a result of private individual decision that these American citizens are barred. It is no longer possible to attempt to evade this problem by lightly passing it off as a result of individual misreading of official regulations. This anti-Jewish discrimination stands clearly disclosed as the direct result of official governmental decision and decree.

Moreover, it is indisputable that our own Government by now must be aware that the current Saudi Arabian boycott of Jewish firms is, in fact, an official undertaking and an expression of anti-Semitic prejudice by the Saudi Arabian Government itself, and not merely a succession of sporadic, private acts. The following item appearing on page 7 of the Foreign Commerce Weekly of March 5, 1956, published in Washington by the United States Department of Commerce establishes that the Department of Commerce, if not the State Department, is fully apprised of the facts:

"Saudi Arabia intends to boycott all Jewish or Jewish-directed firms from trading with that country, according to information received by the Bureau of Foreign Commerce.

"This new policy greatly extends the provisions of the existing boycott against firms having branches, assembly plants, or general agents in Israel, as well as firms having shares in Israeli companies.

"Implementation of the new policy normally will be accomplished by Saudi Arabian Consulates, who are responsible for legalization of commercial invoices and certificates of origin."

Similarly, the Minutes of the Monthly Round Table Conference of the Foreign Credit Interchange Bureau of March 7, 1956, discloses that Mr. Milton Blecher, business analyst of the New York field office of the United States Department of Commerce was among the discussants at the conference and that the following comments on the Saudi Arabian boycott were made:

Chairman: Question. "Customers in Saudi Arabia have advised that a certificate is required by the Saudi Arabian authorities as to the Jewish or Christian status of the firm for which a letter of credit is to be opened. Such a certificate is to be verified or visaed by the Saudi Arabian Consul in New York. Lack of this certificate, or a certificate indicating that the supplier firm is Jewish would make it impossible to conclude the sale. It is not clear just what is meant by a Jewish firm nor can we comply with such a request without protesting the implication. Has there been any action by the Department of Commerce or by the FCIB to make the impertinence of this requirement known to the Saudi-Arabian authorities?"

Mr. Milton Blecher (U. S. Department of Commerce): "Saudi Arabia intends to boycott all Jewish or Jewish-directed firms from trading with that country, according to information received by the Bureau of Foreign Commerce, United States Department of Commerce.

"This new policy greatly extends the provisions of the existing boycott against firms having branches, assembly plants, or general agents in Israel, as well as firms having shares in Israeli companies.

"Implementation of the new policy normally will be accomplished by Saudi Arabian consulates, who are responsible for legalization of commercial invoices and certificates of origin."

Chairman: "I think Mr. Blecher in his comments also answered question No. 2."

Question: "Several stories have appeared recently in the press regarding a trading boycott by Saudi Arabia against certain American firms. Can you develop this further at the round table?"

Member: "One part of the discussion has not been clarified. Is this something being considered or are their firms now shipping to Saudi Arabia and having any difficulty?"

Panel Member: "I just heard of one case where the consulate in Beirut refused to clear the transshipment documents."

Member: "Within the last month we received a letter of credit from Saudi Arabia and there was absolutely no question."

Panel Member: "I thing there is a private clearance going on here by the consulate and they have certain information on certain firms on the strength of which they act."

Member: "We have made several shipments and all that has been required of us has been certificate of origin and that would be legalized by the Saudi Arabian consulate."

Member: "What would be considered a Jewish corporation?"

Chairman: "Can anybody answer that?"

Panel Member: "As far as I know if any member of the firm or part-owner of the firm is of the Jewish faith they will not allow the goods in."

The Department of Commerce is thus aware of the facts. Foreign credit men working in this country are aware of the facts. Virtually the only interested party not aware of the facts is our State Department.

In the one precedent in our history for this withholding of consular approval of commercial documents submitted by American Jewish firms, the then Acting Secretary of State, Alvey A. Adee, in 1895 found this practice to be an "unjust and invidious discrimination against American Jews":

"But the Russian discrimination against American Jews is not confined simply to the matter of visaing passports. This department was informed a few years since by the Russian Minister here that Russian consuls in this country would refuse authentication to legal documents for use in Russia when Jews are ascertained to be interested. This is an unjust and invidious discrimination against American Jews." (Foreign Relations, 1895, p. 1067.)

Acting Secretary Adee called for immediate cessation of these practices and the adoption of preventive measures by this country. It is to be expected that now that all pretense has been dropped and the actual involvement of government officials in the current anti-Jewish boycott is a matter of full public disclosure and information, our State Department officials will similarly be disposed to demand an immediate stop to this intolerable behavior by Arab diplomats in this country.

It is also significant that none of these exporters maintains any branches or transacts any business with the government of Israel or with any Israeli firms. The allegation that only firms with Israeli branches or connections are excluded from Arab trade is a transparent artifice employed by the Arab League to conceal its intention to boycott Jewish firms wherever situated, as is indicated in the remarks of Mr. Blecher of the United States Department of Commerce quoted earlier. It cannot be mere accident that so many individual Arab exporters should have felt constrained to interpret nominally anti-Israel regulations as, in fact, directed against any foreign Jewish enterprise. The merits of Arab hostility to Israel may be debated by other disinterested nations but this hostility cannot in any way be made to justify the current campaign of universal anti-Semitism.

It is worth noting that in some countries, notably Italy and Holland, commercial organizations and government authorities have denounced this Arab policy and have refused to cooperate with it. The Central Organization for Foreign Economic Relations at The Hague has recently advised the Netherlands branch of the International Chamber of Commerce that Dutch members should not supply information relating to the number of Jewish executives and employees employed in Dutch export houses as demanded by various Arab importers. It is also disclosed that: "The Belgian Foreign Ministry is reported to have told the Antwerp association that it is giving sympathetic consideration to the request for international action on the issue." (New York Herald Tribune, February 12, 1956.)

(3) The "Informal Approach" of the State Department

No less should be expected of our own Government. Previous State Department demurrers on the ground that the Arab States have the sovereign right to regulate their commerce and their mode of international dealing are not a sufficient reply to the deprivation of rights suffered by American citizens. The operative facts here do not run to any country's sovereignty but rather to our own country's policy of permitting an affront to a section of American citizenry to go unanswered.

Moreover, the State Department surely has a responsibility to reaffirm and continually press, through every possible international forum, its wholehearted opposition to this practice. As Senator LEHMAN wrote Secretary Dulles on January 25:

"Would you not agree that our Government has an obligation to its citizens, and its own ideals, to the let the government of Saudi Arabia know not only on one occasion but on repeated occasions that we view with utmost distaste this policy of anti-Semitic discrimination?"

It has been already noted that the State Department at one time felt that its intercession had successfully resulted in ending the then concededly official Arab boycott against American Jewish citizens. Recent events obviously disprove this claim. Part of the reason for our Government's notable lack of ability to bring this practice to a decisive end may be found in the hesitant and uncertain attitude of the State Department itself. It will be remembered from Mr. McFall's letter quoted earlier that the State Department was apprehensive about possible repercussions at least as much as it was agitated about the admitted fact of discrimination. Mr. McFall's language is suggestive of the State Department's thinking: "The delicacy of the problem in Saudi Arabia recommended an informal approach rather than official representations to that Government." And the State Department's notion of what needed to be done culminated in holding "frank but friendly discussions."

It is high time the State Department steeled itself to the realization that informal approaches and friendly discussions, however frank, are not enough to drive home the proposition that this Government will not stand for further religious discrimination against its citizens. The fact that the agreement not to boycott did not stick must be attributed to the willingness of our representatives to pussyfoot and equivocate and to act out of fear of loss of advantage rather than out of strength deriving from conviction. Further representations can and ought to be made, but they must be made in firm language and in a formal context that makes it plain that we do not intend to be bought off; that, in short, we are determined with all the vigor and influence we can bring to bear to protect all our citizens alike. It should be made plain that no treaty or trade agreement will be negotiated or maintained between the Arab countries and the United States unless it is expressly understood that all American citizens shall have full and equal right to participate in the trade thus made possible, without regard to religious affiliation. The prestige and influence of the United States is not so inconsiderable that the Arab countries could easily remain recalcitrant and unyielding in the face of a clear and determined expression of policy by this country.

IV. ARAB ANTI-JEWISH PROPAGANDA ACTIVITIES IN THE UNITED STATES

Perhaps the most vicious offense committed by Arab Governments against Jewish citizens in the United States is their deliberate formenting of domestic anti-Semitism in this country and their collaboration with and sponsorship of elements in the American hate movement.

A. The Arab information center

Prior to the end of World War II, there were virtually no Arab propaganda activities at all in the United States. In November 1944, for the first time an office was established in New York under the name of the Institute of Arab-American Affairs to disseminate material about each of the Arab countries separately as well as about the group of Arab countries united in the Arab League. Though its declared purpose was to "seek to implement its policy as a medium of good will between the United States and Arab countries," most of its activities were concerned with the fight against the establishment of a Jewish national home in Palestine and by 1947 the Institute of Arab-American Affairs was dealing exclusively with the Palestine question.

The main organ of propaganda for the Arabs in the United States is the Arab Information Center recently reactivated in New York City at 445 Park Ave., where it shares quarters with the U. N. delegation of the Kingdom of Yemen. The Information Center is currently headed by Kamil Abdul Rahim, a veteran diplomat who served from 1948 to 1953 as Egyptian ambassador to Washington and is now an accrediated member with the rank of Ambassador, of the Yemen delegation to the U. N. As U. N. ambassador, Rahim enjoys diplomatic immunity not only for his own person but also for the premises he occupies, which just happen to be coterminous with those of the Arab Information Center. The Center itself, however, is registered under the Foreign Agents Registration Act. The Center has recently been granted a special fund of $300,000 to expand its activities against Israel and Zionism. Egypt underwrote the major portion of this expenditure with an allocation of $140,000; the Arab League allotted $90,000 and Saudi Arabia $70,000. Besides this, the Center has been given a regular budget of $400,000. Thus, it has a total of $700,000 to spend in the coming year's operations.

B. Collaboration with American hatemongers

In carrying out its anti-Jewish campaign, the Arab Information Center has determined upon a course of intimate cooperation with professional anti-Semites in this country.

A policy statement sent by Rahim on October 25, 1954, from Cairo before his departure for the United States to head the Center, to Dr. Omar Haliq, Arab League representative in New York (Jewish Telegraphic Agency dispatch of March 17, 1955) declared that the Center henceforth would welcome the cooperation and assistance of professional anti-Semites "in all fields and ways." Rahim emphasized that such activities were to be handled discreetly so as not to exposed the Center to charges of anti-Semitism or compromise its character as "a cultural exchange." Rahim indicated that he intended to deal with this facet of the Center's activities personally.

It is further reported that at about this same time Dr. Haliq sounded out for possible Arab collaboration such figures as Gerald L. K. Smith, who runs the Christian Nationalist Party; Joseph P. Kamp, head of the Constitutional Educational League; Allen Zoll, whose American Patriots, Inc., was listed as "fascist" by the Justice Department; and Benjamin H. Freedman, confessed financier of anti-Jewish publications.

More recently open cooperation between Arab diplomats and American hate groups has become even more bold and unabashed. At a meeting last June of the American Nationalist Coalition, a front group for James H. Madole's National Renaissance Party, cited by the House Committee on Un-American Activities as an avowedly Hitlerite group, Abdul M. Hassan, a member of the Egyptian delegation to the United Nations was a featured and inflammatory speaker. A table at the rear of the meeting room, attended by a uniformed American Nationalist Coalition youth member, offered for free distribution such pamphlets as Egypt's Agrarian Policy Under the New Regime by Dr. Abd-El-Razzok Sidky and the Story of Zionist Espionage in Egypt. According to Madole, the pamphlets were provided free by the Egyptian Embassy and proved the anti-Israel and anti-Jewish charges made in Has-

san's remarks. Hassan inevitably later declared that his appearance at the meeting did not necessarily constitute endorsement of the coalition's entire program. (National Jewish Post, June 10, 1955.)

C. Distribution of anti-Semitic literature

The increasingly voluminous literature published directly by Arab official propaganda agencies bears a comparable stamp of anti-Jewishness although, significantly, it does not usually bear any imprint identifying its source. Most of the anti-Jewish items now being freely distributed across the country, often elaborately and handsomely printed, are published by the embassies of the Arab States and distributed by the Arab Information Center.

Generally, Arab officials obey the advice given them by American consultants to avoid heavy-handed anti-Jewish themes in their propaganda. On the other hand, the Arabs understand that the terms "Zionist" and "Jew" are so closely identified in the United States by the general public that the theme of anti-Zionism can be handled adroitly to produce anti-Jewish implications, thus the continually repeated refrain concerning "the influence of the American Zionists in Washington."

Occasionally, however, the Arab line is directed into an unmistakable excursion into overt anti-Jewish incitement. This is especially true in two pamphlets now widely in circulation, "Story of Zionist Espionage in Egypt" and "Jewish Atrocities in the Holy Land." Both documents originally were issued by the Egyptian Embassy and were sent without any indication of their source or sponsorship to a large mailing list. They are also distributed by the Arab Information Center. These pamphlets clearly seek not only to inspire antipathy toward Israel but, in addition, to invoke a feeling of anti-Jewish prejudice and bias generally. And as a matter of fact, domestic anti-Semites in the United States already have distributed and exploited these documents for their own purposes. Thus, "The Story of Zionist Espionage in Egypt" is now being circulated by Madole's National Renaissance Party, an openly Hitlerite group, and "Jewish Atrocities in the Holy Land," published 6 years ago, has been circulated and distributed, and its contents otherwise exploited, by such worthies as Conde McGinley, Gerald L. K. Smith, and Frank L. Britton.

The "Story of Zionist Espionage in Egypt" is openly anti-Jewish as well as anti-Israel. A detailed narration of an alleged spy plot is prefaced with the statement that the Israelis * * * "recruit hundreds of agents, financed through the international system of begging which Israel has invented and brought to an art, and disperse them throughout the Arab world to commit acts of sabotage, destroying the lives of the innocent."

After 40 pages on this subject, the pamphlet then devotes about 15 pages to alleged desecration of Moslem and Christian holy places by "the Zionists" and "the Jewish forces," narrations of the assassinations of Lord Moyne and Count Bernadotte, and finally—after this lengthy warmup of spying, bombing, atrocity, desecration, and assassination—a 1-page dissertation on "Zionism and communism," which begins:

"Zionism and communism are 2 distinctive forces with 1 political objective—world domination. Both powers cooperate secretly and in public without friction since the power in the end will eventually go to Zionism.

"They will not achieve supremacy until they destroy the Islamic and Christian countries all over the world. Therefore communism helps Zionism and each in its own way completes the other; only thus will they reach their aim—Zionist world supremacy."

"Jewish Atrocities in the Holy Land" exploits the excesses committed by unauthorized terrorists at the height of the Arab-Israeli conflict; the excesses are attributed to the Jews as Jews. Scattered throughout the pamphlet are photographs of the more revolting kind, including some which show dead victims in various states of decomposition.

The following excerpts are illustrative of the themes in the text of this pamphlet:

"Now we have once more to hear the horrible tale of sadistic cruelties and wanton brutalities perpetrated against an innocent population, mainly composed of women, children and old men. But this time the aggressors are those very Jews who were lately so loud in their outcry against the Nazis. * * *

"When reading of these atrocious acts, one unconsciously thinks of their perpetrators as being untaught savages, or barbarians of the remote past. Yet these same Jews have for centuries, by virtue of their money-amassing activities, gathered to themselves the cream of culture and refinement of whatever country they have settled in. The wealthy, educated Jew, surrounded by all the culture and art that his riches can command has been a long familiar figure in civilized society."

An even more outrageous document, published by the World Truth League of P. O. B. 44, Jerusalem, Jordan-Arab side, is distributed widely in the United States through embassy offices of the Arab delegations to the U. N. as well as by the Arab Information Center. The sheet, composed in a sensational format, contains touched-up photographs of alleged Israeli massacres of Arab children, old men, and women. It quotes liberally from the "Protocols of the Learned Elders of Zion" to the effect that the Jews believe "the Gentiles are a flock of sheep and we are the wolves and you know what happens when the wolves get hold of the flock." This Jordanian leaflet maintains that Jews, not Israelis, are the unconscionable exploiters of the Gentile world and "they have very well proved it once again by their recent Judaic barbarities against innocent Arab shepherds." It declares that "the basic material in all Jewish propaganda is composed of lies and distortion of facts as is known by now all over the world."

Another column contains citations from books and documents written by Jews of various nationalities around the world, purporting to illustrate the Jewish incendiary revolutionary spirit. Among the persons slandered are Theodore Herzl, Louis Dembitz Brandeis, Harold Laski, and Bernard Baruch. The paper also discloses that: "Benjamin Cohen, a Jew from Chile, is just under Trygve Lie, the U. N. Secretary General and his job is to see that Lie follows the Jew plan." * * * "The United States representative at the U. N. is the Jew, Ernest A. Gross." "Dr. Leo Paslovsky 'Special U. S. Assistant Secretary of State,' a Russian born Jew, naturalized American citizen, is the man who drew the United Nations Charter, with the assistance of Alger Hiss, the traitor, who was then in the State Department." "The United States is hopelessly run by Jews and the U. N. is the den of Jewish spies."

It is apparent that crude and vicious canards of this kind are not intended to be limited merely to incitement of hostility against Israel. They are designed for the larger purpose of promoting hatred toward Jews of every national allegiance throughout the world.

D. Defamation by Arab diplomats

The most astounding and arrogant conduct of all, however, is the persistent abuse by Arab diplomats of the hospitality granted them by the United States. In addition to the spurious political arguments used by Arab diplomatic representatives to press their cause, they have now added an almost open appeal to prejudice, suspicion and race hate. Recourse to anti-Semitism is nothing new in the history of calumny of the Jewish people but it never before has been attempted in America by foreign diplomats as part of a calculated design.

One of the first reported cases of an attack by Arab spokesmen on American Jews before their fellow citizens occurred in February 1953 during a conference on Middle Eastern affairs sponsored by the Foreign Service Educational Foundation in Washington, for the benefit of corporations from all over the country. During the conference, a State Department official read an address by Mr. Bakr, then Iraqui chargé d'affaires in Washington and now his country's foreign secretary, in which Bakr used the then recent "doctor's plot" of Moscow to show that Jews could really not be trusted anywhere and that they are part of an international conspiracy, whether they are Russian citizens, Americans or citizens of any other country.

(1) Ambassador Zeineddin's Anti-Jewish Campaign

Dr. Zeineddin, Bakr's Syrian colleague, tried out this theme a month later in an address at the University of Vermont and then later in a full-fledged attack on April 15, 1953, at the Seventh Session of the United Nations in New York.

In his address, the Syrian ambassador stated:

"The steps taken by the Soviet Union were met with deep satisfaction and appreciation in my country and the public opinion of other Middle Eastern countries * * * Zionism uses the Jewish religion for its political purposes * * * Jews who become Zionists act as a separate closely knit group within their nation. They serve their own Zionist interest. Their allegiance is therefore not to their legal country. Their allegiance to their legal country is formal and not real. Their real allegiance would be to Zionism and Israel, i. e., to a foreign authority. An American, an Argentinian, a Russian or a Syrian Zionist are all one in furthering the aims of Zionism in Israel, be it to the detriment of the interests of their legal country. This, naturally, creates mistrust, suspicion and apprehension between Zionist Jews and non-Jews. Thus Zionism breeds and enhances the growth of anti-Semitism. In fact everywhere that Zionism grew, it brought anti-Semitism in its wake."

After piously insisting that he is not anti-Semitic ("How can we Arabs be anti-Semitic? Are we not Semites ourselves?"), Dr. Zeineddin repeated the familiar calumny of the "internationalist Zionist conspiracy" in the following remarks:

"Zionists today are organized all over the world * * * they join political parties ranging from diehard conservatism to communism, but as Zionists they work toward one end * * * Zionism works in a way which constantly adversely affects world peace and the security of other states by inciting the Jews to feel that they are exiles in their various homelands and by developing in them a conviction that they are an entity of their own in any country. It breaches, with one stroke, the national unity in their country on the basis of religion, thus diminishing national harmony."

These remarks have formed a consistent pattern. Thus, Zeineddin has declared over a radio program broadcast over the NBC network:

"As you may know, Zionism is based upon a distinction as to race and religion between the Jew and the Gentile. They (Zionists) attempt to have the Jews consider themselves as exiles in other countries * * * and there you have the idea of the diaspora * * * and that they should be assembled in Palestine. A Zionist, therefore, gets to be loyal to Israel and gets to be loyal to the Zionist movement if he is really a Zionist. His loyalty to Zionism undoubtedly may diminish

his loyalty to the country in which he lives, and therefore Zionism brings some shade of doubt as to the loyalty of Jews in other countries of whom many might be loyal."

Similarly in a television broadcast some time later, carried over the Dumont network on November 2, 1953, he stated further:

"When an individual becomes a Zionist he acquires a double loyalty, his allegiance is divided. If he is a strong Zionist, his allegiance will certainly go to Israel, even against his very own country, be it the United State, or Syria, or any other country. He is then legally an American, but in fact his allegiance is due to some other principle, that of Zionism, or to some other country such as Israel."

Far from abating, Dr. Zeineddin's incitement of domestic anti-Semitism has became an increasingly intense preoccupation. In a speech delivered before the Women's National Democratic Club in Washington in November 1955 he brazenly impugned the loyalty of American Jews to their own country. Zeineddin charged that "Zionist pressures" on the United States Government and Zionist propaganda had distorted and perverted Arab and American relations. He characterized Jews throughout the world as "mongrellized Russians" who cannot ever claim to be an integral part of a country in which they reside, that they consider themselves different, that they refuse to assimilate and owe their allegiance solely to international Zionism. He wound up his speech by declaring that if there is such a large and urgent sentiment in this country for a creation of a Jewish state "then the only fit place for them is New York City" (New York Post, November 16, 1955).

On November 17, 1955, in a lengthy meeting with George V. Allen, Assistant Secretary of State for Near Eastern Affairs, Zeineddin boasts of having said that: "Zionism seeks with some success to make of the United States and in the United States a center for its worldwide activity which is inimical to other states and which is morally unfounded." Zeineddin reportedly urged that the United States "find it fit to look into this matter in view of its international implications." He stressed that the Arabs were especially anxious to see the United States Government look into tax exemptions by Jewish charity contributors. He claimed such deductions really supported "a foreign political movement." (Jewish Telegraph Agency, November 18, 1955.)

A similar refrain has recently been picked up by the diplomatic representatives of other Arab countries. In an address to the Economic Club of Detroit on October 31, 1955, Dr. Mohammed Fadhil Al-Jamali, Foreign Minister of Iraq and head of its U. N. delegation, described the situation "created by a United States policy which has been inspired mainly by Zionist propaganda and pressure."

"They (the Arabs) feel that American policy cannot easily relieve itself from Zionist pressure and Zionist manipulation of the Jewish vote. Next year is an election year. Could the peoples of the United States who have peace and American interests at heart see to it that Zionist propaganda becomes ineffective in the election campaign? It is most important for United States interests in the Middle East that United States policy should not be influenced by Zionist pressure."

The canards currently being circulated by Arab diplomats have not gone unnoticed and they have not been condemned only within the Jewish community. The leaders of five prominent non-Jewish nationality groups in America, including the president of the Czechoslovak National Council of America, the director of the American Hungarian Federation, the chairman of the National Antidefamation Committee of the Order of the Sons of Italy in the United States, the director of the American Lithuanian Information Center, the executive secretary of the Ukrainian Congress Committee, and the editor of the leading Polish language newspaper in the United States, recently protested to Secretary of State Dulles against Zeineddin's libels. They wrote, "To us, the substance of the Ambassador's remarks in many ways was virtually indistinguishable from Nazi racial theories which, within all our memories have brought about such ruin and loss to the world." (J. T. A. November 22, 1955.)

(2) Recruiting Arab Student Propagandists

The anti-Semitic activities of the Arab diplomats have been supplemented by the more informal if no less intense propaganda efforts of Arab students now studying in the United States. Cairo radio broadcasts monitored in the United States report that the more than 2,000 Arab students in this country have been directed by the Arab League to assume an active role in the promotion of anti-Israel and anti-Jewish propaganda in this country. According to these broadcosts, Arab students have been supplied with anti-Zionist literature and have been instructed to deliver anti-Zionist lectures not only on campus but in the general communities outside the universities in which they study, and they have been directed to exert themselves to stimulate pro-Arab and anti-Jewish articles in the American press. The indefatigable efforts of the Arab League to exploit every possible resource to incite anti-Jewish feeling in this country is evidenced in the following item in the January 1956 Newsletter of the Arab Students Association at Columbia University:

"Arab students abroad to defend Arabism. The secretariat-general of the Arab League requested member states to furnish the League with the names of its nationals studying abroad. The secretariat intends to provide these students, wherever they may be, with information which will help them defend Arab interests."

The same Columbia University Newsletter includes samples of the materials to be used as "factual information" by Arab students invited to college forums and other public meetings. A characteristic example is the following "item" attributed by the Newsletter to the Egyptian weekly Al Musawwar:

"We Egyptians do not face a small country called Israel, but a well organized international movement called Zionism. This movement exerts tremendous pressure on the Governments of the United States, France, England and other western countries.

"Some western and eastern bloc countries supplied Israel with arms during the 1947 conflict. Certain army generals, fliers and soldiers who fought for Israel were not Jews; identification cards of prisoners taken during that war testify to that.

"Israel was established upon the bodies of Palestine's rightful inhabitants, through funds obtained from the pockets of American, British and French Zionists."

The Arab League is careful not to miss a trick. It does not scruple at abusing the special status enjoyed in this country by diplomats and visiting students, and its does not hesitate to attempt to convert each of its nationals in the United Sates into an instrument for the promotion of anti-Israel and anti-Jewish doctrine in this country. That such conduct is improper, that it violates the hospitality extended by the host state, that it is offensive to the beliefs and traditions of the people of the United States is apparently a matter of no concern.

V. RECOMMENDATIONS

While we recognize that the Government of the United States from time to time has expressed its passing disapproval of Arab anti-Jewish discrimination against American citizens, we submit that far more vigorous action is called for than until now has been forthcoming. American Jews have the right to expect their Government to protect their dignity and good name and their right to travel or engage in commerce abroad on an equal footing with their fellow citizens of other faiths. The effect of present Arab policy is not only to deny equal treatment to American citizens in Arab territories but to extend antisemitism into new and unexpected places here. The time is overdue for official American spokesmen to meet infringements by foreign states upon the rights of American citizens with decisions, firmness, and a determination to protect American rights.

The argument that a firm protection of the rights of our Jewish citizens must be damaging to our economic interests is false and misleading. Arab leaders are, if anything, practical men. And Arab economic relations are based not upon sentiment but upon interest. Any concessions that may now be enjoyed by the United States in Arab lands do not derive from any innate liking that Arab leaders have for this country or from their natural sympathy for our democratic objectives. These benefits result more simply from the enormous consideration that the United States is able to pay in return. It is incredible that this immense American revenue, absolutely vital to the support of the Arab economy, will be refused because of our insistence upon equal treatment for all our citizens. Sovereign decisions on economic and political matters are not made to turn solely upon such factors.

American spokesmen appear sometimes to misunderstand our role. Our relations with the Arab States are not those in which we entreat their favor. We come with gifts in our hands amounting to hundreds of millions of dollars a year, and Arab statesmen perceive this truth, perhaps more clearly and accurately than our own. If the Arab Governments have felt during the past decade that they could ignore the protests of American Ministers and Secretaries of State, it is because, and only because, they felt American protests were half-hearted and unwilling and because they were convinced that this Government spoke only for some special interests or for some special point of view. The intolerable abuse of American citizens by Arab States will be corrected just as quickly as they become convinced that for this country it is indeed intolerable.

The action necessary by the United States to convince the Arab Governments of our determination and resolve to protect the rights of all our citizens equally can readily be prescribed. It would quickly be achieved by adoption of the following measures:

1. No treaty or trade agreement should be negotiated between the Arab countries and the United States unless it is stipulated that all American citizens shall have full and equal right to participate in the trade thus made possible, without regard to religious affiliation.

2. No contract should be negotiated with the Arab states by any agency of the United States whether it be for defense, security, or for any other reason, that allows or requires American Jews to be excluded from employment pursuant to its terms. It shall be made a part of each American-Arab agreement that there shall be no religious discrimination as a result of these joint undertakings against any American citizens.

3. Existing American subsidies including those granted under the International Wheat Trade Agreement should be discontinued for trade in Arab countries unless it is explicitly understood that American Jews shall be permitted full participation without prejudice because of their religious beliefs.

4. No agency of this Government, military or diplomatic, should be permitted to consider religious affiliation in selecting personnel for assignment to Arab countries.

5. No discriminatory hiring practices should be condoned or excused because of the possible exclusion of Jews from Arab

lands by Arab refusal to issue necessary visas.

6. The United States should prohibit immigration whether temporary or permanent, whether for turists or for permanent residents, from any Arab state which bars entry to any American citizen because of his religious beliefs.

7. Any member of a diplomatic mission to this country who indulges in public anti-Jewish activities aimed directly or indirectly against American Jewish citizens or the American Jewish community generally should be declared persona non grata by our Government.

8. Any member of a diplomatic mission to this country who refuses to process commercial or legal documents because they are offered by Jewish business firms or who make inquiries into the religious affiliation of persons who come before him in his official capacity should be declared persona non grata.

9. Any person present in the United States on a student visa who engages in public anti-Jewish activities aimed at American citizens should have his student visa terminated, since even the most permissive view of academic freedom cannot justify the promotion of race hatred.

10. The United States delegation to the United Nations should assume the initiative in demanding U. N. inquiry into practices of Arab States that are violative of the common pledge of all U. N. member states to promote universal respect for human rights.

Each of the nine other measures may be initiated by unilateral action of the United States. The anti-Jewish efforts of Arab countries, however, have spilled over every national border and while the general refusal of the civilized world to give way to Arab prejudice is gratifying the fact that no concerted effort has been made to meet it decisively must be regarded as a serious shortcoming. The time has come for an international effort to put an end to a policy which is damaging to international trade and causes loss and grave inconveniences to people of many nationalities. Under article 55 of the charter, the United Nations undertakes to promote "universal respect for and observance of human rights and fundamental freedoms for all without distinction as to race, sex, language or religion" and under article 56, "all members pledge themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in article 55." These texts are susceptible to many and varying interpretations but to seek to reconcile them with a new and deliberate policy of discrimination on an international scale is to denude words of their meaning. The action of Saudi Arabia in instituting discriminatory commercial practices against groups of citizens distinguishable only by their religion in countries with which it enjoys normal diplomatic relations is manifestly irreconcilable with the principles and purposes of the United Nations as embodied in the preamble to the charter and in articles 55 and 56.

Whatever may be thought about the right of a government to practice or tolerate discrimination against its own nationals, the practice of discrimination against the citizens of other states is clearly not compatible with an undertaking to promote "universal respect" for human rights, to say nothing of the comity of nations. If this precedent is allowed to stand without challenge, and is imitated elsewhere, the international community would be exposed to a new and serious menace. The national economy of every country would be opened to the operation of officially sponsored influences dangerous to its welfare and hostile to its traditions.

CONCLUSION

Decisive action by the United States will clear the air. We may confidently expect that Arab governments will desist in their discriminatory practices once our position is indicated by unequivocal action. The arithmetic of advantage is plain. Arab leaders could not repudiate American support without the prospect of certain financial loss. Our serious insistence upon an end to discrimination would doubtless persuade Arab spokesmen acting out of an enlightened self-interest to discontinue their anti-Semitic conduct. In any event, this is a risk we are fated to run. No honorable alternative exists. We respectfully disagree with Secretary Dulles that Arab affronts to American citizens must be suffered peaceably so that our nations may get along together in a way that is to our mutual advantage. There can be no mutual advantage when one of the terms of the bargain requires that we condone and ratify religious bigotry. We believe, as President Wilson believed, in a comparable situation, there comes a time—and that time is now—when we must finally say the price is too great.

Survey by New England Leaders on Major Congressional Issues

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the result of a survey made of New England leaders on major congressional issues. This report was made to the members of the New England congressional delegation dinner on May 1, 1956, in Washington, D. C., given by the New England Council.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HOW NEW ENGLANDERS STAND ON SELECTED MAJOR ISSUES BEFORE CONGRESS IN 1956—A REPORT TO THE NEW ENGLAND CONGRESSIONAL DELEGATION BY THE NEW ENGLAND COUNCIL FOR ECONOMIC DEVELOPMENT AND THE NEW ENGLAND ASSOCIATION OF COMMERCIAL EXECUTIVES

The tabulation below shows how New England business leaders stand on some of the major congressional issues of 1956.

The questions asked in the quiz were submitted by New England Members of Congress and relayed by the New England Council and the New England Association of Commercial Executives to the region's business community.

We believe you will find this record both interesting and helpful.

THE ISSUE AND THE VOTE

1. Disaster insurance: Do you favor the enactment of a Federal program offering insurance against the risk of natural disaster? Yes, 963; no, 656; yes, with reservations, 739.

2. Debt: Do you favor Federal debt reduction prior to Federal tax reduction? Yes, 1,734; no, 360; yes, with reservations, 201.

3. Foreign aid: Do you favor greater expenditures to step up foreign aid in the face of recently increased economic competition from the Soviet Union? Yes, 626; no, 1,023; yes, with reservations, 674.

4. Highways: Do you favor a Federal pay-as-you-go highway program? Yes, 1,788; no, 310; yes, with reservations, 262.

5. Education: Do you favor Federal aid for school construction? Yes, 853; no, 1,017; yes, with reservations, 437.

6. Import quotas: Do you favor protecting investment and employment in New England textiles from low-wage foreign competition, principally from Japan, through the establishment of import quotas? Yes, 1,343; no, 511; yes, with reservations, 485.

THE NEW ENGLAND COUNCIL FOR ECONOMIC DEVELOPMENT

President: Raymond H. Trott, president, Rhode Island Hospital Trust Co., Providence. Executive vice president: Walter Raleigh, the New England Council, Boston. Vice presidents: Frederic W. Howe, Jr., president, Crompton & Knowles Corp., Worcester, Mass.; L. Douglas Meredith, executive vice president and chairman, Committee on Finance, National Life Insurance Co., Montpelier, Vt.; Herman W. Steinkraus, president and chairman of the board, Bridgeport Brass Co., Bridgeport, Conn. Treasurer: B. Morton Jennings, Jr., vice president, First National Bank of Boston, Boston. Secretary: Harry E. Umphrey, president, Aroostook Potato Growers, Inc., Presque Isle, Maine. Chairman of the Board: Hon. Hugh Gregg, president, Gregg & Son, Inc., Nashua, N. H. Chairman of the Senior Council: Curtis M. Hutchins, chairman of the board and president, Bangor & Aroostook Railroad Co., Bangor, Maine.

THE NEW ENGLAND ASSOCIATION OF COMMERCIAL EXECUTIVES

President: George E. Underwood, executive secretary, Bristol Chamber of Commerce, Bristol, Conn. Vice President: Harry L. Gustafson, executive vice president, Worcester Chamber of Commerce, Worcester, Mass. Secretary-Treasury: Sherwood H. Prothero, executive secretary, Chamber of Commerce of Norwalk, Inc., Norwalk, Conn.

Adolph and Joseph Sabath

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. O'HARA of Illinois. Mr. Speaker, Judge Joseph Sabath, brother of our own late beloved Adolph Sabath, is dead in the city of Chicago. He served with distinction on the bench for many years. He was honest and just in all his relations in his personal life and in the performance of his judicial duties. In everything he was gentle and kindly. With other attorneys practicing in his court I shared a feeling for him of respect and of affection.

Just as Adolph served in the House a longer period than any other Member in the history of the Congress so did Joseph, his brother, serve longer continuously as a judge in the courts than any other jurist in the history of Chicago.

Adolph and Joseph Sabath for more than half a century were the close dear friends of my colleagues from Illinois, Congressmen THOMAS J. O'BRIEN and

JAMES BOWLER, and of me. We shall miss Joseph as since his passing 4 years ago we have missed Adolph.

Judge Sabath's son Al was the owner of Alsab, who won the Preakness and narrowly missed in the Kentucky Derby. Al's untimely death some years ago was a heavy blow to the father.

Mr. Speaker, I am extending my remarks to include an editorial from the Chicago Sun-Times of May 7, 1956, that I am sure my colleagues on both sides of the aisle will wish to read:

JUDGE JOSEPH SABATH

Joseph Sabath was one of two immigrant brothers who were destined to achieve unique honors and distinction in America, their adopted homeland.

Joseph and his older brother Adolph were born into one of the poorest families in Zabori, one of the poorest villages in poverty-striken Bohemia. Adolph was 15 when he came to America in 1881 and Joseph was the same age when he joined his brother in Chicago 4 years later.

By dint of hard work and even harder study, the two young men acquired law degrees, took a strong interest in Democratic politics and soon became political figures to be reckoned with.

Though Adolph was the first to serve in a judicial capacity—as a justice of the peace and police magistrate—it was Joseph who made a career of the judiciary.

When Joseph died last week, at the age of 86, he had been retired for 4 years. But he still retained an unbroken record of having served uninterruptedly on the municipal and superior court benches longer than any other man—42 years. Moreover, his long service as a divorce judge had won him national as well as local distinction for having reconciled some 10,000 of the 100,000 couples who had appeared in his court.

Adolph's death nearly 4 years ago, also at the age of 86, terminated the longest uninterrupted service of any Member of the United States House of Representatives. His record of 46 years, during which he became dean of the House and one of its most powerful figures, is still unbroken.

While Judge Sabath's death is widely mourned, as was his brother's, Chicago may well be proud that it opened its heart to these two young immigrants who were to contribute much, in return, to the well-being of the community and the Nation.

For Human Betterment

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. STENNIS. Mr. President, the Honorable Boyd Campbell, of Jackson, Miss., retiring president of the Chamber of Commerce of the United States, delivered a splendid keynote address entitled "For Human Betterment," at the 44th annual meeting in Washington, D. C., on April 30, 1956.

Boyd Campbell is to be congratulated for the fine service he has rendered to the Nation and the lifelong credit that he has brought to our State of Mississippi. His every action has brought credit to the Chamber of Commerce of the United States; his very constructive outlook for progress goes far beyond our times. To know him as I have is to appreciate him for the fine upstanding citizenz that he is, and I ask unanimous consent to have printed in the Appendix of the RECORD his keynote address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOR HUMAN BETTERMENT

(Keynote address by Boyd Campbell, president, Chamber of Commerce of the United States)

Three hundred and sixty-six days and 120,000 miles ago we were in this room together.

Since then, I have been across the length and breadth of our national landscape.

From Albany to Austin, from Poland Springs to Pasadena, and from Wichita to Williamsburg, I have met wonderful people, so many thousands of wonderful people.

It has been thrilling experience. No American could emerge from it without becoming a better American, or without acquiring a more perceptive knowledge of the real strength of our country and of the character, the spirit, and the purpose of our people.

As never before, I have realized the deep reservoir of good will which attaches to the chamber of commerce of the United States—this great federation of chambers of commerce and trade associations, with its underlying membership of more than 1,700,000 businessmen and women.

If you had shared the salt—as I have shared the salt—with those who implement the national chamber's purposes and vitalize its policies—you would have gained—as I have gained—a new respect for the validity of our purposes and the integrity of our policies.

To you and to a great host of others like you, I express the sincere thanks and the most cordial appreciation of the board of directors, the officers, and the staff—and for myself—the gratitude of my heart for your beautiful courtesies and your boundless cooperation.

In 124 communities, I have visited with you and talked to you—singly and in groups.

More importantly, you have talked to me. You have talked about the current issues and public questions that affect the well-being of our beloved country.

By you, I mean Mr. and Mrs. Average American—Godfearing, homeloving, taxpaying, community builders.

Wherever I have met you, north or south, east or west, there was a striking similarity in your thinking.

You spoke the same language. The accents may have varied, but the meaning did not.

Because your words were far more eloquent, and because your thoughts were far more significant than any that I could possibly assemble, I shall tell you what you said.

And so, I appear today as a reporter.

First of all, you talked about business—as it was, and as you thought, or hoped, it would be.

Last summer and fall, you looked forward to the turn of the year in anticipation that 1955 by—national standards—would prove to be our finest business year—and it was.

In planning for 1956, you were hopeful and confident. Now, here we are, with one-third of the year behind us, and most of our economic forecasters believe that 1956—on balance—will be a better year than 1955.

You frequently raised the question about the continuance of good business.

You recognized your own responsibilities for a stable and expanding economy, and you were making plans accordingly. You also recognized that higher levels of business would depend, in large degree, on wise tax policies and sound fiscal policies of government.

While you did not spell it out in so many words, I am convinced that you share my opinion that our high level of prosperity is an almost perfect tribute to the workings of a free economy.

Furthermore, I think you will agree that there was never a more appropriate time to appraise the quality and scope of our economic stewardship.

This appraisal should be a continuing process, and I firmly believe it is becoming so—not only to the advancement of our dynamic system of enterprise, but also to the betterment of all mankind.

You were concerned—and very genuinely so—about the plight of your friends, the farmers, your fellow business men in agriculture. You were troubled because agriculture was not sharing in the prevailing prosperity.

You felt that the farm problem had been vastly complicated because politics had become so interwoven with it.

If I am reporting your opinions correctly, you are convinced that the problem may get worse before it gets better.

You know, however, that the economic softness of agriculture cannot continue indefinitely without becoming a hazard to our national welfare.

You have not claimed to know all the answers, but this you do know: Any real answer to the farm problem must be based upon economic principles rather than political considerations.

There exists among the men of agriculture a tremendous fund of good sense, good judgment, good will, patriotism, and economic understanding.

When we add these priceless qualities to a high faith in the long-range future of farming, there will emerge a real solution to the farm problem—if—and this is a big if—political eager beavers will take a vacation.

Then—taxes. Everywhere I went, you talked about taxes.

What did you say about taxes?

Surely you would not expect me to quote your exact language in this company.

In essence, however, you said: "Taxes are too high."

Maybe you've always said taxes were too high. I've never heard you say taxes were too low—or even just right.

A system of taxation that puts a premium on tax angles rather than upon good management, undermines your confidence in its equity, and without equity, no system of taxation is tolerable or enforceable.

I could drop the subject of taxes right there, but I would be closing on a negative note. The fact is that your thinking leaned very definitely toward the positive.

You were worried not only about the tax burden itself, but about what our tax structure does to initiative, to venture capital, and to opportunity.

And that means that you are for a system of taxation that inspires initiative, magnetizes venture capital and broadens opportunity.

You are thinking about tomorrow, and what it holds for young people. There is nothing negative about that.

You expressed strong opinions about Government in business. First, last, and always, you are against the competition of Government in economic areas where private capital is able and anxious to do the job.

Instead of amplifying your opinions, however, I shall condense them into one emphatic, unequivocal statement.

You said: "Let the Government get out of business."

Repeatedly, you brought up the topic of social security. You approved the principle,

but you were amazed at its complexity and alarmed at its implications.

Because the social-security program is full of heart appeal, it is also full of political allure. You recognized its attractions for the articulate and plausible—sometimes uninformed—and sometimes unprincipled office seekers who attempt to buy votes with your money by constantly raising the social-security ante.

Your deep concern was indicated by the number of times you posed the question: "How far can we go?"

Can we contain the program at its present levels and supplement it by private plans, or will we be led—insidiously but pleasantly—along a primrose path toward a security mirage until we reach the point of no return?

Is it conceivable that the great humanitarian concept of providing basic security for our senior citizens and for widows and orphans could become an economic albatross about the neck of our body politic?

Now this leads us directly to the recommendations of the Hoover Commission. What did you say about those recommendations?

Not enough. Not nearly enough.

True, ninety-nine and fourty-four one hundreths percent of you were for the recommendations of the Hoover Commission—which we usually call the Hoover report—just to simplify the reference.

While you were emphatic and hightly articulate on the subject of taxes, the same emphasis did not carry through on the Hoover report.

This is paradoxical because the adoption of the report would provide the tax relief which you so earnestly seek.

Likewise, it would accomplish your vigorous demand that the Federal Government remove itself from competition with private business.

Not only does the Hoover report provide the means of bringing these long-sought objectives into reality, it proposes the modernization of our National Government, which is a consummation devoutly to be wished.

This magnificent audit of government, produced by the best talent in America, after a prodigious amount of study, however highly respected, is not self-enacting.

To get its recommendtions translated into law will require the full force of your informed, united, and sustained effort. It will take leg work, head work, and heart work.

I do not share the opinion of those who feel that this is not the time to press this matter. It is too important to delay—under any consideration.

An now—the labor merger.

We are confronted with the accomplished fact of a union between the American Federation of Labor and the Congress of Industrial Organizations, comprising a membership of about 15 million.

In many groups, in many States, I have sat in on conversations in which you attempted to appraise the impact of the merger on industry—on politics—and on the publice weal.

If I have correctly gaged your thinking, you look upon the labor merger as a possible menace—and as a possible promise.

Labor's objectives, in many respects, run counter to our own. Labor tends to the idea of more government in our economic system—more concentration of power in Washington.

We have been working in exactly the opposite direction. We believe that one of freedom's greatest safeguards lies in the dispersal of authority, and we will never surrender that conviction.

Labor's vast power has been concentrated—and if I may interpolate a suggestion in at this point, I would recommend that while you are in your capital city, you have a look at the magnificent new buildings the unions have recently constructed—and those they are now constructing. There are some 15 in all.

Those buildings are solid evidence of labor's growing strength and of its entrenchment in Washington to present its views to Government under the constitutional right of petition.

You have expressed no quarrel with that. You only hope that as labor comes into a realization of its great size and strength, it will be as zealous in policing itself for the general well-being as it has been zealous in pressing its economic demands.

You believe that the American public's awareness of the potential danger in bigness—big government, big business or big labor—is a safeguard to the abuse of such power.

You have hailed the high-principled statements of Mr. George Meany—president of the AFL-CIO. He has said, with emphasis, that as labor grows bigger and bigger, that it must discharge its reponsibility to the community as a whole in a manner that will bring credit to the union movement.

Mr. Meany will have your great good wishes if he moves against the intolerable evils in the secondary boycott—that malignancy in the body of our economic-social system.

If Mr. Meany mobilizes his power and influence to clean up terrorism and racketeering in unprincipled unions, he will not only enhance the stature of American labor, he will perform a service of incalculable value to our country.

And then, you spun the globe.

You have been intrigued, amazed—and if I am not mistaken—somewhat amused at the fantastic Russian spectacle—the so-called New Look.

The ghost of Stalin has been haled before the court of his successors and charged with every crime in the book.

No one is easier to convict than a ghost, and so the present masters of the Kremlin, serving in the triple capacity of prosecutor, judge, and jury, have convicted "good old Joe." He is solely responsible, so they say, for the lies, deceit, duplicity, and murder, and all the other sins against society, upon which the Soviet regime was built.

Among the many grotesque contradictions in this situation is that the same old gang is ruling Russia, minus Stalin. It is the same old gang with a brand new look.

They are playing that new look for everything it is worth—and let's face it—they are getting away with it in too many corners of the world.

Day after day we are deluged with stories of the backslapping and baby-kissing tours of Russia's ruling clique. Synthetic good will is simply oozing from their pores.

But, as its present masters parade across the world behind their macks of benignity, you have not forgotten the real character of the Russian apparatus.

No, you have not been fooled. You have not been enticed by the song of the Russian Lorelei, because in that direction lies disaster.

There is nothing you would welcome more than a true change of heart in the rulers of the Kremlin, because deep down inside each of you is a love of peace, and the hope that it may eventually prevail throughout the world.

You cannot envision, however, such a change among the men who were part and parcel of the great Russian blood-lettings.

You are committed to the principle of St. John the Divine, that men should be judged by their works, and so you are in favor of keeping America's defense impregnable while we watch and wait for more convincing evidence of the Soviet's regeneration.

When Russia has reversed all the entries of double dealing:

When she has released the thousands of slave laborers and war prisoners who are being held in captivity in violation of law and human decency;

When she has freed her satellite nations and done everything possible to expiate her crimes against civilization;

When she has repudiated her diabolical purpose to rule the world;

Then perhaps it will be time to take her new look seriously.

How about your views on education?

There was never a time in our history when education was so important to our national vigor—to our very survival—as it is today. The ideological and physical conflicts which embroil the world will be resolved in the realm of the mind and spirit.

You know this. You have come into a new realization of the value of education, and you have a sense of compulsion to do something about it—just what, you are not too sure.

The towering problems of teacher shortages, of tremendous manpower demands, particularly in the fields of science and engineering, and always the problems of finance, do not lend themselves to easy solutions.

Always, in talking about education there arose the subject of Federal aid.

And what is your attitude about Federal aid?

You want no part of it, and you understand clearly why.

You understand that just as livestock lose weight on a long trip to market, so does your tax dollar lose weight on a round trip to Washington.

But that is not your main objection to Federal aid for education. Your objection goes much deeper than that.

You believe in the dispersal of power, particularly with respect to education. You know that if and when local and State authorities surrender their responsibilities for the support and control of our schools, freedom will have lost one of its mightiest citadels.

The Founding Fathers allocated only 17 powers to the Federal Government. The responsibility for education was not one of them. That responsibility was left to the individual States and the people. The architects of our Constitution believed in a government close to the people and in the philosophy of maximum self-determination.

You are familiar with the recent exhaustive studies of the Commission on Intergovernmental Relations in which it was found that not a single State in this Union was unable to finance its educational responsibilities.

The White House Conference confirmed this finding, although in the much-discussed report of the conference, this significant fact has not had the emphasis that it deserves.

If I might be permitted to add a footnote to my interpretation of your attitude toward Federal aid to education, it would be this:

The increasing demand for Federal aid has its genesis in the failure of the States to meet educational needs. It can well be that there has been too much emphasis on States' rights and not enough on States' responsibilities.

If the States do not proceed at once—now—to close the gap between what is and what ought to be in education, we will have Federal aid. Children cannot wait and the national welfare is involved.

Finally, the election year—the year in which a legion of candidates are advancing their personal and party claims to public office.

Among them, are those who seek election to the most powerful position in the world—the Presidency of the United States.

This leap year could be a stimulating and inspiring proposition, a reexamination of governmental practices, a reappraisal of political and economic policies and a reassessment of social accountability. In short—it could be a workshop on citizenship.

But, you say, that such is not the case. You seem to feel that our political campaigns

all to frequently take the form of a promising match.

You believe our democratic concepts would be reinforced if we had more leadership and less followship.

You want the kind of leadership that makes us think—instead of followship that tells us what it thinks we want to hear.

We have often wondered—you and I—just what would happen if a political Daniel should come to judgment. What would happen if this man, possessed of the God-given power to "make interpretations and dissolve doubts," should announce for public office?

Suppose that he should promise nothing but the equivalent of the Churchillian promise of blood, sweat and tears.

Would he be heeded—or hung in effegy?

Suppose he should be elected, and suppose that upon some momentous issue with tremendous public appeal, he should say—as did Senator Lamar of my own State—many years ago—"Today I must be true or false."

And then suppose that he took a position for integrity instead of expendiency.

Would he be returned—or retired?

You are looking for men like that in public office because—here in America—is the desire of the people to do justice, to love mercy and to walk humbly with God.

And now—I close the book on my report.

I conclude, as I began, by saying that no one could emerge from my experience of the past 12 months without becoming a better American.

Whenever I have been abroad, and the hour for returning finally arrives, my thoughts turn to these magnificant lines of Henry Van Dyke:

"Oh it's home again, and home again, America for me.
"I want a ship that's westward bound to plough the rolling sea
"To the blessed land of room enough beyound the ocean bars
"Where the air is full of sunlight and the flag is full of stars."

Here in America—the air is full of sunlight—and the flag is full of stars.

I have never been so proud to be an American.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio and TV broadcast by Glenn J. Tarbott, president of the North Dakota Farmers Union, in connection with the farm bill.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

SPECIAL BROADCAST OVER ENTIRE NORTH DAKOTA RADIO NETWORK BY GLENN J. TALBOTT, PRESIDENT, NORTH DAKOTA FARMERS UNION, MONDAY, APRIL 23, 1956

Good evening. Tonight I should like to direct my remarks to all the people of this State—not merely to farmers, but to the housewives, to the businessmen on Main Street and to the laboring people in our cities and towns.

The subject I want to discuss is the farm in general—and the President's veto of the farm bill in particular.

The farm problem is, I believe, greatly misunderstood by many people. Because it is misunderstood, it is ignored by too many people who apparently feel more comfortable, when they pretend it doesn't exist.

I suppose this is only natural because the farm problem is a tough and complicated problem.

Its solution lies, of necessity, in the field of legislation, and legislation is a political process. Hence, farm legislation is subjected to all the varying degrees of competenee and incompetence of our legislators, to the varying degrees of understanding or misunderstanding of our Congressmen. And should a good solution be found by Congress, the administration of it, is subjected to the varying degrees of competence and understanding of our national admiinstration. Therefore, since a sound solution of the farm problem rests finally with the people, a greater interest and a more real knowledge on the part of all citizens is imperative.

The problem has been ignored by many people because the very term "farm problem" implies that it is an isolated economic problem—of interest and concern only to farmers—and while many people sympathize with farmers when they are in distress, it is natural for nonfarm people to shrug their shoulders and say "Well, it is too bad—but what can we do about it? We have problems of our own."

And that is only too true. Surely the independent businessman on Main Street has his share of problems. And the laboring man does. And so does the housewife who faces the almost impossible task of stretching the paycheck to meet the rising cost of living.

But it is equally true—particularly in a State like ours—that the farm problem and what is or is not done about it—directly affects the economic welfare of everyone else.

Unless the decline in farm income is quickly reversed the current economic distress in agriculture will spread throughout our entire economy. Many businessmen have long since felt the pinch of steadily falling farm prices in terms of cancelled machinery orders, reduced business volume and a dangerously high volume of accounts receivable.

A lot of people ask me: "Why-is it that farmers always seem to be in trouble—particularly now when the rest of the economy seems so prosperous."

Well, the reason for farmers' persistent trouble is not too difficult to understand. Principally, the farm problem stems from the fact that in this highly complex and very delicately balanced economy, the farmer is the only businessman who is forced to buy everything at retail and sell everything he produces at wholesale. According to all normal commercial rules and practices he is forced to operate in reverse.

The farmer is the only businessman in the entire economy who is unable to determine his own price. He cannot—like the manufacturer—or the storekeeper—or the machinery dealer—figure up his operating costs, like taxes, depreciation, interest and a modest profit and then say—on the basis of these costs—"I must get so much for a bushel of wheat, so much for a pound of beef, or so much for a gallon of milk or cream."

The farmer—left to the mercy of the free market—has no idea what his prices will be in the fall, when he plants his crop in the spring. Yet his operating costs are determined by someone else and they remain the same whether he gets $3 a bushel for his wheat or only $1.50 a bushel.

No intelligent businessman in the world could successfully conduct his business on such a basis. Yet a farmer is very much a businessman. His capital investment is high—and his operating costs—like any other businessman's—must be paid out of income. So, because the farmer is forced to calculate his costs of operation at retail prices and at the same time accept prices for his commodities determined by a so-called "free market" process, which is wholly unrelated to his costs, he is constantly in economic trouble.

Yet, because the production of food and fiber is the most vital public-interest business in the Nation, it is necessary that the public first understand the farm problem; and, secondly, helps to provide the legislative and administrative devices which, in some measures, at least, will fill the economic vacuum in which farmers by the very nature of their business must operate. Many economists call this problem: "Agriculture's adverse terms of trade with the rest of the business community."

Before 1930, no real attempt had ever been made to provide the corrective measures necessary to maintain agriculture on an equal level with the rest of the economy. As a result, we had a very deep and disastrous farm depression which ultimately resulted in a nationwide depression during which there were 15 million unemployed—hundreds of banks went busted—thousands of businessmen went bankrupt and hundreds of thousands of farm families were bankrupt and forced out of agriculture. We ought not permit that to happen again. Yet it can happen again unless we establish a Federal farm program that will specifically provide real parity income for farm families.

So actually, farm programs are not, in any sense, class legislation designed to favor farmers at the expense of the rest of the people. When you urge Congress and the President to provide real farm parity, you are saying that you are willing to give the farmers the same economic break as the rest of the country—in order to insure all of you an abundance of food at all times—so that the businessmen who are dependent on farm purchasing power may be successful and so that the jobs of those who work in the trades supplying farmers' needs and in transportation, processing, and distribution of farm commodities, may be secure.

Businessmen are shortchanging their best customers when they fail to understand this, and when they fight against parity farm legislation. The laboring man invites loss of jobs and pay cuts when he fails to support the farmers. The housewife risks a food shortage and invites higher food prices and perhaps even a nationwide food monopoly when she ignores the farm problem.

We think this all-too-prevailing attitude among people is unfortunate and unwise. But it seems nothing less than tragic when the President, presumably upon the advice of his Secretary of Agriculture and his political party, vetoed a farm law which would have partially repaired the income losses farmers have suffered the past 3 years.

We hate to think that the President vetoed the farm bill last week out of ignorance. We cannot believe that the President has no feeling for farmers—no sympathy for their problems. We do not like to think he vetoed the farm bill for purely political motives.

Yet it is a little difficult to believe he is not aware that farmers are in distress—that farm prices have fallen nearly 30 percent since 1952—that farm net income has fallen 37 percent—that the parity ratio has dropped from 101 to slightly over 80 percent.

His avowed farm policies for more than 3 years and by his veto last Monday he said, in effect, that the answer to falling farm income—the answer to the farm depression—is not more but less farm income.

The farm bill—though far from perfect—would have raised farm income nearly $3 billion over the level of 1953.

But the President vetoed it.

It would be pointless to get into a long technical discussion of the bill itself. We would like, however, to point out what the veto means in terms of dollars and cents

to farmers directly and to businessmen indirectly.

On major North Dakota crops affected by the veto, wheat, for instance, will be 26 cents a bushel less this year; rye will be 25 cents a bushel less; oats, 13 cents less; barley, 20 cents a bushel less; corn, in the commercial corn area, 14 cents less; and in the noncommercial corn area, 50 cents a bushel less.

For the average North Dakota farmer—when you multiply the per-bushel price difference by his production of these crops—the veto bill cost him from $1,200 to $2,000 this year.

There are those who say—and this includes the President himself as well as his Secretary of Agriculture—that "yes, falling farm prices are a problem but the important problem in agriculture is farm surpluses and—they say—you can't solve the farm-price situation until you solve the surplus problem." And their answer to solving the alleged surplus problem is to cut prices so low that it drives farmers out of production of these so-called surplus crops.

Aside from the fact that this method is cruel and immoral—actual experience of the past 3 years shows that instead of production falling off and surpluses disappearing—production increases for the simple reason, that farmers, out of the economic necessity to meet high, rigid operating costs, must make up the difference with more production.

For instance, in 3 years to the end of 1955, the price of grain sorghums has gone down 24 percent but production of grain sorghums went up 173 percent.

The price of rye went down 17 percent but production is up 75 percent.

The price of oats went down 23 percent but production is up 42 percent.

The farm price of milk went down 17 percent but production of milk is up 9 percent.

And so it goes all through the list of farm commodities.

Another thing which this administration either fails to understand or refuses to recognize, is, that the present formula for calculating price parity—which they say is high—is, on the contrary, far too low to give farmers any semblance of real parity income, even should price parity be at 100 percent.

Here are most recent figures from the Department of Agriculture and the President's Council of Economic Advisors:

In 1947 when the farm parity ratio stood at 115 percent—or 15 points above the so-called full parity level—per capita farm income was only 55 percent of the per capita income of all nonfarm people.

In 1952 average farm prices were 100 percent of parity but per capita income for farmers was 52 percent of nonfarm per capita income.

And last year, 1955, when farm prices were 84 percent of parity, per capita farm income was only 44 percent of the per capita income of nonfarmers.

Even the most partisan individual would surely admit that this per capita income difference is badly out of balance, and that the answer doesn't lie in the realm of still less farm income. Yet, what other conclusion can you draw from the President's veto, and his message last Monday night.

Obviously, you can't raise farm income by deliberately lowering farm prices. The answer doesn't lie in a return to the free market. It is a proven fact that lower prices will not reduce farm production, unless such a policy is continued until the productive capacity of our farm plant is so impaired that it constitutes a tragic threat to the food needs of our Nation.

We think the veto was a tragic mistake—a staggering blow not only to farmers but to our whole economy.

We think that anyone—regardless who he is—or the position he holds—does the Nation a great disservice by misrepresenting the facts about the farm problem and farm programs.

Whoever does this is gambling with our economy—risking the welfare of 22 million farm people—and gambling with the health and the security of the whole Nation.

Any responsible political party—any man in, or who seeks high office—should understand the simple fact that our economy is not and cannot be truly prosperous while agriculture is being driven deeper into debt and at a headlong pace toward bankruptcy.

It will take broad public understanding—and it will take knowledge and integrity on the part of the press, the politicians and public officials to write a workable farm program that gives farm families real parity of income and thus securing—for all time—an economy of abundance.

That's all we ask—that you recognize the problem for what it is. Try sincerely to understand it. And be willing to give farmers the same economic break that you expect for yourself.

We are sorely disappointed that the President vetoed the farm bill. The Farmers Union, alone of all the farm organizations, supported it—not because we thought it was the best and final answer—but because it provided immediate and substantial help for a rapidly crumbling farm economy.

The Farmers Union will continue to work for legislation that will assure farmers real parity income. We believe this is wholly in the broad public interest. This goal will be realized sooner if all of you—in your own self-interest—will give us your understanding and your support.

Thank you for listening, and good night.

The Bricker-Dirksen Amendment

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. LEHMAN. Mr. President, one of these days the Senate will be faced with the new Bricker-Dirksen amendment. I have recently received a copy of a communication addressed to deans of accredited law schools and teachers of constitutional and international law throughout the country. This letter is signed by five of the most eminent law-school deans in America, Dean Jefferson B. Fordham, of the University of Pennsylvania Law School; Dean Erwin Griswold, of the Harvard Law School; Dean William C. Warren, of Columbia University Law School; Dean Eugene V. Rostow, of the Yale Law School; and Dean E. Blythe Stason, of the University of Michigan Law School. The letter which these five great legal authorities are sending out is in itself a persuasive and convincing argument against the Bricker-Dirksen amendment. The five deans are also attaching to their circular letter a copy of a statement issued by the Committee for Defense of the Constitution by Preserving the Treaty Power.

Mr. President, I ask unanimous consent that the text of the letter being circulated by the five law-school deans, and also the statement of position of the Committee for Defense of the Constitution, together with the names of the officers and sponsors of that committee, be printed in the Appendix of the RECORD.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

CONCERNING THE BRICKER AMENDMENT

DEAR COLLEAGUE: As you know, a majority of the Senate Judiciary Committee recently recommended the adoption of an amendment to the Constitution of the United States in the following language:

"SECTION 1. A provision of a treaty or other international agreement which conflicts with any provision of this Constitution shall not be of any force or effect.

"SEC. 2. On the question of advising and consenting to the ratification of a treaty, the vote shall be determined by yeas and nays, and the names of the persons voting for and against shall be entered on the Journal of the Senate."

You will remember that in 1953, Senator WILEY solicited the views of law school deans and professors of constitutional and international law with respect to the Bricker amendment and that the Judiciary Committee published the replies in a pamphlet which some believe to have been the most effective single document in the fight against the amendment. Twenty-six out of twenty-seven replies were against the proposed amendment.

The wording of section 1 of the then-proposed Bricker amendment, upon which Senator WILEY invited your views, was as follows:

"SECTION 1. A provision of a treaty which conflicts with this Constitution shall not be of any force or effect."

Section 1 of the 1953 version is identical with section 1 of the new Dirksen version, except that the latter adds the words "any provision of" before the words "this Constitution" and also adds the words "other international agreement." The Judiciary Committee report states that the word "conflict" means "inconsistent with" or "at variance from" and the phrase "with any provision of this Constitution" means "each article, section, and clause of the basic document as amended."

We believe that many of the arguments stated in the letters published by Senator WILEY are applicable to the new Dirksen version. It is true now, as then, that there is no necessity for a revision of the treaty provision of the Constitution. Nor is there any occasion for a declaratory amendment; the argument that a treaty or agreement might be used to override the Bill of Rights is unfounded.

Although it is impossible to foresee the consequences in actual interpretation of the new section 1, the proponents make it clear that it is intended to do more than merely restate existing law and practice. Apparently its purpose is to rearrange the boundaries between Federal and State authority and to shift some of the powers of the executive to the judicial and legislative branches. Endless controversial searches would doubtless be invited into its meaning as disputes over particular treaty provisions arose.

Senator BRICKER has stated, it is reported, that the purpose of adding the three words "any provision of" is so that "other provisions of the Constitution could be weighed without reference to" the provision of article VI that treaties shall be the supreme law of the land anything in the Constitution or laws of any State to the contrary notwithstanding. (New York Times, March 14, 1956, p. 11, col. 1.)

Senator DIRKSEN is reported as saying that one effect of the amendment would be to nullify the 1916 treaty with Canada governing protection of migratory birds (New York Times, March 4, 1956, p. 12, col. 1), apparently believing that it would confine the treaty power to those enumerated subjects on which Congress has express powers to legislate.

The majority report states that if an executive agreement involved a matter within the delegated powers of Congress, the agreement would be ineffective unless Congress authorized or ratified it. The proposed amendment would seem to throw a cloud on the Executive's powers when he negotiates agreements under his diplomatic powers or his powers as Commander in Chief.

President Eisenhower in his press conference on April 4, 1956, stated:

"Now, as you know, there have been written into this latest version three words: 'any provisions of.' Those words are under the most earnest study by lawyer groups everywhere. They are advising me, and apparently they are advising Senator BRICKER and the rest; exactly what they mean, it is difficult to say."

Section 2 of the proposal is not needed. Its purpose could readily be achieved by Senate rule.

It is our hope that we can, through your replies to this letter, prepare a report similar to that prepared by Senator WILEY in 1953 and that it may be equally useful to the President and to the Senators in their consideration of the new Dirksen version of the Bricker amendment. We would appreciate your comments.

For your information, there is enclosed a statement of the Committee for Defense of the Constitution by Preserving the Treaty Power, which relates to the current Bricker amendment and to which each of us subscribes.

Sincerely,

JEFFERSON B. FORDHAM.
ERWIN GRISWOLD.
EUGENE V. ROSTOW.
E. BLYTHE STASON.
WILLIAM C. WARREN.

(Please address your reply to Jefferson B. Fordham, 3400 Chestnut Street, Philadelphia 4, Pa.)

APRIL 30, 1956.

COMMITTEE FOR DEFENSE OF THE CONSTITUTION BY PRESERVING THE TREATY POWER—STATEMENT OF POSITION ON THE BRICKER AMENDMENT (1956)

We continue to oppose amending the Constitution as proposed by the so-called Bricker amendment, in its latest version as well as in its numerous earlier forms. The present proposal either is merely a superfluous restatement of existing law, and as such wholly unnecessary, or it is an ambiguous and dangerous limitation on the President and the Federal power to deal effectively with foreign nations. This is certainly no time to introduce a Trojan horse into our Constitution or to downgrade our President as our spokesman in world affairs.

The key provisions of the Bricker amendment, including the so-called which clause, were thoroughly considered during the 1954 Senate debate, and defeated. A revised version, however, including the "which" clause but minus the word "which," was reintroduced and hearings were held by the Senate Judiciary Committee during 1955. Now a majority of the Judiciary Committee has abandoned that version and recently, without further hearings or public discussion, has reported favorably this substitute amendment proposed by Senator DIRKSEN: "A provision of a treaty or other international agreement which conflicts with any provision of this Constitution shall not be of any force or effect." [1]

[1] The only other provision reported out (March 5, 1956) was one requiring a rollcall vote on treaties—a requirement which might well be an improvement in the Senate rules, but certainly not one belonging in the Constitution.

BAD LAW

The three italicized words, according to the report of the majority of the Senate committee, require that any treaty or other international agreement be tested against each article, section, and clause of the Constitution, taken separately. This violates the elementary commonsense rule of construction under which our Constitution has been interpreted in literally thousands of decisions over the past 167 years. Any document, whether it be a constitution, a statute, a will or a contract, must be construed as a whole, each part in its proper relation to the others. By this legerdemain, however, far-reaching results would be accomplished according to the majority report. But the committee does not say which or how many of our presently valid and lawful treaties or executive agreements would suddenly become unconstitutional under the proposed amendment. Presumably, only future litigation would answer such practical and vital questions.

THE ATTACK ON THE EXECUTIVE

A main purpose of the amendment is to restrict the effectiveness of executive agreements made by the President, and about half the report is devoted to establishing such an interpretation. The report makes plain that the amendment is intended to make the internal effectiveness of executive agreements subordinate to State laws, even where the agreements are clearly within the scope of the President's diplomatic powers and his powers as Commander in Chief. Moreover, under the report's interpretation of the amendment, all executive agreements involving any matter within the delegated powers of Congress would be ineffective, not merely when in conflict with a Federal statute, which is the law today, but in all cases where not specifically authorized or ratified by Congress.

THE 10,000-WORD AMENDMENT

To explain the 25-word amendment the majority report takes 10,000 words (twice the number in the original Constitution). Aside from the one new phrase, the words which the proponents chose for their amendment stand alone, uncontaminated by the known seem innocent enough. If these words could objectives, they could be taken as an attempt merely to restate what is already the law—that the Constitution is supreme over treaties and executive agreements, as it is over laws. But when the proponents take 10,000 words to build their own interpretation of their own amendment, we are faced with amending the Constitution by committee report. With such a legislative record, we could not trust even merely declaratory words to carry only their ordinary meaning.

BAD POLICY

The present and all prior versions of the Bricker amendment bear the same stamp—the fewer international agreements the bet-make them, and becloud their legality. In ter, so cut down the President's powers to our whole history there has never been a worse time to pursue such a course. War has become annihilation. The future peace and welfare of our people (or of any people) lies in reaching agreement in their relations with others. To obstruct our own path for reaching such agreements is folly.

Liberalization of Old-Age and Survivors Insurance System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. WILEY. Mr. President, one of the major items of business which will soon come before the Senate is, of course, the important matter of liberalization of the Nation's old-age and survivors insurance system.

We have all been following with interest the deliberations of the Senate Finance Committee on this subject.

I personally feel that improvement of the system—liberalization of benefits and extension of coverage—is long overdue, although changes must, of course, be actuarilly sound.

In the May 1956 issue of the Journal of Lifetime Living magazine, there is an article which discusses looking after the needs of our older people. The article is entitled, "Nineteen Hundred and Fifty-Six: Boom Year for Seniors."

The article prominently features reference to my own bill, S. 2279, for a comprehensive system of grants-in-aid for the purpose of improving not only oldsters' pensions, but their health, housing, recreational opportunities, etc.

I send this article to the desk.

SHEBOYGAN, WIS., REPORT

I append to it two items. The first is a grassroots indication of what people in America are doing by themselves to assure a fairer break for our senior citizens.

This particular item represents the first few pages of a comprehensive report from the Sheboygan, Wis., Committee on the Aging. It shows how the committee set up its subcommittees and did necessary research work as a foundation.

ADDRESS BY J. R. COMINSKY

The second is an excerpt from a major address which was delivered on April 17 by Mr. J. R. Cominsky, publisher of the Saturday Review. In this address, entitled "Vocational Counselling is Unfinished Business," Mr. Cominsky makes a most provocative suggestion dealing with liberalized corporate tax credit for employment of senior citizens.

Mr. Cominsky, I may say, is contributing some of the most original thinking now being done in our country on the paradox of the lengthening of the life span, and the shortening of the work span in America. I have previously brought several of his suggestions to the attention of my colleagues.

I ask unanimous consent that these three items be printed in the Appendix of the RECORD.

There being no objection, the three items were ordered to be printed in the RECORD, as follows:

[From the Journal of Lifetime Living of May 1956]

1956: BOOM YEAR FOR SENIORS

Take a nation which has quadrupled its number of elders since 1900. Add two world wars, a financial depression, a few fist-shaking dictators, and a social or industrial revolution here and there, with an H-bomb thrown in for good measure.

What do you get? It is not surprising if you end up a little confused; and when you take stock, you are apt to find that you overlooked something.

It's a big something that Suncle Sam overlooked. He didn't expect, and didn't fully account for, a host of senior citizens, comprising almost 10 percent of our present population, and zooming higher and higher.

In the midst of all his other worries, he was caught with his statistics down, and with attitudes, policies, legislation, and an economy unprepared to cope with the wants and needs of this new kind of citizenry.

He is still dazed by it. But the alarm, which started to wake him with a tinkle, is now ringing like a firebell. The present session of Congress is swamped with measures for elders. There are more than 200 bills to liberalize social security. There are senior housing acts, and a proposal which would set up a Federal bureau for seniors. In the administrative branches of Government, and on the State and local levels, scores of new projects are afoot for the vocational, educational, recreational, and health betterment of the more mature set.

Politically, economically, and socially, seniors as a class, and as an issue, have moved into the big league of national affairs. In the haze of election maneuvers, it is hard to predict a score. But it seems clear that 1956 marks the beginning of a new emergence for men and women past 40—and especially for the 14 million who are 65 and over.

"Congress will have to take a whole new look at all the problems," Senator ALEXANDER WILEY told the Journal of Lifetime Living. "And it will have to do so this year."

JOBS, HOUSING, RECREATION

The senior Republican from Wisconsin now has before the Senate the most vital measure of the current crop—Senate bill 2279, which authorizes a new Federal series of 5-year annual grants to the States, for the purpose of developing and improving all programs and services for the 65'ers.

Insiders complain that the bill is too technical to have vote appeal—and the administration's Budget Bureau reportedly opposes it. But the Senator has stirred up something.

He wants more jobs for seniors, and an end to age discrimination in employment.

He wants more housing projects meeting the means and special needs of our elders.

He wants better educational and recreational facilities geared to the older league.

He wants more people trained to handle the problems of seniors medically, socially, and every other way, coupled with more research into every phase of their welfare.

And he wants it all coordinated, and watchfully guarded, by Uncle Sam personally.

"The Federal Government can't do it all." Senator WILEY says, "but it can help and encourage the States to do it."

A SENIOR DEPARTMENT

Under his bill, the Secretary of Health, Education, and Welfare would establish an administrative unit, functioning along the general lines of the Children's Bureau, established in 1912 and now part of the Social Security Administration.

The new unit would administer the grants, to be offered to the 48 States on a 50–50 matching basis. It would keep in touch with State, national, and international developments affecting senior citizens, and would serve as a clearinghouse of information and advice. It would suggest coordinated approaches to the problems involved, provide the States with specialists in various aspects of the work, make grants for special "pilot" or demonstration projects, and maintain contact with other public and private agencies.

The Senator is convinced that nothing less than such a comprehensive approach can do the job.

"We've been falling down in every single one of the major fields of activity concerning elders," he argues. "Just look at the situation.

"Average income for senior citizens is going down while living costs are going up. Job opportunities are also decreasing. The percentage of men gainfully employed after age 65 had decreased from 68 percent in 1890 to 42 percent in 1950. While 1 of 3 applicants for work is 45 or over, only 1 out of 7 placements is now made in this group.

"A third of the elderly are inadequately housed. Boarding and nursing homes have long waiting lists.

"It's the same with education and recreation. Most adult education programs are concerned only with younger folks. And while clubs and recreational programs for seniors are developing in some areas, the development is spotty, and the number of people who benefit is very small in relation to the total age group.

"There are some bright spots in the picture. But they're still the exception."

Senator WILEY has no fault to find with Federal officeholders now engaged in the field. "But how many are there?" he demanded. "I'll tell you. Recently I called up the United States Department of Health, Education, and Welfare, to talk to people working on the wants of seniors in that Department. And guess how many of these workers I found there? Three. Three employees to look after the needs of 14 million people."

ACTION VERSUS WORDS

"I think that typifies the situation. We sing songs, recite poems, and make speeches about senior folks—how much we love them, and what we ought to do for them. But when it comes to action, you see what we've done.

"We've been turning our backs on them—and the way our population is headed, that means we've been turning our backs on our future.

"We can't treat senior citizens as though they were liabilities—when the facts show that they're assets. We have to use and improve those assets now."

Toward this end, the first planks of a platform are at last coming out of the mill.

We have a long way to go for our senior utopia. But Congress is waking up, and we're getting a good start. A measure like the Wiley bill may be just what we need to tip the scales for our elders.

CHAPTER I OF REPORT OF SHEBOYGAN COMMITTEE OF THE AGING

THE COMMITTEE IS FORMED

The following committees were established:

1. Census committee: The census subcommittee was assigned the planning of the collection, through the field subcommittee's, data which would give an adequate picture of the characteristics of the aging population in Sheboygan County. It would be the further responsibility of the census subcommittee to organize the collection of data both from standard institutional files and from the United States Census.

Specifically, the census committee was assigned the responsibility of avoiding duplication of data.

2. Recreation: The content subcommittee on recreation was designed to collect all available information from whatever sources on the facilities, plans and present operating organizations whose primary aim is the execution of recreation and useful activities for persons 65 and over in Sheboygan County. The recreation subcommittee would ultimately, work closely with all other subcommittees.

3. Health and welfare: A joint subcommittee on health and welfare was organized for the initial phases of the committee's work. This subcommittee was assigned the responsibility of collecting information on the health facilities and services and the welfare facilities and services, both public and private, within the county which are available for the population under study. Special emphasis was placed on the collection of all possible data through existing organizations, in order to avoid painful, slow and expensive duplication of effort.

4. Employment: The employment subcommittee was established to survey and to examine the employment situation within the county, with specific reference to employment opportunities and policies relating to persons 65 and over. It is to be a further concern of this committee to survey the policies of local companies to ascertain the exact potential for full-time and part-time employment for persons 65 and over. This committee would also utilize institutional file information wherever possible.

5. Spiritual life committee: It was felt by the committee that no study of the problems of older persons would be complete without a careful examination of the services and functions of all church and spiritual groups in relation to the older persons.

6. Education: It was believed that all other subcommittee functions would act as a source of supply for information for the subcommittee on education. This subcommittee would have a dual purpose: (a) to educate the older persons as to the possibilities of making their own present lives more rich, more worthwhile, and more constructive; and (b) to undertake a broad program of public education aimed at familiarizing the general public with the problems which all persons, young and old, are apt to face when they have reached retirement age.

To supplement these 6 basic content committees, 26 area subcommittees, based on the political subdivisions of the county, were formed for the various townships, villages, and cities. Considerable effort was made to recruit adequate area chairmen who in turn would, at their own option, recruit the assistance of local persons to serve on their subcommittees. The basic purpose of these area subcommittees was to obtain information and data which was not readily available through institutional or organizational files nor through the Bureau of Census in Washington, D. C. Hence, the collection of all but the central core of data would rest upon the shoulders of these area subcommittees.

It is important to pay special tribute to those persons who have had little or no formal research experience before, who, with courage and good humor undertook a tremendously difficult task. The committee agreed that a relatively simple but broad gage questionnaire should be formulated which would make it possible for the local area subcommittees to collect information which would be of prime interest and concern to the committee as a whole.

In the latter part of October the first field series form (which was designed to collect those data probably not available through the United States Census, or other cannels) was distributed to the area chairman with the hope that these forms would be completed prior to a mid-November meeting. Most of the forms were completed in first-class shape and returned to the writer prior to the deadline.

It was thus that the Sheboygan County Committee on Aging actually launched its basic function as a research organization. It should be said, in concluding this chapter, that the basic function in the future will be twofold: First, to continue to collect such data deemed appropriate and necessary for adequate future planning; second, to carry on a continuing program of planning and action designed to enrich the declining years of all our senior citizens, present and future.

EXCERPTS FROM TEXT OF VOCATIONAL COUNSELLING IS UNFINISHED BUSINESS, AN ADDRESS DELIVERED BY J. R. COMINSKY, PUBLISHER OF THE SATURDAY REVIEW, BEFORE A CONFERENCE OF THE ALUMNAE ADVISORY CENTER ON CONFLICTING JOB ATTITUDES: HOW CAN WE RESOLVE THEM? ON TUESDAY AFTERNOON, APRIL 17, AT THE WQXR AUDITORIUM, NEW YORK TIMES, NEW YORK CITY

The interrelationship of all human endeavor could not be exemplified better than to point out that while exciting news is flowing from the laboratories of the medical scientists and practitioners another kind of news is flowing from industrial and labor fronts to take the bloom off some great achievements of medicine. To state it bluntly: Of what use is a lengthened life span if it is accompanied by a greatly shortened working span?

This, of course, is no fault of medicine. It is not the fault of medicine that there has been in recent years an almost hysterical absorption with "security"—"security" at almost any price, it has seemed to me. And all the pension plans and retirement arrangements aren't worth the price we are paying for them if it means one able-bodied person, qualified in every other way, self-respecting and eager to work, cannot obtain employment after he passes the age of 40, or possibly a slightly higher limit. The life-span figure, large or small, becomes academic in the light of such a development, and all of us had better face up to it.

It would seem humane for insurance companies to restudy the present group life insurance plans which may be limiting the hiring of workers in their forties.

It would seem equally humane for the various States to restudy their unemployment insurance and disability compensation laws which may deter employers from hiring older people. It is a recognized fact that older workers take longer to recuperate and tend to raise the disability compensation rates paid by their employers in some States.

If a plan of State or Federal Government cooperation could be worked out whereby the employer were not penalized for this fact of life, he might take another view of the employee over 40.

It would also be humane for our leading and most responsible labor unions to study this problem in relation to the pressures now being put on employers for social benefits.

We might also explore Federal social security cooperation for persons who wish to work beyond the age of 65, with a possible lessened effectiveness offset by the Government's contribution.

Perhaps the simplest way to lift the burden and the penalties from the employer of the older worker would be to allow a Federal corporate tax credit based on percentages of employees in various age groups—such a credit at least in part to offset the extra insurance and other costs derived from actuarial accounting. Here is an area worthy of our deepest study and thought.

The complexity of this serious situation affecting so large a segment of our manpower flows from the fact that our retirement and pension plans are figured on the basis of chronological and not physiological factors. We understand what great differences in physical and mental power there can be in people of the same age. Yet this factor has been somewhat obscured in our social planning.

The drastic shortening of man's working span brings with it a problem that should concern every boy and girl going to college, and the parents, as well as the middle aged. The trial and error period, which in the past allowed a person to try his hand at a few jobs in the hope of finding the one he liked best and could do best, is now something that, in retrospect, went out with the model T Ford. Today a person's talents must be channeled immediately into the area in which he can be most effective, or he is sunk. That's the dilemma, and we may as well be realistic about it.

We haven't yet really begun to deal in a serious way with the psychological, social and economic problems created by our fantastic medical progress. The proposal of the Alumnae Advisory Center for a 5-year study to investigate a possible solution to problems faced by older women college graduates in New York and by those who want part-time jobs is an indication that there is a real stirring of interest in important places. I sincerely hope that the modest financial requirement for such a study will be supplied at the earliest possible date.

Our Guided Missiles Crisis

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. JACKSON. I ask unanimous consent to have printed in the Appendix of the RECORD a revealing report on the status of our critical missile program. This report appears in the latest issue of Look magazine, and was written by Mr. Trevor Gardner, former Assistant Secretary of the Air Force.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR GUIDED MISSILES CRISIS

(By Trevor Gardner)

The intercontinental ballistics missile is probably the greatest single advance in weapons that will be attained by any country in the next 10 years. The nation that gets it first may be in a position to determine the kind of world we will live in for the next generation. We and the Russians are racing for it. But our own effort is snarled up in bureaucratic redtape. Here's what's wrong:

1. The Army, the Navy, and the Air Force, each working on its own parochial guided-missiles program, are vying with each other in an intolerable rivalry.

2. The overall missiles program is smothering in an administrative nightmare of committees and subcommittees competing with each other for influence and appropriations.

3. The ICBM project, which 2½ years ago was given a top priority status, now shares top priority with many subsidiary missiles projects and the result is that there is no such thing as "top priority."

4. The executive personnel of the missiles program is notable for its preponderance of management experts recruited from private business, and for its poverty of full-time scientists who qualify as missiles experts and know what they're talking about.

I believe that if President Eisenhower suspected the real gravity of this situation he would, without doubt, step in and straighten things out. But the President's chief advisers have left him, at best, incompletely informed.

Meantime, the people—who, after all, are the ones most deeply concerned—remain the least informed of all. The public is bewildered by "artists' conceptions" of missiles that dont' exist (and anyway couldn't fly as the artists conceive them) and by half-truths, understatements and exaggerations about missiles that do exist or are about to exist or will never exist.

The President has said we are ahead of Russia in some missiles fields, but behind in others. Other officials of the executive branch have said the Russians are closing in on our lead in some fields and increasing their own lead in others. Responsible members of the Senate are now trying to find out just where we do stand.

The public knows there must be a gigantic program of some kind going on. Large numbers of people are being hired; loud test explosions are heard in the proving-ground areas, but the whole operation is strapped in by an official public-relations policy which is a heritage from wartime censorship. Nobody confirms and nobody denies.

Yet there are some things that can be told, and some questions that should be answered.

There have been various published estimates indicating that, by 1960 or earlier, the Russians may have intercontinental ballistics missiles with thermonuclear warheads. In my opinion, the Russians would then be in a position to destroy or blackmail this country unless we had similar weapons.

Are we following a course calculated to protect us from falling into this trap? The answer depends upon who is talking, and whom you believe.

The business executives who run the Government tell you in effect not to worry—your Government has the problem well in hand—and no changes are needed.

The Nation's greatest scientists, missiles engineers and military leaders—the American professional team—say there is a great deal about our missiles picture to worry any American; that our ICBM effort is not under control and that, unless great changes are made in the program immediately, we can do nothing but lose to the Russians.

You cannot believe both groups. They have nothing in common. There is no ground for compromise here any more than there is in running a race. Either you win it or you don't.

Three years ago, as the first civilian manager of the Air Force research and development activity, I chose to rely on the professionals. My experience during the 3 years that followed has only confirmed that choice.

In the face of the deadlock between the scientists and the executives, it is only natural to wonder where President Eisenhower stands. I believe the President's advisers, who are not missiles experts, have given him only an incomplete picture of the crisis. His own broad policy thinking about missiles could put this country on the right track if his civilian deputies kept him accurately informed.

To comprehend our danger clearly requires some understanding of the new family of missiles weapons that generated this danger in the first place. There is literally no end to destructive applications of the jet propulsion-missile principle. The press is full of reports about the development of missiles which are fired from the ground and aimed at enemy territory. We also hear about ground-to-aid missiles, the least effective of which is at least 10 times better than our most advanced antiaircraft guns. Other accounts report missiles that can be launched from submarines, from ships at sea, and even from mobile battlefield platforms. Some of these missiles breathe air. Others carry their own "air" with them. Some are short range—15 to 150 miles. Others are medium range, and still others are designed for great distances—5,000 to 6,000 miles.

While every potential new member of the rapidly growing missiles family will represent an important and valuable step in advanced weapons, the ICBM is clearly of the highest priority importance. The United States is engaged in a truly massive effort with respect to missiles. But by itself a mass of effort is not enough. The mass must be organized and the effort must be selective.

The reason for this is that, should the Russians perfect an ICBM in operational quantities, or even demonstrate it experimentally before we do, they will have the ability to hit our great Midwestern heartland with a weapon against which no defense is yet known. The only certain way to counter this kind of threat is to be able to fire, from our own independent bases on American soil, massive quantities of the same kind of weapon, capable of devastating an enemy as defenseless before it as we are. As long as we permit anything to interfere with the perfection of this weapon, we are like children making sling shots to repel an invasion from Mars.

As a Nation, we are in this kind of peril because, for a generation or more, we have consistently failed to recognize the giant steps the Germans and Russians have been taking in missile development. After each hot and cold war, we have cut back on our research and development budgets. It happened once again in 1953. These cuts were doubly disturbing to the scientific world, because by now the technical horizons of the problem were rapidly receding and widening. The inherent built-in complexities of the ICBM were mushrooming daily, invading almost every known realm of science.

To get an idea of the kind of effort we should be making, imagine an ICBM traveling at speeds over 4 miles a second—coast to coast in less than 15 minutes; climbing 500 miles into airless outer space; propelled by multimillion-horsepower plants; storing within its belly the very air these giant power plants must gulp to perform at all; controlled by a built-in electronic brain capable of making decisions in a ten-thousandth of any given second; able to withstand surface-friction heats so high that they vaporize any known metal.

That is "The Beast." It is the one weapon we need today, above all others. Can anyone doubt that the greatest scientific brains in the free world are needed for its creation?

In 1953, the Air Force asked Dr. John Von Neumann, one of America's most distinguished scientists, now a member of the Atomic Energy Commission, to head an advisory task force. The mission of the Von Neumann committee was to assist the Air Force in weighing the difficulties presented by the ICBM, to invent scientific shortcuts and solutions, and to come up with a practical set of specifications designed to give us the weapon we need in the shortest possible time.

This committee's conclusions reflected no doubts about our technical competence to solve this problem. Many members of the committee had helped develop the atomic bomb. Hard problems were not new to them. They believed the quick completion of the ICBM was well within the scope of America's great scientific resources.

What bothered the scientists was that in peacetime the cumbersome, time-consuming machinery of government could not be streamlined to permit the swift mobilization of the necessary resources. As a result, the committee's most urgent recommendations were focused upon how to organize the effort.

A unique and responsive machinery was organized quickly within the Air Force, under the brilliant leadership of Maj. Gen. Bernard A. Schriever. His assignment was to see that the work got started and to make whatever modifications in approach he and Dr. Von Neumann's advisory committee deemed necessary to bring off a test firing of the ICBM as soon as possible. General Schriever's project was therefore assigned the highest priority within the Air Force.

General Schriever immediately recruited Dr. Simon Ramo and Dr. Dean Wooldridge (who had also served on the Von Neumann committee) as his technical advisors and to help him secure the best scientific brains in America to work on this project full time. In complexity, General Schriever's job was much like the atomic bomb development; and in the beginning, he and his unusually fine organization were able to make dramatic progress because they were organized to make quick decisions.

The spirit we achieved in the Manhattan project, which gave us the A-bomb, was that the small problems about men, material, buildings, machine tools, and money were not to be allowed to block progress in any way. An environment was created in which all levels of management were encouraged to use their best judgment, to make quick decisions and to go ahead. The penalties for obstructing progress were severe. The same kind of spirit, the same sense of urgency, the same ability to get on with the job, are needed for a successful ICBM effort.

General Schriever's project had begun to breathe that way. In addition, the project was slated to graduate from No. 1 priority in the Air Force to the Nation's No. 1 priority. This, in fact, happened. But a lot of other things began to happen too. Unfortunately for the budget-controlled Secretary of Defense, the ballistics-missiles race with the Russians could not be deferred. This weapons revolution had a new character and a new dimension. As national recognition of the importance of the missile mounted, with its implied threat of unbalancing the budget, the Secretary of Defense was faced with his first major dilemma. Could the country afford this program or should it be deferred?

The Secretary of Defense decided that the venture was vital and that it could not be deferred, but the only way it could be financed without unbalancing the budget was to limit expenditures on other planned defense programs.

Air Force dollars for the program became plentiful, but since the total level of the Air Force budget was not materially increased, those dollars had to be made available through many sacrifices, including one-shot savings projects, reduction in planned procurement of jet aircraft and postponing the modernization and building of vitally needed new air bases. General Schriever and his organization were able to carry on, with the Air Force supporting the enormously expensive ICBM effort at this great and dangerous sacrifice.

Then the Army and Navy suddenly began to recognize the importance of the ballistics missile in their future. Both services immediately embarked upon a vast competition to get into the ballistics missiles act.

Each assigned its own highest priority to whatever ballistics-missiles projects it wanted to develop. And in a brief time, numerous new and different missiles projects sprang into being. None of these duplicated the ICBM. They were designed, rather, to

produce either an intermediate-range missile or a variety of short-range missiles.

But the Army and Navy were also required to rob their existing programs in order to finance new missile weapons. Not content to play second fiddle to the Air Force, the other services insisted upon and received the highest national priority for each of their own intermediate-range ballistic-missiles (IRBM) projects.

The ICBM, the one weapon we desperately need, was now in competition for the Nation's resources with many little brothers and sisters at the family table. And everyone was entitled to be served first. To make matters worse, the services then generated other phantom or study missiles programs. These don't yet enjoy the same top priority as the earlier programs do, but they are fighting hard for equality of treatment and no one will be too surprised if they win.

As if there were not enough clamoring mouths all demanding preferred treatment, the Secretary of Defense approved and the White House announced that a satellite would be launched in 1958 during the International Geophysical Year. This also, of course, is a top-priority project.

The Secretary of Defense has explained this rash of new programs, actual and pending, as a logical way to provide competition, designed to create a better product. Maybe you get a better product by creating a free-for-all. If so, it is a brandnew way to stimulate scientific invention.

Competitive interference was inevitable, of course, and it soon became apparent to all three services that rivalry and duplication were creating enormous confusion. None of the services really knew what its mission was or what its final role was going to be in the missiles program. Opinions were naturally voiced that a fourth armed service should be established to develop and use these missiles. Those opposed to this idea said that each service should be assigned its own part in the development and ultimate use of the new weapons. The resulting argument should have been decided early by the Joint Chiefs of Staff and the Secretary of Defense, but the answer to this pressing problem was to defer making any decision at all. The whole fundamental question of roles and missions was left for decision at some future date.

Having given his blessing to this competitive scramble, the Secretary of Defense had to create executive and administrative mechanisms to monitor the claims and counterclaims of the competing services, and to control at least the more obvious duplications of effort. Moreover, someone had to see to it that the intense rivalry between the services would not result in each one lowering its own iron curtain to conceal its technical achievements from the others; unfortunately, interservice rivalries work that way.

But in the face of violently conflicting interservice claims, contradictory reports and confusion concerning achievements, the Secretary of Defense avoided another question: Should he concentrate all missiles authority in one office or in one individual? His first answer was to generate an appalling series of committees from each of the separate services—plus his own office. These committees were all composed of people who had other major jobs to perform and who, therefore, could devote only part time to the problem of managing a by-now unmanageable missiles program.

COMMITTEES, WATCHDOGS, AND MONITORS MOVE IN

None of the members of any of these committees are missiles experts. Realizing this fact, and being aware of his own individual part-time limitations, each committee member quickly appointed a deputy who (while also having a full-time job himself) could spare more time than his superior. This resulted in a group of phantom subcommittees to sharpen up the problems, and to present them to the major decision-making committees. None of the members of these phantom committees are missile experts. Most of them are not engineers.

General Schriever's once fine organization, streamlined in the Manhattan spirit to make quick decisions and get on with the job became hopelessly lost among coordinating committees from the other services, scientific advisory committees from the other services, Bureau of the Budget watchdogs, monitors from the Department of Defense, representatives of the National Security Council, and additional committees and subcommittees. In fact, General Schriever's organization was forced into doing everything but getting on with the vital business of making that one piece of hardware—the ICBM.

Yet today Washington's business executives continue to tell our people that the missiles program is well in hand—and there is no cause for worry. Only recently the Secretary of Defense installed an able chemical industrial executive as a special assistant for ballistics-missiles development. His job was described to the press as a missiles czar. But there never was and never will be a special assistant who could get all these committtees and subcommittees to resolve their disputes overnight and then act in unison on a continuing day-to-day basis.

Having served as a special assistant for 2 years before being appointed an Assistant Secretary of the Air Force by the President, I know that a special assistant just does not have enough basic responsibility and authority to resolve the interservice ballistics-missiles snarl in time to beat the Russians to the ICBM.

How can all this happen, many citizens will ask, when the President is himself a great general? It happens because, in areas of new technology, the communications system he relies on simply isn't working.

I am convinced that the President has not been given a clear picture of the ballistics-missiles crisis. Here are some of the things he might ask, for clarification and for the safety of our country:

Why did it take from August to November to make a decision to proceed with the medium-range missile? Why is the present organization so filled with committees? Why wasn't one man put in charge of the entire program at an early stage? Why was just another special assistant belatedly appointed? Won't interservice rivalries and the multiplicity of programs result in a slowdown in ICBM progress? Why isn't the ICBM given a clear top priority over other missiles programs?

What the program desperately needs is this:

1. The appointment of a missiles boss. In my opinion, he should be a Presidential appointee, reporting directly to the Secretary of Defense, and with him, directly to the President. He should be approved by the Senate. This missiles boss needs to have the power to solve all missiles problems as they arise, and to determine how missiles appropriations are to be spent.

2. After eliminating needless duplications, the missiles boss and his organization must assign an order of priority to each of the remaining programs, with the ICBM given first place.

3. The role and the mission of each of the services with respect to each of the programs should be clearly defined. Once definition has been achieved, assignment of responsibilities can be made intelligently to the appropriate services, in terms of their own functions in any future war.

4. The Congress should enact legislation giving the missiles boss and his organization fresh money with which to work. This would put a prompt end to the tragic Peter-to-pay-Paul robberies now depleting the operational capabilities of all the services. In giving the missiles boss and his organization fresh money, Congress should place these funds in a separate category and exempt them from the normal controls and restraints governing the spending of defense dollars in peacetime.

5. A separate congressional watchdog committee (like the Joint Atomic Energy Committee) should be formed to monitor these funds and the progress being made through their use.

Time is short. Action is required now, by the President and the Congress. Compared to what otherwise may befall us, Pearl Harbor could seem like child's play.

The Case for Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. SPARKMAN. Mr. President, recently, in Washington, Mr. J. D. Zellerbach, chairman of the Committee for Economic Development, delivered an address before the National Conference on International Economic and Social Development.

Mr. Zellerbach is one of the leading industrialists of the United States, and is a very clear thinker. He made a speech which is certainly provocative of thought. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CASE FOR FOREIGN AID

Those of us here today undoubtedly share many basic beliefs about the world outside the borders of our country.

We believe that our destiny is intimately wound up with the destinies of those millions abroad who only now are beginning to experience national independence and individual freedom.

And we realize, I think, that the job of keeping freedom a strong and growing force in the world is a long, hard job. That there are no short cuts around perseverance; no blueprints to tell us what to do. The job cannot be mechanized.

These thoughts are always in my mind when I think of foreign aid. I'm sure most of you will not find them exceptional. Yet we meet at a time when all signs indicate that the public at large is losing sight of the importance of foreign aid—is becoming impatient with the idea. Politicians, versed in reading public opinion, are finding it no longer pays to endorse foreign-aid programs. Foreign aid is out of fashion, so to speak.

I believe these are indications of a genuine lack of understanding—warnings that you and I and others in a position to influence public opinion have not been getting the case for foreign aid across to the people of this country forcefully enough.

I want briefly today to sketch that case as I see it—to show why I think foreign aid is not only important but is more important today than it has been since the early days of the Marshall plan.

When we talk about foreign aid today we talk mostly about helping the newly independent countries of Asia, the Middle East, and Africa with their economic de-

velopment. After all, it is in these countries that the issue between freedom and Communist tyranny is hottest today. The case for foreign aid must stand or fall on the promise such aid gives of tipping the balance in freedom's favor in these countries.

I think the cause of freedom—and therefore of the security of western civilization—is helped three ways by aiding these countries with their economic development.

First, in many countries such aid encourages national leaders who are experimenting with democratic forms of government and with the values of individual freedom and justice. We may not like the policies these leaders adopt from time to time at home or abroad. We may not be able to sign them up in a military alliance. But none of these drawbacks is one whit so important as the fact that today in some parts of the world men from nonwestern societies are championing concepts of freedom and democracy—seeing if they can make them take root outside of the Western World.

The job these leaders are trying to do is as herculean as it is historic. They are trying—sometimes hesitantly, sometimes awkwardly—to marry an essentially western concept of individual justice with a revived and revitalized pride in their own ancient and honorable cultures. And they are doing this in the midst of apalling poverty.

To have any chance of success these leaders must first be able to offer their people the prospect of a better material life and one free from the stigma of political and social inferiority. People must have hope and dignity in order to practice freedom and justice. We in the United States can participate in the process of providing the economic base for a better material life; we can thereby increase the chances that freedom and democracy will take permanent hold. Or we can stand aloof and leave the new leaders in these countries to struggle by themselves. We cannot deny them development, of course. They are going to get it one way or another. We can help—or we can stand aside and greatly increase the chances that development will come at the cost of freedom.

The second reason for aiding these countries with their economic development is much like the first. Whatever the aims and ideals of the new leaders, if we want to encourage the growth of freedom and democracy, the best way—sometimes the only way—is to participate in economic development projects. For only by working side by side at common tasks with the people of these countries can we hope to influence their political development in ways compatible with our own security and growth.

Democracy and freedom are not marketable like soap. They aren't preachable like communism. Unlike communism, democracy doesn't prescribe a single dogma, a single way of life. Quite the contrary. Our values constitute a way of making it possible for different peoples and cultures to live together in peace and freedom.

And the values of freedom and democracy can only be learned slowly. No one knows this better than those like Prime Minister Nehru of India and Prime Minister U Nu of Burma who champion these values in Asia today. No propaganda, no exhortations from afar will get them across. If we of the West are to help, we have to make contact—constant contact—with the people of these newly independent countries. There is no better way of making contact—often there is no other way—than by participating in economic development projects.

These arguments in the case for foreign aid stress the political aspects of the security of our civilization. The third argument in the case is more a matter of economics. It is a fact that Japan and many of the nations of the Atlantic Community depend for their economic strength and health on the trade and raw materials of these newly independent nations of the world.

The oil of the Middle East is absolutely essential today to fire the industries of Western Europe. Markets in southeast Asia are absolutely essential if Japan is to avoid the twin dangers of starvation and Communist absorption. The dollars that Britain earns from sales of Malayan rubber are absolutely essential to the viability of the world's largest single area of free trade, the sterling area. A crisis at any of these points would disrupt the unity of the Atlantic Community—and of the West with Japan.

The United States, too, is increasingly dependent on an expanding world economy—particularly for raw materials. And as economic development proceeds there will be new markets for American business—markets which will contribute to our growth and prosperity. But some, I think, tend to overemphasize these points. The case for foreign aid is based primarily on our political interests so seriously challenged by communism, today—on the need to encourage those experimenting for the first time with individual freedom and democracy; on the need to maintain constant contact with the people of the newly independent countries; and on the need to safeguard the economic strength of our industrial allies in Japan and Western Europe.

These arguments don't change with the zigzags of the Communist line, or with changes in poltical fashion here at home. They don't change, because they are based squarely on long-range requirements of our own national security.

Changes in Communist tactics do, however, expand and contract the urgency of the case for foreign aid. And today I submit Communist actions are underlining the urgency of foreign aid more clearly than ever before.

No one can deny now that milder winds are blowing from the Kremlin these days. But at best this is a mixed blessing. In place of the ruthless rigidities of Stalinist policy, we now have the ingenious flexibilities of peaceful coexistence. Stalinism is dead; but the Communist empire lives on.

Just consider these events of the past 8 months:

Last September Czechoslovakia offered arms to Egypt in exchange for Egyptian cotton. The Soviet regime announced it would help build the Aswan Dam on the Nile. This was followed by the Khrushchev-Bulganin tour of India, Burma, and Afghanistan. In each country important economic agreements were reached—a trade pact and a steel mill for India—development goods in exchange for Burma's surplus rice—economic agreements with Afghanistan which come close to integrating that country into the Communist empire.

These Russian moves were followed up by offers of aid and technical assistance to Middle Eastern countries in December and offers of trade and aid to Latin America, Pakistan, and Turkey in January and February. And as a backdrop for this diplomacy, the 20th Communist Party Congress in Moscow rewrote the gospel according to Lenin: War no longer is supposed to be inevitable and civil war is no longer necessary to establish Communist rule within a country. Communists, according to the latest word in party doctrine, can come to power through parliamentary means—although this has never been done to date. And in doing so they should make common cause with Socialists and others.

These are only the highspots. But even this list documents the vigor and ingenuity of Russia's peaceful coexistence diplomacy. The face of Communist colonialism today wears a benign smile; its hand is extended in a gesture of help to all who want a better material life.

Secure in our knowledge of the hollowness of Communist promises and the wickedness of Communist aims, we of the West have no trouble assessing all these blandishments for what they are. We are tempted to rest the case merely by warning the rest of the free world to beware Communists bearing gifts. After all, what have we to gain by trying to out-promise the Soviet regime?

Yet if ever it were dangerous to draw such a curtain of complacency around ourselves it is now. The desire for econmic development is the overriding passion in more than half of the world today. It makes the leaders of nations see peace where there is no peace. It makes them see friendship and independence where there is only deceit and slavery. To expect the leaders of the newly independent nations of Asia, Africa, and the Middle East to resist the temptations of trying to do business with Soviet Russia is to ignore the facts of life in all of these countries.

The cunning Soviet tactic of peaceful coexistence presents a tremendous challenge to our will and ingenuity today. And the acid test of this challenge is our willingness to draw on our material and intellectual resources to devise an effective program for giving genuine aid to the economic development of what we call the underdeveloped countries.

The foreign aid bill now before Congress is the beginning of the administration's answer to this challenge.

This bill does not anticipate any noticeable increase in expenditures on foreign economic aid. We should not confuse authorizations to spend money over a number of years with actual expenditures in 1 year.

It is a matter of record that I and my colleagues in CED think the United States should increase its annual investment in the economic development of underdeveloped countries. The free countries of Asia, Africa, the Middle East, and Latin America could probably use effectively between half a billion and $1.5 billion more in foreign development capital than they are now getting. I feel it is certainly in our interest to increase our annual expenditures in this field at least to some point between these limits. After all, these are sums that the $400 billion American economy can take very easily in its stride.

But as a first step the administration's bill deserves our earnest support. There are two aspects of the bill which are worthy of comment:

First, the President has asked for greater "flexibility" in the use of foreign aid appropriations. It is important that he get it.

Foreign aid money now is appropriated by function and area—that is defense support to be spent in the Middle East; development aid for Southeast Asia and so forth. These functional and area programs are drawn up about a year and a half in advance and, quite naturally, they very often fail to reflect the right balance in the need for aid when appropriations are finally made.

The President already has some authority to shift funds around among different areas and for different functions. He is now asking for more—to be exact for authority to spend about $500 million in foreign aid funds where, in his opinion, the need is greatest at the time the money is appropriated. This is a useful step in the right direction.

The pending bill also asks Congress to approve a new procedure whereby Congress will have a chance to approve in advance of appropriations the suitability of certain long-range development projects for United States aid.

Many of the development projects which we should be supporting cannot be completed short of several years—dams, road networks, harbor developments, water resource projects and so forth. Such projects might require a commitment from the United States to provide aid for several years running. In fact, however, the United States Government cannot make a binding commitment to give foreign aid longer than about 3 years.

Under the new procedure Congress would be asked to pass a form of resolution, taking note of a given project and endorsing its general qualifications for United States aid. This resolution would have no legal force. Any commitment the President might make would still be "subject to the willingness of the Congress to appropriate funds." However, such a resolution on the part of Congress would be an important aid to diplomacy. It would help in negotiations with foreign governments and it would help in cases where third countries or international institutions are participating in the project. This is also an important step in the right direction.

The first priority now should be to maintain foreign aid at least at present budgetary levels or above, with the addition of these new features requested of Congress by the administration. In this way we will not leave the field by default to the Soviet regime.

Our second objective should be to reexamine our approach to this aspect of our foreign economic policy to determine whether we are really devoting enough time, effort and budget to do the job effectively. As part of this reexamination, we should encourage the underdeveloped countries themselves to take more thorough inventories of their minimum and maximum investment needs so that we have a more accurate picture of the complete scope of the problem.

We need today to revive something of the spirit and the imagination that went into the Marshal plan. The system of mutual cooperation among all the participating countries, which was so important a feature of the Marshall plan, may yet have much to contribute in the underdeveloped areas. But the essence of the Marshall plan was a willingness to set the goals high and to devise effective methods to achieve them. That should also be our approach to this new challenge before us. I feel sure that a program of cooperation to achieve a better life in the new democracies struggling for their existence will get the generous endorsement of the American people.

The Law of the Land

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that a very fine editorial broadcast, entitled "The Law of the Land," made over New York Station WMCA by Mr. Nathan Straus, president of the station, be printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THE LAW OF THE LAND

(Editorial broadcast over station WMCA by Nathan Straus, April 19, 1956)

As this editorial is broadcast, a courageous man lies in a hospital bed, praying for the preservation of his eyesight, fighting against being blind for life. He was attacked and maimed because he dared to write and to speak the truth. This happened in New York City.

At the same time, men are persecuted and attacked for speaking the truth as they see it in other parts of the country. Bitterness, man's inhumanity to man, vengefulness, are not confined to any part of our country. There are good men and bad men in every State and in every city and in every community. It ill befits a New Yorker to speak in self-righteous tones about injustice to people of a darker skin color, while congested slums, occupied by Negro and Puerto Rican families, still disgrace whole sections of our city.

Nevertheless, without boasting of our own virtues in New York, it may reasonably be asserted that widespread intolerance and hatred of the Negro is a mental disease or kind of astigmatism that afflicts a greater proportion of the people in some Southern States than in our own State.

Some southern newspapers attempt a defense of segregation and discrimination such as has not been attempted by any New York newspaper.

An examination of southern newspapers reveals that all of the reasons advanced against integration in the public schools consist essentially of four basic arguments. These are:

1. That integration is unwise now because the South needs time to prepare its people for such a fundamental step;

2. That the unanimous decision of the Supreme Court outlawing segregation in the public schools is unconstitutional and, therefore, any State may nullify the edict by interposing its own authority.

3. That the order to integrate the public schools at this time is politically inexpedient and must affect Democratic chances in the 1956 presidential election;

4. That segregation is justified by the doctrine of white supremacy.

It is true that integration is unwise now because the South needs time to prepare its people? Is it true that separation of the races is a way of life in the South, respected by both Negro and white citizens? Is it true that upsetting this traditional custom would inflame racial passions and endanger both races?

There is no doubt that time is a universal healer. The fact is, however, that the South has had, not 1 year or 2 years to prepare for integration—it has had 90 years. And what has been achieved in those 90 years? The races have been separated at every possible opportunity and the discredited doctrine of racism has been perpetuated year after year and decade after decade.

Moreover, the notion that violence will occur from integration is not necessarily true. There has been integration in some southern border States, during the last few years, without explosive incidents. In Missouri, the schools—notably in St. Louis, Kansas City, Springfield, and other cities—have shown steady progress under integration. Today, 12 years after its initiation in St. Louis, integration is an established fact. The same is true of Washington, D. C., Maryland, and Kentucky.

In the capitol of the United States, according to a survey made by the New York Times, "7 days after the Supreme Court ruled that racial segragation in the public schools was unconstitutional, the District of Columbia had a plan for desegration. * * * It acted with almost incredible speed to revolutionize a school system that for more than 90 years had operated under acts of Congress that legalized segregation." Now there are 147 schools with classes of mixed races. They contain all of Washington's 68,000 Negro pupils, outnumbering the white pupils nearly 2 to 1. Fears that school integration under such conditions might be difficult have proved wholly unjustified.

In West Virginia, Oklahoma, and, to an extent, in other States, integration is going on successfully, with only temporary, localized set-backs.

Actually, only five States, Mississippi, Alabama, Georgia, Virginia, and South Carolina, have openly declared defiance. Any delay granted to those States which have declared they will resist the law of the land, will encourage lawlessness amongst those States that have indicated they will abide by the law and can serve only to encourage evasion.

While complete equality, including integration of the school system, will undoubtedly take time, there is no evidence in history or in law that a policy or delay, linger, and wait will succeed any better in the future than it has in the past.

What is the second objection raised against the Supreme Court decision? It is that the Supreme Court decision itself is unconstitutional. In the words of Senator EASTLAND, of Mississippi, southerners are obliged to defy it.

This argument is an extension of the idea that the States are sovereign and can interpose their will against the Federal Government. The concept was resurrected from Civil War days by the Richmond News-Leader of Virginia, last November, in a series of editorials. The word "interposition" now has become the rallying cry for all those who believe in Jim Crow.

But not even southerners are in agreement on the doctrine. It has been branded as "legal poppycock" by Mississippi's Gov. J. P. Coleman. Tennessee's Gov. Frank Clement has refused to support it. Florida's Gov. LeRoy Collins has stated that interposition "would be the same as saying that, for limited purposes, we will secede from the Union. And that question has been settled, as we all well know."

Interposition was the subject of bitter disagreement in 1833 between John Calhoun and Daniel Webster. In the Senate in February of that year, Webster declared: "The right of State interposition strikes at the very foundation of legislative power of Congress. * * * It cannot make laws for the Union, if any part of the Union may pronounce its enactments void and of no effect. * * * I maintain, therefore, that * * * the acts of Congress and the decisions of the national courts must be of higher authority than State laws and State decisions.* * * Nullification is as distinctly revolutionary as secession."

The great Chief Justice, John Marshall, in his opinion in the case of *McCulloch* v. *Maryland*, said, on March 6, 1819: "* * * The instrument [the proposed constitution for the United States] * * * was submitted to the people. They acted upon it in the only manner in which they can act safely, effectively, and wisely, on such a subject, by assemblying in convention. It is true, they assembled in their several States—and where else should they have assembled? * * * But the people were at perfect liberty to accept or reject it; and their act was final * * *. The constitution, when thus adopted, was of complete obligation, and bound the State sovereignties * * *. The Government of the United States, then, though limited in its powers, is supreme; and its laws, when made in pursuance of the constitution, form the supreme law of the land."

We can dispose of the whole theory of interposition by this evidence that the highest legal opinion, in the present and in the past, has held that the Government of the United States is supreme.

The third argument advanced by the South to support evasion of the law is that it would be politically inexpedient to insist on integration because it would impel the South to form a third party based on principles acceptable to the Dixiecrats. This is an argument of desperation rather than of reason.

Actually, a third party would not benefit the South. On the contrary, it would render the Southern States politically impotent. Even the most rabid Dixiecrat knows that the progress of the South has been and is

today tied to the Democratic Party. Because of seniority, Members of Congress from the Southern States hold the major committee chairmanships. If the Southern States were to bolt the Democratic Party, such action would only serve to keep the Republican Party in power and lose for the South the great political influence it now wields in the halls of Congress.

The fourth and final reason offered by the South to support its plea that segregation is justified is the assertion that the white race is superior to the Negro race.

Thus under the banner of white supremacy, the South is successfully enlisting support for a revival of the Ku Klux Klan and similar organizations. The so-called White Citizens Councils are conducting a campaign of fear and economic boycott against the Negroes. Even substantial business groups are being wooed. Along the countryside in the vicinity of Charleston, S. C., large blackboards confront the eye, sponsored by the junior chamber of commerce. They show lifelike replicas of school blackboards with this imitation military legend scrawled in white chalk "Remember Operation Blackboard," a reminder to white citizens to use every possible device to evade integration of the public schools.

There is neither religious nor scientific sanction for the doctrine of white supremacy. All of the responsible religious leaders have emphatically denied the notion that God has given superior intelligence or superior virtue to the whites. Historically, Negroes have contributed materially to our civilization. Their achievements have been the more remarkable because of the handicaps of prejudice and discrimination under which they have suffered.

Today, no responsible scholar or scientist will claim that the white race is superior. All that is left in this doctrine of white supremacy is, therefore, unadulterated racial bigotry. Americans cannot honorably acknowledge or accept such a doctrine as a reason for evading the law of the land.

If there is no such thing as white supremacy, how can we eliminate conduct based on this prejudice from the heart of the Southland? We cannot legislate an end to bigotry in the minds of men. But we can, at least, insist on compliance with the law of the land as set forth in a unanimous opinion of the United States Supreme Court. We can refuse to participate in any device for evasion of the law. We can—and we must—insist that planks be incorporated in the political platforms of both political parties, demanding equal compliance with the Federal law, all of the Federal law, by all of the States of the Union—the South as well as the North. To do less is to give greater consideration to those who practice discrimination than to those who suffer from it.

Security for the Land

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. CURTIS. Mr. President, yesterday was Rural Life Sunday. Rev. John F. Streng, D. D., of St. John American Lutheran Church, of Beatrice, Nebr., preached an appropriate sermon entitled "Security for the Land," in which he dwelt upon the definite obligation for soil conservation.

I ask unanimous consent that the sermon be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

SECURITY FOR THE LAND

(Sermon by Rev. John F. Streng, D. D., St. John American Lutheran Church, Beatrice, Nebr.)

(Text: Deuteronomy 6: 17–19.)

Rural Life Sunday has become a time-honored institution and holiday in the church. The Hebrews in Old Testament times observed it with special care and consideration of God's laws concerning the land and its products and preservation. God's original creation included earth and man, both made from dust. The firmanent on high, its countless galaxies of other worlds including sun, moon, and stars, were all made subservient to the good earth. In every land leaders have paused on certain days to remind the people of God's admonition to cherish and care for earth which gives birth and nourishment. The Bible we have, tells us that God created man in His image, and the earth for man's pleasant; and that man was to inherit the earth to the glory of God! Thus man's relationship to the soil is God-given and will never be changed. Productive soil is, together with the salvation of mankind, God's most wonderful gift. It is the one lifeline without which neither man nor animal can find food, clothing, and shelter.

Virgin soil is a miracle of God's creation, a mixture of rock, plants, animals, and tiny living organisms constantly changing, yet always lifegiving. God's immutable law that the soil shall never cease to bring forth life is man's guaranty of divine favor, so long as man respects the soil. Down through the centuries man has not always dealt kindly with the soil, which because of man's sin is equally under the sign of divine punishment. Thorns and thistles were no part of God's original plan in Paradise; but nature groans and travails under the awful curse of man's sin. Man for selfish reasons sets aside God's law concerning birth—death—rebirth, when he employs sticks or stones, axes and plows, fire and water, to multilate God's land. Greed and neglect force land to deteriorate. Because man refuses to watch over it as a shepherd and steward, land is exposed to robbers and thieves, natural and artificial, and much good earth goes to waste.

Soil conservation is God's command. From Genesis to Revelations, the Lord constantly lays upon man's conscience a personal responsibility for the inheritance of the good earth, the cultivation of the land, and careful nurture of the same for the prosperity of posterity. Security of land and people lies not in weapons forced and forged from the soil's minerals, but in God's benevolent answer to the prayers and soil-conservation practices of Christian people everywhere. Soil stewardship is the most important law in God's word next to soul conservation. A better understanding of the value of property and the eternity of divine laws will solve the problem of worldwide starvation.

Man's relation to his Creator is the same regardless of skin. Worn out, eroded land is a visible, tangible proof that man has refused to be God's helper, determined to live as he pleases. Soil is not just so much dirt under our feet. It is a living, breathing, health-giving, life-sustaining creation. It can be either developed, destroyed or debauched. Wise and loving care will preserve it; ignorance and greed will ruin it.

Soil conservation is the tried method of overcoming selfishness, and therefore, meets with divine approval. Jesus was always comparing the Kingdom of God with something akin to the soil. Thus the church's message has always had the burden to stress God's complete and irrevocable ownership of all in heaven and earth. Only love for God and what is His can convert and change the human heart. The Church which the Bible calls God's handmaiden and hired hand is committed to call attention to the sin of soil exploitation. The Christian farmer is a Man of God. He knows that it is God's will to use good soil practices so that future generations may still enjoy the Lord's land. As humble coworker with his Creator, he studies soil economy, and helps his neighbor do likewise. The church has increasingly positively supported all programs that conserve the soil, but she must leave actual practices to those who are called of God to farm.

People are dependent upon the land passed on to them by their fathers. Each generation has a peculiar responsibility. Jesus severely condemned the unfaithful servant who returned the unused talent he had received (St. Matthew 24: 14–30). The church, as one of the most respected institutions in every community, must analyze conditions affecting the welfare of the people. According to statistics the United States population increases 9,000 per day or 3 million per year. Yet poductive areas are shrinking at the rate of 500,000 acres per year. More people must be fed on less soil; therefore soil conservation is a community enterprise. By fulfilling Jesus' command: "Love thy neighbor," genuine Christian brotherhood and Christlike goodwill extend to the soil. Careful economic research shows that recommended conservation practices increase production by 35 percent. Christian farmers are good citizens, good customers, good community builders. They pay their taxes and tithes regularly. They support unborn generations. They have the welfare of the entire Nation at heart. They know that change from soil abuse to achievement means prosperity. Vast scars of maltreated nature must heal through vegetation. Land crying out in anguish, washing away in its own tears of torture, bleeding from merciless gouging and gorging, can recuperate only through sympathetic soil surgery and care. The cattle on a thousand hills enjoy God's green carpet of nature using its delicious food for man. A nation that is impoverished through sterile land has stolen from God. We have a moral obligation to see to it that it may be well with us on the land that the Lord our God has given us.

Government has officially described a farm as a place of 3 to 4 acres, providing the annual value of agricultural products raised thereon as $150. What tremendous changes in farming many of us have seen in past decades. Today the size of the average Nebraska farm is 471 acres. The average farm in the United States has 242 acres; that is 104 acres more than in 1910. With rapid modern mechanization this trend continues, so that every farm journal emphasizes that the day of the small farmer, as we knew him, is limited.

God wants to be good to all. No wealth can buy all the rain, no dictator can command that rain fall only on his land. Both Old and New Testaments define stewards as such who hold in trust the possessions received from their Lord. We are responsible for the soil and its condition. County and State conservation groups and related projects are proof positive that all citizens have a stake in every acre of land regardless of whether the courthouse records show that temporary title is vested in someone's name. People pass on; but the soil remains. How glorious that in our day of frustration, sorrow, sin, temptation, and starvation, we live in a land where a goodly number of farmers are God-fearing men, who rear their family in the fear and admonition of the Lord. When the Lord decreed that man should have dominion over the earth He added the serious responsibility to cultivate and culture the soil.

The church thanks God for youth education on farm and in school, preparing them for future contributions in conservation. In America alone, some 2 million 4-H Club

members, 300,000 future farmers, 2 million boy and girl scouts, 300,000 future homemakers, and scores of other organized youth groups are taught that conservation and good stewardship are a good way to keep America the land of the free and home of the brave.

"Dig the ground and smoothly rake it,
Plant the seeds with loving care;
God's bright sun will shine upon them,
God's warm rain will find them there;
Carefully we'll watch and tend them;
Soon they'll show their thankful heads.
They will grow and bud and blossom, making flower beds."

Once upon a time God created a Garden in Eden; and when He comes again to judge the quick and the dead, each generation will have to account of its season of cultivation. Proverbs 24: 30–32, Job 12: 7–9. The thoughtful farmer will not plant seed that has not been carefully screened and cleaned. So God cannot plant His word into a heart that will not be cleaned of evil habits. God's word declares that man shall not reap good from malice, or righteousness from immorality, or love from hate. No one will draw out of God's bank more love and trust and thankfulness than they invested in soil and soul. God declares that whatsoever a man sows, that shall he also reap.

Seed, sower, and soil all are God's. He created a triple partnership of unique design and no man can dissolve it. Man can divorce himself from God's laws but he will suffer for it. Today's vast deserts are silent sandy monuments to man's defiance of God's laws. The earth suffers terribly under such abuse but God will some day remove its travail and restore it to its former beauty in Paradise. The best things in life are those nearest to us: the soil at our feet, the flower in the garden, the daily duties at hand, the health God gives us, and the path God has outlined for us. So we need not reach for the stars but do life's common work as it comes. That will please God more than anything else and it will occupy our mind with noble thoughts. Amen.

Progress in the Fisheries Industry

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. ALLEN of California. Mr. Speaker, a problem which has always confronted the fisheries industry has been the matter of preserving the product between the time it is caught and the time it is subsequently sold to a consumer.

One of the greatest advances toward the solution of this problem has been the development of a technique in which the freshest of fish is immediately prepared, fried, quickly frozen, and packaged for later sale and consumption. The technique has made good fishery products available in every part of the Nation at all times.

A part of the difficulty in the fish-stick business, as it is called, has been to establish standards for the product. In this effort, the Fish and Wildlife Service of the Department of Interior and the Department of Agriculture have been of great assistance. The appreciation of the industry was expressed in a resolution adopted by the National Fisheries Institute in convention in Florida recently and embodied in a letter addressed to the Honorable Wesley A. D'Ewart, Assistant Secretary of Interior. The letter reads as follows:

DEAR MR. D'EWART. At the closing business session of its recent convention, the National Fisheries Institute adopted a special resolution recognizing the splendid progress made in establishing grade standards for fishery products. We feel that this progress is considerable due to your efforts and the efforts of your assistants in the Fish and Wildlife Service. It gives me sincere pleasure, as president of the National Fisheries Institute, to convey to you the following resolution:

"Whereas the National Fisheries Institute at its 1954 convention gave special recognition to the problems of the infant fish-stick industry and the fish-stick committee was therefore created; and

"Whereas the fish-stick committee late in 1954 undertook to develop voluntary grade standards for frozen fried fish sticks and secured capable assistance from Fish and Wildlife Service technologists; and

"Whereas the entire fish-stick industry, through the fish-stick committee, at the 1955 convention requested the Fish and Wildlife Service to complete the development of practical grade standards and then to issue them on an official voluntary basis; and

"Whereas, at the present convention, the Honorable Wesley A. D'Ewart, Assistant Secretary of the Interior, has announced that official voluntary grade standards for fish sticks are to appear in the Federal Register within a few days: Now, therefore, be it

"*Resolved*, That the National Fisheries Institute in convention assembled at Miami Beach, Fla., April 18, 1956, recognize with gratitude the effective efforts of the Department of the Interior, the Fish and Wildlife Service and the Department of Agriculture in developing and establishing standards for grading fish sticks; and be it further

"*Resolved*, That the Department of the Interior, the Fish and Wildlife Service and the Department of Agriculture be urged to continue the programs to develop standards as requested by the industry."

Please accept this resolution as a token of the gratitude of the entire fishing industry.

Sincerely yours,
FRANK W. WILKISSON, *President*.

Woodrow Wilson Centennial Celebration

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BEALL. Mr. President, the First Unitarian Church in Baltimore recently held a Woodrow Wilson Centennial Celebration at which remarks were delivered by Dr. W. Waldemar W. Argow, minister of the church; the Honorable Emory H. Niles, chief judge of the Supreme Bench of Baltimore City; Gov. Theodore R. McKeldin, of Maryland; the Honorable Simon E. Sobeloff, Solicitor General of the United States; and Dr. Carl B. Swisher, professor at the Johns Hopkins University. Their comments were eminently noteworthy and I ask unanimous consent that they be included in the Appendix of today's RECORD, notwithstanding the fact that according to an estimate by the Public Printer, the cost will be $294.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INTRODUCTORY REMARKS BY DR. W. WALDEMAR W. ARGOW, MINISTER OF THE FIRST UNITARIAN CHURCH, BALTIMORE CITY, ON THE OCCASION OF THE WOODROW WILSON CENTENNIAL CELEBRATION ON SUNDAY, APRIL 22, 1956, AT THE CHURCH

The First Unitarian Church of Baltimore City joins in this year's centennial celebration of Woodrow Wilson with a special pride: it was during his postgraduate years at the Johns Hopkins University that he was a member of our choir, contributing generously of his time and talent to our worship service. Therefore, in honoring him we honor ourselves.

We have asked Judge Emory H. Niles, chief judge of the supreme bench of Baltimore City, to introduce our guest speakers because his father, Judge Alfred S. Niles, was a fellow student of Woodrow Wilson at the Johns Hopkins University.

REMARKS OF JUDGE EMORY H. NILES, CHIEF JUDGE OF THE SUPREME BENCH OF BALTIMORE CITY

It is my privilege to introduce the distinguished speakers who will address us this morning.

They have come to honor Woodrow Wilson, one of the greatest men that America has produced. In doing honor to him they bring honor upon themselves and upon us.

It is, of course, unnecessary to pretend that Governor McKeldin, Solicitor General Sobeloff, and Professor Swisher are strangers. The first two were born in Baltimore, and the third has lived in Baltimore for approximately 20 years. All three have held public and private positions of high importance in the life of Baltimore, of Maryland, and of the United States, positions so important that they are well known to most of you. I shall not, therefore, attempt to recite details of their careers.

Governor McKeldin grew up in Baltimore and must have been in school here when Woodrow Wilson was nominated for the Presidency in the old Fifth Regiment Armory in 1912. I suggest that he was too young to have actually attended a session of the convention. He is named for the great Republican President, Theodore Roosevelt, who was Woodrow Wilson's greatest opponent. The Governor's presence here today to pay tribute to Woodrow Wilson accords with our fundamental tradition that we are Americans first and members of parties second. The Governor is not unknown to the members of this church, for he has spoken twice in this building during the last year. We welcome him again.

The Solicitor General, Simon E. Sobeloff, is likewise a Baltimorean. He was a young man when Wilson was nominated, and I think it probable that he attended the sessions of the nominating convention. He has been city solicitor of Baltimore, and United States Attorney for the District of Maryland. From 1952 to 1954 he was chief judge of the Court of Appeals of Maryland, the highest judicial office in this State. He resigned that office only to accept the office of Solicitor General of the United States, an office which he now holds, and which may be described as that of the principal lawyer for the Government of the United States. He has been appointed by President Eisenhower to be a judge of the United States Court of Appeals for the Fourth Circuit, but has not yet been confirmed. The reasons for opposition to his confirmation do him honor, and I am sure that we who are present hope that

the opposition to his confirmation will be overcome, and that the principles for which he stands, and which we share, will be vindicated.

Prof. Carl B. Swisher was born in West Virginia, and grew up there. Dr. Swisher has been a student and teacher of political science all his life. He was a member of the faculty of Columbia University until he came to Baltimore in 1935 as a member of the faculty of the Johns Hopkins University. He is now the Thomas P. Stran professor of political science. Although the professorship which Dr. Swisher holds cannot technically be called that under which Woodrow Wilson studied while he was at Johns Hopkins, it can fairly be said, I think, that Dr. Swisher is truly the successor of the professor under whom Woodrow Wilson took his doctorate here and an academic child of Wilson. Woodrow Wilson made his great contributions to scholarship in the field of American history and government. Dr. Swisher's life has been spent on this subject, and his last book, which is entitled "Theory and Practice of American National Government," is reminiscent of Woodrow Wilson.

Governor McKeldin will speak on Woodrow Wilson as statesman. Judge Sobeloff will speak on Woodrow Wilson as humanitarian, and Dr. Swisher will speak on Woodrow Wilson as scholar.

On your behalf I again express our thanks to them.

REMARKS OF GOV. THEODORE R. MCKELDIN, OF MARYLAND

Woodrow Wilson became a legend while he was still alive. This is an unusual fate and proves that the man was a strong personality; but it is not altogether fortunate. For when a man becomes legendary the world begins to weave mythology about him. Friend and foe join to build up the legend, with the result that the plain truth becomes obscured and many years may pass before he is accorded his rightful place in histsory.

Even today, 32 years after his death, only a reckless man will assert that he knows exactly where Wilson stands in the list of American statesmen. Some of the most important ideas he introduced into our system of government have not yet been fully worked out. So as they succeed or fail under the test of time, Wilson's rank will be somewhat higher, or somewhat lower, than it is today.

But there is no longer any doubt that his final place in that list will be a high one, so his statecraft is worthy of careful study by anyone interested in the science and art of government. For a long time the outlines of that statecraft were made obscure and uncertain by the dust of political combat. Details that seemed tremendously important at the time have now sunk into insignificance. On the other hand, things to which nobody paid much attention at the time are now, 32 years later, seen to be of immense importance.

For example, his announcement immediately after his first election that he proposed to be not only President of the United States but also the leader of his party, evoked little serious comment. Most people, Republicans as well as Democrats, simply said, Why not? After all, he was the party leader, so why not say so? It was nothing new. Theodore Roosevelt, before him, had certainly been a party leader, and Abraham Lincoln before Roosevelt, and Jackson and Jefferson before Lincoln.

This reasoning ignores the psychological effect of bringing a thing into the open, whereby all subsequent generations must face it. We know now that Wilson's pronouncement actually transformed the Presidency in important respects. I mention this, not because it tells us much about Wilson as a statesman, but simply to illustrate how the perspective of more than 30 years gives a different look to nearly everything he did, including more important things.

Very little knowledge of history is needed to enable one to realize that the career of Wilson as a statesman is sharply divided by the year 1914. This was as unexpected by him as by the rest of the world, for nobody, not the most experienced and astute statesmen in the New World or the Old, had any real conception of what was coming. A great many people were talking about war, to be sure, but what they had in mind was at worst some such conflict as the American Civil War, which was a war of movement resulting in definite, measurable victory for one side. The inconceivably brutal and almost static slaughter of the First World War was beyond imagination—and it was not imagined.

Thus Wilson came to the Presidency under the impression that the utmost that would be required of him was a reformation and renovation of the system of government that had endured since 1789.

For that task he was splendidly equipped. As a student of government he had no superior in this country and few in the world. But he was more than a student. He had a logical and resourceful mind, capable of seeing the weak spot in the existing system of government and also capable of devising ways and means of strengthening it—practical ways and means, based on sound reasoning, ways and means that would work.

The excellence of the work done in the first 2 years of that administration is a matter of history. The first income-tax law, the Federal Reserve System, the Smith-Lever Agricultural Act, the Federal Trade Commission, and the Clayton Antitrust Act were all monumental achievements which stand to this day unchanged except as they have been expanded and strengthened.

But the most that can be said of all this is that it was sound statecraft in the old tradition. It moved in the same direction that Theodore Roosevelt had been going 10 years earlier. New conditions had imposed new methods, but the spirit of it all was identical with the reforming spirit that had animated the men who organized the Republican Party 60 years earlier, and the aim of it was no more than to guarantee to every American citizen the rights of life, liberty, and the pursuit, of happiness. Had this been the sum of his achievements Wilson would have come down in history as a strong and able statesman, but in no way unique.

It was when the world was riven asunder by the explosion in Europe that the situation was created that gave him a place apart from all his predecessors by compelling him to devise and practice a form of statecraft different from anything known in this or any other country. For the First World War literally demolished a world that had existed ever since the reorganization of Europe after the Dark Ages. Statesmen everywhere had the very foundations of their profession blown from under them. Not even the Napoleonic wars made such a complete wreck of the fundamental principles of diplomacy, government, and war. A large part of Europe was physically devastated, but all of Europe and most of the rest of the world was psychologically shattered.

Every man charged with the conduct of public affairs had to reconstruct his system of ideas; but many of them built after the fashion of the poorer citizens of Rome after the fall of the empire, who constructed their houses with stones snatched from the ruined Colosseum. All over Europe men tried to reconstruct their national home with ideas taken from the fallen empires—and poor, and crooked and rickety most of them proved to be.

One statesman only came forward in that emergency with plans for a completely new structure of the world, built with new materials. He was Woodrow Wilson, who perceived that the political philosophy of isolated nationalism had run its course and, like all outworn philosophies, was now most completely false in precisely those aspects that had once been true. This was an idea born of the stresses of the time, not inherited from the Founding Fathers of the Republic. It could not be, for in George Washington's day nationalism was just beginning its triumphant career.

It is true, of course, that the idea of collective security was not original with Woodrow Wilson, any more than the idea of the Declaration of Independence was original with Thomas Jefferson, or the idea that the world is round was original with Christopher Columbus. Nevertheless, Jefferson and Columbus were great men because they gave force and effect to the idea. So did Wilson; and that was the element of greatness in him.

Yet it was precisely at this point that he doomed himself to failure, for it was at this point that he broke the connection between his own mind and the prevailing thought of the time. We must remember that all his brilliant successes in domestic policies, although they were called innovations, were not in fact novelties but merely extensions of practices and ideas that had long been familiar to the American people. The Federal Reserve System, for instance, was new in its structural details, but the idea of with the other memorable reforms. In doan elastic currency was very old. So it was mestic affairs Wilson was a successful statesman not because he induced us to do things we had never thought of but because he showed us how to do what we had long wanted to do.

But the idea that the free nations are interdependent, that none can be secure unless and until all are secure, was a genuine novelty. It had not been true 50 years earlier. What made it true was a combination of circumstances. For one thing, international trade had developed until the prosperity of each individual nation was tied in with the prosperity of its neighbors. For another, communications had developed until what was being thought and said in London and Washington was known within hours, possibly within minutes, in Peking and New Delhi. Finally, the science of warfare had developed until not merely soldiers, but every citizen of every belligerent had become part of its fighting forces.

But when such great changes as these occur, the wisest men in the world do not see all their implications immediately and the mass of the people do not see them for years. Wilson himself did not see them in 1914. There is no reason to doubt that at the outbreak of the war he really believed it was possible for this country to remain neutral and yet remain free. He did not voluntarily yield that belief; the facts simply smashed it down.

However, he was the President, which is to say, he was the best-informed man in the country, possibly in the world. He knew a great deal that was not clearly apparent, often not apparent at all, to the general public. Some people say, in that case he should have informed the public, but that is nonsense; you can't inform a hundred million people rapidly. You can tell them, and Wilson did tell them; but they are not really informed until they have not only heard the news but are convinced that it is true, and convincing people takes time.

In this case there was no time. Some kind of war settlement had to be made then and there, for anarchy was marching hard on the heels of war. The question that Wilson had to answer in 1919 was this: Should he act on the truth as he knew it, but as most of the people did not know it, at risk of losing his leadership and being repudiated; or should he act on outworn and false, but familiar principles, thereby retaining his in-

fluence, but at risk of building a peace structure on such rotten foundations that it would certainly fall down within a few years? Essentially this meant, should he act in behalf of Wilson, the man, or should he act in behalf of the country and the world?

He chose to act for the country and the world; and that made him a great man.

It is true that he failed. The world did not build on the foundation that he laid, and the peace did fall down within 20 years. It is true that he contributed somewhat to his own failure, partly by mishandling men and misjudging events, partly because he collapsed physically. But the failure of the peace treaty and the League of Nations was not the final test of the statesman. That test came when he was called on to risk everything on adherence to what he knew was truth although others could not see it. In that test he did not fail, and so his greatness has survived the ruin of all his hopes.

I am aware of all the charges that have been brought against Woodrow Wilson. Some, but not all of them can be refuted, but at this moment I am not interested in refuting any. Grant that he was stubborn. Grant that he was arrogant. Grant that he was tactless and hopelessly deficient in the arts of conciliation and compromise. All this does not alter the fact that on the supremely important point he was right. This is his enduring honor. May I add, parenthetically, that it is also the great honor of certain of his political opponents, as, for example, William H. Taft and A. Lawrence Lowell, that they, keenly aware of all Wilson's faults, nevertheless saw that he was right on the main thing and supported him strongly.

The whole story of Woodrow Wilson is one that discourages fainthearted men, and men eaten by personal ambition. There is no comfort in it for them, none at all. For the moral of it is that really great statecraft is highly dangerous to the statesman. It is on a lower level that men achieve dazzling personal success—the level of extending and improving, not building from the ground up. Washington, leaving the Presidency amid a storm of vilification and abuse; Lincoln, dead in the moment of victory; Wilson, broken and defeated in his supreme effort—these are typical of men so great that their true stature cannot be appreciated, or even seen, by their contemporaries.

Yet if each of these is in some sense a tragedy, each is tragedy in the Greek manner, high tragedy that, while it arouses terror and pity, at the same time gives a lift to the spirit. You and I may know well enough that we cannot rival or even understand them; yet the mere knowledge that there have been such men reflects honor upon us all. Correggio, on seeing one of Raphael's masterpieces, cried out, "And I, too, am a painter." So you and I, looking with amazement at Washington, Lincoln, Wilson, may reflect, "And I, too, am an American" and be strengthened and emboldened by the thought.

So in this, Wilson's centennial year, I see little profit in speculation as to what might have been had he done otherwise, or had the wheel of fortune spun somewhat faster or somewhat slower. We need not distract our minds over what might have been; it is enough to know what was. It is enough that this American statesman boldly proclaimed the truth when to suppress it would have been more profitable; and so handed down to us the legacy of a great ideal. Thus he became one to whom we may apply the mighty eulogy in the Apocrypha.

"Let us now praise famous men,
And our fathers that begot us.
Such as did bear rule in their kingdoms,
Men renowned for their power,
Giving counsel by their understanding * * *
Leaders of the people by their counsels,
Wise and eloquent in their instructions * * *
Their bodies are buried in peace;
But their name liveth for evermore."

REMARKS OF SIMON E. SOBELOFF, SOLICITOR GENERAL OF THE UNITED STATES

It is in accordance with custom, when a personality is to be honored and there are several to participate in the program, to dissect the subject into separate categories, as you have ordered today. Thus Dr. Swisher was given the assignment "Wilson the Scholar"; the Governor has discussed "Wilson the Statesman," and I am directed to speak of "Wilson the Humanitarian."

But in truth, Wilson was an integrated personality not readily divisible into unrelated segments. His depth of insight and integrity as a scholar, his courage and devotion to duty as a statesman are inseparable from the qualities which may be said to exemplify his broad humanitarianism. In the rich tapestry of his eventful life these several strands are interwoven, and indeed they cannot be separated without losing the pattern of the fabric as a whole.

Thus, when we examine his incomparable state papers, we behold at once the flowering of a lifetime of scholarship in history and political science and the practical wisdom of a statesman; but these are illumined by his vision of the good life and an orderly world, and made dynamic by his ardent zeal for the welfare of his fellow men.

Woodrow Wilson's humanitarianism was not the superficial, backslapping "hail fellow well met" type, characteristic of so many in politics. He was, in fact, at times a bit austere and unbending, even harsh in dealing with people—a defect which hampered him—but he proved himself, nevertheless, a skillful administrator and negotiator.

As president of Princeton, Wilson's drive against the social snobbery of the college clubs is a reflection of his democratic concepts and so was his resistance to the domination of wealthy donors in university affairs. Though unpopular in some quarters, the implications of these ideas were noted by the wider public beyond the campus and had not a little to do with his nomination as a candidate for Governor of New Jersey.

There is not time this morning to dwell upon many facets of Woodrow Wilson's social thought, which are interesting and impressive even to those who may find themselves in dissent. Necessarily I limit myself to a single one, and even that can be dealt with only sketchily. It fell to Woodrow Wilson to lead this Nation in the First World War and to articulate its war aims. Of course, Wilson did not originate the idea of a League of Nations. The dream of peace and freedom, sometimes realized, too often rudely shattered, had been in the minds of men for centuries. It was Wilson's great merit that he wrought mightily to convert the old-age dream into a durable political reality.

The clarity and eloquence of his speeches resounded throughout the world, and he gave moving utterance to our deepest national aspirations. He was more than a master of the potent phrase; he possessed the vital spark of vivid insight. Pertaining to the assigned theme—Wilson's humanitarianism—the high purpose which he declared was not less than to put an end to war and make the world safe for democracy. It captivated multitudes in our country and everywhere. Scoffers and cynics slur and disparage such designs; others, borne down by the wearying weight of things, and their fiber spent, fall victim to apathy or despair; but it is precisely through such persistent moral and spiritual self-consciousness that man has risen as far as he has from primitive barbarism. Wilson became the symbol of the passionate hopes of the masses of men who believed with religious fervor that the League of Nations fashioned by Wilson, would free mankind from recurrent scourges of bloodshed and destruction.

America was not yet ready to go the way Wilson pointed. Without the adherence of the United States the League of Nations was doomed inevitably to failure, and after a few years of unhappy existence it gave up the ghost. Let philosophers of history carry on their fruitless debates as to whether, if the United States Senate had ratified the Treaty, the agony of a second World War and its sequels, which still oppress and baffle us, would have been averted.

What of today? Are we in a better state? This is a time of conflict and confusion in which the deepest issues of the nature of man and the aims of his society are being debated. Cherished democratic ideals are under heavy assault and our basic assumptions in respect to the freedom of the individual are being contradicted. The stress of this period makes it increasingly clear to all thinking persons that having won liberty, a nation cannot rest in the assurance that it may enjoy it without further care or effort. The defense of freedom is a perpetual struggle against dangers internal and external. It is a problem that is never solved, a task never completed. The securing of freedom is not the burden of courts alone, or of Congress alone, or of the executive branch alone, or merely of all departments of Government together. The maintenance of freedom is the responsibility of every citizen and requires not only abstract approval of the slogans of freedom, but devotion in our hearts to freedom's cause and a determination to live by its precepts. This calls for knowledge and understanding and unremitting alertness and sustained effort to oppose acts and usages that are destructive of freedom.

In the field of our foreign relations, we find in the United Nations that the veto power, as so persistently exploited and abused by the Soviet Union, has seriously impaired the United Nation's effectiveness. Indeed, the organization has too often been converted into a forum for the conduct of the cold war, and we are bewildered by the erratic alternations of soft speech and extravagant vituperations, the sullen scowls and specious smiles of modern diplomacy. Even now, as the Near East teeters on the edge of war, with menacing possibilities for the peace of the entire world, the Soviet Union's arms shipments to the Arab nations inexorably continue and the peril of a disastrous conflagration keeps mounting daily. The true meaning behind diplomatic language lies (if we may be permitted such a word) in a confusing obscurity. No wonder a spirit of deep apprehension prevails.

Yet we are not resigned to utter pessimism. We look back to an early chapter in the history of our own Nation and take heart. Two years before our union of the Thirteen Original States was launched in 1787, Thomas Paine, one of its promoters, hopelessly said, "made up as it is of people from different nations, accustomed to different forms and habits of governments, speaking different languages, and more different in their modes of worship, it would appear that the union of such people was impracticable." History attests how wide of the mark Thomas Paine's prophesy has been.

An so, despite difficulties and discouragements, our Nation, under the leadership of President Eisenhower, is not abandoning the struggle for a peace based on righteousness, but perseveres in the hope that in time mutual distrust and accusation will subside and an increasing measure of tranquility, freedom and justice be attained. Thus the President said in his San Francisco speech last June, "The munitions of peace are justice, honesty, mutual understanding, and respect for others. So believing and so motivated, the United States will leave no stone unturned to work for peace. We shall reject no method, however novel, that holds out any hope, however faint, for a just and lasting peace." And some months earlier, he declared in his address to the United Nations, "the United States pledges before you—and therefore before the world—its deter-

mination to help solve the fearful atomic dilemma—to devote its entire heart and mind to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life."

It would be pleasant to be able to report that more has been achieved but it would be calamitous to resign ourselves to accepting less. Our moral duty and our religious command is to "seek peace and pursue it."

This is also the spirit in which Wilson labored and selflessly gave his last measure of strength. His grandest work did not attain success in his lifetime, but there is no dishonor in defeat where there is integrity, high principle and generous devotion to an exalted humanitarian aim.

"The work of justice," the prophet Isaiah has told us, "shall be peace; and the effect of justice quietness and assurance forever." The eternal verity of this utterance is ineluctable and a faltering mankind still gropes toward its full understanding. In the heat of controversy there is inevitable exaggeration of a man's imperfections and limitations and a calculated disparagement of his better qualities, aims and deeds. After the lapse of a third of a century, however, such hostile detractions are muted and there is a softer, juster, more discriminating appreciation of Wilson's character and the grandeur of the ideal for which he struggled with unselfish heart. Today Wilson's life is part of the national heritage all Americans hold in common. When mankind sees this righteous goal with brighter clarity the glory of Woodrow Wilson will shine; for his exceptional talents of mind and heart, his learning and his statesmanship converged in a magnificent humanitarian vision of a world at peace and united, not by fears, but by justice.

REMARKS OF DR. CARL B. SWISHER, PROFESSOR AT THE JOHNS HOPKINS UNIVERSITY

It is a unique experience in American history that in the planning of a memorial to a President of the United States, one-third of the time should be allocated to the subject as a scholar. Such an allocation is appropriately made only in the instance of Woodrow Wilson. He has been our only professor in the White House. Thomas Jefferson, it is true, founded a State university, the University of Virginia. The two Presidents Adams were men of great learning. Grover Cleveland had a post-presidential connection with Princeton University. And William Howard Taft was a professor at Yale Law School between his presidential period and his appointment as Chief Justice and as such he wrote a thoughtful book on the presidency.

Of all our Presidents, it was only Wilson who began with a definitely scholarly career and pursued that career with such success that it might well have led him away from Government service rather than into it. Yet it is to be remembered that scholarship has many facets. There are in particular two types of emphasis. One emphasis is on the disciplined and meticulous collection of facts that have not been collected before, the addition to the sum total of the knowledge of mankind. The other is the play of the processes of thought upon facts in such a way as to illuminate their meaning. Both types of scholarship are needed, and the two are needed in combination. Wilson combined the two types, but his emphasis was always on the second. He was never interested in facts for the sake of facts alone. He was not a collector or an antiquarian. But from earliest boyhood he was interested in men and their history and in the discovery of the meaning of history, with particular emphasis on the history of governments. He read not merely to know but to understand. Ray Stannard Baker, author of Wilson's multiple volume biography, quotes Wilson the college student as warning against cramming into one's head too many ideas of other men lest there be not enough room for thoughts of one's own. He studied in order to understand and to develop his own ideas, and he developed ideas not because his aim was abstract thinking but because from early life he expected some day to be a statesman. "The Senator from Virginia," he signed himself once upon a time when in college. The purpose of scholarship, or of Wilson's personal scholarship at any rate, was statesmanship.

For all the help that he may have received along the way from dedicated teachers, Wilson seems not to have been outstandingly the product of any one of them. He used them, as it is indeed the function of teachers to be used, but he operated under his own dynamics and with his own sense of direction. The one person of predominant scholarly influence in his life, it would seem, was his father, a Presbyterian minister, from whom he imbibed a deep sense of moral values and high standards of literary performance. As a college student at Princeton it seems to have been a group of choice fellow students who served as friends, foils in debate, and sources of ideas, rather than teachers or administrators. When a college senior he wrote a paper on "Cabinet Government in the United States, which was published, ironically, under the editorship of Henry Cabot Lodge, he 'spake as one having authority." He sized up the separation of powers in the United States, he found it wanting, and in ringing tones he proclaimed its defects. He admired the writings of distinguished Englishmen such as Edmund Burke and Walter Bagehot and accepted many of their ideas, and at a later date at the Johns Hopkins University he enjoyed the lectures of James Bryce, another Englishman who told the American people much that they needed to know about their own Government, but in essence, even as to these men, his thinking was his own. He was an independent scholar on his way to service of the state.

Wilson studied law at the University of Virginia not because he wanted a conventional law practice but because he believed the law the appropriate route to statesmanship. He was frankly bored with much of the mass of material he had to memorize to get a degree and to secure admission to the bar but he did the work with the long-range goal in mind. He began practice in Atlanta—or at any rate he opened an office there. But in addition to the difficulties of most young lawyers in building a clientele he had the handicap of not being vitally interested in his profession for its own sake. As the public continued to ignore him he rethought his life plan, admitted the fact that he was far more interested in the living ideas of history and political science than in petty legal controversies which would for long constitute the grist of his practice, and decided to go back to school.

So it was that in 1883 Wilson became a graduate student in history and political science at the Johns Hopkins University in Baltimore, a unique graduate institution then only 7 years of age. There with a small group of able teachers and a unique group of fellow students he resumed his story of American history and American government. While a student he wrote and read to seminars the chapters of what was perhaps his most distinguished book, Congressional Government. With keen powers and great self-assurance he exposed the operations of Congress as work bogged down in committees and as leading politicians determined the nature and extent of the legislative grist. Here again, as the kind of student every graduate school longs for, it appears that he gave intellectual leadership to a greater extent than his acceptance of leadership from others. He continued to recoil at requirements laid upon him by others. He wrote no doctoral dissertation as such and seems to have been determined not to write one. When after 2 years at Johns Hopkins he left to teach at Bryn Mawr, it required persuasion from his wife and from his Johns Hopkins teachers to get him to present his Congressional Government as his dissertation and to return to Baltimore to take the dreaded examinations. He of course came through with flying colors and ended up a Ph. D. almost in spite of himself. It is of note that while teaching full time at a number of other institutions he returned to Johns Hopkins for a part of each of 10 years to lecture where he had been a graduate student, receiving in the beginning the munificent sum of $500 for a series of 25 lectures.

Bryn Mawr, where he had his first teaching appointment, seems to have been regarded from the beginning as but a temporary stop. There he could teach only women, and in the teaching of women he saw little to be gained in his struggle toward statesmanship or the teaching of prospective statesmen. His next stop was Wesleyan University, in Connecticut, where he enjoyed the experience of teaching men. But it was the call to Princeton, his college home, that placed him completely in his academic element. It was during the years from 1890 to 1902 that he developed at Princeton his reputation as a lecturer and wrote most of the books that stand as his scholarly monument. He was still, or perhaps increasingly, the man of ideas. He continued to perfect his literary artistry, with hopes on the part of his wife, indeed, that he would seek a predominantly literary career. Although he was immensely popular with students, his popularity was primarily as a lecturer rather than as a tutor and close associate. He was so sensitive to any kind of imperfect performance that he found the reading of student papers extremely painful. He was at his best in the organization and delivery of lectures with all the finesse of which he was capable. Among his books, including a biography of George Washington, Division and Reunion, The State, and others, we find further examples of his intellectual performance. Historians complained of him that they contained not so much history as what Woodrow Wilson thought about history. It is true in general that they represented appraisals of history rather than collections of historical facts not hitherto assembled. It is also true that today they are for the most part period pieces rather than volumes in current use. As themselves a part of the everflowing stream of American history, nevertheless they have a value and a significance not to be attributed to the works of other and more pedantic historians who then criticized him.

By 1902 Professor Wilson's prestige was such as to make him the logical selection of the presidency of Princeton. At this time, in directing the course of a great university, he entered in earnest on a career of active statesmanship, even though statesmanship in the specialized field of scholarship. At this point the important materials begin to fall within the jurisdictions of Governor McKeldin and Judge Sobeloff, who have spoken before me. Suffice it in large part to say that the qualities that had been developing over long years of teaching and writing came more and more into fruition. He fought for high intellectual and ethical standards, and with the aristocracy of his earlier training he refused to "suffer fools gladly," whether in matters of university finance, the social organization of the university community, or in scholarship. He found low-level academic politics as painful as he had found immature student performance. He fought to make Princeton the great university it was capable of becoming, and he never fully understood how trustees and deans and faculty could operate on a lower level. The fact that in important matters some of them temporarily defeated him made him willing to look toward farther horizons and

lead to his election first as Governor of New Jersey and then as President of the United States.

While it is true that Woodrow Wilson was a scholar in the presidency, it is also true that he had first been a statesman in scholarship. In Washington he was uncomfortable with the rough-and-tumble, no-holds-barred type of politician he met in many posts. He could denounce a group of United States Senators as "a little group of willful men" without sensing the nature of their willfulness or developing adequately the means of dealing with it. Himself a man of ideas and ideals, he could not effectively operate with men who could not rise to his dimension. Yet to an amazing degree he made his ideals live for the American people and gave idealistic leadership when war provided one of the major crises of our times. True, he had vision of world unity and consequently of world peace beyond the range of the great body of human imagination. A point was reached at which the weariness of the people with idealistic strain, the cupidity of politicians seeking selfish advantage, and indeed his own inability to implement adequately his own idealism led to political defeat. But as we see it now the cause on which he had embarked was not one to be achieved merely by the ratification of a treay and the support of an organization. We now see that minds throughout the entire world had to undergo changes and require decades, rather than months or years, before effective unity could be achieved. If Wilson failed, he nevertheless gave a tremendous impetus to the kind of shift in attitude that must take place if mankind is to survive.

A final word as to this scholar who became President, this professor in the White House. His was a great democratic ideal, the ideal approximating that of Lincoln, from whom in many ways he differed greatly but whom he greatly admired. Wilson was in every sense an intellectual aristocrat. To some his aristocracy seemed to reach the point of arrogance and to be devoid of that quality of humility that is essential to genuinely democratic performance. When we reach this point in our analysis we need to resort to careful definition of terms, and on this occasion there is inadequate time for defining them. Certain it is that Wilson was incapable of becoming the kind of politician who measured democratic sentiment merely by keeping his ear to the ground. He sought, instead, to mold and develop that sentiment by his personal example and by the persuasive statement of high ideals. Whence came those ideals which he sought to inculcate? For all his want of ability to assume an ear-to-the-ground posture I should hesitate to say that the ideals were not the major undertones of American sentiment, undertones that needed to be brought to the fore by means of artistic and persuasive statement such as that of which Woodrow Wilson was capable. If he at times guided by an eye turned inward rather than by an ear turned groundward, it would not seem inappropriate to suggest within the walls of this sanctuary that the mystic elements of inner communion may at times provide a better guide to the deeper spirit of mankind than the crasser techniques of public soundings.

However that may be, it was in his idealistic leadership as President that Wilson fulfilled his life both as a scholar and as a statesman. Wilson the man was greater than any of the books that he wrote. His books were stepping stones and not ends in themselves. It was as President and as the advocate of world union for the sake of world peace that he wrestled with possible achievements greater than himself. Here it was that he wrecked himself upon life. Here, for all the appearance of failure, is the measure of the aspiration and of the inner greatness of the man whom we commemorate on this occasion.

Constitutional Means Available for Change

EXTENSION OF REMARKS

OF

HON. HUGH Q. ALEXANDER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. ALEXANDER. Mr. Speaker, under permission to extend my remarks, I include, by request, the following letter from Mr. P. E. Thompson, Spencer, N. C., addressed to the editor of the Salisbury Post, Salisbury, N. C., entitled "Constitutional Means Available for Change":

CONSTITUTIONAL MEANS AVAILABLE FOR CHANGE

EDITOR POST:

In the beginning God created Heaven and the Earth, and as we know the Earth today, it is comprised of six Continents separated by thousands of miles of water or other natural barriers. God created man in his own image, and later created separate races, first mentioned in Genesis, 9th and 10th Chapter, as the descendants of Ham, and identified by the New International Encyclopedia as the black race. There are, as commonly accepted, five races: white (Caucasian), black (Ethiopian), yellow (Mongolian), brown (Malayan), and red (American Indian).

Since it has been determined that there is no difference in the blood of mankind, some people have been led to believe that there is no difference in the races. Blood in a human has no more to do with the nature than the sap in a tree, grafted, and producing different fruits, or different vegetation growing in the same soil. It is the seed that makes the difference as the Seed of Abraham, etc.

God further separated mankind by different languages resulting in the setting up of separate nations. These separate nations have increased in number, the latest being Israeli, created by the United Nations for the Jews. We have separate religious denominations, labor organizations, and many other separations, that many may have freedom of choice and develop along lines of their choosing, with no thought of superiority, striving only to improve and excell in doing good. I believe this is according to God's plan and man's desire.

When this great Nation was formed from 13 separate colonies, history tells us that the Founding Fathers had much difficulty in getting agreement to setting up a central government, but finally agreed on certain specific controls only. The Constitution provides for three separate branches of the Federal Government, each to be independent and supreme in its own branch. This Constitution provided that any changes in this basic law would be inaugurated by the legislative branch and ratified by three-fourths of the States before it would be effective.

1896 RULING

In 1896 the Supreme Court ruled on the race question that equal but separate for the races was according to the Constitution. I think that Court was as wise and as unprejudiced as the present personnel of the same Court, as much as I think George Washington, Thomas Jefferson and Abraham Lincoln were as wise as F. D. R. or Dwight Eisenhower, and there has not been any amendment since 1896 to change this basic law.

I think the present Court not only acted unwisely in its reversal of this decision, and caused unnecessary friction between the races, but violated the very Constitution which it is sworn to uphold. The decision of 1896 has been the law of the land for 60 years, and it certainly does not make for stability of the law for different personnel of the same Court to make different rulings. If such a radical change is to be made the Constitution plainly provides the procedure. It is not for different courts to say what they think the law ought to be, only what it is until changed.

I think the South is being unduly singled out on the question of racial prejudice. The present Chief Justice of the Supreme Court is from a State (California) which has intense prejudice against the yellow race, being the State most instrumental in securing the Chinese Exclusion Act, or Treaty, which was resented by all the yellow races, and I believe was the basic cause of the Pearl Harbor attack.

I think the South has done a pretty good job assisting the Negroes to advance from slavery, in less than a hundred years, to a position superior to any of the colored races of the world, and I venture to say that their standards of living will compare favorably with any people anywhere outside of America. In fact there ceases to be any complaint by the colored people of their economics condition or standard of schools, etc. Their only remaining desire is "Integration." The mixing of races in schools, especially in the lower grades where first impressions are formed, and where the doctrine of no difference in races is taught will eventually result in the beginning of a "mongrel" race. I ask the best people of both races, Is that what you want?

I think there is more sectional prejudice against the South than there is racial prejudice in the South. I think this is based more on ignorance of the subject than anything else. As hateful as slavery is to me, and most people of today, I do believe that God has used it sometimes as a blessing in disguise. I don't believe the Negroes would ever have reached the promised land of America had it not been for slavery. In colonial days England and other European nations had hundreds of ships in the slave trade. Slavery was first legalized in the colonies in Massachusetts in 1641. The first legal action against slavery was taken by Virginia in 1723.

CHANGE OF SCENE

After the northern colonies found that they could not use the slaves to advantage because of climate and their type of industries, they did not free them. They sold them to the southerners to be further enslaved, but in the South they were able to survive and multiply. I think those who sold them were just as guilty as those who bought them. Then they later prosecuted a war to free them with no provision to compensate the South for its loss. A recently reported statement by a colored bishop visiting in Russia that the "Negroes' life in America is like that of any other people."

In the past 5 years the colored race has increased in the South only 2 percent, and in the balance of the country 56 percent. At that rate, the so-called race problem will be removed from the South to such segregated sections as Harlem, and similar sections. I hope the colored people decide to stay and continue to advance in their separate business enterprises, schools, and professions. The South is the land of opportunity for the colored man as well as others of good will.

When a people are willing to accept such a radical and unprecedented directive as that of the Supreme Court of May 1954, and May 1955, I think they are ripe for dictatorship, whether by "nine old men" or by an overzealous younger one.

The South, with the highest percentage of American-born population, should be proud of the 100 Congressmen and several governors and legislatures in their determination to resist this dictatorial decision by every legal means, and I believe Virginia is proceeding properly in invoking the sovereign States right of interposition, not to annul, but to hold in abeyance the Court's directive until

a change in the Constitution can be properly submitted, and ratified by the necessary 34 States.

After humbly and prayerfully considering the above question, this is what I believe.

P. E. THOMPSON.

SPENCER, N. C., *April 16, 1956.*

Virtue and the Farm Bill

EXTENSION OF REMARKS
OF
HON. ALVIN R. BUSH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. BUSH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Saturady, May 5, 1956:

VIRTUE AND THE FARM BILL

The House has acceded to the request of the President and has passed legislation providing for the soil bank, which was the most important single proposal in the President's farm program as presented to Congress in his message of January 9. The bill calls for a total of $5.7 billion in additional farm spending over the next 4 years.

Though the President had asked only for the soil bank, on the desirability of which the administration and Congress were in complete agreement, it was probably expecting too much to suppose that Congress could resist the temptation to try to load it down with amendments of its own, designed to make itself solid with groups that might not stand to benefit from the soil bank. In some cases it failed to marshal the needed strength, but in several others it succeeded. The latter included at least one of the provisions that had been singled out specifically for criticism by the President in the message accompanying his veto of the original omnibus farm bill. This was a provision calling for mandatory supports for the principal feed grains other than corn—rye, oats, barley, and grain sorghums.

In calling for enactment of a soil-bank bill the President had taken into account the frequently repeated refrain of the Democratic leaders that it was imperative to get additional income into the hands of the farmers this year. This, in fact, was the sole basis on which the opposition attempted to reinstate 90-percent price supports in the bill vetoed by the President, a policy which, as one commentator recently put it, "is like prescribing a diet of sugar for a diabetic."

Congress had procrastinated so long before giving the President the soil bank when he first asked for it that it would have been of little use so far as increasing farm income this year was concerned. The President, in making his second request for the bank, therefore proposed that any farmer who formally contracted to withdraw acreage from surplus crops under the bank's provision receive an advance on the payment he was to receive after the contract had been carried out.

This, needless to say, put the Democrats, who had been demanding immediate cash for the farmer, in a highly uncomfortable position. Should they approve the proposal for prepayments and thus permit the administration to take credit for getting purchasing power promptly into the hands of the farmers? Or should they block the administration's plan, and run the risk of alienating perhaps an equal number of farm votes? And, if they chose the latter course, how would they rationalize their action?

In the end they chose the second course. This would seem to be dubious even from a political standpoint. But the opposition has insisted on making it a little ludicrous as well, by attempting to clothe their decision in the robe of moral rectitude. Their position, it would seem, comes down to this: It is politically moral for you yourself to pump out additional income to the farmer if you do it through 90-percent rigid supports, a mechanism under which the producers of crops already in surplus are encouraged to increase that surplus; it is immoral when someone else proposes to raise farm income through an apparatus which is based on the sound principle that to be eligible for additional income the farmer must cooperate in reducing the farm surplus.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. WIGGLESWORTH. Mr. Speaker, I am happy on the occasion of the 165th anniversary of the adoption of the Polish Constitution to join in tribute to the people of Poland and the indomitable spirit which they have shown throughout the centuries.

No one can turn the pages of history without realizing the brilliant contribution which the Polish people have made to mankind in the field of literature, in the field of music, in the field of science, in the military and other fields.

No one could travel throughout Poland, meeting some of its outstanding leaders, as it has been my privilege to do in days gone by, without sensing the genius of the people.

We in America are fortunate in having some 6 million fellow citizens of Polish descent. They have contributed greatly to the life of the Nation in time of peace and in time of war, and are today playing their part in the struggle in which we are engaged for freedom and independence in a peaceful world.

America and Poland have had much in common in their love of liberty, justice, and peace and have evidenced their friendship in experience shared, and in mutual assistance rendered in time of need.

During the Revolutionary War, it was General Kosciusko and General Pulaski who came to the assistance of America.

During and after the First World War, our national leaders contributed greatly to the rebirth and rebuilding of Poland.

During the Second World War, the soldiers of Poland fought brilliantly in many theaters of the war. They fought on land, they fought in the air, their aviators winning especial renown. They fought on despite unbelievable suffering inflicted upon those at home.

We all appreciate the unbelievable suffering which those in the homeland have experienced under the yoke of Communist aggression.

We are confident, however, that the spirit of Poland which proved indomitable despite 150 years of partition by the forces of three empires will again prove indomitable despite the circumstances by which Poland is today confronted.

We look forward to the day when the ideals and courage of the Polish people will be rewarded by a government which is again independent, playing its proper role among the free nations of the world.

The State Senate of the Commonwealth of Pennsylvania Urges Congressional Action Against Unfair Import Competition

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. VAN ZANDT. Mr. Speaker, on January 30, 1956, the following bipartisan-supported resolution, urging congressional action against unfair-import competition, was approved by the State Senate of Pennsylvania.

The resolution follows:

RESOLUTION URGING CONGRESSIONAL ACTION AGAINST UNFAIR IMPORT COMPETITION

Whereas the increased importation of numerous products that come into competition with the output of factories, farms, and mines of Pennsylvania, replacing the products of Pennsylvania's industries, is a constant menace to the State's continuing economic stability; and

Whereas the lower wages paid abroad make it impossible for many of our smaller and medium-sized producers to compete with imports without resorting to ruinous price cutting, which in turn would result either in financial losses or heavy pressure for wage reductions and outright unemployment; and

Whereas our national obligations have reached such extreme proportions that the national income must be maintained at its present unprecedented high level, or close thereto, lest we become insolvent; and

Whereas unemployment caused by the imports of residual oil, which increased 300 percent from an average of 45 million barrels in 1946, to more than 136 million barrels in 1954, or the yearly equivalent of 33 million tons of coal; and unemployment caused by imports of crude oil; various types of glass, steel, aluminum, brass, and zinc products; pottery and chinaware; granite, tiles, cement, hardboard, plywood, hardware, plumbing, flat glass and other building supplies, lace, carpets and all kinds of woolen, cotton and synthetic fiber manufactured goods; leather and fabric gloves; bicycles; hydraulic turbines; machine tools and other machinery; heavy electrical equipment and other electrical industry products and electronics; watches, clocks and parts; optical industry products; cutlery; scientific apparatus; pencils and pens; pins, clips, and fastenders; soft fiber; insulation board and manufactured cork products; chemicals; toys; mushrooms; farm, dairy and dried milk products; wallpaper; hats and millinery; printing industry products; ladies' handbags and leather goods; nails, wire, screws, bolts and nuts and many other commodities; will render the upholding of the economy at its high levels most uncertain and difficult, unless all import trade is placed on a fair competitive basis and the potential injury therefrom thus eliminated; and

Whereas agricultural products such as wheat, wheat flour, cotton, butter, cheese and peanuts enjoy the protection of import quotas; and

Whereas a maximum of satisfactory trade results from a prosperous domestic economy

freed from the threat of a breakdown resulting from unfair import competition: Therefore be it

Resolved (if the house of representatives concurs), That the General Assembly of the Commonwealth of Pennsylvania hereby memorialize the Congress of the United States that adequate safeguards be provided in tariff and trade legislation, including import quotas, against the destruction or lowering of our American standard of living, the labor standard of our workmen, and the stability of our economy by unfair import competition and that the existing trade agreements legislation be amended accordingly; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Vice President of the United States, the Secretary of State, the Secretary of Commerce, the Secretary of Labor, the Secretary of Agriculture, the Chairman of the United States Tariff Commission, the Speaker of the House of Representatives, and each Senator and Representative from Pennsylvania in the Congress of the United States.

Dinosaur National Monument

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What's the Rush About Dinosaur?" published in the Deseret (Utah) News of April 26, 1956. The editorial refers to the proposal to make a national park of Dinosaur National Monument.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The sudden excitement over making Dinosaur National Monument a national park should be recognized for what it is—nothing but a hangover of the bitter fight over Dinosaur in connection with the Colorado River storage project.

As such, it is perhaps at least partly understandable, but it is nonetheless ill-advised. By acting hastily in this matter, the Nation could do serious harm to the long-range national park program with which we are all sympathetically concerned.

Let us review the facts, objectively and without sectional heat:

Utah and other upper-basin States agreed that Echo Park Dam should not be made a part of the recently approved legislation authorizing the upper Colorado project. This agreement was fully kept. Echo Park was taken from the legislation, and no effort was made to restore it in the Senate-House conference or elsewhere. It is completely out of the initial phase of the project, which cannot now be amended.

This means there is no time pressure. Conservationists who are dedicated to keeping a storage dam and reservoir out of Dinosaur need have no worry in the forseeable future. They have no reason to rush through a bill to change the existing monument to park status. There is plenty of time to consider the proposal fully and act in wisdom instead of in haste.

Several pertinent questions need full consideration.

First of all, would it be wise to add additional lands to our national parks system at a time when the National Park Service has insufficient funds to keep up the units now under its supervision? The Senate Appropriations Committee this week approved a larger budget for parks maintenance than was available last year, but still had to strike out such needed items as an oil road around the rim of Cedar Breaks National Monument, a road from U. S. 91 into Zion National Monument, a road into Arches National Monument and development of a water supply at Capitol Reef National Monument.

These are all units of the National Park System in the same general area as Dinosaur—and other developments in other areas were also left out. It would be well to take care of what we have before going on to more ambitious expansion.

Secondly, there is very serious question whether the canyons of the Green and Yampa Rivers are as deserving of national-park status as several other areas in the same Colorado River Basin. This question has been raised before, but the conservationists categorically refused to consider it when the Echo Park issue was being debated. The conservationists may have felt the question was introduced solely as a diversionary tactic at that time—but now that all time pressure has been removed, it can be impartially reconsidered.

The National Park Service's own Survey of the Recreational Resources of the Colorado River Basin lists numerous areas of genuinely outstanding scenic value. Among them are:

Monument Valley, already world famous, but still without status as a national park or monument.

The Gray's Pasture Land's End area, a broad expanse of fantastic country which includes the incredible and still unsurveyed Land of the Standing Men, famous Dead Horse Point—which the late Believe It or Not Ripley rated as a more magnificent view than the Grand Canyon itself—and the spectacular Needles area. Many naturalists believe this vast area holds some of our most outstanding scenery—not excluding that of our present highly spectacular parks and monuments.

The Escalante, Hole in the Rock, Rainbow Bridge country, filled with startling and colorful rock formations.

It is not suggested that the Nation rush out and set up a new national park in any or all of these areas, any more than it hasten to give Dinosaur national-park status. On the contrary, it is suggested—in fact, urged—that we do not make wasteful haste at all.

With ample time available, a thorough study of all of the scenic potential of the Colorado Plateau can be made, and a wise decision be based on the factual foundation such a study will establish.

Poland's Constitution Day

SPEECH
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mrs. CHURCH. Mr. Speaker, on May 3, which is the anniversary of the adoption of the Polish Constitution of 1791, I would like—since that heroic nation is unable to speak for itself—to commemorate for its people this significant occasion marking the former freedom and democratic practices of that nation; and also to express the hope felt by myself and millions of others in our own free land and that the future will bring to the Poles behind the Iron Curtain a release from their present bondage and an opportunity once more to function as free men in true national freedom. Not only is this the hope of individual Americans and of Americans like ourselves who represent the people of the United States in the Congress: The State Department, in a statement issued yesterday, pointed out that in recent years May 3 has become something more than the day Poles and their friends celebrate as Poland's National Day. "It has become a day on which the United States reaffirms its assurances that it is not reconciled to the bondage of Poland."

We look forward with the Polish people to the day when they can again celebrate this great occasion as a free nation.

Definite Relief for Cotton Growers Required

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the text of a letter I sent to Secretary Benson, on April 25, 1956:

Hon. EZRA T. BENSON,
Secretary of Agriculture,
Department of Agriculture,
Washington 25, D. C.

MY DEAR MR. SECRETARY: This letter is to bring to your attention the plight of the extra long staple cotton growers in the United States, and to ask your best effort in alleviating the current conditions.

Basically, the problem facing our domestic producers are directly traceable to excessive imports of long staple cotton from Egypt.

It is my purpose to request that you use the provision of section 22 of the Agricultural Adjustment Act to deal with this matter. As you know, under the provisions of this Act the Secretary of Agriculture has the right and the responsibility to recommend to the President the initiation of proceedings looking toward import restrictions, when such imports are shown to be the detriment of domestic producers.

Currently, foreign grown cotton accounts for almost 100 percent of American mill consumption. Most of this foreign cotton is purchased from Egypt, while our own cotton is stored in warehouses and domestic acreage is further decreased. Our imports from Egypt have reached 95,000 bales annually, the near-maximum under the quota system.

Time was when our State Department advocated liberal importing of cotton from Egypt to discourage that nation's trade with Communist-controlled nations. But the record shows that Egypt has increased trade with these Red nations, and her attitude toward the United States and other freedom-loving nations has become auspect, thus the original contention of the State Department is destroyed.

Egypt has acted, overall, in a manner very hostile to the United States. She protested our spending money paid us by the Italians for defense bases in Italy. She asked for our aid in building the Aswam Dam, accepted our offer to do so, and turned her back on the United States to deal even more with Russia. She demanded our money to buy planes and train pilots to fight army boll-worms attacking Egyptian cotton.

General Nasser, dictator of Egypt, has been responsible for the present crises in the Mid-

dle East, due to his acceptance of Red arms from Czechoslovakia. Those arms include submarines which will fly the Egyptian flag but be manned by Communist technicians under Russian tutelage. Those subs will ply the Mediterranean in the shadow of our 6th Fleet.

Egypt refused to import much of our surplus wheat, at a time when we desperately needed a new wheat market, yet she accepted wheat from Russia during this same period.

It does not seem logical, nor in the interest of fair play and justice, to continue to appease a nation definitely hostile to the United States, and particularly to the detriment of our domestic cotton growers and at the expense of their cotton market. Enlightened self-interest requires the action requested herein.

I, therefore, strongly urge your using section 22 of the Agricultural Adjustment Act to lower the import quota and to place a tariff designed to protect American interests on foreign-produced extra-long staple cotton.

Your prompt attention, consideration, and reply will be greatly appreciated.

Respectfully yours,

EMANUEL CELLER.

Basic Issues Involved In the Labor Problem

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. GOLDWATER. Mr. President, one of Arizona's most distinguished citizens, Mr. Frank Brophy, has written a most searching article dwelling on the basic issues involved in what is wrongly referred to as the labor problem. Because of the current and proper interest in this subject, I suggest that my colleagues read the article, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Arizona Republic of May 4, 1956]

LETTER TO THE EDITOR: CANDLE OF VISION

(By Frank Cullen Brophy)

Jack Hellman asks (letter April 21) through your letters to the editor column that I write a piece on some subject "close to the heart of labor"; and he very wisely suggests "it is better to light one little candle than to curse the darkness." This admonition, I suspect, has been borrowed from by friend, Father James Keller, who started the Christopher (the Christ bearer) movement some years ago. He has often given that wise counsel to a world grown bitter and confused in the darkness of minds that are warped by fear and hatred.

I, too, shall borrow a phrase to start my reply. The famous George Russell (AE) once titled a book of essays "The Candle of Vision," and if I remember correctly, it contained the most devastating criticism of a fellow poet I have ever read. AE was no "silver spoon" writer. In his younger years he served as a clerk in a dry goods shop. He was a wise, intuitive and kindly man who could be roused to rip the hide off Rudyard Kipling only when the poet laureate had debauched a fine poetic talent in order to please his imperial masters, the British Tory ruling class.

Had I the talent of AE I, too, might have done a more memorable piece on the author of The Voice of Arizona Labor who used his position to villify and sneer at Senator GOLDWATER. GOLDWATER's offense was that he had the intelligence to perceive that certain labor politicians were betraying the very people they posed as befriending, and he had the courage to expose them, even when he knew that the wealth and power of the newly formed labor political party (AFL–CIO) would be thrown against him. At the appropriate time these same union-political forces will, no doubt, eulogize some wealthy political Milquetoast, like Harriman or Stevenson, for the sordid reason that they may agree to prostitute themselves to a power-hungry pack of leaders who want to control the revolt of the masses of America.

But now I shall try to oblige Mr. Hellman and write something close to the heart of labor—not the labor professionals, I must add.

The labor problem, as I see it, is the human problem. It is the endless tragedy of man's inhumanity to man. Confucius faced it when he urged his fellow Chinese never to do unto others except as one would have them do unto them. When the Son of Man, who loved men as only God can love, came down to this earth, he simply said "Love one another." To those who could not see themselves except in the role of exploiters, he urged: "Seek ye first the Kingdom of God and all things shall be added to you."

These are very unrealistic and impractical words according to the concepts of politicians, financiers, economists and labor bosses, yet they have come down the millennia of years—challenged, but never erased. Each century has produced its little crop of politicians, demagogs, rulers and powerful ones. Their words and pronouncements usually precede them into oblivion. They are the constant proof that the foolishness of God is greater than the wisdom of men; but, of course, the kind of men who deceive their fellow man, and thereby rise to seats of power and eminence never admit anything so preposterous—at least in public.

The labor problem is one that touches all of us—rich and poor, fools and philosophers. Since the fall of Adam, man has been doomed to earn his bread by the sweat of his brow. The laborer does it at the end of a shovel, the corporation lawyer over a desk strewn with books and papers, the executive on a mahogany table with a mind bedeviled by doubts and hopes.

One day, I lunched with one of the richest men in America. He had a lettuce sandwich and a glass of milk. He looked as unhappy as Dives must have looked when he begged in Hell for just one drop of water. I have also lunched with a peasant on a bowl of strong soup, a hunk of French bread and a bottle of wine. He looked as happy as a king is supposed to look, but seldom does. This is the paradox of mankind. It is also the paradox of the labor problem. It cannot be solved by forcing men to join unions. It cannot be solved by strikebreakers and starvation wages. In fact, it cannot be solved—period. It can only be alleviated.

When those strong enough to maintain positions of power and trust will do for those beneath them as they would want it done to themselves were the positions reversed, then progress in easing the pain that gnaws at the heart of labor will be made. When those in authority reject the temptations of pride and greed and try to guide their actions with a spirit of fair dealing and justice, then progress in the labor problem is being made. When the man at the bottom, or in the middle, can face life with a minimum of envy, hatred, and greed, he is helping work out the labor problem though he may little suspect it. I repeat what I said in the beginning. The labor problem is the human problem, and the answer to the human problem will only be found in the mystery that lies hidden in the heart of God.

I frankly admit that my candle of vision is a tiny one; but if it has been lighted by only a spark thrown off from the mighty flame that is the Light of the World, then it will not have burned in vain.

Cash Payments to Totally and Permanently Disabled Persons

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Inspiration Does It" written by Inman H. Douglass, and published in a recent issue of the Christian Science Monitor. The article deals with cash payments to totally and permanently disabled persons.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON.—The routine listening to routine testimony came to a sudden halt the other day in the Senate Finance Committee. Hearings had been droning along on H. R. 7225, the social security bill to provide among other things, cash payments beginning at age 50 to persons totally and permanently disabled.

Reason for the quickened interest was the testimony of a lively new witness on the stand, who might himself have been once classified as disabled, but who quite definitely had declassified himself.

"There are no disabled," vigorously declared Henry Viscardi, Jr., the legless president of Abilities, Inc., a Long Island, N. Y., firm that employs only disabled persons. The next hour Mr. Viscardi spent explaining his statement.

Abilities, Inc., produces electronic parts for airplane manufacturers and other industries, and seems to specialize in positively demonstrating what other opponents of the disability provisions of H. R. 7225 have been more quietly saying: that ability is vastly more than a physical condition.

To back this up, Mr. Viscardi briefly told the thrilling story of his unique organization, a corporation formed in 1952 with $8,000 of borrowed capital. It now consists of 176 men and women considered disabled from a medical and physical standpoint who successfully compete in the open market against firms that employ nonimpaired workers.

Accepting neither charity, donations, nor Government grants, the corporation has repaid out of operating profits the $8,000 borrowed capital, with interest, but the main thing it does not accept is disability. The central theme of its philosophy is the restoration and preservation of the incentive, dignity, resourcefulness, and productivity of the individual regardless of his physical handicap.

Mr. Viscardi personally believes that the passage of the proposed legislation to provide cash benefits for the disabled would "destroy all opportunity for the disabled to help themselves." He said it would make them kept citizens.

His firm has been able to provide a more-than-average wage level for its employees,

and a retirement fund as well—a fund for disabled disabled workers. Asked when a company employee became disabled, Mr. Viscardi replied that that would be when a person could no longer perform the work for which he was trained and could not be trained to perform some other type of work. He added that so far no employee had applied for corporation-provided disability benefits; they are still at work. "It is his abilities that count, not his disabilities," Mr. Viscardi stressed.

"What a disabled person wants and what he needs is not a pension or pity but the dignity of a productive life. A disabled person wants a chance to help himself, a chance to seek the challenges of life—a meaningful life—instead of a guaranteed existence."

Committee members, witnesses, and spectators alike were captivated by this testimony of what the spirit of man can both do and undo: doing of the possible proving to be the undoing of the impossible. There was no doubt that Mr. Viscardi was, so far, the star witness of this series of hearings which began early in February.

Here was a modest little man, asking for nothing and offering nothing but the observation that he was apprehensive of the destructive effect that the passage of this bill would have on that class of people who are regarded as disabled. Almost apologetically he expressed regret over not having something more constructive to offer. He kept trying to bring his testimony to a close, but the Senators would not let him go. They wanted to know more about his work, how he went about rehabilitating people, training them, lifting up their spirits, and enabling them to become self-supporting.

He was sorry, he said, that he couldn't give more of an answer to those questions. All he could say was that he was obsessed with a burning drive to prove that a person doesn't have to be disabled. One of the Senators replied in substance: "Mr. Viscardi, if you could tell how you get your inspiration and have been able to impart it here to us today, and how you could impart it to others, we would have the answer to this whole problem."

It was as though a fresh breeze of earth-free inspiration had suddenly swept the room clean of dusty, time-tangled convention. It would have indeed been difficult for anyone at that moment to define the term "disability."

Farm Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two bulletins from the GTA Daily Radio Roundup, dated April 26, 1956, and April 30, 1956, respectively.

There being no objection, the bulletins were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

THURSDAY, APRIL 26, 1956

A hornet's nest of criticism was stirred up by Congress when it passed its 1956 farm bill. Newspaper editorials buzzed angrily over the proposal to restore 90 percent supports, to continue dual parity, and other features to help bolster farm income. And, the same editorial columns cheered wildly when the President killed the bill with a veto. Big-city newspapers kept up a steady barrage of opposition to the bill. And, as usual, many of them succeeded in picturing the farmer as an inefficient individual, asking pampering and subsidies from the rest of the country.

An editor of a daily newspaper in southern Minnesota notes all these complaints, and doesn't like them at all. Here's what the editor of the Mankato Free Press has to say: "Sometimes it seems to us that the farmer himself, the farm bloc in Congress, and the several nationwide organizations which represent the farmer, all have done a poor job in selling the rest of the Nation on the simply magnificent job that the farmer has done in making agriculture the efficient, productive, modern industry that it is today. Also of the tremendously important part that particular industry plays in our national defense."

These thoughts, says the editor, were prompted by the comment of an eastern journalist to the effect that a particular farm legislative proposal was "just another subsidy for the farmer." The Mankato editor says there are three words that have no place in that statement. They are, he comments, these three—"for the farmer." He declares that, "The soil bank, price supports, all of the other aids the farmer has received to stabilize prices and keep his industry productive and efficient, have benefited the Nation at large far more than they have benefited the farmer personally."

He goes on to point out the vital role that agriculture has played in our national defense—how a great amount of our staying power in time of past wars has been due to the ability of our farmers to sustain and step up food and fiber production. But, unfortunately for the farmers' public relations, people have forgotten that just a few years ago we were faced, not with too much food, but with the actual danger of shortages. Farmers met that challenge and produced plenty. They came through with flying colors. But, they failed to get the credit and recognition deserved for that job. It's quickly forgotten by journalists who complain of aids "for the farmer."

The truth of the matter is that farmers, when it comes to efficiency, belong at the head of the class. They've accomplished miracles of production and deserve credit, not abuse, for the job they've performed. Everybody has benefited. That's what the Mankato editor is saying. Legislative aids to bolster farm income are not "just another subsidy for the farmer" but an intelligent way to help people in the city, in industry, in the whole nation.

This broadcast comes to you from GTA, the co-op way, grain marketing cooperative of thousands of Midwest farmers.

MONDAY, APRIL 30, 1956

As you heard in the news, the House Agriculture Committee has just okayed the new farm bill. Now the House is ready to act on the compromise measure including the soil bank. We hope, naturally, that Congress passes and gives the President the soil bank he wants. For those who say the soil bank gives farmers less than it takes away, in the small print, all we can say is, give it a chance. Then we can know if it works or not. The same as the farmers gave the Secretary of Agriculture a chance for 1 year, 2 years, 3 years, and now, in the fourth and politically important year.

What manner of man is this high priest of low farm prices these days when his vision is 6½ percent higher than it was just a few months ago. As the St. Louis Post Dispatch writes, he's a changed man, and here's the story about "Ezra's Changing Image." "Secretary of Agriculture Benson has now completed the job of putting into force a new schedule of election-year farm price supports, and it seems clear that the popular image of the Secretary will have to be revised." And, the St. Louis Post Dispatch goes on: "Ever since coming into office, Secretary Benson has been known as a perfect lion of a man—brave, flinty, indomitable, foe of expediency, embodiment of unyielding principle. In short, just great.

"When he called the Brannan plan morally corrupt, his own purity of character shone forth like a new weather beacon. Here was a man who, as he himself did not mind suggesting, would always do right, and whole right, and nothing but the right. Now it does not quite track. Ezra turns out to be about as flexible as the sliding-scale price supports he used to advocate up to a few weeks ago. Basically, the farm situation has not undergone any drastic change within the last month. Yet Secretary Benson is now setting all the major price supports well above the levels where he had previously announced they would be set.

"How does it happen," the St. Louis newspaper asks, "that brave and flinty Ezra could consider 75 percent of parity an adequate support level for cotton in March, but in April deems 82½ percent necessary? What considerations impelled him to raise wheat from 76 to 84 percent, commercial corn from 81 to 86 percent, rice from 75 to 83 percent, and so on? The answer is, of course, well-known and does not have much to do with principle. Secretary Benson changed his mind because the President told him to. And, the President told him to because sugar coating was needed, at least enough to last until November, for the pill of the farm bill veto."

That is what the writers of the St. Louis Post-Dispatch say, and those men are as much against firm price supports as Ezra still is. On our part, we are pleased rather than indignant. We are pleased when any move is made to help farmers get a more decent income. And, so we take some pride in what Farmers Union and GTA have done to make Ezra Taft Benson ante up 6½ percent, to raise his sights above the disaster level, to recognize finally that farmers need money and income, the same as other people. And, we are glad to know that it has not warped his moral integrity, nor made him yield principle for 6½ percent. We hope he comes around to 90 percent, but we doubt if he will, unless the President tells him to.

Thanks for listening, and listen again tomorrow—to GTA, the co-op way.

Rochambeau (14th Street) Bridge

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 7, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Susie P. Glasgow, of Alexandria, Va., which appeared in the Washington Post and Times Herald of Sunday, April 15, 1956, relating to a proposed name for the 14th Street Bridge across the Potomac River, in Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROCHAMBEAU BRIDGE

Mr. Charles Parmer's listing of our indebtness to Rochambeau and his troops merits action. Let's name the 14th Street Bridge Rochambeau Bridge. Honor our debt to Ro-

chambeau, his troops and our French ally, as well as perpetuate recognition of our indebtedness by generations yet to come.

SUSIE P. GLASGOW.

ALEXANDRIA.

Resolution by Hawaii Residents' Association, Inc.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas on October 28, 1951, seven leaders of the Communist Party in Hawaii were indicted under the Smith Act and charged with conspiring to teach and advocate the overthrow of our American Government by force and violence; and

Whereas on June 19, 1953, these seven Communist leaders were found guilty as charged, and were, on July 3, 1953, sentenced to pay fines and serve prison sentences; and

Whereas all seven convicted defendants have since remained free on bail pending appeal of their cases to the United States Ninth Circuit Court of Appeals; and

Whereas at least five of these convicted defendants have, since their conviction under the Smith Act, continued to occupy positions of power and influence closely associated with Communist activities in Hawaii; and

Whereas the long delay in judicial procedures incident to the appeals in the cases of these defendants has tended increasingly to promote, among Hawaii's people, the conclusion that "after all, conspiring to teach and advocate the overthrow of our Government by force and violence cannot be a very serious matter if the courts do not move faster to complete actions against persons indicted for and convicted of such conspiracy"; and

Whereas during the long delay since conviction of the seven Hawaii Communists, the Communist propaganda apparatus, both here and on the mainland, has continued its effort to convince the public that these cases are frameups, and that the courts, the Department of Justice, and the Federal Bureau of Investigation have been engaged in a nefarious plot against the seven defendants; and

Whereas the long delay, now approaching 3 years in duration, appears to have fostered disrespect for and lack of trust in our courts and in the administration of justice; and

Whereas it would appear that any question involved in the cases against the seven convicted Communists could be settled with justice and fairness to all concerned in a matter of several months at most: Now, therefore, be it

Resolved (1) That the Hawaii Residents' Association (IMUA),[1] convinced that justice delayed is justice denied," hereby expresses its concern over the 3-year delay in bringing the cases of the seven convicted Hawaii Communists to final settlement; (2) that the Hawaii Residents' Association, by this resolution, calls attention to the harmful effects on the attitudes and thinking of our people—and especially on our growing children—of the courts' slowness to act in a matter involving so seriously the welfare and safety of our Government; (3) that the Department of Justice and the courts be requested promptly to examine the validity of the reasons which have been advanced for the long delay in these cases; and that these be weighed against the definite damage which has been and is being done to our Territory by failure to bring these litigations to a prompt conclusion; (4) that copies of this resolution be forwarded to the Attorney General of the United States, the chairman of the Un-American Activities Committee of the House of Representatives, the United States Senate Internal Security Subcommittee, the United States District Court of Appeals of the Ninth Circuit Court, the Governor of Hawaii, and the Delegate from Hawaii to the Congress of the United States.

The above resolution was passed unanimously at a regularly called meeting of the Hawaii Residents' Association, Inc. (IMUA), on April 26, 1956, in Honolulu, T. H., U. S. A.

LAWRENCE M. JUDD,
President, Hawaii Residents' Associates, Inc.

[1] IMUA is an Hawaiian word meaning "Forward."

The Efficient Use of Railroad Boxcars

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It Should Be Probed," published in the Wyoming State Tribune, Cheyenne, Wyo., on April 22, 1956. The author, Lewis E. Bates, is one of the best editorial writers in the West. He calls attention to a problem of extreme importance. As the editorial so aptly points out, the existing regulations of the Interstate Commerce Commission are causing a nationwide boxcar shortage as a result of their ruling prohibiting railroad-truck freight service. I hope the Committee on Interstate and Foreign Commerce will prepare proposed legislation to remedy this situation. I believe the time has come to modernize antiquated regulations which may have been in order in the past, but which now tend to block the full and efficient use of our transportation machinery.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT SHOULD BE PROBED

Congressional investigation is indeed warranted in the matter of Interstate Commerce Commission regulations which restrict, so as to virtually prohibit, railroad-truck freight service and therefore efficient use of railroad boxcars.

The national boxcar shortage is again a serious matter. It is not so much that the railroads do not have enough cars. They do. It is because outmoded ICC rules prevent the coordinated use of those cars so they would be in plentiful supply when needed, and where needed.

The waste of cars in Wyoming, which is but a fraction of that over the Nation, was well highlighted in an editorial written for the Green River Star by Adria Reynolds, a former railroader and presently president of the Wyoming Press Association.

The editorial was published early this week in the Tribune, and it has attracted much attention, particularly from railroad workers, who know the problem and therefore the truth in Mr. Reynolds' remarks.

Mr. Reynolds wrote:

"At present, the railroad is required to load and package cars daily from Ogden and Salt Lake City to Green River and Rock Springs, even though the amount of merchandise in each car is small. I believe a single substitute highway vehicle would handle these shipments and serve merchants and other consignees of freight, including those at Evanston and other intermediate rail points, with better and faster service.

"Similarly, peddler cars, i. e., cars stopping to unload freight at various towns, are handled westbound, all adding up to wasteful use of approximately 75 cars per month or about 900 cars per year in this relatively small service area. These freight cars are tied up 2 to 3 days each to handle these often-small amounts of merchandise business, but could be put to better use if loaded with soda ash, lumber, grain or other commodities in carload service."

He added that "if our little area shows such wasteful use of approximately 900 cars annually, it is not impossible to accept the estimate of the loss of the use of at least 100,000 box cars annually in the Nation, needlessly used in package car and peddler car service."

Such waste is intolerable, when relief ways and means are at hand. Someone at Washington certainly ought to drag this out in the open and do something about it.

Army's Esprit de Corps

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of May 6, 1956:

ARMY'S ESPRIT DE CORPS—AN EXAMINATION OF THE RELATION OF RECENT ORDERS TO FIGHTING ABILITY OF THE TROOPS

(By Hanson W. Baldwin)

The United States Army sometimes is the despair of its best friends.

At Fort Ord, Calif., at Fort Bragg, N. C., and in Germany some of the Army's recent decisions have destroyed considerable good will, dispersed some well-trained units, and reduced esprit de corps.

The units affected are small. But the ineptitude that has materially reduced their usefulness has been displayed so often before that its repetition is discouraging to some, infuriating to others.

The Army is stressing the need for tradition, symbolism, and esprit de corps, the necessity for eliminating frequent transfers and for providing service "homes" for officer and enlisted men. But at the same time it has taken actions that have precisely the opposite effect.

SPECIAL FORCES CUT

Item: At Fort Bragg, N. C., the Army has built up a psychological warfare center and a group of specially selected and specially trained troops for guerrilla warfare and action behind enemy lines. Many of these men are former nationals of Poland, Hungary, Germany, Russia, and other foreign countries. Most are masters of two or more languages. All of them paratroopers.

They are perhaps one of the most thoroughly trained units in the Army. They are organized as the 77th Special Forces Group Airborne at Bragg. A companion group, trained at Bragg, is the 10th Special Forces Group. It is in Germany.

Their creation in 1952 answered at long last, the well-founded contention that the Army had never paid enough attention to guerrilla and unconventional warfare.

The Special Forces fulfilled the need for a force capable of mustering underground aid. Thus it seemed to many to be an important strategic and psychological instrument in the cold war.

The Russians apparently thought so too, for these troops were honored recently by an attack in Red Star, the Soviet army's newspaper and by propaganda blasts from Radio Moscow.

The training, esprit, pride of place, distinction of bearing, and capabilities of these troops were so good that they may have aroused envy in lesser units. In any case the Army has taken three actions that have reduced and will still further reduce the combat effectiveness of these units.

In the current fiscal year, which ends June 30, their manpower was cut drastically. The 77th Group at Bragg was reduced by one-quarter and the 10th Group in Germany by two-thirds.

On April 15, the green beret, which was as much a distinctive badge as a useful head covering for special forces, was eliminated by a desk order from the Pentagon.

And on June 1, a second cut is to be superimposed on the first. The 77th is to be reduced from 1,250 to 1,000 men, just one-half of its original strength.

FAMED UNIT DEACTIVATED

Item: At Fort Ord, Calif., the 6th Division, a training division that had built up high morale, has been deactivated. Its colors have been furled. Several historic units with long records and traditions were in this division. The men had been taught the traditions; the regiments had become their service homes.

One unit in particular had built high morale. It was the 20th Infantry Regiment. The Army, in a general shift of units, changed the name of the 20th Regiment to the 6003 Service Unit.

The 20th has also been known as "Sykes Regulars" after the Civil War Union general, George Sykes.

Due, at least in part to the effective protests of Allen Griffin, publisher of the Monterey Peninsula Herald, the name of the 20th was preserved. The colors are being shifted to another regiment at Panama but the men who made the esprit, who had their service home in the 20th are left behind.

It is pretty hard to build up enthusiasm in a unit called the 6003 SU but the men are doing it all over again. They are trying to get permission to call themselves the RFA (Reserves Forces Act) Regiment.

Meanwhile, the colors of other outfits that belong to the now deactivated 6th Division have been shifted elsewhere. The value of a unit home has been lost—even though the names and designations of famous regiments have been retained.

The moral of all this is pretty plain. It has been spelled out time and again in any number of surveys of what was wrong with the Army. The old band-of-brothers concept, the sense of belonging that marked the old Army has gone. One of the most precious intangibles, a place in a unit with traditions, is still too often disregarded.

Above all, the Army still seems to be opposed to elite troops. It seems to be trying to cut down to size those who rise above the ruck. Men won't reenlist to join the common denominators. They want a service home and they want a sense of pride in belonging to the "best damned squad in the best damned platoon in the best damned company in the best damned regiment in the Army."

If green berets and old traditions contribute to this they are beyond price.

Soviet Makes Trade Gains in Latin America

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article by R. Hart Phillips in the New York Times of May 6, 1956, that, in my opinion, deserves the thoughtful reading of every Member of the Congress. The article follows:

HAVANA, April 30.—The new world peace policy of the Soviet Union has been preceded by a program of economic penetration of Latin America. And many here believe the new policy is more dangerous to the United States than the former bellicosity of the Russians.

The Soviet Union is already stepping into the vacuum created by the inability of the United States to purchase the mounting quantities of raw materials in Latin America and the inability of the Latin Americans to pay the high prices for United States exports. Latin America is a price market and will buy the cheapest product, particularly when the seller is also the buyer of its raw materials. Cuba, faced with a world surplus of sugar and the continual efforts of United States producers to cut Cuba's sales to the United States, was highly pleased to sell half a million tons of sugar to the Soviet Union in 1955. This year Cuba expects to sell a larger quantity of sugar to the Soviet Union. This situation is being repeated in various Latin American countries, according to commercial reports.

SOVIET BLOC GOODS ON SALE

A walk through Havana's streets reveals where some of the money obtained from the Soviet sugar sales is going. One can buy in the shops Pilsener beer, ham from Prague or Hungary, sausages from Poland, caviar and vodka from the Soviet, tiles and light bulbs from Czechoslovakia. The motorcycle market in Cuba, formerly held by the United States and Britain and later shared with West Germany, is being rapidly captured by Czechoslovakia. The new Skoda automobiles, which recently arrived, are being viewed by the surprised Cuban public.

What makes the business so attractive to the Cubans, are the quick deliveries and long-term credits offered, particularly on machinery, in contrast with the system of advance irrevocable credits placed in New York for purchases from United States exporters.

Not a week passes but that salesmen, engineers and technicians from countries behind the Iron Curtain arrive in Cuba. These men give the impression of carefully avoiding any contact with Cuban Communists and on the surface are interested only in business. They offer the most attractive prices and terms for the growing exports from satellite countries of tractors, bicycles, machine tools, machinery for manufacturing plants, fertilizer, cement, agricultural and mining machinery, and many cheap industrial products.

The same thing is happening in other Latin American countries. Recently, it is reported, a successful trip was made by a commercial mission from East Germany to the Argentine and to Chile.

These salesmen and technicians easily obtain and take back with them much information that it would be difficult for a Soviet agent to obtain. With a sufficient number of commercial agents traveling throughout Latin America spreading the propaganda of economic coexistence and collecting information, it is plain that the Cominform is no longer needed in this part of the world.

THE AGRARIAN SCISSORS

Some years ago a Russian economist, Eugene Varga, predicted the shift in Latin America toward economic coexistence with the Soviet Union based on a chart that he called Agrarian Scissors of Latin America. He showed the line of the upward trend of inflated United States industrial prices crossed by the descending line of agrarian prices in Latin America. He pointed out that as the blades of the scissors opened wider, so in the same proportion did the chances of Soviet coexistence with Latin America become better.

Beaumont Enterprise Named Outstanding Texas Daily

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. BROOKS of Texas. Mr. Speaker, I have always been proud to be able to claim that I have some printer's ink in my blood. I worked for the Beaumont (Tex.) Enterprise for 3 years beginning September 12, 1938, and I have followed the progress of this fine newspaper closely ever since.

In the May issue of Harper's Magazine, the Beaumont Enterprise was commended as "the best edited newspaper in Texas." Although the article was generally unfriendly to our daily press in Texas, I was pleased to note that in considering the Enterprise the information was based on a factual analysis of the actual number of inches of international and national news coverage.

This type of full coverage is typical of the fairness and thoroughness of the Enterprise and the deep responsibility its editor, Mr. Robert W. Akers; managing editor, T. T. Hunt; news editor, Don Streater; city editor, Bob Packwood; and other members of the editorial staff feel toward their readers. This example is the finest traditions of our American freedom of the press, and through this full publication of news which vitally concerns our citizens, their rights and interests are protected.

I would like to take this opportunity of presenting for the attention of the House the following excerpt from the Harper's article which concerns the Beaumont Enterprise:

In this journalistic Sahara there is one notable oasis: the Beaumont Enterprise. It is far and away the best edited newspaper in Texas, and the only one, with the possible exception of the Corpus Christi Caller, which gives intelligent and balanced coverage of national and international news. In comparison with the big city dailies, the Enter-

prise has only a modest amount of space available. Nevertheless, it devotes about half of its news columns—like the responsible press in other States—to world and national news. In January the Enterprise printed an average of 18 columns of news every day; and 10½ of these columns originated outside the State. Even more surprising—for Texas—is its fairness. At the height of the Dixon-Yates controversy, for example, the Enterprise printed the Republican and Democratic arguments in parallel columns on the front page. No other Texas daily remotely approached this kind of even-handed treatment.

Famous Americans

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert an article extracted from a brochure published by Maine's Department of Commerce and Industry.

Mr. Speaker, Maine is proud of the many fine things she produces, for there are few who are not familiar with the succulence of her potatoes, her dairy products, her poultry and meat products, and her foods from the sea; with the excellent quality of her woodpulp, her lumber, and the other harvests of Maine's forests; with the majestic scenery and the multiple advantages that Maine offers to the vacationer and the sportsmen.

But caught up in the fascination of such an array of productivity, it is very easy for one to neglect one other facet of production which is Maine's proud lot—the production of famous Americans.

The article follows:

DONALD CAMERON, WILSON'S MILLS, MAINE

(By Denis O'Brien)

For a long, memorable weekend last June, the eyes of America and in fact, the whole world were focused on Paramachenee, in the Rangeley Lakes region of Maine. Because, during that weekend, Maine played host to President Dwight D. Eisenhower.

Ike, as ardent a disciple of Isaac Walton as ever wet a line, fished fabulous Parmachenee, caught his full quota of speckled beauties. Characteristically, he left a memento of his trip that will always be treasured by the people of that area.

His guide while fishing was Donald Cameron, of Wilson's Mills, Maine. When the President left, he promised he would do a portrait of Don. Lo and behold, a few short weeks afterwards, the distinctive painting arrived, and was presented to Don in appropriate ceremonies.

Cold black-and-white photography cannot capture the warmth of the President's portrayal, but the faithful reproduction is strikingly attested to by this shot of Don himself holding his prized picture.

Almost 40 years ago, a very great American sat in the sanctuary of his trophy-laden study and re-lived some golden moments out of his exciting, rough riding past. He was an ardent admirer of Maine, and says as such in an article he penned that long gone March day, whose opening words are:

"I owe a personal debt to Maine because of my association with certain staunch friends in Aroostook County, an association that helped and benefited me throughout my life in more ways than one."

The staunch friends he referred to were members of the Sewall family of Island Falls, especially Bill, and Bill's bosom comrade, Wilmot Dow. Under the spell of the man's words, we accompany him in his descent down Katahdin; share wintry nights in balsam bunks in front of a blazing bough; and smack our lips hungrily as he partakes of venison, trout and partridge. He recalls that when he became President of the United States, the Sewalls and his old Maine friends came down to Washington to visit him. He concludes with this touching tribute: "Never were there more welcome guests at the White House."

Those affectionate lines were written at Sagamore Hill, March 20, 1918.

The man who wrote them was Theodore Roosevelt.

The imperial Kennebec curves again on its majestic course and, suddenly, for the first time, we see the granite gray State capitol building loom up. That brief glimpse, from broad picture windows of the warm, spacious, speeding train, reminds us it is time to reach for our bags and don our coats. We are nearing Augusta.

It wasn't always thus, though.

Once, it wasn't even Augusta. Once, it was Cushnoc or—as the dusky, moccasin-shod Indians pronounced it—"Koussinoc." There were no well-appointed trains then that roared their way over ribbons of steel. Instead a frail, but seaworthy shallop, small and primitive, battled the billows and steered by the stars from far-off Plymouth Coloney on Massachusetts Bay. Few journeys were more hazardous; each trip might well be the last. But the fate of that desperate, hard pressed, indomitable band of Pilgrims depended upon the successful outcome of each perilous voyage. They knew they must reach Koussinoc (to barter for precious Indian furs they used as payments on their over-extended London loans to keep their precarious settlement alive) and that knowledge spurred those men onward. What men they were.

The Bradfords and the Winthrops, the Howlands and the Winslows, trod these forests. An ancient historian relates how young John Howland, peering down river on a certain soft spring morn nearly a third off of a thousand years ago, espied the slight shallop steadily coursing upwards to the Koussinoc trading post Howland presided over.

"By my faith, I wonder," he conjectured idly," who is in charge of her this trip? To whom did she entrust herself for delivery and guidance? To ye olde, fearless fighter, Capt. Myles Standish? Or to ye dashing, up-and-coming young John Alden? (Two centuries later, America's most beloved poet, Maine's own Henry Wadsworth Longfellow, had his own answer to another question concerning the same two gentlemen.)

No, there weren't—always—picture windows to look out of when approaching Augusta. Or, rather, Cushnoc.

Or—excuse us—Koussinoc.

Free Federal Aid

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, May 7, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Now's a Good Time To Contemplate That Free Federal Aid," published in an Ephraim, Utah, newspaper of April 20, 1956. The editorial relates to so-called free Federal aid.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

How's your bank account this week? Did it show any shrinkage over the past week end? If not, you must be one of those rare humans who filed your income tax return early, a person with a lot of exemptions, one who had a disheartening low income during 1955, or who did some figure juggling which you hope the boys in the Internal Revenue Department will fail to detect.

It would be most interesting to know how much money went out of Ephraim for Federal income taxes the past week or so. We've asked a few people what they would estimate it to be and all seemed to think it would be arcund $100,000, maybe more. All were agreed that it was probably far more than all the property taxes, car licenses, and other direct taxes (not including sales tax) paid by the people of the community.

One person knew of a local resident who was knicked to the tune of about $3,600 for income taxes. A few others were estimated to be well over the $1,000 mark.

With that kind of money going out of Ephriam, it's not hard to understand why it is so difficult to make badly needed local improvements, such as replacing the public school building which has been so outmoded, dangerous, and inadequate for so many years.

But with that kind of money going out of Ephriam it is hard to understand how so many still refer to Federal aid as free money. Right now is a good time to ponder that matter and, if one reasons honestly and sensibly, he is certain to come up with the conclusion that Federal aid is some of the most expensive aid we get.

The collection of the income taxes—which taxes supply such a large part of Federal revenues—is expensive to the Federal Government and to the taxpayers alike. It takes an army of agents to check the returns, to prepare and send out the forms, and check up on cases which appear inaccurate, inconsistent, or downright dishonest.

It takes another small army to compile, audit, alot, earmark, and distribute Federal funds. If we in Ephriam could just send our income taxes to Washington and have them returned to us less the various costs along the way, it is doubtful if much more than half would ever get back. That is how free Federal aid can be. The earners and producers provide the taxes from which hundreds of thousands of nonproducers take the cream for a living often much easier and richer than that enjoyed by the producers.

This is a good time to realize that every extravagance in government is paid for right out of the pockets of the citizens. Government does not produce wealth. It simply takes wealth produced by its citizens and distributes it where it seems most needed or where there is the most political pressure.

Yes, right now, while the paying of income taxes is fresh in the memory, is a good time to resolve to ask for no unneeded and undeserved Government handouts for ourselves and to use all the influence at our disposal to see that they are not given to others, also to insist that Government employees give an honest day's labor each day they are on the Government payroll. In this way and this way only can taxes be reduced.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Men of Arlington

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. DOWDY. Mr. Speaker, yesterday, May 6, 1956, was held the 23d annual Odd Fellow pilgrimage to the Tomb of the Unknown Soldier. Odd Fellows and Rebekahs were present from all parts of North America to honor the Unknown Soldier.

The memorial address was delivered by the Honorable H. Sanders Anglea, sovereign grand master of the Independent Order of Odd Fellows. The title of his inspiring message was "Men of Arlington."

Under unanimous consent, I include this address in the Appendix of the CONGRESSIONAL RECORD. Our colleagues, Hon. PERCY PRIEST, of Tennessee, and Hon. LESTER JOHNSON, of Wisconsin, join me in this request:

MEN OF ARLINGTON

(Memorial address delivered by H. Sanders Anglea, sovereign grand master of the Independent Order of Odd Fellows, on May 6, 1956, at Arlington National Cemetery on the occasion of the annual Odd Fellow pilgrimage to the Tomb of the Unknown Soldier)

General Commanding Soaper, officers, Chevaliers, ladies, and friends, I am sure that it goes without saying, that, on behalf of the entire membership of the world of the Independent Order of Odd Fellows, I am both delighted and gratified that such a great number of our members have journeyed from the four corners of the North American Continent to take part in this solemn, patriotic, and sacred ceremony whereby Odd Fellows and Rebekahs and freedom-loving people all over the world take time out from their daily routine of life to join with us who are assembled here to do honor and pay tribute to the Unknown American Soldier whose mortal and revered remains rest within the shadow of this great Amphitheater.

You may think it strange that I say to you in my opening remarks that I have heard it said a thousand times that the most important thing in life to an individual is his or her good health, and, quite frankly, I have been guilty of making the same statement many, many times. May I say that within the past few days I have come to realize that such a statement is grossly false, even though I have not recently enjoyed the best of health, and am now under the care of two physicians, because, when a man such as I sits in the solitude of his office, just as I have done for the past few days, and attempts to assemble his thoughts to be expressed on a great occasion such as this, one soon comes to the full realization that the most valuable possession that any individual can own is his freedom; freedom to worship as one pleases, freedom to walk alone or with a friend, freedom from want, freedom from fear, freedom to write as we please, freedom of speech and freedom of assembly such as we have today.

It is a great honor that is ours to have the privilege of meeting here as free men and free women to do honor to the Unknown Soldier and the Men of Arlington according to the dictates of our own hearts. Freedom as we of the free world know it, was and is a gift of God to all mankind, although, through selfishness and greed on the part of a few, the great majority of mankind from the beginning of time have had to fight and even wage wars to preserve it. This National Cemetery serves as mute evidence of the great sacrifices that have been made to preserve the freedom I am talking about for you and for me. Each monument and each small marker that you see are the markers along the highway of freedom that extends from this day of honor all the way back through the years to the founding of this great Nation. We, as Americans, as we relive, by memory and the teachings of our history books, the journey of our country on this highway of freedom can well be proud of the fact that not a marker in this cemetery or any other cemetery is standing because we have engaged in war as aggressors. Again I say, that freedom alone is our most valuable asset, and by comparison all other values dwindle into unimportance. Health and wealth are to be desired, but I, for one, would sacrifice both for freedom, the kind that you and I are now enjoying, the kind that you and I have come to take for granted, the kind that makes you and me owe a special prayer to our Maker and a great debt to the Men of Arlington, and I refer to the men of all our Arlingtons whether at home or abroad, through whose efforts the gift of God has been placed into our hands.

It is to be regretted that those of us who are privileged to make this memorial address each year are not endowed with the wisdom of the Great Emancipator, and that we do not have sufficient command of the English language as to make the pillars of this structure vibrate and ring with our sincerity just as has done the entire world wherever and whenever the words of Mr. Lincoln's Gettysburg Address have been repeated. On that great occasion when those historic words were uttered and became sound waves that have been heard and appreciated for their simplicity and sincerity for more than 90 years, President Lincoln wove a few words into this beautiful sentence: "The world will little note nor long remember what we say here." As we all know, Mr. Lincoln was mistaken in this statement, because his Gettysburg Address has become, and will continue to be, one of the outstanding classics of modern English literature. I know that I can truthfully say to you that "the world will little note nor long remember what we say here," but this statement will not be true of us as individuals, as this occasion will remain engraved upon our minds and our hearts until the last day of our respective lives. As we approach the moment when we are privileged to place the wreaths at the tomb of America's best known and most beloved hero, our minds will be closed to the audible word, and only our hearts will feel the joy that is ours in representing some 2 million or more Odd Fellows and Rebekahs scattered throughout the free world, and we will know that each of these members whom we represent will, in their own way and in their own language, offer a prayer today that this young hero will not have died in vain, and that the principles upon which our freedom is based and for which he died, will be preserved and respected by all nations, tongues, and kindreds of the earth until time shall be no more. While our words and our actions of today may be soon forgotten, it will not matter, for the words and actions of today deal with and pay well deserved honor to the past. But it is not the past alone which belongs to these who lie here. They gave their lives for the future, a future which can be realized only as we give ourselves to make secure the peace and freedom for which they died.

The sincerity of the motives which have caused us to assemble for this sacred rite can be indicated only by the measure of our personal devotion in all of our tomorrows to the principles for which these have died. Only so is their sacrifice not in vain. Only so is the sincerity of our words of tribute established. Here we have dealt with the past, the future lies along the highway of tomorrow.

Here today we have a singular privilege granted to no other fraternal order to pay a military tribute to the past. Let us not forget that tomorrow we have an equally singular responsibility for the future, a responsibility begotten by the privilege of today. The highway of the past is dotted with these markers of honor designating the graves of those who made that past glorious. The highway of the future will be marked by the deeds of us who walk that road, you and I.

If that future be made glorious by the peace and freedom for which these have made the supreme sacrifice, then we too shall be called upon to make our own sacrifices. For only at the price of such self-giving is peace and freedom purchased. It is ours to make the sacrificial gift of time and effort to participate in the responsibilities of citizenship. This is our peacetime contribution to their wartime sacrifice.

What of the influence of 2 million Odd Fellows and Rebekahs unselfishly giving their support to the modern counterpart of the little red schoolhouse? The seed of citizenship and love of freedom is sown here. What of our influence in preserving and strengthening the democratic principles or our communities against the tyranny of dictatorship? What of our influence in establishing and maintaining Christian homes in which God is worshipped and followed as the guide of life? Here are the roots of freedom from fear.

What of our influence in the support of public worship that God may be known publicly and sought after according to the dictates of men's consciences? Here are the roots of freedom of religion.

All of these responsibilities to our community life, our homes, and our churches, have been instilled into us by our forefathers. But the privilege to exercise these responsibilities in the manner of freemen today is ours because of the sacrifice of the "Men of Arlington." To see that they have not died in vain; to make tomorrow free is our sacred responsibility and the greatest tribute we can pay these honored dead.

During the past few minutes we have talked much about the highway of national life that extends from here to the very beginning of this great Nation; about the markers of sacrifice that endlessly line this

highway of the past. Now may I say that this highway of national life does not end here today; it extends into our future and each of our tomorrows and if I had but one wish to express on this occasion, it would be this: That the highway of tomorrow be also lined with markers, not small ones of sacrifice but large ones of accomplishment, and each would bear this inscription: "This is the way to life everlasting, this is the way to everlasting peace and freedom, this is the way to the Saviour of all mankind. This highway was built by men and women of all nations through a common understanding of the problems of each other and this understanding was made possible through the united effort of the churches of the world with the cooperation of the world's great fraternities that have enlightened all men as to the value of the principles of friendship, love, truth, faith, hope, and charity." Such an inscription would satisfy me because the use of the words "world's great fraternities" would include the Odd Fellows and Rebekahs of the past, present, and future, and particularly you who are present today and those 2 million whom we are privileged to represent.

Just being here in Arlington National Cemetery today gives one the feeling of being in church and, rightfully so, because these are sacred grounds where we walk softly and reverently. Yes, sacred grounds wherein repose the mortal remains of the greatest men into whose bodies God permitted the breath of life to be breathed; men whose names, deeds and souls have become immortal. The very memory of these men feed our veins and our sinews with renewed hope, thereby giving us the strength to push aside any and all attempts at invasion from without and from this strength comes the courage to face the future with the firm resolve that the cloak of peace and individual freedom, on tomorrow, will once again drape the shoulders of the world. As I look about me, the soil of this holy place loses its identity as such and the marble and stone pillars and encasements no longer impress me as elements of nature and in their stead I see and feel the tender and encircling arms of an everloving God with whom are now gathered in blessed and everlasting fellowship these men of Arlington, who so well, faithfully, and bravely did the work here on earth that was patterned for them in heaven by the great Author of the universe. Even now, as the slight breeze passes through the leaves of the nearby trees manufacturing its own little murmur, one can almost hear the voice of the Saviour saying to the men of Arlington, "Well done thou good and faithful servants, enter thou into the joy of thy Lord."

The Soil-Bank Program

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. SCHWENGEL. Mr. Speaker, I have been very much impressed with the debate on the soil-bank bill that has been before us. Practically all of the argument that has been presented thus far accents the immediate economic value to the farmers of the soil-bank program. It is not my purpose to deny or to take issue with those who argue this point of view, but, Mr. Speaker, I think there is another viewpoint—a long-range viewpoint that should be called to the attention of the Members of the House. Therefore, I should like to address my remarks to the soil-bank program as it relates to the economics of America over a period of years—what it means not alone to the farmers but to all America and to posterity.

The conservation-reserve provision of the soil-bank program is a great step in the direction of a more efficient land-use program.

The need for soil conservation can scarcely be overemphasized. History is replete with examples of nations that have declined or perished because of land impoverishment through misuse, neglect, and erosion.

Accelerated erosion of the soil is not merely a recent threat to human security; it is as old as agriculture itself. Erosion most likely began when the first rain struck the first furrow turned by a crude implement in the hands of prehistoric man. There is little doubt that it has been going on ever since, wherever man's efforts to gain a livelihood from the soil have led him to remove the natural cover of protective vegetation. History, to a great extent, is a record of man's efforts to wrest the land from nature, simply because he relies for sustenance on the products of the soil. Yet in many instances his conquest of the land has been disastrous. Over extensive areas, his culture of the earth has resulted in extreme impoverishment or nearly complete destruction of the soil resources upon which he is dependent. When this has occurred on a wide scale, the consequence has been the disappearance of civilization from the affected region. To illustrate the effects of soil erosion during ancient times, I would like to quote a few lines from an article entitled "Erosion at Its Worst, and a Hundred Dead Cities," written during 1939 by Dr. Walter C. Lowdermilk, former Assistant Chief of the Soil Conservation Service of the United States Department of Agriculture:

> The dead cities of north Syria reveal a period of history of which very little is thus far known. It was a local civilization but very advanced and rich, with highly developed and distinctive Syrian art found nowhere else. * * * Today, after 13 centuries of neglect and patch cultivation to cereals by seminomadic descendants of the invaders, and of overgrazing by their goats, soil erosion has completed the destruction of the good earth with a thoroughness that has left this once fertile land a complete manmade desert, void of vegetation, water, and soil, except in rare pockets with scanty cover of crops and thorn bushes. The ruins of a highly developed architecture tell of the advanced culture of this region.
>
> As in north China, north Africa, Transjordan, and elsewhere, soil erosion is clearly the principal agent in destroying the land and in undermining the civilization and culture which was dependent upon it. The early inhabitants found primeval forests here. Then began moderate clearing, deforestation and cultivation of slopes. Ancient cultivation up through the Roman period was intelligent and demonstrated an understanding on the part of the inhabitants of conservation of soils and rain waters by terraces and check dams. At this time the region was highly prosperous, populous, and flourishing. But in A. D. 630 the Arab invasion swept away progress in agriculture. The vineyards and olive trees were destroyed, and the land was put under patch cultivation to grain crops and heavily grazed. After the destruction and dispersal of the former population, neglect of the land brought * * * on erosion of the soil. * * *
>
> These hundred or more dead cities are dead forever because their soils are gone beyond any hope of reclamation. * * * Man and erosion have devastated this area for a geologic age. Here the unpardonable sin of land use has been committed.

Soil conservationists find in Syria many lessons which we in this country may well take to heart. It is true that we have for some time now attempted to preserve our forests and to rebuild our soil, but have we done enough? Have we used our acres in such a way as to yield the greatest returns to our farmers and to the Nation as a whole? When we examine areas where erosion has taken its toll, such as the Dust Bowl, I think the answer is quite clear. There is very little doubt about the fact that many acres now being used for cultivated crops should never have been plowed. Many of these acres should be restored to forests and grasslands.

The conservation reserve provision of the soil-bank proposal is a major forward step in the direction of achieving a better land-use program. If finally adopted, the conservation reserve plan will lead to a program yielding greater net returns to farmers today and at the same time leading to a land-use program that will make it possible to provide fertile farmlands for future generations.

The objective of this program as originally proposed was to shift about 25 million acres from cropland to forage, trees, or water storage. This shift as proposed was intended to lead to a long-range adjustment in land use. Some of our less productive lands would be brought into the program, as well as some of the acres which have been diverted out of wheat and cotton into feed grains and other crops.

The current legislation with respect to the soil bank, if enacted and approved during this session of the Congress, would provide a maximum of $450 million annually to carry out the conservation reserve phase of the program.

The Government, through the agricultural conservation program currently in operation and the conservation reserve provision of the soil-bank program, makes manifest the obligation of the whole people to share the responsibility, as well as the benefits, of assuring the continued fertility of our soil. By helping farmers, with money or conservation materials and technical services, to accomplish specified conservation practices, the program practically and directly helps make effective the research and educational work done by the Federal and State agencies. Funds appropriated to help conserve the soil and water resources of the Nation are a practical investment in the future welfare and productivity of the country. There is every reason to believe that soil conservation is our common concern whether we are farmers, manufacturers, food processors, bankers, merchants or professional people.

It is evident that continued and ever-increasing measures to conserve and rebuild the fertility of our land are necessary if the health and the level of living of Americans are to be maintained.

Experience has proved that neither an awareness on the part of the farmers of the need for conserving our national soil and water resources nor technical advice about the kind of conservation practices needed will get the job done, unless accompanied by measures which make it economically possible for the farmer to accomplish such practices. To maintain the strength of our Nation there are no more important appropriations than those for our overall conservation program.

The provisions for financial assistance to farmers to carry out the land use program proposed under the conservation reserve features of the soil bank proposal would provide an incentive to farmers to cooperate in making this program a success. Under the program the Government would bear a fair share of the costs involved in establishing a suitable cover. As farmers reorganize their farms along these soil conserving lines, they would be eligible to receive annual payments for a period of years related to the length of time needed to establish the new use of the land.

The acreage reserve phase of the soil-bank proposal has been referred to as a deferred-production plan. It would be voluntary and temporary, and generally aimed at reducing production, and hence carryover, of those agricultural products which are currently in greatest surplus. Under the plan as originally introduced, it was contemplated that it would be applied to such crops as wheat, cotton, corn, and rice and would remain in operation until carryover stocks of these commodities have been reduced to desirable levels.

The essence of the proposed program is that farmers would voluntarily reduce production of specified crops below their allotted acreage. The acreage withheld from production of any specific crop would be placed in the reserve. In return for placing a part of his allotted acres in the reserve, the farmer would receive as compensation certificates which would be redeemable by the Commodity Credit Corporation in cash or in kind. The basis for the value of the certificates would be the normal yield on the designated reserve acres.

This phase of the program would serve to achieve at least two important objectives: First, reduce surpluses, and second, encourage soil conservation. Much of the land now being used to produce crops in excess of domestic, export, and normal carryover requirements would be devoted to producing soil-building crops. The compensation received by farmers for cooperating in the program would reimburse them for their loss of production on the acres placed in the reserve.

The operation of the soil-bank program would beyond a doubt improve the economic position of the agricultural sector of our economy. I would like to mention but a few of the ways in which this would be accomplished: First, storage costs would be reduced as surpluses are reduced; second, as surpluses are reduced and supplies again are held at desirable levels market prices will tend to rise to legal support levels or even above established price support levels, thus giving farmers greater returns on that output produced on fewer acres; third, the compensatory payments will increase farm income.

It should be noted that the compensatory payments will be partly offset by savings on storage costs as surpluses are reduced to reasonable levels.

It is conceivable that within 2 or 3 years if farmers cooperate in the acreage-reserve program, and 15 to 20 million acres of the land devoted to the crops now in greatest surplus are taken out of production of those crops, assuming normal yields, surpluses would be reduced sufficiently to result in a supply situation that would result in higher market prices. The higher market prices together with the soil-bank payments under the conservation reserve and the acreage reserve would probably provide a higher net return to producers of many of the crops to which the program may be applied. While any statements one might make with respect to the extent of the economic benefits of this program are at present hypothetical, it is, nevertheless, logical to conclude that the benefits will be substantial.

Current pending legislation with respect to the acreage reserve places a limit of $800 million per year on expenditures under this phase of the program.

The proposed soil bank program has received widespread endorsement from conservation groups and leading farm organizations. While there may be differences of opinion with respect to specific details of its operation, there appears to be more or less general endorsement of the concept of the soil bank as such. I would like to quote the following views of leaders of farm organizations and conservation groups concerning the soil bank program made at hearings of the Senate Committee on Agriculture and Forestry:

Mr. Charles B. Shuman, president of the American Farm Bureau Federation stated:

For the past 3 years the American Farm Bureau Federation has been on record in favor of what we have called a soil-bank program, by which we mean that we should utilize our surplus productive capacity so that farmers would store fertility in the soil rather than to produce surpluses for the Commodity Credit Corporation. * * *

The basic purpose of the surplus reduction and soil-bank plan, as we conceive it, is to bring about at the earliest feasible date a balance between annual supply and effective demand and to make more rapid progress toward the liquidation of current surplus stocks.

Mr. Herschel D. Newsom, master, National Grange, had the following to say with respect to the soil-bank program:

The Grange has long recognized and repeatedly stated that a form of land rental type program—preferably as closely related as we can honestly relate it to a long-range, sound soil-conservation objective—has a real place in both emergency type farm legislation and in long-term permanent legislation.

* * * The acreage reserve program, seems basically sound and substantially in accord, we believe—on a hasty and superficial examination of its contents—with Grange program and policy and with the above three-point program, insofar as our present Government-held stocks are concerned.

Mr. Charles H. Callison, conservation director, National Wildlife Federation, made the following statement:

We foresee in this proposal, this plan to authorize or implement the setting aside of certain acreages on the farms of the Nation for conservation practices, these acres to be taken out of production of general farm crops and livestock, great benefits in the conservation of our natural resources, not only the soil and water resources, but those related resources.

This plan is bound to have extremely important, and beneficial wildlife effects, because in these areas which may be set aside as an acreage reserve or as a soil bank, which areas will be left ungrazed and uncropped, you are bound to produce excellent farm game cover.

Not only that, it will help control the runoff and check soil erosion which is detrimental to fish in the streams of the watersheds.

If there is included in the program the idea that has been advanced for a timber bank, and we hope that it is included, we can see even greater benefits from the standpoint of wildlife production, because the planting of trees, the reforestation of marginal areas on farms that are suitable for that type of use, will produce cover for many kinds of wildlife.

We feel that any comprehensive-conservation program must take into consideration not narrowly just the soil and water, but all the natural products of the land.

Mr. Joseph W. Penfold, conservation director, Izaak Walton League of America, Denver, Colo., said:

We have been interested in it for quite some time. As a matter of fact, our original committee started in Illinois something more than 3 years ago working on a soil-bank plan. * * *

At our last national convention, last spring, the membership, through their delegates, adopted some general principles of the soil-bank plan. * * * In our several years of developing the idea and discussing it with farm people and others all over the country—we have not stressed the wildlife aspects for a couple reasons: One of them, because we think the soil-bank plan is a very important and worthwhile program aside from wildlife angles; and also, if we were to come out stressing wildlife, they would immediately assume that our interest was strictly wildlife, which is not the case.

* * * We see the opportunity as well as responsibility in our State game and fish departments to cooperate in this program so that the maximum values are achieved with the minimum of costs.

I feel that this soil-bank program is worthy of our wholehearted support, and that it should be enacted at an early date so that it can be put into operation during this crop year. I feel confident that if enacted it will be an important step in the direction of improved soil conservation, surplus reduction, and higher farm income.

A 90-Year-Old Idea

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. FORRESTER. Mr. Speaker, a short time ago one of Washington's daily

newspapers carried an article stating that the idea of decorating the graves of the soldiers involved in the War Between the States and memorializing those heroes was born in Columbus, Ga.

Hon. W. C. Tucker, editor of the Columbus Enquirer, Columbus, Ga., was in Washington attending the National Association of Newspaper Editors Convention, and the Washington newspaper article was called to his attention. Mr. Tucker, being completely familiar with the history of that idea, wrote in his column of April 26, 1956, a review of that history, which I am sure will be of interest, and which because of its historical significance should be preserved. Mr. Tucker's article is as follows:

TOP O' THE MORN

(By W. C. Tucker)

A 90-YEAR-OLD IDEA

It was 90 years ago today that an idea born in Columbus came to fruition, with the result that each year since southern Memorial Day has been observed on April 26.

It was in this fair city on the banks of the Chattahoochee that a group of ladies formed themselves into an organization to plan an annual memorial service in tribute to the heroes of the Confederacy.

The first such service was held at St. Luke Methodist Church with Col. James N. Ramsey delivering the oration. It was the start of a beautiful custom that has survived the years.

IDEA IS OFFERED

Historians tell us that Miss Lizzie Rutherford suggested the idea of Southern Memorial Day to a group of ladies after they had gone to the cemetery to care for the graves of the soldiers buried there. Miss Rutherford said she had been reading The Initials, by Baroness Tautphoeus and that she was impressed with a description of a custom of the Roman Catholics in decorating the graves on All Saints' Day. She would like to see such a custom here, said Miss Rutherford, and the matter was taken up by the Soldiers' Aid Society, which adopted the idea and immediately organized itself into the Ladies Memorial Association.

April 26 was later chosen as the date for the observance, as it was upon that day in 1865 that Gen. Joseph E. Johnston, the last Confederate leader to surrender, laid down his arms.

Adopting the idea of the observance, the Ladies Memorial Association instructed its secretary, Mrs. Charles J. Williams, to write to women and organizations elsewhere, asking cooperation in extending the idea of holding appropriate exercises for the Confederate soldiers.

LETTER TO THE ENQUIRER

Mrs. Williams sent letters to several Southern newspapers asking assistance in the matter of observing southern Memorial Day. The letter appeared in the March 11, 1866, issue of the Enquirer as follows:

"EDITOR, ENQUIRER: The ladies now and have been for several days engaged in the sad but pleasant duty of ornamenting and improving that portion of the city cemetery sacred to the memory of our gallant Confederate dead, but we feel it an unfinished work unless a day be set apart annually for its especial attention. We cannot raise monumental shafts and inscribe thereon their many deeds of heroism, but we can keep alive the memory of the debt we owe them, by dedicating at least 1 day in each year to embellishing their humble graves with flowers. Therefore, we beg the assistance of the press and the ladies throughout the South to aid us in our efforts to set apart a certain day to be observed from the Potomac to the Rio Grande, and be handed down through time as a religious custom of the country, to wreath the graves of our martyred dead with flowers. (We would propose the 6th of April, as at that time our land might be truly called "the land of flowers.") Let every city, town, and village join in the pleasant duty. Let all be alike remembered, from the heroes of Manassas to those who expired amid the death throes of our hallowed cause. We'll crown alike the honored resting places of the immortal Jackson in Virginia, Johnston at Shiloh, Cleburne in Tennessee, and the host of gallant privates who adorned our ranks. All did their duty and to all we owe our gratitude. Let the soldiers' graves, for that day at least, be the southern mecca to whose shrine her sorrowing women, like pilgrims, may annually bring their grateful hearts and floral offerings. And when we remember the thousands who were buried "with their material cloaks around them," without Christian ceremony of interment for their beloved bodies, we would invoke the aid of the most thrilling eloquence throughout the land to inaugurate this custom, by delivering on the appointed day this year, a eulogy on the unburied dead of our glorious Southern Army—they died for their country. Whether their country had or had not the right to demand the sacrifice is no longer a question of discussion with us. We leave that for future nations to decide. That it was demanded—that they nobly responded and fell holy sacrifices on their country's altar, and are thereby entitled to their country's gratitude—none will deny. The proud banner under which they rallied in defense of the noblest cause for which heroes fought, or trusting women prayed, has been furled forever. The country for which they suffered and died, has now no name or place among the nations of the earth. Legislative enactments may not now be made to do honor to their memories, but the veriest radical that ever traced his genealogy back to the deck of the Mayflower, could not deny us the simple privilege of paying honor to those who died defending the life, honor, and happiness of the

"SOUTHERN WOMEN."

SUGGESTING APRIL 26

Historians say the above letter was sent to the press by Mrs. Williams, though her name did not appear in connection with it as it appeared in the Enquirer and in the Sun and Times of the same date it was published in this newspaper.

It will be noted that the date April 6 was suggested in the letter to the editor of the Enquirer. On March 13, 1866, the following appeared in the Enquirer:

"For the ENQUIRER:

"OUR CONFEDERATE DEAD

"I hope every southern heart will respond to a suggestion in an article published in your Sunday issue advocating that a special day be set apart in each year to do appropriate honor to our heroic dead with suitable public eulogies, and wherever practicable, to adorn their graves with southern flowers. I would suggest as a proper day for this offering—the 26th of April—the day of General Johnston's surrender. I believe the proposition will meet the approval of the southern ladies as it will by every

"CITIZEN."

SELECTION OF DATE

Announcement of selection of April 26 as the date for the memorial service was contained in the Enquirer of March 14, 1866. Here is the item as appeared in this newspaper at that time:

"The proposition to appoint the 26th of April, as the anniversary on which all Southern women are called on to decorate the graves of our deceased soldiers, meets the cordial approbation of the ladies interested in the work here.

"On the 26th of April (God willing) we will inaugurate this custom in Columbus and we earnestly hope that it will never fall into desuetude."

Stories appeared in later issues of the Enquirer on the forming of plans for the exercises and the April 27 issue carried a story of the first Memorial Day program.

In addition to the oration at the St. Luke Church, the graves of the soldiers in Linwood Cemetery were decorated by the ladies.

This custom has persisted since that day in 1866. The same organization that held the first exercise—the Ladies Memorial Association—has once again decorated the graves of the Confederate dead in Linwood Cemetery and it has arranged for the exercises that are to be held this afternoon at First Baptist Church.

OBSERVANCE KEPT ALIVE

The good ladies of Columbus have adhered to the admonishment of the Enquirer in its issue of March 4, 1866, against allowing Memoiral Day to "fall in desuetude."

For 90 years, they have kept the beautiful custom alive in the birthplace of the idea.

Will the observance of southern Memorial Day continue over the years to come?

The Enquirer, which played an important role in the inauguration of Memorial Day, hopes most earnestly that the people of this city will not allow anything whatever to stop the observance.

This newspaper hopes that interest in the idea will not lag but that the work of those courageous and patriotic women of the sixties and of the years that have followed will be perpetuated by the succeeding generations. The Enquirer hopes that the Ladies Memorial Association of Columbus will never die but that it will keep alive the spirit that was evident in the first exercises on that long-ago April 26 when first Columbus citizens gathered to pay tribute to Confederate patriots.

ONE NATION TODAY

Section fought against section in the conflict of the sixties. The discussion of the issues of the conflict have continued through the years that followed the surrender of Gen. Robert E. Lee at Appomattox in 1865. Whatever may have been the issues that resulted in the great Civil War, southerners displayed a courage that has not been excelled in this land or in any other. Southerners though they were, they were Americans nonetheless. They fought for what they thought was right and they fought with a devotion to duty that won the plaudits of everyone.

Americans lie yonder in Linwood Cemetery beneath the Stars-and-Bars-draped graves. Americans lie in Confederate cemeteries throughout the Southland, having fought for a noble cause and having won the undying admiration of the great Southland.

Since the War Between the States, new issues and new problems have arisen to unite the South with the North in a common national interest. The boys of both North and South have fought side by side for the same cause and in defense of the same nation in four wars that followed the one that tore this country asunder. But now there is a united Nation, despite the domestic problems and controversies the arise from time to time, and the South is as much a part of this Nation as any other area or section.

Southern customs and traditions will continue over the years, however, and it is for the perpetuity of one of these—southern Memorial Day—that the Enquirer pleads today.

The Townsend Plan for Help to the Aged, the Money Therefor To Be Supplied by a National Gross Income Tax, Is a Sound Plan

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. JOHNSON of California. Mr. Speaker, the Townsend plan has been changed very materially. The plan presently recommended by Dr. Townsend is simple, and a similar plan has been tried and found to be sound and successful. The basic idea of the Townsend plan now, is that to provide for the aged the Government levy a gross income tax. A similar plan has been tried in the Territory of Hawaii and has thus furnished us a yardstick by which to measure the success of such a plan.

Dr. Francis E. Townsend is the authentic pioneer in the development of a plan to give proper aid to the aged. He was born in 1867 and will be 90 years old on January 13, 1957, and is still vigorous and active both physically and mentally.

The Townsend plan has gone through several evolutionary changes largely by the thinking of Dr. Townsend, but also because he has had the support of some very important people who have had experience in the administration of welfare funds under the Social Security System. One of these persons is John C. Cunio, of Modesto, Calif. He has been a member of the California State Welfare Board for over 20 years. This board distributes the social-security funds that the National Government sends to California for distribution to those who qualify. In that manner he has learned how cumbersome and sometimes unjust the present system is.

The present Townsend plan is to levy a gross income tax on all those earning more than $250 per month. This plan has the support of some people who are authorities on tax problems. It also has been operated and found to be practical and workable.

The Territory of Hawaii has a gross income tax which went into effect in 1935. This is a business privilege tax measured by gross proceeds of sales or gross income. The tax rate is 1 percent on wholesaling and blind persons, 1½ percent producing and manufacturing, except sugar producers and canneries who are taxed at the rate of 2½ percent which is also the applicable rate on all other taxable gross receipts. A $1 license must be secured and renewed annually on a calendar year basis.

Returns are due and the tax payable on or before the 20th day of the following month. An annual summary and reconciliation return must be filed on or before March 20 of each year.

Taxes are payable at the time of filing of the monthly return, also when annual return is filed if additional tax is due.

Now fortunately there is concrete evidence by persons who are experts in taxation problems that the Townsend plan of today, which provides for a gross income tax levy is a sound system.

In the American Weekly, dated April 22, 1956, was a very interesting article by T. Coleman Andrews, former Commissioner of Internal Revenue, entitled "Let's Get Rid of the Income Tax." He points out very vividly how damaging and unfair the income tax is, and refers to it as "legalized confiscation," "too complicated," "unstable." He goes on to show the great inequities in our income tax. For instance he states that a man who earns $200,000 a year—he specifically refers to a boxing champion—pays 50 times as much as a person whose tax is on a $4,000 income.

Under leave to extend my remarks, I am going to place into the RECORD following my remarks the article which I hope every Member of the House will read. It is startling how the Government takes fabulous sums from persons who by ability, ingenuity, and persistent effort contribute wealth which could be turned into producing channels which could bring the cost of living down and produce plenty where now we have poverty.

I particularly hope that everyone will read the predictions which some of the Members of Congress who were against the income tax made and compare them with what has happened.

Private enterprise which is prized by all Americans would be helped immeasurably if the Townsend Plan were placed into effect and the taxes were lowered.

In Indiana the gross income tax is used to solve its financial problems as well as to build up the State. Here is what Indiana said about its plan, printed in U. S. News & World Report, May 27, 1955, page 125:

> There is a race in Indiana and a race to debt free Indiana, the State that is attracting more industries per capita than any other. No State debt. Constitution does it. Surplus $80,000 million. No nuisance or penalty tax. No net income, use, retail sales, corporate or manufacturer's tax. Only one-fourth of 1 percent on gross receipts from sales for processing, resale, etc. not in interstate or foreign commerce; 1 percent on other receipts derived in Indiana except from sale to ultimate consumer (one-half of 1 percent); there is no tax on receipts from sales in interstate or foreign commerce.

Such a plan if placed into effect could not only solve the problem of taking care of the aged and disabled but could also solve the problem created by the large influx of people to California. With such a scheme in operation undoubtedly new industries would rapidly spring up to give employment to these new citizens of California.

Mr. Speaker, this is from page 12 of U. S. News & World Report under date of April 20, 1956, volume XL, No. 16:

> What of the idea to end the income tax? It's catching on. The only question is, Where else can $30 billion come from? Individuals pay about that much out of their income. Tax on retail sales might be geared at a high enough level to meet part of that bill. A turnover tax is used by Russia, along with a low-income tax. That fosters monopoly, as a way to avoid as many transactions as possible. A flat tax on gross income is another one.
>
> Chances are that there'll always be an income tax, but someday it might be forced lower. Right now a good many people are forced to work a large part of the year just to pay taxes. Then they must knock themselves out week ends filling out complicated forms to make sure that the Government gets every nickel of their income that it can.
>
> Salaried people, wage earners, those whose taxes are withheld at the source, are the ones hardest hit today. They're the ones talking revolt.
>
> Businessmen often have expense accounts. Labor leaders usually enjoy big expense accounts. Professional people are able to take deductions of many kinds not available to the man who has only a salary. Farmers, where income comes into the tax range, have a broad range of deductions.
>
> Income taxes today are highly discriminatory, with privileges for some and a crackdown on others. An idea is getting around that, if everybody paid taxes on the same basis as everybody else, tax rates could be lower.

The following editorial from the Modesto Bee, Modesto, Calif., under date of April 18, 1956, as follows:

TAX INEQUITIES NEED CONTINUED ATTENTION

This is the period when the inequalities of their tax system are borne home to the American people.

When they made out their income-tax returns, Federal and State, many people had a vague and garbled sense that there is a growing minority which enjoys various kinds of preferences, exemptions, and loopholes out of reach to the ordinary salary and wage earner.

And they are right in this vague impression. There are oil nabobs with $100,000 a year from royalties who get a depletion allowance and pay less than 50 percent in taxes. The ordinary single Joe without an oil well would pay nearly 70 percent.

There are people with enough money to buy substantial shares of stock, hold them 6 months, sell them at a profit, and pay a capital-gains tax far lower than the usual income tax.

There are executives allowed to take part of their pay in shares of stock on which they pay capital gains rather than ordinary income taxes. There are others with handsome expense accounts out of reach of the tax. And there are the holders of tax exempt municipal bonds.

The ordinary salaried man takes his tax straight and it is bitter brew beside the sweetened portion of the favored.

This picture has led within the last few weeks to strong attacks on the tax system by two national publications, Life magazine and Collier's.

The situation flows first from a system of income-tax rates jacked to great heights. This has stimulated tremendous pressure on Congress to provide exemptions. Primarily those who have the power of the checkbook at campaign time and the organized voting blocs have been the successful ones with Congress.

Such are the political realities of the situation that a favor given is virtually never retracted. It goes the other way; one favor invites another and the end of this process is the disintegration of the Federal income-tax system.

Sooner or later the solution must be to rewrite our tax laws, invest them with equity and equality and, once that is achieved, hold the line.

It will be well therefore for the American people to retain their interest in this subject beyond the filing deadlines.

The Agricultural Act of 1956

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY
OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. COOLEY. Mr. Speaker, on Thursday, May 3, the House passed H. R. 10875, the Agricultural Act of 1956. For the convenience of the Members and to answer numerous inquiries from throughout the Nation, I am inserting at this place in the RECORD a concise statement of the major provisions of this legislation.

H. R. 10875 embodies the principal provisions of H. R. 12 which were not specifically pointed out by the President as reasons for his veto of H. R. 12.

Important provisions of the vetoed H. R. 12 which are not embraced in H. R. 10875 include the 90 percent of parity price supports for major crops, alternate parity computations, an increase in the minimum support level for the dairy industry, and the domestic parity programs for wheat and rice.

In presenting H. R. 10875, the report from the House Committee on Agriculture said:

> A majority of the members of this committee and, we believe, a majority of both Houses of the Congress still feel that these provisions (objected to by the President) would have checked and changed the tragic downward trend of the farmers' income and would have improved both farm income and farm purchasing power. But in the present situation, appreciating the right of the President to exercise the constitutional powers of his high office, the committee realizes it would be futile to present again legislation embracing the very provisions which met with the objection of the President.

Thus, H. R. 10875 retains every feature of H. R. 12 that tends to stabilize the agricultural economy, and not specifically rejected by the President.

H. R. 10875 AS PASSED BY THE HOUSE—MAJOR PROVISIONS

First. A $1,250,000,000-a-year soil bank, in two parts:

(a) An acreage reserve designed to reduce acreage of wheat, cotton, corn, peanuts, rice, tobacco, feed grains, other field crops, and grazing lands. Payment to farmers would be made to reduce their acreage of these crops below their acreage allotments of wheat, cotton, peanuts, rice, and tobacco; below their farm base acreage in the case of corn; below their 3-year average in the case of feed grains; or in accordance with regulations set up by the Secretary of Agriculture, in the case of grazing lands. The Department of Agriculture's present estimates of the payments which would be made per acre for this reduction are: Tobacco, $100–$300; cotton, $48–$60; peanuts, $50–$70; wheat, $18–$25; corn, $36-$50; rice, $60–$75; and feed grains, $15–$50. A maximum of $800 million a year could be expended on the acreage reserve for the next 4 years.

(b) A conservaton reserve designed to remove acreage from crop production on a semipermanent basis, for which payments approximately equivalent to the rental value of the land would be made, with an annual limit of $450 million.

Compulsory features, proposed in other soil bank legislation, were not included in H. R. 12—vetoed—or in this bill; limits have been put on the amounts that can be spent on specific crops, thus assuring an equitable distribution of funds; and provision is made for the protection of tenants and sharecroppers.

Second. Corn: The bill authorizes five different programs under which corn farmers may receive price supports on corn in 1956, as follows:

(a) Producers in the commercial area who elect to comply with the acreage allotments previously announced by the Secretary—at the rate of approximately 43 million acres—will be eligible for price supports at $1.50 per bushel—86.2 percent of parity—under that program, without putting land into the soil bank.

(b) For the operation of the soil bank the bill increases the corn acreage allotment for 1956 by 9 million acres to a total of 51 million acres. Corn producers in the commercial producing area may qualify for price supports at $1.50 per bushel—86.2 percent of parity—by planting within their allotment from the 51 million-acre base acreage, provided they put into the soil bank an amount of cropland equal to 15 percent of their base acreage of corn.

(c) Producers in the commercial corn area who do not comply with the regular acreage allotments previously announced nor with the base acreage setup for soil bank purposes will still be eligible for price supports, under the noncompliance program recently announced by the Secretary, at the rate of $1.25 per bushel—about 83 percent of the support level of compliance corn in the commercial area.

(d) Corn producers outside the commercial corn area may comply with the feed-grain provisions of the soil bank and qualify for support at about $1.24 per bushel—82½ percent of the support level of compliance corn in the commercial area—by planting a total of not to exceed 85 percent of their 3-year average of feed grains and placing into the soil bank an acreage equal to 15 percent of their average feed grain acreage.

(e) Corn producers outside the commercial area who do not choose to participate in the feed-grain and soil bank programs authorized by this bill will be eligible for supports at approximately $1.12½ per bushel—75 percent of the support level of compliance corn in the commercial area—under the regular support program previously announced by the Secretary.

Third. Feed grains: Classified as feed grains in the bill are grain sorghums, oats, barley, rye, and corn outside the commercial corn area. Producers of feed grains may became eligible for price support at a higher level than that previously announced by the Secretary only by complying with the acreage reduction provisions of the soil bank. These requirements are that the producer not plant a total acreage of feed grains in excess of 85 percent of his base acreage—which in 1956 will be his average of the previous 3 years—and that he devote an acreage of cropland equal to 15 percent of such base acreage to the soil bank program.

Producers who comply with these requirements in 1956 will be eligible for price support on their grain sorghums, oats, barley, and rye at 81.2 percent of parity—5 parity points below the support level of commercial area corn which has been set by the Secretary at 86.2 percent for 1956—and in the case of corn, 82.5 percent of the support level of commercial area corn. On the basis of present parity calculations this amounts, in terms of national averages, to about: Oats, 69 cents; barley, $1.08; rye, $1.35; grain sorghums per hundredweight, $2.09; and corn, $1.24.

Feed grain producers who do not choose to participate in the soil bank program will be eligible for price supports at 70 percent of parity as previously announced by the Secretary—except in the case of corn in the noncommercial area which is 75 percent of the support price in the commercial area.

Fourth. Grazing lands: The Secretary is directed to include grazing lands in the acreage reserve program of the soil bank and to formulate a program under which farmers and ranchers would be compensated for placing a portion of their grazing lands in the acreage reserve and "making a corresponding reduction in livestock units." A limitation of $50 million annually is placed upon the amount that can be spent on the grazing lands portion of the soil bank program.

Fifth. Other field crops: The bill authorizes the inclusion of "other field crops" in the acreage reserve program. The Secretary is authorized to formulate acreage reserve programs for such other field crops as he might designate, such as potatoes, field peas, and so forth. A limitation of $50 million is placed upon the amount which can be spent annually on such programs.

Sixth. Soil bank payments: The Secretary is directed to make payments to participants in the acreage reserve program as soon as he ascertains that the participant has complied with the agreement to reduce his acreage. Under the previous provisions of the bill the Secretary was authorized to make payment upon the certification of the participant that he "has complied with all requirements for such payment."

In addition to the stipulated acreage reduction, there are a number of other requirements that are or may be a part of the obligation of the participant. In the case of some of these—such as not harvesting any crop from the land or not permitting the land to be grazed—the participant could not certify that he had performed until the contract period had expired. It is probable, therefore, that under the previous provisions of the bill payment could not have been made to the farmer in most instances until after the full year's program had expired.

The Cooley amendment will make it possible for the Secretary to make payment in full to farmers participating in the program as soon as their acreage has

been measured and it is ascertained that they have complied with the acreage reduction stipulated in their contracts. Thus, if the program is put into effect for 1956 crops, farmlands could be measured for compliance with the acreage reserve program at the same time they are measured for compliance with acreage allotments—which measurements will be made in most cases in the early summer—and payment in full for participation in the 1956 acreage reserve program could be made at that time.

Seventh. Appeals procedure: Procedures are provided for appeal by producers whose soil bank contracts have been canceled because of alleged violation.

Eighth. Production on Government-owned lands: The President is directed to restrict insofar as practicable the leasing of Government-owned lands for the production of agricultural commodities in surplus supply.

Ninth. Cotton: The bill provides that the national marketing quota for cotton for the 1957 and 1958 crops shall not result in a national acreage allotment for those years smaller than the national acreage allotment for 1956. It establishes for 1957 and 1958 for cotton a special national acreage reserve of 100,000 acres, in addition to the national allotment, to be distributed to States and counties to aid in establishing in all counties minimum farm allotments of 4 acres or the highest acreage planted on the farm in the preceding 3 years, whichever is smaller.

Tenth. Surplus commodities—other provisions: The bill embraces improvements in the disposal of surplus commodities and other important provisions, some of which are discussed below.

To facilitate surplus disposal in the United States, the Secretary of Agriculture is authorized to process food commodities, such as grains, into a form—meal or flour—which can be used in the home and is also given authority long sought by both the State and the Federal Government to donate food commodities to certain penal institutions.

To facilitate surplus disposal abroad, the President is given authority to pay ocean freight on surplus commodities donated for use in other countries and to step up disposal under title II of Public Law 480 from $300 million to $500 million.

An attack is made upon the surplus problem affecting long staple cotton by again placing extra long staple cotton, now exempt from quotas, within the quota set up for all cotton longer than 1⅛ inches.

Solution of our surplus problem, particularly in textiles, would be substantially assisted by authority clearly given the President in this bill to negotiate voluntary agreements with representatives of other countries with respect to importations into the United States of competing agricultural commodities or products made therefrom.

An appropriation of an additional $500 million annually is authorized for section 32 funds, for use in surplus removal and disposal operations, particularly for perishable commodities.

The bill authorizes the appointment of a Surplus Disposal Administrator in the Department of Agriculture.

Provision is made for the appointment of a commission to study and make recommendations to Congress on increased industrial use of agricultural products.

In order to encourage further the underplanting of acreage allotments, the bill authorized a producer, for the first time, to plant only a part or even none of an acreage allotment for 3 successive years without losing his history and the right to future allotments. This could eliminate the practice of planting merely to retain history for allotment purposes, which is now required.

To make present production adjustment laws more effective, the bill increases to 75 percent of the support price the penalty for exceeding peanut-marketing quotas.

In addition to these specific new authorizations to deal with the surplus problem—authority which the Secretary of Agriculture does not now have—there are other directives in the bill designed also to deal with the surplus situation.

The Secretary of Agriculture is directed to make a study of proposals for disposing of surplus food commodities domestically through some kind of food-stamp plan. He is directed to report to Congress within 90 days on this important matter. He is directed to make a similar study and report on the matter of establishing strategic stockpiles of agricultural commodities both in the United States and abroad for use in the event of war or similar emergency. He is directed to use existing authority of the Commodity Credit Corporation to dispose of surpluses generally and long-staple cotton specifically.

Address Delivered by Hon. John P. Saylor, House of Representatives, at the American Mining Congress, Cincinnati, Ohio, on Monday, May 7, 1956

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include the following address which I gave this morning before the American Mining Congress at Cincinnati, Ohio:

Mr. Shoemaker, fellow members of the panel, members of the American Mining Congress, and guests, it is a distinct pleasure and I deem it a high privilege to be invited here today to speak to you on the subject Congress and the Coal Industry.

Last week, a Representative from Texas told me that he had read about my scheduled appearance here today. He said: "I am glad to know that the American Mining Congress is meeting in Cincinnati. We have had to listen to so much talk in the Halls of Congress about the coal industry that I was beginning to think that the legislative branch of our Government was becoming the Mining Congress."

It is true that a considerable amount of time has been devoted to the coal industry in recent sessions of Congress, but certainly no more than the subject warrants. To my way of thinking, the industry's importance and its problems should have been given far more attention on Capitol Hill long before the current crusade got under way. Had such been the case, our subsequent efforts would have taken effect much more quickly.

During the immediate postwar period, the coal business was good and Congress had no notion of the industry's miseries that lay dead ahead. Not until 1949, when production dropped to 447 million tons—as opposed to 599 million tons in the preceding year—did the industry itself evidence any concern. Even the thud created by this downward plunge was not sufficiently shocking to bring about complete unity of forces within the industry. By now foreign residual oil was flowing freely into the Eastern seaboard, and there was an earnest, but somewhat disjointed, effort to remedy the situation through legislation. This effort, of course, proved to be abortive, partially because the advent of the Korean war in the summer of 1950 brought with it increased demand for all fuels. Coal again was called upon to fill the power gap when our country went to war.

Actually, the coal industry probably would have been better off had this artificial stimulus to production not taken place. Both Congress and the industry were lulled into a temporary sense of security while the oil import problem proceeded to get out of hand.

My tenure in office dates back to the fall of 1949. The district which I represent produced about 23 percent of Pennsylvania's total output that year, so quite naturally I was intensely interested in the condition of the coal industry. I might say parenthetically that, while I never worked in the mines it has been my privilege to associate with operators and miners all my life, so I consider I have at least a working knowledge of the industry. I have often discussed industry economics with a number of gentlemen who are members of the American Mining Congress, including Dr. Charles Potter, a friend of many years.

The danger signal was up for the coal industry by the time I became a Member of Congress, but then came Korea and the temporary upturn in demand. Finally in 1952, coal and allied industries became understandingly alarmed when business again went into reverse.

That was the year in which coal-State Members of Congress first took the offensive in order to prevent a serious fuel problem from becoming a national catastrophe. We attacked the oil import program vehemently. We went after the Government for its inequitable fuel-buying policies. We insisted upon a change in attitude of foreign governments which were accepting our handouts and then refusing to buy the products of our mines.

Against the backdrop of a rapidly expanding economy, the industry was in the uniquely unfortunate position of being one important segment of our business enterprise not prospering. As a consequence, it was extremely difficult to secure recognition for the serious problems affecting coal. When we pointed out that thousands of our miners were unemployed because of the oil import program, the general reaction was that they should seek opportunities elsewhere. Some went so far as to say that coal was really a "dying" industry, notwithstanding the fact that America would have to rely heavily upon coal for its rising energy needs in the years ahead.

We who live in coal districts or are otherwise associated with the industry realized the danger inherent in the loss of our skilled workers. We knew that it was not in the public interest to allow mines to close and deteriorate. We recognized the dangerous implications of the disappearance of investment capital for the maintenance and expansion of existing coal properties and for the development of new properties. We knew it, but we could not convince the rest of the Nation of the grave significance of these conditions.

We in Congress thereupon began to put more emphasis upon the coal industry's relationship to national defense. This was the strategy born of necessity. We took somewhat the same course of action that Mustafa Kemal followed at the beginning of this century in Turkey. He was a fervent patriot who as a youth learned that his political views were not acceptable to incumbent government leaders; in fact, he was at one time banished to Damascus for publicly expressing his views. Members of Congress from coal districts escaped that fate, but there were times—such as when more billions of dollars were appropriated for foreign countries while our pleas were being ignored—that we felt we could have done better had we been from Damascus or someplace else outside the United States. Kemal finally decided to abandon politics for a military career. Years later, as the famous Ataturk, he became President of the Turkish Republic when it was established in 1923. Thus he was able to command a tremendous influence in politics and national affairs after all.

The coal industry's economic tables had produced no significant results, so we turned to the mobilization angle. We made it clear that in an emergency there would not be enough steel if there were not enough coal. No steel—no airplanes, tanks, guns, shells, or ships. After many months, this method of approach began to penetrate. In 1954 the Defense Mobilization Director took up the fight, warning that a deteriorating coal industry could represent a real threat to our mobilization base requirements.

Meanwhile, President Eisenhower had appointed a Cabinet committee to make a study of the fuels picture. In February 1955, it issued a report recommending a five-point program for the resuscitation of the coal industry. These recommendations included a long-needed check on excessive oil imports. This provision was made into law through the medium of a national security amendment to the extension of the Trade Agreements Act in 1955. Thus, for the first time in history, international oil companies were put on notice that there was a limit to the amount of foreign oil they could bring into our markets. I might say here that I am not satisfied with the levels decided upon.

The fact is that excessive imports are finally being recognized as a threat to our national security, and a line has been drawn. We have stemmed the tide, and have had an opportunity to reconnoiter. We are finally in the position of being able to try to roll back the tide and erect flood walls in the form of quota limitations.

On February 10 of this year I introduced House Resolution 400, which since has received the unanimous approval of the House of Representatives. Needless to say, I shall be looking forward to recommendations from members of the American Mining Congress. This is one effort in which we are going to need the combined best thinking of coal producers, miners, transporters, and the consumers.

I am also hopeful that Mr. Patchell, the Pennsylvania Railroad research and development executive who preceded me on this platform this morning, will offer his recommendations when our subcommittee hearings get underway shortly. I shall also look forward to testimony from equipment manufacturers and all other industries and labor groups allied with coal in any way.

Now, I have invited members of this audience to participate in our hearings, yet I have not explained the provisions of House Resolution 400. I assume that most of you are familiar with it, at least to the extent that we in Congress want to learn whether an effective research program for coal might be developed in the same magnitude as those which have been and are currently conducted by the Atomic Energy Commission, the National Advisory Committee for Aeronautics, the National Science Foundation, and similar groups.

My resolution provides for investigating such fields of research as coal production, coal transportation, coal distribution, coal utilization, and a general appraisal of all coal technology. The job cut out for us is a big one, and no doubt many new facets will present themselves as our investigations proceed.

Since my resolution passed the House, I have received correspondence and personal calls from university officials, industrial research firms, and from coal people themselves. Let me read one analysis of the situation:

"The coal industry in 1956 is at a stage similar to that of agriculture in 1862, when the Morrill Act established the land-grant college system and the Hatch Act in 1887 which established the agricultural experiment stations * * * much research was needed to correct the problems."

The House Interior and Insular Affairs subcommittee which will carry out the objectives of House Resolution 400 had its first meeting last Thursday. You will be interested to know that hearings will open in Washington on June 4. Let me say that you gentlemen can have every confidence in the Congressmen who will be serving with Chairman EDMONDSON and me on this subcommittee. While I happen to be the only member from East of the Mississippi, all of my colleagues on the subcommittee are from coal-producing districts, and all are highly conscious of the need for a vigorous coal industry.

It is our fervent hope that House Resolution 400 will eventually settle the industry's principal problems. Meanwhile, Congress must not relent in other undertakings necessary to ease coal's inequitable burdens. In addition to the foreign oil problem, such matters as conservation of natural gas and increased depletion allowance for coal are subjects that cannot be laid aside on Capitol Hill.

The Government's policy on development of peacetime uses of atomic energy is one item that must be watched carefully. The time has come to turn off the stream of Treasury dollars that are flowing freely in an attempt to produce—at astronomical costs—the same kind of electricity that coal-fired plants have been turning out for years. The efforts of private utilities in this direction are most welcome, but I object to the Atomic Energy Commission's use of false figures on coal reserves and other spurious devices in the campaign for what could become an atomic TVA. Next will come the request for the Government to underwrite risk insurance necessary for the operation of reactors in populated communities. Such investments are unfair—not only to the coal industry, but also to every other United States taxpayer.

Within the past few weeks, a number of other Members of Congress have risen to challenge the AEC's determined effort to create subsidized atomic power competition for the coal industry. We are hoping that similar support will come to coal's defense with respect to the other problems that are confronting the industry. If you will permit me to refer once more to foreign oil, I should like to point out that during the current session of Congress an increasing number of Representatives and Senators have come to recognize the danger in the theories of free traders. Congressmen from New England and the South have become much disturbed about excessive imports that are imperilling their home industries. Just before leaving Washington last Friday, I talked with a member of the Georgia delegation who was denouncing a bill that would give the State Department even greater authority in the making of tariff concessions. He emphasized that this is a fight which we must wage together, so I reminded him that he was not in our camp in the past when we had bills up to place a quota on oil imports.

"Oh, I realize that I didn't vote for you on those bills," he said. "But actually I have been on your side all along."

We must continue to present a united front and keep our problems before the Nation if we are to continue our progress toward getting more remedial action from unfair policies harmful to coal. The fact is that there is national danger in a mobilization program that does not include a vigorous coal industry capable of accelerating production to meet emergency demands.

According to recent developments, this situation is finally being recognized, yet we must remember back to other periods when upward spirals in production developed an overconfidence that resolved itself into a sense of complacency. The ills brought on by unrealistic Government policies will not cure themselves. They may appear innocuous when the general state of affairs is in good health, but the time may come when they threaten the position of the entire industry. The cure must be undertaken as soon as possible, and with unity of determination I am sure that we can and will restore the coal industry to its rightful place in a growing economy and in America's defense structure.

Decrease in Number of United States Farms and Farmers

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a radio talk by R. K. Bliss, head of the extension service, Iowa State College, Ames, Iowa. His talk is entitled "Decrease in Number of United States Farms and Farmers," and is a very informative one which in a measure shows the great changes taking place in agriculture in the United States.

The address follows:

DECREASE IN NUMBER OF UNITED STATES FARMS AND FARMERS

(Radio talk by R. K. Bliss, April 6, 1956, extension service, Iowa State College)

During the past few months there has been much "viewing with alarm" concerning the decrease in the number of farms in the United States. Those who express this concern apparently do not know that the decrease in number of farms is not something that has developed recently but has been going on for 20 years at about the present rate.

Statistics compiled by the Bureau of the Census show that there were over 2 million more farms in the United States in 1935 than there were 20 years later in 1955. The census also shows that during the same period the number of people living on farms declined by almost 10 million.

Is this reduction in number of farms and people living on farms good or bad? Let us consider the situation from the following angles:

1. Decrease in number of farms.
2. Decrease in percentage of people required to produce food.
3. Farm power and improved agricultural practices.
4. Comments on the general situation.

DECREASE IN NUMBER OF UNITED STATES FARMS

First let us take a look at the decrease in the number of United States farms. The reduction in the number of farms began actively about 20 years ago and has been going on steadily since.

The Bureau of the Census reports, by 5-year periods since 1935, are as follows:

Number of United States farms:

1935	6,812,350
1940	6,096,799
1945	5,859,169
1950	5,382,162
1955	4,782,393

From 1935 to 1955, a period of 20 years, there has been a reduction of 2,029,957 farms in the United States. At the same time the area of land in farms has increased by over 100 million acres or an area almost 3 times the size of the State of Iowa. Farms have grown larger both because of a decrease in numbers and also an increase in total acres.

Percentagewise there were about 42 percent more farms in the United States in 1935 than in 1955.

Let us now take a look at the past 10 years. In 1945 the Bureau of the Census reported 5,859,169 farms in the United States. In 1955 the Bureau reports 4,782,393 farms or a decrease in the number of farms during the past 10 years of 1,076,776 farms.

Percentagewise there were 22½ percent more farms in the United States in 1945 than in 1955. This was a greater percentage decrease than in the 10-year period from 1935 to 1945.

Let us now consider the period from 1940 to 1955 which covers World War II and the Korean war and was the most prosperous period in the history of United States agriculture. During this period of great agricultural prosperity the number of farms in the United States decreased by 1,314,406. Percentagewise there were 27½ percent more farms in 1940 than in 1955.

Increase in farms from 1930 to 1935. For comparison let us consider the period from 1930 to 1935. During this period of world depression and extreme agricultural hardships in the United States the number of farms increased 523,000. Percentagewise the number of farms increased 8 percent in the United States from 1930 to 1935.

You will note that during the period of farm prosperity the number of farms decreased, while during the very severe world depression the number of farms increased.

But someone may say that farms are being bought up by outside interests. Probably some of them are but let us again take a look at the record.

Farm tenantry decreased from 42.1 percent in 1935 to 24.4 percent in 1954.

On the other hand farmers owning and operating their own land increased from 47.1 percent in 1935 to 57.2 percent in 1954. Part owner operators, that is farmers who own land and rent additional land, increased from 10.1 percent in 1935 to 17.9 percent in 1954.

Percentagewise tenancy has materially decreased since the world depression and farmers who own and operate their farms have increased. This is an encouraging development.

As compared with the total number of farms the principal percentage increase has been in farms whose annual gross sales range from $2,500 annually to $25,000 annually. From 1949 to 1954 there was an increase in the number of these farms of about 4½ percent. Iowa farms fall principally in this group. As compared with the total number, farms—the value of whose gross sales was over $25,000—increased less than 1 percent during the same period.

The fact is we have in the United States many farms that are too small to be operated with modern machinery and are uneconomical. Actually the reduction in the number of people required to operate farms represents the most significant progress that has been made in solving the farm problem. Suppose, for example, that present farm income had to be divided among 2 million more farms representing 10 million more people. Now let us turn to the percentage of the population necessary to produce food.

PERCENTAGE OF POPULATION REQUIRED TO PRODUCE FOOD

At the close of the Revolutionary War from 85 to 90 percent of the population was engaged in producing food. In 1955, the percentage of the population engaged in producing food had dropped to 13½ percent and still we are burdened with food surpluses.

This is the change that has taken place in agriculture in this country in the past 165 years. The change in the past 20 years has been little short of astounding. In brief, about 40 percent fewer people in 1955 are producing 40 percent more food than in 1935. Why this change?

FARM POWER ALONG WITH IMPROVED AGRICULTURAL PRACTICES

Probably the principal reason for this recent increase in production per man is the increase in farm power—the gasoline engine and electricity. When I was a boy we plowed the ground with 14-inch, 16-inch, or 18-inch walking plows pulled by horses. Now we plow with gang plows, cultivate with two-row cultivators, pick the corn with a mechanical picker, etc. Is it any wonder that family farms have grown larger?

When the farmer got through fieldwork 50 years ago, he usually had a couple of hours of chores ahead of him. Now electricity helps mightily with the chores, operating milking machines, pumping water, taking care of lighting buildings, etc. This also increases the ability of the farm family to operate a larger farm.

COMMENTS ON THE GENERAL SITUATION

Our big problem in food production now appears to be one of controlling our inventive genius and scientific ability in such a way as not to oversupply the food market with surpluses. This is not an easy job. The capacity of people to consume food is limited regardless of the money they have to spend. Even the millionaire can eat only one steak and no more than the average man, but he can buy several expensive cars and build bigger houses. Food is different from other commodities. You can consume so much and no more.

There is one phase of the agricultural problem which we have handled badly. We have destroyed much good soil and we have frightfully misused our timber resources in the past. The proposed conservation reserve which takes acres out of production for a period of years is a part solution of our production problem and a good one. It can be used to restore grass in the Dust Bowl and to reforest or seed down unproductive cropland. This is good conservation and builds for the future.

The acreage reserve by keeping land completely out of production for a short period to reduce the surplus also helps to limit production and also builds for the future. In my opinion, we should move toward making Government payments to support farm prices contingent on the farmer following conservation practices on his farm. I see no good reason for helping to keep a man farming who will not cooperate in conserving his soil.

There are about 1½ million farms in the United States that are classed either as part-time farms or that have an income of less than $250 a year. It is clear that there will have to be a further reduction in number of farms in order to bring agricultural per capita income up to a par with urban income. We should help these low-income farmers make the best possible use of the acres they now have, but we should also thruogh our employment agencies find part-time or full-time work off of the farm for them. They and their children should have vocational training to better fit them for urban jobs.

We are going through an agricultural revolution of readjustments and there is no easy solution.

There is, however, a bright side to the picture.

United States farm people generally enjoy a good standard of living. This is especially true of the farm people of Iowa.

It is a fact that as the percentage of people required to produce food in the United States has decreased the total prosperity of all, including farmers, has increased. This is generally true of all nations. It does not seem that we should be disturbed too much concerning a decrease in farms. We should be alert, however, to help such farmers get good jobs elsewhere.

Poland's Constitution Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

POLISH LEGION OF
AMERICAN VETERANS, U. S. A.,
Chicago, Ill., May 2, 1956.

DEAR CONGRESSMAN: Enclosed please find copy of two resolutions which were passed unanimously at the national executive committee of the Polish Legion of American Veterans in Detroit, Mich., on April 28, 1956.

Sincerely yours,

LOUIS J. SPYCHALSKI,
National Commander.
LEONARD J. WOLODZKO,
National Adjutant.

POLAND'S CONSTITUTION OF MAY 3, 1791

Whereas the Polish Legion of American Veterans, U. S. A., takes cognizance of and recognizes the 165th anniversary of the adoption of Poland's Constitution of May 3, 1791; and

Whereas this constitution, as does that of the United States of America, stresses the ideals of human dignity and liberty; and

Whereas the Polish Legion of American Veterans, U. S. A., believed that unless these ideals are adhered to with unwavering devo-

tion and resolve, liberty will perish from this earth: Now, therefore, be it

Resolved by the delegates assembled at the national executive committee of the Polish Legion of American Veterans, U. S. A., this 28th day of April 1956 in Detroit, Mich.—

1. The United States and all the free people of this world stand firm and unyielding before the autocrats of the world and resolve firmly to guarantee these principles to all the people of Poland, as well as to all the people of the world.

2. To implement the above the United States must:

(a) Withdraw immediately recognition of the Communist Government of Poland.

(b) Unequivocally repudiate the shameful agreements of Yalta and Teheran by which human dignity and liberty for many nation's and peoples were lost.

(c) Conduct diplomatic negotiations with Russia and all nations in firm resolve that enslavement of all people however manifested shall perish from this earth and that all people have the inherent right to determine their own national destiny.

(d) Condemn the shameful imprisonment of 15 Polish officials invited to Red Russia and then treacherously imprisoned, and demand the release of those still in their prisons though their terms have long expired.

PENSIONS TO VETERANS OF OUR ARMED FORCES

Whereas over 20 million veterans of military and naval service in these United States of America have given years of their lives to the service of their country, and,

Whereas many score of these veterans have suffered physical and other disabilities during their said terms of military service, and,

Whereas the tremendous sacrifices of these veterans, of the lives, health and personal liberties during such military service to protect our freedoms and liberties can never be adequately measured nor compensated, and,

Whereas certain forces are now attempting to modify or eliminate pensions to veterans of our Armed Forces granted to them in a small, meager way to show the gratitude of their country: Now, therefore, be it

Resolved by the delegates assembled at the national executive committee of the Polish Legion of American Veterans, U. S. A., this 28th day of April 1956, in Detroit, Mich., That this organization is unequivocally opposed to any modifications decreasing or eliminating the present grossly inadequate pension payments to our veterans.

POLISH LEGION OF AMERICAN VETERANS, U. S. A.
LOUIS J. SPYCHALSKI,
National Commander.
LEONARD J. WOLODZKO,
National Adjutant.

Africa Report Shows up Competitive Labor Costs

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I would like to include excerpts from an article appearing in the April 29, 1956, edition of the Salt Lake Tribune.

This column points up one of the numerous difficulties encountered by domestic mines in competing with foreign production, namely, the extremely low wage scales in many foreign countries. With the domestic purchase program for tungsten coming to a close in the next few weeks and with foreign tungsten being produced by labor paid a small fraction of that received by American miners, a very serious and critical situation is developing in our domestic tungsten industry.

The above-mentioned follows:

AFRICA REPORT SHOWS UP COMPETITIVE LABOR COSTS

(By Robert W. Bernick)

With the closing of the western tungsten mines at advent of end of Government stockpiling program, new light is thrown on competitive labor costs in foreign tungsten mines.

As was reported in the Salt Lake Tribune, Minerals Engineering Co. of Grand Junction, Colo., and Salt Lake City, has determined that in order to survive as a tungsten firm it would reopen the San Alberto properties in Sonora Province, Mexico.

• • • • •

It is not, however, possible for western United States mines to compete with foreign inflow of tungsten mined by labor paid at about $1.50 a day when domestic firms must pay a minimum of between $16 and $20 a day to American miners and millmen.

To date Washington has unerringly followed a path of semisubsidization through stockpile purchasing rather than select the alternative of tariffs suggested by the industry.

What has happened to lead and zinc, tungsten, manganese, and antimony also can happen to a few other metals apparently enjoying a boom here and elsewhere in the world.

Uranium, of course, is a fixed-price affair with an uncertain future unless the gap between production for military stockpile and eventual civilian consumption is reduced from the now predicted 10-year period.

And it seems incredible to propose that copper, which has enjoyed an inflationary binge the last several months, could be situated at any date as is lead and zinc, et al.

However, Leonard Ingalls, writing in New York Times from Tsumeb in southwest Africa, describes how investment by United States mining companies has revived what was formerly a ghost town into a thriving camp based on production of copper, lead and zinc, cadmium, and germanium—a metal finding vogue in transistor manufacture.

In 1947, says Mr. Ingalls, the Tsumeb Corp., supported mostly by United States capital, and associated with the American Metal Co., Ltd., New York, purchased the Tsumeb mines.

With expenditure of $16 million, new modern properties were quickly placed into production. Some 3,830 are employed—730 white persons and 3,100 Negroes.

The latter are the miners and are from the Ovambo Tribe in northern southwest Africa, who came to Tsumeb on a 15-month contract without their families. "They earn from 25 cents to $1.54 a day for 8 hours' work," and work 6 days a week.

The Times states the miners "get good food and medical attention free, and they sleep in compounds, 12 men to a room, with only a half-inch felt pad between each man and his concrete bunk.

"A first-class white artisan at the mine is paid $6 basic wage and rents a company house for $6 a month. He also is paid a $75 monthly cost-of-living bonus."

When we add these figures on the basis of a 24-day month for the Tsumeb miner and a 22-day month for the miner at Park City, Summit County, or in Big Indian district, San Juan County, we find that:

The producer of lead-zinc and copper in southwest Africa is being paid monthly around $30 in money. The Utah miner is making anywhere between $400 and $440 a month. In neither case do we include overtime or fringe benefits which most certainly would increase the disparity.

Miners in Utah even make substantially more than white skilled artisans at Tsumeb.

In eliminating ghost towns throughout the world foreign mining ventures are increasing the chances of creating ghost towns in the West—unless miners surrender their hard-won standard of living.

As this is just as unthinkable as creating another United States subsidy monster similar to agriculture, the alternatives are either to raise wages in Africa—which American voters cannot do—or impose tariffs.

The Case for the South

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. LANHAM. Mr. Speaker, I am offering for insertion in the Appendix of the RECORD an article written by Dr. William Howard Lewis, of Rome, Ga. It is such a splendid presentation of the South's position on the recent decision by the Supreme Court declaring segregation in the schools unconstitutional that I wish every person in America could read it. It is written by a man born in the North who years ago cast his lot with the South. The article is entitled "The Case for the South," by Dr. William Howard Lewis:

I was born and for 35 years lived a "dam Yankee." For almost 40 years I have lived in the South. In these years of the practice of medicine, I have come to know my fellow Southerners intimately. I feel that, knowing both sections, or shall we say, both peoples, I am in a position to interpret the problem better perhaps than a born southerner. I am grieved at the misrepresentations which the North accepts and much of the biased propaganda emanating from that source. I believe that the real picture should be painted before it is too late, that the North should understand the background for the attitude of the South.

Experts have made quick surveys, spot checks, and snapshots of the South. Their observations are based upon segments of area and time. It is not that simple.

This is not intended to be a legal discourse but a long-time survey to show who the southerner is and why he things and feels the way he does. It may not conform to ideas which exist elsewhere but it is founded upon many years of association and observation.

The title of this article is correct. This is presented neither as a defense nor an apology. The South does not wish nor need either. This is intended as an educational effort to show what the real problem is, that it concerns both North and South and that the South understands the common problem best. It is an effort to show that the problem is far more than political, more than race itself—that ultimately it is a problem of our civilization.

What is the South? It is not simply a geographic area. It is a people with a way of life and individual principles of its own—until 1940. These people came from the

British Isles: English, Scotch, Welsh, and Irish. That generation had the initiative, the courage, and the industry to leave their homes and venture upon a virgin continent. A sturdy group.

They come of the stock which wrested the Magna Carta from the king. They come of the stock which drafted the Declaration of Independence, which drew up the Bill of Rights. In their blood today flows the same spirit of independence and opposition to outside interference. They are well nigh, in character and political principle, the only remnant of the original United States of America.

They are individuals, self reliant, capable of resentment but not cherishing it for long. They want to be allowed to solve their own problems. They are not naturally impetuous but slow to react and stubborn in that reaction.

They have a very personal standard of liberty and dislike regimentation. They believe that the States have certain rights which the Federal Government cannot transcend.

They are nature lovers, fundamentally agricultural although recent farm economics have forced many of them into the cities against their will. A southerner loves his mountains and his forests, his streams and his fields. He prefers to live rather than to strive. Like all nature lovers he is religious and with it has a peace of mind and natural philosophy which the driving northerner cannot comprehend but might well envy. A man is judged for what he is and not for what he may possess of his social status. The southerner wishes leisure to enjoy life and has no great desire for material possessions. He relies upon his own resources for his livelihood and hoes not approve of a paternalistic government. He hesitates to sacrifice his personal independence for security in the mass.

Since the great northern invasion of industry and population beginning in 1940 there has been much change of which he does not entirely approve and often resents. His way of life is threatened. What of these northerners who have come into our midst? There is no antagonism, no line is drawn. They are welcome, sometimes to their surprise. They discover the South, the real South of which they had been quite ignorant. They accept it heartily, they appreciate its way of life and become loyal southerners. Two Presidents have adopted us. There must be a reason. But the reason cannot be defined, it must be experienced.

The French Revolution began in a very moderate way. In the early assembly were a large group of competent men who believed that the form of the government should be modified. They consisted of philosophers, students, socially minded men, and a minority of radicals. For a year or two its deliberations were logical and constructive. Then through disagreement and dissatisfaction the constructive group lost control, the radicals got in the saddle, and the gillotine became the law.

When mutual understanding is not arrived at, when no sincere effort is made to secure a mutual understanding, the radicals have a field day. It is to this juncture that the Supreme Court has brought the races and North and South with its school decision. Whether this decision was strictly legal, the South questions. The Vice President definitely considers it to have been political, when he says "a great Republican Chief Justice, Earl Warren, has ordered an end to racial segregation in the Nation's schools."

About 1830 a young Frenchman by the name of de Toqueville spent almost a year in this country studying our governmental machine from the New England town meeting through city and State to the Federal Government. He pointed out its strong and weak points. He said in substance, "The Supreme Court is the most powerful body in the world. As long as its members are men of high intellect and integrity the Court will be a bulwark. If it ever becomes a political body, it will endanger the whole structure."

It is doubtful if this matter would ever have been presented to the Court if both political parties were not contending for the Negro vote, which in certain pivotal States practically holds the balance of power. The South suspects that the Court threw politics into the scales of justice.

The South believes that the States have certain rights within the Constitution and that the school decision adds to the centralization of power for which the Federal Government has been reaching for two decades. The South believes that this violates the basic principles of division of authority and that the threat is vital to every State in the Nation. In that direction lies tyranny.

Politicians, governors, legislators—North and South—have used the segregation decision as a political football while the innocent people of both races are incited to apprehension, animosity and hatred. We have too many politicians and too few statesmen. With a few exceptions it has been impossible for the South to present its case in a rational way in the northern press. If there is prejudice in the South there is censorship in the North where the accused cannot present its case to the court of public opinion. Is this a fair trial? Is this good sportsmanship? How much does the North really know of the problem? Propaganda is not always the presentation of facts.

Up to the time of the decision of the Supreme Court the races in the South lived in accord and mutual respect. Before the Supreme Court decision there was much heard of the criticism by Moscow of the racial situation in America and the "liberals" insisted that our social standards would not be respected by other peoples until this was remedied. The Communists sent agitators among the colored people and the "intellectuals" and aroused dissatisfaction. The South has little doubt that the Communists laid the egg and that we hatched it. As usual we fell into the Communist trap.

The North's knowledge of the South's negro problem dates largely from "Uncle Tom's Cabin" probably the world's foremost propaganda effort. In this was portrayed both aspects and both true—the care of the white slave owner with Little Eva and Uncle Tom and the cruelty of Simon Legree. The picture of the latter has remained fixed but that of Little Eva and Uncle Tom has faded.

The slave was the capital of the plantation owner, generally the only capital, as he was very commonly in debt to Old or to New England. Being capital it was to his interest to care for them and this he did with few exceptions. An English traveler along the eastern border of the South about 1830 published in the record of his trip that the slaves of the South were far better off than the working man of England. This naturally raised a furor but was quite true and could have been said of the working man of the North at that period.

There is a northern concept of the mistress of a southern plantation as a charming aristocrat living in luxury and idleness. She was undoubtedly charming but she carried a responsibility and task which none of her northern sisters faced. There might have been five or a thousand slaves and in the strictest sense they belonged to her household. She had to supervise their food supply from soil to table. Hers was the task of director of the looms and sewing rooms to provide the clothing. Particularly did she care for the sick, often staying up all night in a Negro cottage or on larger establishments in their own hospital. She looked after their order and sanitation at a time when disease was a constant presence. No wonder, after the Emancipation Proclamation, that the slaves did not revolt, as the North had expected. With the white master in the army the former slaves carried on for their mistress and her children. The life of the owners of the plantation had little romance and leisure but much responsibility and care. Theirs was the white man's burden.

A great section of the slave owners did not approve of slavery. They had inherited it and they were involved in the system. There was studious consideration in regard to how it could be ended as it was generally realized that eventually it had to go. Many went so far as to free their slaves. But the Northern radicals would not give them time, they demanded immediate action. The Anglo Saxon South, pondering its own plans for the future of its own problem resented outside dictation and the Civil War broke out. How like the problems and urgency today. Neither North nor South wanted that war. The great mass of white people on both sides desired patient consideration and peaceful solution but they were swept off their feet by radicals on both sides. It is a fair assumption that if Boston and Charleston could have been quarantined there would have been no war.

Speaking of Boston how many know that many great fortunes were made in New England by the owners of the slave ships? The slaves did not come to the South in ships of southern registry. When the first slave ship landed on our shores it brought an invisible cargo—the race problem.

Let us begin at the beginning. Probably the greatest injustice ever done the Negro was to liberate him without any provision for his status after liberation. Accustomed always to being cared for by his "white folks" he was in no position to care for himself. Millions of Negroes were freed and the only persons to care for or supervise him were the same "white folks" now reduced by the ravages of war to almost an equal degree of poverty. Then came 10 years of "reconstruction" and "carpet bagging" when what little economy of the South which was left was exploited and the Negro was encouraged by northern whites to dominate the southern whites. The bayonets of Federal troops were used for years to support carpet-bag rule and Negro equality. It was an era of social, political and economic tragedy. Space does not permit a description of this period but it was fully as bad as the war years. Again it was hatred and prejudice, not Lincoln's plan. There was, about 1861, a bill before the Congress for the Federal Government to buy the freedom of the slaves by the issuance of bonds to come due in 1900. So far had sane thinking gone. Again the radicals blocked it. How small would have been the cost.

Out of hardship and privation the Southern whites slowly developed a new economy and along with them carried the Negroes. They were still mutually dependant and both knew it. The whites gave the Negroes supervision, employment, and what education they could out of their meager resources. The North left them strictly alone to struggle with a problem which no other people had ever faced.

This was the period when the North loaned capital to the South at 12 percent interest and more. The South needed capital and could not bargain. How different from today when we scatter billions across the world "for free." This was the era when Henry Grady described the southern funeral where everything from pick to casket, shroud and Bible came from the North and the South supplied only the corpse and the grave. Such was the economic exploitation of the Southern white by the Northern white.

This was the era of differential freight rates discriminating against Southern in-

dustry, ports and products. Only yesterday were these rates annulled. Was it because of the vast amount of northern capital now in the South?

The memory of this persists, the persecution, the financial and economic enslavement, the political denouncement, the superior attitude and it has much to do with the resentment by the southerner of northern dictation.

There was an intangible handicap under which the South operated. For several generations, despairing of opportunity in the South thousands of ambitious young southerners went North to contribute their efforts to the development of the northern economy depriving their native people of an executive potential. This must have been costly.

When 1917 came all this did not delay southern boys from enlisting in large proportion. It was their country which was at war and the past was forgotten. Following that war came a realization by the South that it must develop and that it had much for development. Great progress was beginning and then came 10 years of depression with all which it involved, again in hardship and delay. However, to the South the depression was not as devastating as to the North. In the South there was so little difference between prosperity and depression.

We number two arrived with millions of southern boys seeing the entire Nation for the first time along with stupendous industrial development in the South. At the same time millions of northern boys saw the South for the first time, many to come back later and make their homes in the South and marry southern girls.

Why recite all this? To show that until 1940 the South had no surplus wealth to spend upon social, civic, or educational development.

Some years ago the Negro president of a Negro college in Albany, Ga., wrote a book upon the Negro problem. Significantly he entitled it, "You Can't Build a Chimney From the Top." It is an excellent presentation of the situation. In summary he set forth that the Negro race is not yet qualified for full association, morally or intellectually. They are not yet capable of assimilation of education, they lack thrift, self-control, constructive ambition and social courtesies.

He emphasized that the Negro's best friend is the southern white race. He cited many trips which he made in the North to secure funds and where he made talks in prominent white churches. In no instance was any effort made to secure him accommodations and he commonly had to put up in unfortunate quarters. In only one instance did a white man offer him accommodations and he was a saloon keeper. His white fellow churchmen were willing to give him their money but withheld their association.

He described how the influential people of Albany helped him develop his college, provide funds and gave him counsel. He also described an enlightening incident. At one time a paved highway was built through the college campus. A young white man persisted in driving through the campus at high speed endangering the pupils. After several requests to exercise care he continued his reckless driving. The college president then took out an injunction. That night he received a phone call to the effect "we are coming to get you." At midnight four dark cars drove up and took up positions on each side of the house. A man rang the bell and demanded of the wife of the colored president that he come out. She said he would not do so. They then said he would come out or they would burn the house over his head.

He came out, agreed to have the injunction rescinded and they left. At one in the morning he went to the house of the sheriff, related what had happened and asked that the warrant be withdrawn. In reply the sheriff, of his own accord, issued another warrant, this time to keep the peace. The final comment upon this incident speaks volumes. "In 2 years they had sold their plantations and gone back to Ohio where they came from." The Southern sheriff would not permit respected colored persons to be abused and evidently the white population ostracised these men. No outsider could tell them how to run their business.

It has been observed that "the North loves the Negro as a race, the South loves him as an individual." In the South the Negro has his "white folks" who counsel him, advance him money when in financial straits and stand for him before the law. When he goes North he finds little such personal relationship or practical consideration. He is a lost ball in the weeds.

Some years ago the Negro editor of a New Jersey paper who had not been in the South for many years, having heard some very serious reports, decided that he would see for himself. He made an extensive tour and came back and wrote an editorial. It was to the effect that the Negro should stay in the South where he had better treatment and greater opportunities. He cited the improving school systems, the thousands of Negroes who owned their own farms, the good relations between the races.

He also cited a Negro who owned a theater and a bus line in Charleston, S. C., and a large insurance company in South Carolina, operated by and for Negroes. These in the State where his paper was published, he observed, could not occur. True, there were civil rights statutes, but a Negro would never get a franchise for such businesses.

No one knows better than the southerner that his educational plant has been inadequate. Its roots go back to slavery times when the big plantation owners refused to tax themselves for schools for the lesser whites and certainly not for the slaves. Then till 1940 there was too little income in Southern States to develop a comprehensive public school system for the white children and less for the Negro. This the southerner knew too well. Since 1940 there has been great improvement equaled nowhere in the Nation. In the forefront has been provision for Negro schools and the South has expended millions in every State for the most modern school structures for Negroes, better than those for the whites. The decision of the Supreme Court did not stop the building nor the appropriation of additional funds.

It is a fair assumption that over 99 percent of these funds come from the white taxpayer. He does not begrudge it but he regards it as the white man's responsibility. If he is putting up that much money should he not be entitled to assign the manner in which it should be spent?

As the old South realized that slavery was doomed and was casting about for some means of progressive change so the new South has realized that the Negro and the white child must have better educational facilities and it is acting upon its convictions. As the radicals brought on the Civil War just so now the radicals of both races are arousing the resentment of the South at the very time when it is beginning to successfully cope with its own problem. Why shouldn's the southerner resent it?

A recent survey in U. S. News & World Report of the schools in Washington, D. C., reports the scholarship standard to be very low. Sixty percent are Negroes and the white scholarship standard is held to the level of the colored. This coming at a time when the standards of all our schools is lamented, when colleges find that high school graduates cannot read, spell, write or figure, when industry is calling for 100,000 qualified technical men and cannot get them, when the Armed Forces report only 14 percent of the inductees capable of taking training for the special branches.

How much more must we endanger our educational standards by diluting our schools with pupils, who, through no fault of their own, cannot attain a high average level of scholarship? In all probability millions more Negroes will locate in the North in years to come and that problem will become greater. Has the white child no rights?

At present in educational circles is talk of special classes and advancement for the "unusual" child in the white group. What will happen to the balance of the white children if held back further to the level of the colored children in their classes? Has the white child, North or South, no rights?

It is a fair question to ask the members of the Supreme Court—"Do you or would you send your children to the public schools of Washington or to private schools?" If they say they do or would send them to private schools simply because they can afford it, how about the white parents who cannot afford it and who are moving out of Washington in order that their children may secure an adequate education?

The High Court was very solicitous for the the Negro child. Did it give the white child any consideration? In the early school years up to college age, the child is in the formative period. He is sensitive to his associations, surroundings and suggestions. Today we are very conscious of this.

Where there are few colored children this is no great factor but where there are a large or major proportion of colored it is a situation which demands consideration. This feature presents the greatest if not the main objection raised by the southerner and he is in a psoition to know whereof he speaks. The southerner lives with the Negro problem and understands it. The northerner lives outside the Negro problem and does not understand it. The college and university level presents no such problem.

Probably not one parent in a hundred in the North is confronted by such a situation. As parents they dare not condemn the white parents of the South who know the problem and who place the future welfare and character of their children above all else. This is the crux of the resistance. Perhaps this will help to explain why millions of thinking, moderate people of the South are fixed in their opposition to the ruling of the Supreme Court. They think more of their children than did the Court.

Legislation will not remedy nor control social problems. We tried it with prohibition and in varying degrees with prostitution. You cannot alter nor compromise with natural law without a penalty. Nature strives for the average. Do we want an average black and white, because that is the termination. As a nation of do-gooders we have lost all perspective, appreciation and understanding of real values and forces. Has the white race no rights or will they be legislated out? The white and colored can go forward on parallel lines together but they cannot go up as a unit, only to an average.

To return to the summit. If the high Court considers that the Negro has been deprived of a right what about the Asiatic Exclusion Act placed upon our statutes at the insistence of California. This is segregation on a continental scale. No tirades are directed at California for this. They too are race and civilization conscious.

Up to the beginning of the century the immigrants to this country came from northern Europe with similar backgrounds and standards. From then to the First World War came millions from other sections with different backgrounds and social and political potentials. The Congress did not believe that these people could be well assimilated and an immigration restriction act

was passed. It was a recognition of a danger to our standards of civilization. With the new thought of the High Court, intellectuals (self-admitted) and the Communists, why not rescind this act and the Asiatic Exclusion Act? Why not consistency?

The southerner is greatly puzzled over the Constitution. Following the Constitution, as expounded by several rulings of the Supreme Court, the South spent millions of dollars upon new scchools, separate but equal. They made every effort to conform to the law. Then at high noon on a certain Monday the Court decreed that the South was violating the Constitution. At the tick of the clock the Constitution had changed. The South wonders what the Constitution may be at noon of some future Monday. Indeed, why have a constitution?

Ethically and logically, citizenship is not a right but a privilege. For several decades after our independence a number of the States recognized this by imposing qualifications for voting. These restrictions did not last long. Now merely because one has been born he is a voting citizen.

All men are not "created equal" nor do they develop equally. This phrase of equality by birth was debated vigorously in the constitutional convention but won out. As a result, predicated upon this, has grown up a process of legislation which may well be challenged. Citizenship has its obligations, of character, intelligence and a discernment of the common and national good, not merely of local and group advantage.

To justify citizenship the Negro—as well as the white—has obligations. The Negro must think as a citizen, not merely as a Negro. He must learn that the more he expects of society the more must he return to society. He must appreciate the dignity of work and that a fair unit of work must be rendered for a fair unit of pay. He must learn the value of order and cleanliness in his living. That lack of this means a poor citizen regardless of color. He must learn thrift, that any person who has nothing remaining upon Monday morning from the previous week's pay is a poor citizen. He must learn that a sense of responsibility, trustworthiness, integrity, and honor are the badges of character. A great many have attained this standard. The mass have not.

Theorists have pointed to Booker T. Washington and George Washington Carver and Marian Anderson as representatives of the race. Great as these names are they are no more typical than are Edison, Einstein, and Shubert typical of the white race. In the past hundred years the Negro in America has come far but how far has the white race come in 30 centuries?

The origins of the white population of the South have been traced. It is of no less moment to trace the origins of the colored population as it throws light upon the variation in progress of individuals of the race today.

The colored population originated in Africa but to dismiss this factor by terming them Africans is an oversimplification. There was a definite variation in the cultures of the Negroes in their native state perhaps relatively as great as in the European backgrounds of the whites.

True they had not risen above the tribal level. A clear picture can be secured from the volumes of In Darkest Africa being an account by Henry M. Stanley of his expedition for the relief of Dr. Livingstone. He describes the many different Negro tribes which he encountered and there was a wide variation in their culture. Many were what could be regarded as in a primitive state while others had attained a distinct degree of organization and relative advancement. However, nowhere did he find the wheel or any evidence of a written language.

The stream of slave material came from all these levels and the purchasers soon learned that members of certain tribes were much more desirable than others. In point of time and background the upper group might have been a thousand years in advance.

This source variation may well account for the present variation in culture of the individuals of the colored race in our midst as it also does in the white race. It would also demonstrate that the present advanced group is not representative but the result of selective evolution just as in the white race. It also indicates that a uniform progress cannot be expected of them as a race any more than before their arrival upon these shores.

There is one aspect of the decision of the Supreme Court which the proponents of the colored race appear to have overlooked. The learned judges made this a sociological argument when they obviously regarded the white race as superior by stating that only by association with white children could the colored child advance.

The great number of colored persons who have attained a high level of culture indicates that the Negro is an undeveloped race rather than specifically an inferior one as the Court seems to imply. It is only natural that some members of this upper group should be militant in their efforts to elevate the entire body but they have failed to realize that nature operates slowly, especially in the mass and that she cannot be forced. Nature's tool is evolution which is constructive, not revolution which is destructive. Impatience may be understandable but it is not the part of wisdom.

The present campaign has set back good relations and progress for many years. The colored race is entitled to more intelligent leadership. They need another Booker Washington.

There is one logical solution to the problem. The Negro must develop a pride of race and free himself from his present inferiority attitude. Instead of agitators he needs constructive leaders of his own race who will seek to develop its progress and culture within the capacity and pattern of their own people. These leaders should devote their efforts to development of the entire group along their own potential channels to build up a pride of their own and not in aggressive competition with the white race. They should have pride in race. Their record justifies it. This is statesmanship.

The situation which irks the southerner most, aside from outside dictation, is that the North is guilty of the very charges of which it accuses the South.

In both sections are certain levels of population which are prone to violence in race situations. The North has shouted loudly of lynchings which have disappeared. The North forgets race battles in St. Louis, Chicago, and Detroit where probably more Negroes died than in all the lynchings in the South. These were not lynchings, they were just riots.

There have been serious disurbances in the North where Negroes moved into white sections. In other areas where Negroes moved in, the value of real estate dropped—a financial index of the white attitude. In the big cities of the North are Negro ghettos, centers of crowding, sickness, violence, disorder. Sections in which a white man may hardly dare to venture. Segregation? Parks and playgrounds formerly white, when invaded by the Negro are shunned by whites. Segregation?

The first real disturbance after the Court's decision did not occur in the South but in the small Ohio city of Hillsboro. True it was not extensive because the school was small but revolt it was. The Northern press gave it some mention; the Southern press practically none. Possibly because they regarded it as a natural event.

Do you find Negroes welcome in first-class hotels and restaurants in the North? Segregation? Ten years ago my Northern friends looked down their noses at me. Now they are alarmed. They ask "What can we do about it?" The camel got his head under the tent and his tail followed.

Unconsciously the Southerner is fighting more than the problem of race. He is fighting for our standards of civilization. No civilization is any stronger than the individuals and the elements which compose it.

History is the mirror of the future. Ancient Egypt through the centuries built a great civilization which existed for 2,000 years. In their wars they brought into their nation hundreds of thousands of captives as slaves, Ethiopians and Asiatics. The integration was slow but inevitable. Their customs and standards, those of different races, gradually infiltrated, they gradually interbred. Rawlinson in his history, published in 1880, observes that by 1500 B. C. Egyptian progress ceased and her civilization sank to a level from which it has never recovered. He attributed it to an assimilation of the standards and intellectual level of and interbreeding with the various races which they had brought into their midst.

In their turn Greece and Rome went the same way. The primary groups built great civilizations but integrated eventually with the great body of slaves and foreign elements which grew in their midst. The constructive elements of the original group were diluted with miscellaneous elements and made them an easy prey to conquest. Great civilizations have always degenerated from within before conquest from without. Is this significant?

A famous English statesman once said in regard to the American Colonies, "You cannot indict a whole people." The North, the South, the Negro cannot be indicted as a whole. Too many are not partisan, are moderate and do not believe that the situation can be solved off hand. It may take a century if then.

Through slavery for a century and a half the Southerner has guided and assisted the Negro to where he has advanced far from his original state. The Southerner has been his understanding friend. The present movement, by alienating these white friends has done the Negro most serious injury which will take a long time to repair. He has lost far more than he can possibly gain.

It should be set forth without question that there are many thousands of colored persons who have obtained a high cultural social and intellectual level both North and South. This the unbiased Southerner freely acknowledges. He respects them, they are his friends. The Northerner regards them as representative.

No race has come as far in as short a time. The above group is the cultural peak but there is a great body which is far from that peak and which will require an unknown period of time for it to develop. This the cultured group knows.

In the South the great mass of the colored people do not desire integration. They want their own schools with their own people. But they are not vocal. They fear the conflicts not only with white adults but with white pupils. Can the Supreme Court control such personal conflict at the school level?

It might be well here to touch briefly upon the Tuscaloosa incident. When the colored woman entered the university she created little interest. However, when the students learned that she was a trial balloon for the NAACP they remonstrated. A previous refusal of a colored girl by the University was due, according to the CONGRESSIONAL RECORD, to the fact that she was unmarried and 3 months pregnant.

It is for the vast majorities of our people in the light of history, facts, truth and reality to readjust the balance with sane counsel

and prayerful consideration. It is for them to restrain the radicals in every quarter. It is for them to realize that adjustments cannot come by legislation nor can they be forced. It is for them to see the whole problem and not just a segment, to appreciate that it is not merely our present but our whole future which is at stake. The present may well become most critical. It may be later than we think. It is for the moderates to rally now to the defense of generations yet unborn. When passion, the spawn of prejudice, takes over, disaster comes.

Plentiful Jobs, Good Pay Are in Prospect for Fall

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. SPRINGER. Mr. Speaker, various magazine and newspaper writers have been predicting the economic situation for the remainder of 1956. One such estimate has been made by James Y. Newton in Sunday's Washington Star. This columnist predicts that jobs will be plentiful and good overall pay is in prospect for the job seeker. Mr. Speaker, I append herewith the article in full:

THE WAGE EARNER: PLENTIFUL JOBS, GOOD PAY ARE IN PROSPECT FOR FALL

Election day, 1956, should find a near-record number of people employed and bringing home pay checks of near-record size. The worker's dinner pail, ever the concern of those seeking political office, should be brimming over.

The overall outlook is good both for jobs and wages through next fall. There are some pools of unemployment—the old ones in Northern textile centers and coal mining regions of a dozen States. New unemployment is concentrated largely in the farm-equipment and automobile industries where upward of 120,000 workers have been laid off. Unemployment could be the deciding election factor in some localities, but it is not likely to be a matter of national concern this year.

It is even likely that those who have been laid off in the automobile industry, mostly around Detroit, may be back at work come the first Tuesday in November. This is because the auto poducers are planning new model changes early this year to boost sagging sales and their factories could be running full blast by November.

STEEL WAGES AT ISSUE

United States Steel and other basic steel producers are preparing for new contract negotiations with the AFL–CIO United Steelworkers. The present wage agreement, covering a half million workers, expires June 30.

A deadlock on issues and a strike, such as the one the steel industry suffered for months in 1952, could have a marked depressing effect on the whole American economy.

Most labor experts do not believe there will be a strike in steel this year, however. Their predictions are based, for the most part, on the unprecedented prosperity of the industry. For example, profits of United States Steel are running away over last year, which was an excellent year itself. The corporation most likely would go far in meeting the steelworkers' demands rather than risk interruption of this period of prosperity. And United States Steel usually sets the industry pattern on wages.

Latest Commerce-Labor Department figures show that 63.1 million persons were employed in March, 2.5 million more than in March last year, when the job upswing following the 1954 recession had not gained full momentum. Because of the seasonal factors there always are more people employed in October and November than in March. Last year, for example, November employment totaled 64.8 million. It is expected the total for the month this year will be higher, perhaps topping the all-time employment high of 65.5 million reached last August.

Despite the auto industry layoffs, unemployment in March was 2.8 million, about 350,000 less than in the same month of 1955.

On wages the Bureau of Labor Statistics reported that take-home pay of factory workers and the amount of goods and services it could buy reached new peaks for March.

Net spendable earnings of a worker with three dependents were $72.10 in March, while those of a worker with no dependents were $64.77. This was a gain of 33 cents over February, and an increase of more than $2.70 or about 4 percent over last March.

The March figures were exceeded only in the last few months of 1955 when the auto industry was going full tilt making new 1956 models and factory hours were consequently somewhat higher. BLS said the stability of consumer prices over the year has meant that virtually all gains in factory take-home pay have resulted in increasing buying power for the worker. Compared to March a year ago, buying power was up almost 4 percent.

These happy conditions for the worker are expected to carry through election time.

A survey conducted by the Federal Reserve Bulletin illustrated dramatically the improved economic lot of the worker over what it was before the 1952 election.

In the past 5 years hourly and weekly earnings in manufacturing have increased 25 percent. Since consumer prices have been relatively stable, increases in dollar earnings have represented almost equivalent gains in real earnings—that is, in terms of buyinig power of the dollar.

OTHER BENEFITS ADDED

"Changes in wages have not fully represented growth in workers' compensation over the 5-year period," the Federal Reserve points out. "Through collective bargaining, private security and welfare programs—such as pensions and health and other insurance—have been extended rapidly, and last year supplementary unemployment benefits were introduced. Growth of these deferred benefits has added to the security of the worker and has further increased his stake in a stable purchasing power for the dollar."

Wage settlements this year, not reflected in the Federal Reserve earnings figures, have tended to be on the liberal side. So from the standpoint of pay, at least, the worker should be in a happy frame of mind come election day.

Dictatorial Example

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. BURDICK. Mr. Speaker, I have here an editorial which appeared in the Devils Lake (N. Dak.) Journal on April 27, 1956. It points up the high-handed manner in which the Indian Bureau deals with the Indians, and I believe should be brought to the attention of the Congress:

Another example of the dictatorial policies of the Bureau of Indian Affairs in their treatment of Indians has come to light on the Fort Totten Reservation.
